A PHILADELPHIA MENU.
THERE was a great ball in Philadelphia last Saturday night, and the Sunday morning journals vied with one another in glowing accounts of the "society leaders" who were present, the general gorgeousness of the affair, and the ultra fashionable character of it all. Along with the description of the belles, the dresses and the dancing, they gave the menu, among other details being roast grouse and broiled quail. As both of these species of game are now out of season, and it is forbidden to have them in possession, the sportsmen of Philadelphia are naturally indignant at the peculiarly aggravated act of defiance of law on the part of the Assembly Ball managers and their caterer. The managers, we observe, are trying to dodge responsibility by averring that although they saw and approved the menu when submitted to them by the caterer, they did not know that the grouse and quail were out of season. It is Major J. Biddle Porter who makes this curious defense, curious because any one who enjoys enough intelligence to manage a "society event" of this magnitude presumably knows that there are open and close seasons for game; times when they can lawfully be served and other times when those who supply them must do it in a sneaking, dodge-the-detectives covert way—or would do it in that way if by reason of ineffective machinery for their punishment they did not feel safe in violating the law openly and shamelessly. If Philadelphia sportsmen's clubs are so lax in their methods that an individual occupying Major Porter's place in society actually knows nothing of the game laws applicable to such a case, they would do well to bestir themselves now, and by making a notable example of this grouse and quail-serving caterer and his employers, give the public some needed enlightenment. For it stands to reason that if things have come to a pass where unlawful game is served quite as a matter of course at a public event of this prominence, the unlawful game consumed in Philadelphia in ordinary channels must be computed by barrels and carloads.
By an odd and instructive coincidence Fish and Game Warden Hague, of Pittsburgh, Pa., has just brought to conviction and fine six restaurant keepers and dealers of that city, who, when taxed with having quail out of season, rubbed their eyes in alleged awakening from a slumber of innocent ignorance, but in the end put their hands into their pockets and paid up.
When Warden Hague shall have thoroughly purged Pittsburgh, he might find a wider field for further efforts in the fashionable circles of Philadelphia.

BITS OF TALK.
THE HYDROPATHIC TREATMENT OF GUN-SHYNESS.
"WONDERFUL, wonderful!" said the Lieutenant from the Minnesota. "And just a length ahead of any fish story I happen to have about me at the present time. I've heard of big fishes jumping over boats, of course, and I have a yarn of that sort that I tell; but I never yet found myself in a company where I thought I could make the monster of the deep go through the sail like a circus rider through a hoop. But how is it that you never wrote anything about it to FOREST AND STREAM?"
"Well, until we had secured the land we wanted, we did not care to attract any more attention to that country than we had to," replied the Artist, "your fisherman of these days sometimes proves to be a keen-nosed land speculator, up to choice building sites, game preserves, a lodge in the wilderness—for speculative purposes only—and all that sort of thing. So we kept mum."
"Oh, I see. Judging by the size of that fish yarn, you must have secured what land you wanted; and now you are throwing out your bait. Fish stories for revenue only. What did you say the name of the station was? Would you consent to sell me a portion of the water front, just enough for a fishing stand, at a long price?"
"It's a sadly mercenary world," reflected the Major, sententiously. "The time was when there was nothing more in a Camp-Fire Flickering than a good joke; but nowadays, when a man sets out to tell you how much game he killed or how many fish he caught, just as likely as not he winds up by trying to stick you for an investment in backwoods real estate."
"Well, he could not sell me any land," said the Lieutenant, "I have an invitation from a brother in Texas to visit his ranch, where the game is well worth the trip. The ranch is—"
"For sale, of course," put in the Major.
"No, I was going to give you the location. I am neither a land speculator nor a dog-in-the-manger. When I know of a good thing I am perfectly free to give it to somebody else. Now, last year I was at Beaufort, South Carolina, and a delightful time I had; perfect weather and fourteen days' shooting out of the twenty-five days there. While I didn't make as large bags as I have in former years, I had great fun. My total was 256 quail, ranging from thirty-four, highest daily score, to seven, the smallest."
"Any ducking there?" inquired the Artist.
"Yes, but I don't go much on ducking. It's all very well for fellows who think it fun to undergo the hardship of 'duck hunting,' but I get enough hardship aboard ship. When I am ashore and go shooting, I go for fun."
"Beaufort, that was where you broke the gun-shy setter by hydropathy, was it not? By the way, I never heard the particulars of that."
"I had a very handsome English setter, which had been brought from Louisville, Ky., to South Carolina, for breaking and the season's work. He had never been in the field, and was but indifferently yard-broken. He was very soon taken out by his admirers, and certainly showed promising qualities, until the first crack of the gun; then he showed that his strongest hold was as a runner. He ran a mile and a half to the landing; and had to stop there, thanks to the limits of the island, or he might be running still. After my friends found out that Shot was gun-shy, they eyed him with contempt and jeered me unmercifully."
"About this time the tides were serving right for shooting marsh hens. It was suggested that the dog be taken out in the boat on the marshes, and the gunners to shoot away and simply ignore him. This was done with strict injunctions to the paddler not to touch the dog unless ordered to do so.
"A bird flew up, the gun went off, and out went Shot, overboard into the brine. We paid no attention to him, but popped away. At every report he would give a frantic lunge, as if a shark had him; but we just let him swim and plunge and have a good time out there, while we went on shooting. It was a mile to solid ground, he could not get there, and after several approaches and retreats at the sound of the artillery, he finally came back to the boat, pretty well tuckered out, and we pulled him in. He had not any more than shaken a bucket or two of water over us, when bang went the gun again, and Shot was once more foundering about in the water. This operation was repeated several times; but each succeeding swim was shorter, and the dog came more quickly and gladly

to the boat. We voted the method a sure success, and tried some more of it the next day. He went overboard only once and quickly returned; and then seemed to have made a grim determination to stick to the boat, gun or no gun. Soon after that he was taken into the field and worked to the close of the season, a little timid, perhaps, but certainly cured of his nonsense. Cold water did it; no more trouble with gun-shyness, if only you can get the victim to tidewater."
"It's worth while taking pains even with a gun-shy dog," said the Major, "for if you do cure him, the rewards in after years are worth the trouble."
"They may be sometimes," reflected the Lieutenant, "but as for Shot, poor fellow, he died the next spring from a rattlesnake bite."
"Hydropathy is well enough in its way," concluded the Artist, "but cold water won't cure snake bite."

A BLACK ARMY.
THE project of making a great public park in the Adirondacks has again come to the front. By the present law; lands which are forfeited to the State for taxes are held as public possessions in perpetuity; and in this way the State has acquired title to numerous tracts, varying in dimensions and values, and for the most part separated by private lands lying between them. If these intervening private lands could be secured and a large territory of State lands thus be merged into a continuous tract, New York would possess a great woodland park whose present and future value as a forest preserve for her river water supply and as a sanitarium for her people would be beyond computation.
In a message sent to the Legislature last Monday Gov. Hill recommends that steps be taken to assign limits within which lands now owned by the State shall be retained, and outside of which State lands shall be disposed of. His scheme contemplates the sale of public lands outside of the proposed State park limits, or the exchanging of them for private lands. Gov. Hill's plan is that a special commission shall be created "to investigate the whole subject, and recommend to the Legislature a plan for the creation of a State park in the Adirondacks, and fix and define the limits thereof, and for the leasing of small parcels thereof for summer camps, cottages and buildings, and for acquiring all forest lands within its limits."

It is clear that if the private lands could be secured for a fair compensation, if the exchange of public for private tracts could be made honestly and with ample protection of the State interest, in short if the transaction could be conducted by shrewd, public-spirited commissioners with an eye single to the public good, the scheme is one deserving of cordial support and immediate adoption.
But it is well enough known that the chances are tremendously against the scheme ever being carried out in that way; the probability, so strong as to be reckoned almost an absolute certainty, is that the people's interests would not be protected, but that the whole project would be turned to the private benefit of the lumbermen. This is the most natural conclusion in the world to adopt, and the newspaper correspondents at Albany are already beginning to explain with respect to Gov. Hill's proposal, that there is a "nigger in the woodpile." There is in fact in this Adirondack forestry scheme abundant room for forty thousand Africans—a black army, one concealed behind every tree.

WORK OF THE FISH COMMISSIONS.
UNDER this title will be found in our columns the most satisfactory statement of results accomplished and hoped for in Fish Commission bureaus that has yet been presented. Everywhere can be observed evidences of activity and wise methods of work. The angler will see that his interests have been well looked after and that the future for his outing is bright. Steadily and surely a healthy public sentiment in favor of a rational use of the inhabitants of stream and lake, coupled with efficient protection when circumstances demand it, is being reflected in the speech and action of the people. To this we owe our societies for the protection and increase of fishes and our State legislation for the same objects. We wish to express our thanks to the contributors who have furnished these valuable notes, and will be obliged for information as to corrections that may be necessary on account of changes since the end of 1889.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

II.—A BULL MOOSE AND A BEAR.

FOR some days we had journeyed down Middle Creek. In the pass at its head we had been buffeted by the blasts that howl among those bare rough peaks, and blinded by the whirling snowdrifts that they carry with them. Further down the valley the clouds had drenched us with dismal downpouring rain, and the mountains, which walled us in on either hand, had been hidden by curtains of mist. At last the storms had passed away, and now a cloudless sky over-arched the valley and we traveled through a crisp, cool, bracing air, tempered at midday by warm sunshine.

At length we reached the main river and turning northward followed up its narrow valley. So far not much game had been seen on the trip. This was perhaps more because no one had looked for it, than from any real scarcity. One or two of the packers had seen deer, the Geologist, when riding ahead of the train, had come upon a small grizzly bear, which had promptly fled up the mountainside, and some fresh elk tracks had been observed. So far, however, nothing had been killed. No one had taken the time to hunt, for we were hurrying along as fast as possible, and all hands traveled with the train. We were trying to reach a particular point, at which some work was to be done. The noise made by a pack train—the bell, the calls of the packers, the snapping of sticks as they are broken by the packs, the occasional dull clang of steel against stone, as a horse's shod hoof strikes a rock in the trail, and the rustling of the brush against the loads—is always enough to frighten away any game that may be in the vicinity. There was every indication that at certain seasons at least—in spring and early summer, when the ground was soft from rains and melting snows—elk, deer and bear had been abundant here. Their old tracks were seen everywhere.

Although we had killed no game we had by no means starved. The stream was full of trout, of which a good many came to our table, and as we traveled along we managed almost every day to kill a few grouse, which were tender and delicious.

One afternoon we camped early and almost everybody started out to hunt. The packers went up and down the creek to look for deer. Provo took the hillside north of camp, while I climbed the mountain at whose foot we had pitched our tents, thinking that possibly I might get a shot at some elk that I had seen high up above the valley just before we made camp.

That night no meat was brought in. The packers had seen deer, but had failed to get any. I had come on the tracks of the elk and had followed them until near dark, but had been unable to come up with the animals, which were traveling along without pausing to feed. Provo, however, had had a mixture of good and bad luck which I envied him. After hunting all the afternoon without seeing any game, he was returning to camp toward nightfall, walking down the valley with his rifle over his shoulder, when, to use his own expression, "a great big black animal, with horns and whiskers, started up out of the willows about 40 yds. in front of me, and stood there looking at me. Of course I knew it must be a bull moose, and I fired at it. As soon as I shot, it turned and ran off about 300 yds, and then lay down among the willows. I could see it lying there tossing its head about. I did not know what to do now, whether to let it alone—for I felt sure that it must be badly wounded—or to try to get near to it and finish it up. I went toward it, but did not go very close, for I was afraid of frightening it. I could see nothing but the tips of its horns, and so had nothing to shoot at. I started to go around it, looking for some opening through which to shoot at its body, but before I had made the circle it jumped up and ran away. I tried to shoot at it, but my Winchester failed to go. I followed the tracks for half a mile and then lost them in some thick timber."

It was three or four days after this, on a beautiful, bright Sunday morning, that one of the packers rode into camp and announced that he had found Mr. Provo's moose. He had met the slayer of the bull, who was out photographing, and had taken him to where the carcass lay. A few hours later the hero of the adventure came in and told us where the moose had been found. He said among other things that he intended that afternoon to take an axe and go up to the carcass and get the scalp with the horns, and mentioned casually that the bears had been at the meat. I suggested to him that his trip for the horns be postponed till near sunset, and that then we might walk up with our guns and possibly get a shot at a bear. The suggestion was approved, dinner was ordered a little earlier than usual, and before six o'clock Provo, Percyval and I, having crossed the creek on a fallen tree, were marching in single file through the open timber.

From camp to where the moose lay was perhaps two miles, and as the sun was already behind the mountain tops it was necessary that we should walk briskly if we were to reach the carcass before dark. Now, it happened that the day before Provo had had an attack of indigestion, and this rapid walking made him again quite ill, and when we had come within 200 or 300 yds. of where the moose was (he sat down on a log, feeling too badly to go further. He said: "You two go on; Percyval knows where the moose is, I will come as soon as I can.") It was necessary to act on this advice at once, if we hoped to get a shot, as the dusk was now drawing on rapidly, and already in the thick timber we could see but a short distance.

We started for the carcass, and presently, when we got near to where it was, Percyval very generously insisted on my taking the lead, although I urged him to keep it, if for no other reason than that he knew where the moose lay, which I did not. However, he pushed me ahead, remarking that he could guide me by motions of his hand. By this time we were pretty close to the carcass, and as may be imagined, were going along as quietly as possible, for, as is known to every one who has ever hunted them, bears are very keen of scent and acute of hearing. We were going through thick green timber, and there were some fallen trees on the ground, which besides was strewn with dead dry branches and twigs, which would snap and crack on the very smallest provocation. However, we went along pretty noiselessly, looking and listening with all our eyes and ears.

Once we thought we heard a twig snap in the thick timber just ahead of us, but it appeared after a little that it was only the cracking of the branches in a wind-swayed dead pine above us. Very slowly and carefully we went on, and presently I noticed that Percyval had stopped. I could see from his actions that he had come to the place where he supposed the moose lay, but there was no moose there.

It was now almost too dark to see one's sights, and any shooting that was to be done must be done quickly. I took two or three quiet steps forward and strove to penetrate the gloom of the forest. I could see nothing, hear nothing; but as I stood looking there was wafted to my nostrils a faint odor of decaying meat. There was only a slight breeze, but what there was blew down the valley. We had come to the carcass up wind, and so it must be ahead of us. With my nose in the air like a pointer on a hot scent I "drew" along as quickly, yet as cautiously as possible. I had gone not more than 15 or 20 ft., the scent constantly growing stronger, when suddenly I heard—as it seemed at my very elbow—the shrill whistling "woof" of a bear.

It would perhaps be an exaggeration to say that at the sound I jumped over the 50-foot spruce by which I was standing, but I have no doubt that I straightened up a little, for I was startled. That the bear was close to me I could not doubt, but beyond this I knew nothing, and I wanted to know a great deal. Had he seen or smelt us? was he standing, running away or charging? was he as large as a camp kettle or as small as a load of hay? These interesting questions chased each other through my brain with the speed of thought, but I had no time nor inclination to ponder over them. My whole mind was concentrated in my eyes and ears; for I was struggling with all my might to discover the whereabouts of the bear. At the same time I had a curious and delightful feeling of exhilaration; somewhat the same sensation that one sometimes experiences when in full health and vigor he faces a storm, delighting to throw out his chest and press forward in the teeth of wind and rain and snow. There was some little excitement in the feeling, and a glad willingness to meet the rush of the bear if he should be coming my way; it was a sort of *gaudium certaminis*, in fact. The whole feeling, while not new to me, was new from such a cause; and I mention it as a psychological phenomenon which greatly interested me.

Standing where I had first heard the bear, I looked and listened for a guide to his position; but in vain. Strain my eyes and ears as I might, I could neither see nor hear anything more. I took two swift, stealthy steps forward, and like a ghost glided up—almost to the moose's head. A great tree, with some thick brush at its foot, had hidden the carcass from me.

A quick look over the little open spot in which the carcass lay showed nothing living, and my heart sank. I glanced again at the shadowy black mass which terminated in a dimly seen moose's head and horns about six yards from my feet, and as I looked I thought I saw motion in that part of the mass furthest from me; and it flashed across me that the bear was there, at work at the stern of the moose and that he had not heard us.

It was now very dark, and I looked in vain for something to shoot at. I could form no notion as to the size of the bear, nor as to how he stood, whether head or side toward me, though as the moose lay with its head toward me, it was perhaps reasonable to suppose that the bear was head on too. I dared not move, for if the bear should perceive me, one jump would put him out of my sight. At this moment the bear again moved, and I made out—or thought I did—his shoulders, and the line of his roach. I instantly determined that I would try to break his neck, and without a moment's hesitation I threw up the gun, fired and reloaded.

A loud bawl followed the shot, and a dark object separated itself from the moose and began to dance about and turn somersaults over the ground. Evidently I had wounded the bear, but I was not inclined to take any chances of his getting away, so I took a step or two toward the tumbler, put in another ball behind the shoulder and the gymnastics ceased at once.

Now it has been made clear, I hope, that up to this time I had known very little about this bear. The creature's voice—so to speak—and its surroundings told me that it was a bear, but at no time had the light been sufficient for me to see it clearly enough, to determine its size or shape. Now, when it lay still, I stepped up to it, and finding that it no longer breathed, took it by the ear to look at its head, and by the forefoot to examine its claws. Disappointment awaited me. It was not one of those thousand-pound grizzlies of which we hear so much and see so little. It was not even a grizzly of the smallest size, but just a plain, simple, ordinary, common black bear, neither very large nor very small; quite old, as his yellow broken teeth showed, but in no sense a monster of the forest, nor a monarch of the mountains. The most that could be said for him was that he was a bear. How much he weighed I cannot say. Percyval and I tried to carry him out to the edge of the river, where there was a little light to get a better look at his skin, and we found that we could just lift him clear of the ground, but could not carry him.

I suppose that to preserve the unities and to tell a really good bear story, I should now dilate on the long glossy fur of the animal, and explain that my feet are at present resting on his hide, but truth is better even than a good story. On passing my hand over the animal's coat I found that his skin was not worth taking off. Besides this he was very thin, and his flesh would have been poor eating for those who care for bear meat, which I do not. So we left him lying there by the dead moose, and I confess to a sneaking regret that I had killed the poor fellow.

While we were talking and laughing over the occurrences of the evening, Provo came up, and before long we had the horns off the moose, and had started back to camp. By this time it was quite dark in the timber, and even in the little open spots which we had to cross the light was very dim; the stars were shining; it was night.

We had no sooner started on our return to camp than our troubles began. Any one who has had occasion to walk at night through thick timber where there is no trail can picture to himself the sorrows which we endured in passing over the two miles which lay between the woods and our camp. In the open timber, where there was no underbrush, it was not so bad. The going was fairly good, and the sound of the stream on our left gave us the direction. But when there was down timber or underbrush, or, worst of all, deep gullies with steep banks, in such places our

woes became unspeakable. At almost every step fallen logs tripped us up, stones got in our way, we walked into thick clumps of low-growing vegetation which clung about our feet and threw us down; at every few steps we thrust our faces against sharp-pointed dead branches of the trees among which we were walking. These were uncomfortable incidents, but the most annoying thing of all was to be walking along apparently over smooth ground, and then suddenly step off a cut bank and fall two, three or six feet on to the round boulders below. This was enough to ruffle the temper of a Job or to make a parson swear.

In one of Mark Twain's books—perhaps it is in "Roughing It"—there is a story told of a stage coach at night on the plains whose driver has lost the road. Driver and express guard get down from the box to look for the wagon tracks, the former carrying a lantern. In their search the guard, who was a little ahead, fell over a cut bank a dozen feet high, and called back to the driver, who held the light, "Don't come here;" to which the driver replied in grim humor, "Think I'm a damn fool!" I was reminded many times that night of this story, for during the two hours that were spent in making our way back to camp, the warning "Don't come here" was almost constantly in the mouth of the man who happened to be in the lead.

At length, however, the lights of the camp-fires were seen on the opposite side of the creek; we made our way down to the water, crossed over, and soon sitting around the cheery blaze told our story.

The next morning we had almost forgotten the scratches that we carried on our hands and faces, and the pictures of the boulders that we wore on our shins. Yo.

Natural History.

WILD HORSES OF AUSTRALIA.

THE problem which I have discussed in a former article regarding dogs, also exists regarding horses. Is there really such a thing as a wild horse, except in the sense of the domestic horse which has got loose into the wilds and bred there? Are the so-called wild horses capable of domestication by merely being caught and tamed? Do they lose their wild characteristics—such as they are—by interbreeding with domestic stock?

The subject is a very interesting one not only to the naturalist, but to the sportsman and also to that much larger class of readers who are neither naturalists nor sportsmen, but who, nevertheless, like to hear about animals and strange countries and the changes that are made by civilization and discovery. The horse question carries us at one sweep of the mental vision over a very large part of the earth's surface and back into very remote periods of its history. Fossil remains show that horses existed in America as well as in Europe, Asia and Africa, ages and ages ago, when rhinoceroses and other queer beasts were quite common in countries where now they are only to be found in the "Zoo." These horses, I fancy, must have been wild, because there were no men in the world to tame them then, as far as the fossils show. Moreover, these antediluvian horses—the American varieties, at least—had three or four toes on each foot, and were, therefore, quite unfit for domestic purposes. But, as far back as the history of mankind goes, the horse is always alluded to as a domestic animal, and never as a wild animal. In the Old Testament we read of horses as an ordinary and necessary companion of man, in the earliest description of social life after the creation; and the most ancient Egyptian and Assyrian monuments are covered with representations of horses so splendidly bred and trained that they must have had an immensely long and aristocratic pedigree, though their pictures are 4,000 or 5,000 years old. To come down to later times, when Julius Caesar invaded Britain, one of the first things he noticed was that the savages of that remote country had beautiful horses. Caesar was a bit of a vet. He had an eye for a horse, and in his Commentaries he notes with high approval the points of the British horses and the admirable manner in which they were trained to draw chariots with scythes projecting from the axles, in battle. When Alexander the Great invaded India, he found the Indian princes riding superb steeds and commanding magnificent cavalry. As for the Chinese, they have had horses ever since they have had pigtails, which signifies an antiquity bewildering to contemplate. In short, one of the first things Adam did when he was turned out of Eden, seems to have been to rope a mustang and teach Cain and Abel to ride.

But, it will be asked, perhaps with some surprise, are there not wild horses still to be found in some parts of the world, not merely tame horses gone wild, but wild species? It does not do to be too positive about these things, but I am inclined to answer that question in the negative. There are only two places where it is even alleged that truly wild horses exist, and both of these cases are doubtful. The tarpan which roams the plains of Tartary is most commonly adduced as the original wild horse, and there is this to be said in favor of the theory—the tarpan is certainly a horse. It also has this resemblance to a wild animal, that it is almost always the same color, red or reddish, with a black stripe down the back and a black mane and tail. But great numbers of domestic horses in Tartary are the same color, and whenever a Tartar tribe are short of horses, they capture as many tarpans as they want and break them to the saddle or pack-harness without more trouble than would be required with any other horses that had never been handled in youth. The alleged untameableness of the tarpan is all nonsense. It kicks and bites and plays up for a bit, as any horse would that has run loose all its life, but a Tartar bit and a huge load soon bring it to its senses; and before it has been lashed and goaded a hundred miles over the steppe, it is just as broken-spirited as any poor brute in the caravan. The Tarpan breeds freely with domestic Tartar stock and the progeny are not distinguishable.

The other so-called wild horse, the *koomrah* of northern Africa—named by its discoverer, Colonel Hamilton Smith, *Equus hippagrus*, as if it were a distinct species—has the disadvantage of not being a horse at all. It is a quaint-looking beast, something like a tarpan in color, but with woolly hair on its forehead instead of a forelock, and no hair at all on its tail for some distance from the root. It is allied to the zebra (*Equus hippobrytris*),

the quagga and other queer gradations between the horse and the ass. The difference between these creatures and horses is that, while they will breed with horses to one generation, the progeny are sterile; whereas all descriptions of true horses interbred to all generations.

Ponies are not a distinct species of horse at all, but are merely the domestic horse (*Equus caballus*), dwarfed and otherwise modified through inhabiting cold, barren or mountainous countries for centuries. There is no animal that shows more the character of the country it inhabits than the horse, both in size and in other qualities. A particular strain, nevertheless, lasts for a very long time when transported to another country and intermingled with other strains. A curious illustration of this came within my own knowledge. The horses at the Cape of Good Hope are, or were, very small and weedy; the progeny of some poor stock brought there by the Dutch Boers. One of the pioneer ships, carrying emigrants to New Zealand in 1839, put in at the Cape for water, and one of the passengers, the Hon. Henry Petre, a son of Lord Petre, bought twenty little Cape mares and took them with him to the new colony. They were landed at Wellington, where the first settlement was formed, and nearly all the early stock there were bred from these twenty mares. Half a century has slipped away since then; but though New Zealand generally produces as fine horses as there are in the world, the Wellington horses are notoriously the poorest in the country, weedy little scrubbers as their South African progenitors were. On the other hand, in all those parts of New Zealand where the Imperial army were quartered for any length of time during the Maori wars, which lasted twenty years, the horses are very fine and of a particular stamp. The reason is that the military train brought hundreds of grand, up-standing mares for commissariat service, which were periodically sold off when aged or worked out, and recruited by fresh drafts of picked animals. These local and accidental characteristics will probably not be obliterated for centuries.

On the pumice plains or deserts of the interior of the North Island of New Zealand, there are great herds of horses belonging to nobody in particular, though possibly claimed in a general way by the Maori tribes who own the soil by ancient tradition. These pumice plains have been formed by the ashes pouring out of the three great volcanoes, Tongariro, Ruapehu and Ngaruahoe, and carried by the prevailing westerly winds as far as the shore of Lake Taupo. They look almost bare of vegetation, and no method has yet been discovered of cultivating them, but in reality they bear a good deal of stunted herbage in ordinary seasons and are intersected by abundant streams from the snow-capped mountains. These appear to be the conditions of an equine paradise, the prehensile muzzle and lips and flat teeth of the horse enabling it to browse herbage, which neither cattle nor sheep could eat, while the dry warm ground and plentiful waters more than counterbalance the disadvantage of having to travel far in search of feed.

The Maoris, who are thoroughly equestrian in their habits now, though they never saw nor heard of a horse until the European settlement, catch these wanderers of the plain by driving them into swamps, where they flounder about till they are exhausted. The Maoris are very bad riders, their short, thick thighs preventing them from ever getting a good seat. Yet they will never walk a yard if they can get any poor brute to carry them. They mount mere foals that are not half grown, and they always ride at full gallop. It can well be imagined that Maori horses are not much good. Yet among them sometimes is found a wonderfully fine animal, and a good judge of horses will often pick up for a trifle in a Maori village a tandem leader or even a racer, that after a little grooming and training is worth a large sum of money. Maori horses are generally chestnut in color and very rough-haired, with no sort of paces, but every trick and vice that cruelty and ignorance can inculcate.

The continent of Australia, which was colonized just 100 years ago, was by far the largest tract of land on the surface of the globe without horses, since the Spaniards brought them to America in the sixteenth century. Yet no part of the globe, certainly, was better suited to them; and already, probably, Australia has the greatest herds of wild horses as well as some of the very finest domestic ones. The extent to which they have multiplied in the trackless and boundless plains of the interior is almost incredible. What they live upon is a mystery, for a great proportion of the tracts they inhabit has apparently nothing on it all the summer but spinifex and saltbush and not much of them; while in the dry season there is absolutely no water for many hundreds of miles. It is an extraordinary fact, however, that the horse, an animal with a small stomach, which, when domesticated, requires to be fed and watered several times a day, can so adapt itself to desert circumstances as to go for two or three days without either food or water, while traveling at a great speed. But for this faculty, the wild horses of Australia would long since have been exterminated by drought, instead of which they continually increase, through being able to get over immense distances and reach water courses and pastures before their strength fails them. A herd of wild horses are considered an unerring guide to water, and many a time the shepherds save their flocks by driving them along the horses' trail. Sometimes, nevertheless, grievous disappointment follows. The expected river or water hole turns out to be a dried mud hole which failed to supply enough moisture for half the horses that went there, to say nothing of the sheep that came after them; and a tangled mass of bones and hides shows where the poor creatures trampled each other to death in their frantic efforts to quench their thirst.

At other times the tables are turned and the horses invade the domain of the sheep, breaking down fences or leaping over them, regardless of barbed wire, and forcing their way into pastures and water preserves which are the only hope of the sheep farmers for keeping their flocks alive till the rains come. Then ensues a terrible slaughter. Every fire-arm on the station is called into requisition, bullets are hastily moulded, and some of the hands are sent off to the nearest township to buy all the powder and lead that is to be got. A small army of shepherds, boundary riders, "roustabouts," "jackaroos" and blackfellows then sally forth and kill, kill, kill, till either the horses are all shot or driven away, or the ammunition gives out. It seems a brutal, wasteful thing to do, but, in reality, it is the only thing under the circumstances. The sheep are worth a hundred times more than the horses, and the hides are worth something if there hap-

pens to be wattle-bark near at hand for tanning them. It is a common maxim, indeed, in Australia, that horse feed is worth more than horse flesh. It might be imagined that, after such a slaughter as I have described, the decaying bodies would poison the air and make the sheep station untenable. But that is not the case. Almost before the firing has ceased and the skinning been accomplished, the eagle-hawks, enormous birds with an insatiable appetite, begin to appear out of clear space, as it seems, and these are speedily followed by innumerable kites, crows and lesser birds of prey. The carcasses are soon covered by a shrieking, cawing, fighting, tearing, gobbling swarm of scavengers, and before the next morning all the carrion that can be got off the bones by beak or talon is gone. When the birds have picked the skeletons clean, the flies and the beetles and the ants come in for their share and make a perfect job of it. Within twenty-hours after the battle the only signs that are left of it are heaps of bones as white as snow.

The Australian deserts were originally stocked by horses that strayed away from the sheep or cattle stations or were deliberately driven away when feed was short, on the chance of recovering them at some future time; and herds such as I have spoken of, that are shot down in mobs, to save the grass and water for the sheep, consist for the most part of the merest weeds. Here and there among them may be seen one taller and better-proportioned than its companions, and it is from these exceptions that the station stud is usually recruited. Occasionally a herd are found which are worth driving in and culling; but the best of them, unless in rare instances, though good enough for station use, are almost unsalable at the yards. Having never tasted corn or been under shelter in their life, they are wonderfully hard and enduring so long as they are grass-fed and turned out at night. But directly they are stabled and fed like civilized horses, they are apt to get soft and develop all sorts of complaints; just as a cowboy might be expected to do, if brought in from the wilds of Texas and boarded and lodged at Delmonico's. As their hardness is really their only valuable quality, it is seldom worth while to bring them under conditions where there is a great risk of their losing it. Yet there have been desert horses, bought for a few cents, that not only bore stabling and corn-feeding well, but readily adapted themselves to severe training and won the biggest prizes of the Australian turf by their unapproachable staying power.

Now and then a very curious sport is found among the desert horses. The oddest of these that I ever saw was a huge, ungainly beast without a hair upon it. It was cut out of a wild herd and roped in by a station hand, who sold it for a drink and a plug of tobacco to some man riding along the road past the homestead. The latter tamed the hairless horse, taught it a few common-place tricks, and showed it all over the colonies. He was said to have taken \$100,000, though he spent it as fast as he got it. I saw the animal many times. It was rather well-shaped when it filled out, and having no mane, but a high neck and crest, it had something of the appearance of horses in antique sculptures or bronzes. Its skin was perfectly smooth and shiny and a dark mottled brown in color, and the poor thing seemed very intelligent and docile. Many people thought it was an imposture, but every veterinary test showed that it was perfectly genuine; and, in fact, the history of the hairless horse was amply vouched for. It died of confinement and overfeeding, and is now in a museum in its native country.

A time came when the feasibility of rearing marketable horses in the Australian desert was realized with important results. It was hastened by a legislative enactment, which had quite a different object. The Government of South Australia, a colony, which despite its name, extends to the ocean at the extreme north of the continent—had adopted the plan of leasing the grazing rights of vast blocks of unexplored land at a nominal rental. Upon this, a popular cry arose that capitalists were monopolizing all the lands of the colony for speculative purposes. To meet that cry, a law was passed requiring the pastoral tenants of the Crown to stock their blocks with so many head of sheep, cattle or horses per square mile within a given time on pain of forfeiting the lease. Some of the most promising of these great tracts, judging from their situation and from the little that was known of them, were in the hands of Sir Thomas Elder, a wealthy and enterprising settler. It was out of the question at that stage to put either sheep or cattle on them. But in order to save his lease, and at the same time to try a bold experiment, Sir Thomas resolved to stock his territory up to the legal requirement with horses, with a view to supplying the Indian market, where large horses of good stamina are always in demand as remounts for the British army of 60,000 men. He imported a number of thoroughbred colts of the best racing blood in England, and he bought big-boned healthy mares wherever he could get them.

I happened to be at Adelaide when these operations were in progress, and Sir Thomas Elder drove me down to his wonderful establishment near that beautiful city, whence all the stock for his northern country were drawn. I saw an immense mob of huge mares, with an extremely select assortment of imported horses, start for their journey to the desert in charge of a trusted Scottish drover and a number of blackfellows, all splendidly mounted. They were expected to take some months on the road, and I afterward learned that the drovers returned without having lost a single animal. Those horses, and numbers of similar drafts, going out year after year, run loose in the desert, and are never seen for years together. A grand muster, however, is made at some suitable season and place, and then a careful selection is made of the young stock. The inferior ones are removed or destroyed, and those which are fit for market are driven to Adelaide and shipped to India.

This masterly experiment has been very successful. It has had two results, both of considerable magnitude. It has enabled vast tracts of the unknown interior Australia to be turned to profitable account, pending its occupation for wool-growing, and it has brought into existence by far the finest and probably the largest herds of wild horses in the world.

EDWARD WAKEFIELD.

FOREST AND STREAM has illustrated circulars of Mr. G. O. Shields' new book, "Cruisings in the Cascades," which will be sent to any address on application. The book is highly commended by T. S. Van Dyke, "P." W. B. Leffingwell and other prominent sportsmen, as one of the best that has ever been written on big game hunting.—*Adp.*

THE HIBERNATION OF BEARS.

THE usual Maine winter is severely cold. In a recent year for ten days in the first part of January the thermometer registered 20° below in the morning on an average, and on the morning of the eighth 35° below. Place a man, with his clothes on, in any cave in the mountains, or under the turned-up roots of any tree, even covered with snow; lay him down horizontally, and let him remain without motion, and he will freeze solid before morning in any one of these ten mornings. Yet hundreds of the black bears were then as now quietly hibernating among the mountains of the White Mountain range, in the northwestern part of Maine and New Hampshire, stretched out at full length, or coiled up in a snug heap, as the chance permits, in some cave in the ledge on the mountain side; it may be in a capacious subterranean room, or a mere crevice covered by snow, or a shelving rock, or even under some foreign substance which holds up the body of snow, making a small room into which the animal has managed to squeeze himself; and even there the droppings of melting snow and ice in a thaw in the winter oozes down upon his unprotected body. Can we imagine the desolate situation of such a living creature?

"O solitude, where are the charms,
That sages have seen in thy face!"

The bears are surely here, stowed away very closely and asleep or dead. Are they frozen? Can they stand the test of atmosphere at 84° below? Or are they sleeping their last long sleep? What causes their death? Are they subject to the same diseases as man? I have given this subject much thought, but of course can arrive at no certain conclusion, but will give those who feel an interest in the subject some data to base their judgment upon. We have found wild animals' bones in caves of the earth—some of them bears—did they freeze to death, or did they die of sickness, or did they meet in deadly conflict with their kind or some other kind?

Bears sometimes die of old age. A well-known woodsman in Oxford county found the skeleton of a large bear on a mountainside in Riley plantation. The tearer teeth were worn down even with the maxillæ, and the claws were worn off, indicating extreme age.

Bears that den up lean, would be more likely to freeze during the winter. A fat bear comes out fat in the spring. There is a very small exhaustion of the system during their five months' sleep, but if a bear from any cause goes into winter quarters in poor condition, his chances to wake up when spring sings melodies over his head are exceedingly doubtful.

When a bear is fairly asleep in his winter quarters he scarcely breathes; no motion of the body nor perceptible respiration exists. The blood, if moving at all, must move very sluggishly, thus facilitating the chances of freezing up.

A neighbor of mine, near the Rangeley Lakes, caught a bear in the fall and made a den of a large hollow log, and when winter came on he put his bear into it, leaving a hole for ventilation, and covered the log with straw and snow to keep him warm; but in March he opened the log to find the bear frozen solid. No doubt the condition of the stomach has much to do with the wintering chances.

In his free, wild state, the bear gradually prepares himself for his long sleep, taking less and less food during the late fall, until the necessity for food ceases altogether, when he will search out a suitable place to spend the winter.

Sometimes they get disturbed or belated, and heavy snows coming on early force them to choose some temporary retreat as best they can. In such case they often improvise any upturned tree, where they can cover in with brush or loose logs, a protection from the weather.

It is an old belief that bears get pitch from the trees they tear the bark from to stop themselves up with, so as to avoid the necessity of eating, before going to den. Others think they are governed by the early or late snows about going into winter quarters. This is all wrong, for often when the snows come early we find the tracks of the bear in every direction, and you can follow them to your heart's content and they will keep going—not presuming to den while a man is behind them. I think the scantiness or abundance of their natural food—more especially berries—influence the time of their denning. When berries of all kinds are abundant they roam late in the fall—until early winter—snow or no snow, and *vice versa*. Their stomach being in proper condition, their instinct teaches the rest. Fat bears hibernate earlier than poor ones, and sex and age doubtless have an influence. Sometimes two or more bears room together for winter quarters, but more commonly only one—never, I think, two old males—oftener a barren female and one or two of her former cubs, and perhaps a male stranger, sometimes two young males.

Bears are good swimmers and are frequently caught crossing rivers, ponds and lakes. They take to the water as naturally as to calf or mutton.

J. G. R.

BETHEL, Maine.

A FISH-EATING SNAKE.—In a recent number of *Humboldt* Herr Fischer-Sigwart describes the habits of a snake, *Tropidonotus tessellatus*, which he kept in his terrarium in Zurich. This snake was fond of basking in the sun on the top of a laurel, from which it climbed easily to its night quarters in a high cherry tree placed against a wall. Sometimes after lying still for hours it would hasten down into a small pond of goldfish and conceal itself a long time behind a stone or in some plants, its tongue meanwhile constantly playing. When a fish came near the snake would make a dart at its belly and, if successful, carry off its prey to some quiet corner and feast upon it at leisure. The skin of the victim was not injured and, if released, the fish would swim away. After being seized, however, it became still and stiff as if dead and actually appeared to be hypnotized.—*Nature, London, Dec. 19, 1889.* [We have in the United States a number of species of water snakes belonging to the genus *Tropidonotus*, and all of them have the reputation of being very destructive to fish. At the carp ponds in Washington, D. C., 221 snakes were killed in one week in August, 1888. Some of the larger individuals were found to contain over 25 young carp. These snakes hid themselves in old walls, from which their heads protruded while watching the unsuspicious fishes. M. Hessel considers snakes more destructive than any of the birds.]

OUT-OF-DOOR PAPERS.

IX.—LARGELY PERSONAL.

IT IS night now, and in winter the night is for owls. In summer the small birds sometimes wake during the long hours; the chippy, as if roused from pleasant dreams, trills a little song before tucking her head under her wing; the vesper sparrow often sings a few clear notes; the whippoorwill chants in his vigils, and the loon, sailing on the moonlit lakes, lifts a long halloo, to which the hills respond. But when the winter's cold closes in at evening and the heavens stand dark blue and distant, and the stars blaze with a brilliancy unknown on warmer nights, what birds are there abroad but the owls? Chickadees and nuthatches, grosbeaks and redpolls, long since made themselves comfortable on some sheltered limb, muffling their toes in their feathers; their enemies, the shrikes and hawks, did the same; the grouse, after his cold supper of poplar twigs, settled in the snow to wait for morning; but the owls are out all night. They whoop to each other; they break up rabbit parties and flying squirrel conventions; they scour the woods far and wide, bent on mischief, their coming first proclaimed by the silent blue shadow which glides before them. What mortal terror must chill the hare, frisking in the moonlight, as, affrighted at the shadow, he turns and sees those goggle-eyes glaring at him. The incident is so tragic, the moral so deep and universal, that it might be given a place in Holbein's "Dance of Death," with the motto, "For man knoweth not his end."

Artists have never understood the nature of the horned owl or they would have appreciated his value as an emblem of evil—something a little better adapted to artistic representation than either Sin or the Devil, but containing the essence of both. The truth about him is best told as it was first told: Time, thirty years ago; two little girls playing school; the elder to the younger: "Now, Alice, let's play definitions." Alice agrees. "Now, Alice, I shall say 'What is an owl?' and you shall say, 'I don't know,' and I shall tell you." After a moment for learning the lesson comes the question, "What is an owl?" to which Alice responds with equal truth and ignorance, "A owl is a beast."

A horned owl bears little resemblance to Minerva's bird which was "accounted wise for saying nothing," nor to any of those other sad and gentle creatures which are represented as moping about church yards and complaining to the moon. He is a fiend incarnate. He harries all the smaller animals with relentless cruelty, and all night long he howls and hoots in the swamps, making horrid noises in great variety. "I was not born in the woods to be scared by an owl," says the proverb, but the best hunter alive will probably remember at least one time in his life when he has wished himself somewhere else, all on account of an owl. These creatures seem to me uncanny: a monkey, because with all his man-likeness he falls so far short of humanity; a parrot, because with a thimbleful of brains its wit puts man's in dis-esteem; and the horned owl, because without a drop of the milk of human kindness, he seems to read men's thoughts and to impute base motives.

And yet I once loved a horned owl. A farmer brought him to the door and I purchased the bird for a private investment. Indeed, from the moment I first saw him, he was mine; there was something fine and commanding about the creature which won my admiration. I always spoke of the bird as "him" out of deference to its spirit—braver bird there never was—although its great size and the pure white collar about the neck showed that it was a female. He had been trapped and was hurt; he had been caged and was offended; he was wild from the woods and wholly unused to civilization, but when I lifted him from his box and placed him on the floor, wholly unconfined, he made no attempt to escape, and showed neither fear nor resentment. His great eyes scanned each one of us narrowly, but he stood as unmoved as a captive Indian. From the very first he manifested a preference for me, and before night he learned to distinguish my step from all others. When any one else came near his box he would snap his bill loudly, but at my approach he was always silent. He seemed to enjoy having me handle him; would let me take all sorts of liberties with his feathers, even to examining his ears; would lie quietly upon his back and let me carry him about on my arm; and he especially enjoyed having his head scratched. When I rubbed it gently with my finger, working the feathers back and forth, he would sit with half-closed eyes showing his pleasure by the relaxation of his muscles and the slow movements of his inner eyelids. He never made an attempt to escape or to bite. Whether he would have used his claws can only be conjectured, for I always held both feet when I handled him for fear he might forget his manners; but as I once went into a dark room whither he had escaped from his box, and recaptured him without receiving a scratch, it seems probable that his intentions were good. If the best of its kind is the fittest to survive, that owl should be alive today. How his demise came about need not be related, and which cried the more over it, the owl or myself, the owl will not now tell.

The next which came was also a horned owl, a little black fellow, as ugly as wickedness. A missionary preparing for work among the Cannibal Islanders might have learned the ways of heathendom from the little brute. To be sure he had his griefs; his wings had been clipped and his nails cut; his leg was sore from the trap, and his temper completely ruined by weeks of captivity, but so much diabolism could never have been wholly acquired since the date of his misfortunes. I handled him as I pleased, but it was through no good will of his; indeed, he seemed greatly provoked whenever I tucked him under my arm and carried him about. It was funny to see him try to get away when put down, flapping with his wings and hobbling on his knuckle joints, with his toes turned under like a Chinese woman's and his head facing squarely between his shoulders. It is funny also to remember how I went to visit him in the morning and found only an empty box, while from the top of a very high wood pile he looked down on me, grotesquely like some of Cima-bue's angels. But this escape and the mischief which he did during that night of liberty so filled the measure of his crimes that he never saw another morning.

The great popular superstition regarding owls seems to be that of their inability to see in the day time. It is probable that the desire to account for the mysterious nocturnal lid has been strong enough to outweigh all other evidence against this theory. What the use of this

membrane is I cannot say, but that it is intended to shield the eyes from too strong light seems very doubtful; for, however bright the light, when intent on watching anything, the lid is withdrawn. One has but to notice the great contractility of the owl's iris and the peculiar shape of the eyeball, which makes it an optical instrument with remarkable power of adjustment to a focus, to believe that it is an eye especially formed for keen seeing in light as well as in darkness. And the facts bear out the belief. Even the barred owl can see well in the day time, and a close observer tells me that he never saw a horned owl which had not first seen him. He states also that they can distinguish the motion of raising a rifle as far off as he cares to shoot at them, which would seem to indicate that their eyesight, if defective—as most of the books believe—is so for astronomical distances only.

The only one of our Northern owls which seems short-sighted is the little Acadian owl. It is more exclusively nocturnal than any other that we have here, seldom, if ever, moving in the daytime unless disturbed. When found it can often be taken alive without difficulty. But whether this unwariness is due to defective sight remains to be proved, for those which we have had as pets seemed to see perfectly in the daytime, although they did not become lively until night. In all we have had three. One refused all food and was liberated after a few days; the second ate only too willingly and died from devouring a scrap of salted meat; the other was for a long time a most interesting pet, although this was before my remembrance. He was given the range of the house, and soon became very tame, on good terms with the whole family except the cat. He was a gentle little creature, quiet in the daytime, but lively at night, when he would sometimes be heard talking to himself—the only vocal noise that he made—a soft co-co-co-co, co-co-co several times repeated. He seemed to notice vertical movements more than horizontal ones, perhaps because he saw the shadow quicker, perhaps on account of the arrangement and structure of his eyes, which are almost immovable and have a vertical contracting pupil, like a cat's. He never was contented to sit on any perch which would cause one foot to be below the other, and whenever he alighted on such a place (as the top of a clock or a chair back) he immediately walked sidewise up the incline until he stood at the highest point, where his feet could be on a level. He was an acrobat in a small way, for when a small stick was put between his jaws and he lifted by it, he would swing back and forth in wider and wider arcs until on some backward swing longer than the others, he could throw up his feet and grasp the stick, when he would raise himself into an upright position and look as sedate as any owl. His great delight was to torment the cat. He hectorated the poor beast until an undisturbed nap was something only to be dreamed of, flying down from some high perch with a speed and silence which enabled him to scratch his victim's nose or ears and escape in good season. So sudden were the attacks that the cat got no opportunity of revenge until after the owl died and was mounted, when one day he tore off the owl's head. Whether he was satisfied that the bird was killed or was disgusted to find him only tow and feathers can never be known; but after that he looked at the owl and the owl looked at him without enmity.

These notes are personal to an unusual degree, and perhaps should be called gossip rather than science. As the subjects are all dead they cannot object to anything which has been said of them, and I am willing to vouch for its truth; but if any one were to ask what the story teaches, a wiser man must tell him or else he must go directly to the owls. FANNIE PEARSON HARDY.

GROUSE IN CONFINEMENT.

Editor Forest and Stream:

Late in the past summer I captured a two-thirds-grown grouse. He seemed to be perfectly healthy, and after I got home I put him in an inclosure about 10ft. x 3ft. in size. Fed him on grain, berries and bread. He ate greedily after the first day of captivity. To all appearances he was doing finely, but on the eleventh day, when I went to see how he was progressing, I found a dead bird. As the pen had a ground floor, and he was plentifully supplied with water, I could see no reason for his death, except that he died of homesickness for his native thicket. By the way, I shot a grouse last week which had a circle of erect dark blue feathers around its neck. Can any one explain it? G. JAYE.

Editor Forest and Stream:

Often seeing in FOREST AND STREAM accounts of tame grouse, I thought I would write of one I have. It was caught young and kept in a cage first, then let from that out in the room. Often when it made dirt on the floor the folks would drive it out doors; then it would go to the window and peck to get in. It now stays with a cock and hen in the chicken house. The hen pecks it, but not so with the rooster. So at night the grouse snugs up to him and sleeps. It does not attempt to go away. Will perch on the finger and eat out of the saucer, etc. I do not know whether it is a male or female; it has the black feathers on side of neck. W. D. L.

PESHIGO, Wisconsin.

AQUARIA NOTES.

A PECULIAR HABIT OF HOLOTHURIANS.

I HAD been told by some one, probably Prof. Verrill, that holothurians would completely eviscerate themselves, throwing off branchiae (lungs) and the entire visceral mass, and speedily reproduce a new set as a crustacean will grow a new claw. The throwing off part of it I had observed dozens of times, but never any evidence of the reproduction of new organs, the specimen so affected generally dying shortly after, possibly from starvation, as from some cause they do not live long in the aquarium. Recently, however, observing one divest itself of its vitals, I was surprised to see it at once put forth a set of delicate and transparent white branchiae, somewhat smaller than usual. This would indicate that the new viscera are developed before and not after the old ones are thrown off. The history of this strange phase of development is no doubt described somewhere in the musty records of some scientific body, but I have never noticed it anywhere in popular science literature, and so record it here for the benefit of the lay reader.

The branchiae of the holothurian are ordinarily gray in

color. The new branchiae were white, translucent and beautifully lobed and branched, but not having the usual fringed appearance given to them by the development of numbers of still more minute lobes. They were evidently only partially developed. They looked like some of the small and delicate red algae with all the coloring matter bleached out. This reproduction of the most vital parts of an organism, even as low as an echinoderm, is decidedly wonderful. WM. P. SEAL.

Camp-Fire Glickeyings.

"That reminds me."

295.

WHEN a youngster I had gone late one afternoon to watch a frost grape vine where partridges were wont to feed, hoping to get a shot at one. The vine grew in a sort of bay as it were, which made in from the broad meadow between two wooded hills. Taking a secluded station within range of the vine I watched and waited patiently in vain until dark, for no birds came to be shot. My way home led up over the hill to the right, and I began climbing the same a little chilled, for the weather was cold, and somewhat disheartened at the thought of not being able to take home to my mother the partridge which I had so glowingly assured her I would bring on my return.

I had made my way nearly to the top of the hill in the dark, when up went a partridge in front of me, and I instinctively raised my gun and fired—at the sound of his fluttering. He flew almost over my head, and I could hear his wings occasionally clip the twigs as he darted down the hill up which I came. Listening for an instant in the stillness of the woods, I heard him strike the ground heavily in the ravine at the foot of the hill, and following down quickly I hit the bird with my foot, and picking it up hurried home as proud a boy as one often sees, having shot and found a partridge in the dark. A.

296.

My friend Paoli had an experience once which I think worth relating. He was visiting in the country, and his cousin, a lad of fifteen, gave very enthusiastic accounts of the squirrels which abounded in the woods thereabout. Upon his urgent invitation Paoli and the boy started out for the woods early next morning, "just as the sun was gilding the treetops, etc." After traversing a mile or so of open ground they entered timber, where the squirrels were making a lively racket, cutting nuts and chasing each other up and down the trees. Our two hunters were armed with muzzleloaders, this being in the antebellum period.

The battle began at once, and Paoli had knocked three squirrels down from the same tree, when he was interrupted by an appeal from the boy to help him get his gun off, as it would do nothing but snap caps, and being a single barrel he was left out of the game. So Paoli took the gun and proceeded patiently to "pick" powder in the tube. After getting it chuck full he tried a cap on it, but it still snapped. This process was tried again and again without success, when seeing the boy's great disappointment he proposed to go back to the house, procure a "wiper," and withdraw the load. They accordingly trudged back as rapidly as they could, and arriving at the house the wiper was procured, the worm adjusted on it, and it was dropped into the gun. When it struck the bottom there was a metallic sound given forth, which suggested the idea of blowing into the muzzle, when it developed at once that the gun had not been loaded.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 10, May 30.
FOLSON 10 and 12, Sept. 20.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 20.
GREENER 12, Aug. 5.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 10.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

TEXAS GAME AND VARMINTS.

JAYTON, Kent County, Tex., Jan. 4.—The weather this winter has been uninterruptedly good, with two slight exceptions, once in November, with a three days' cool rain, and a cool blow on the 30th of December, when ice formed nearly half an inch thick in exposed vessels, but ponds did not freeze over. The delightful weather for camping brought forth the hunters in double and treble the numbers ever before known. While it was believed there was plenty of game, it has certainly been a surprise to the few of us who live in this country and do not appreciate the game (because it is so plentiful), that the hunters have met with such gratifying success. Turkey, deer and antelope are the favorite game with most of the hunters. Many of them are hunting to supply the markets, and will load a wagon at the turkey roasts in a night or two. The continued warm weather spoiled load after load before reaching the markets, the railroad being eighty-five miles distant. It is not uncommon to see the game abandoned in camp because spoiled.

Having stock upon the range, and being interested, I yesterday asked a crew of three young men why they did not kill the panthers and large beasts of prey. The spokesman replied, "Oh, I'm afraid of them things, and let 'em alone if they'll let me alone." And so the majority of the hunters kill the inoffensive game that the beasts of prey live upon, and the latter are then compelled to kill our calves and colts, and often our larger animals to subsist upon. The stockmen pay bounties ranging from \$5 to \$50 for each scalp, and yet there are few who care to engage in a business, exciting in the extreme, but with a considerable percentage of the elements of danger.

A short time since a shepherd, supposed to be a very mild-mannered man, saw lying down an animal

which he took to be a deer. He made a successful shot. It proved to be a panther. Immediately another and larger one rose up near by, and with a fierce growl started toward the herder. The first shot at this one wounded him, and having to climb a small bluff, a few well-directed shots rapidly fired put a quietus on the large male. The shepherd received a bounty of \$20 for his few minutes' work.

Several varieties of the cat species flourish here in great numbers. Few of the carnivorous animals are killed here except by poison. A few hunters poison wolves for their pelts and the bounties. These are being quite successful, as the large areas around their camps covered with stretched and drying pelts attest. Fox carcasses are seen at almost every camp. They are not taken with hounds, but are shot as hunters pass about in still hunts. More of these probably are slain in a day here, in this dull and unexciting way than would suffice to furnish sport for a large club in the North for a whole season. A neighbor a few days since saw two panthers and killed three deer in going four or five miles. Next day, as he went back to bring in his deer he killed another. He was not out specially hunting, either.

Game, however, is becoming scarce, compared to what it was. The wild turkey gobbler which we had for Christmas weighed 15lbs. when dressed. STOCKMAN.

SEEN IN MEXICO.

THERE are so many queer things in this odd country that one scarcely knows where to commence to write about the strange sights that are to be seen on all sides. Let me tell you about one that met my eyes yesterday morning on my way to the Mexican Central Railway station—a group of three Mexican sportsmen fully equipped for the field. My Yankee curiosity was excited and I followed them at a distance. If they had just stepped out of a dime museum they could not have looked funnier. One of them was armed with some kind of a German or French arm of about 24-gauge, 4ft. barrel, muzzleloading shotgun, with all the straps and gew-gaws that belong to that impractical style of arm. His companion followed with a 25lbs. German target rifle, which I should judge was quite a fine weapon to shoot at a target with from a rest, or at a soldier a mile distant from a rifle-pit, but rather a clumsy weapon for small game, or a jack rabbit on the run. This gentleman was followed by still another who carried an old Spanish firelock that must have come over with Cortez and been changed into a percussion gun by some native artist whose name has been lost to fame. These gentry were accompanied by several curs of evidently no pedigree. Each sported an impracticable game-bag of the English store pattern, and out of date twenty years ago. These were all immaculate and evidently of recent purchase. Their martial tread resounded through the street as they made their way to the station and to the field of blood and carnage upon which they were evidently bent. They looked like veritable disciples of Don Quixote, following in his very footsteps. It must not be thought however from the above sketch that there are no sportsmen in Mexico, for there are keen shots here as in all other parts of the world, and many Mexican gentlemen are fitted out with all sorts of modern arms and accoutrements; but the every day native is about 200 years behind the time.

The country abounds in game, and yesterday my son and myself bagged 22 English snipe just inside the city limits, on the road to Guadalupe, in less than two hours; and this, to mind you, in the tail end of the season, which is virtually considered over. The birds are found on vast level prairies that are covered with a short stubby grass and an inch or so of water; at this late season it is but just to state that they do not lie well but get up rather wild, on the other hand they are very fat and go straight away and make an easy shot, and there is nothing to obstruct the view in shooting. There is also here in the neighborhood most excellent duck shooting, such as any sportsman might desire to enjoy, and there is game of all sorts from one end of the Republic to the other, along the line of the Mexican Central Railway from El Paso, Texas, to the city of Mexico; and one can get off at the thousand and one points under the advice of the conductor, and enjoy royal sport. And as for the weather, how is one to describe it? Possibly I can do so best by simply saying that after my return from snipe shooting the other day I was able to go to the grand open bath tank in this city and plunge in, the same as if it had been July 4 instead of January 6. All tourists bound for this lovely climate, where the temperature does not change 20 degrees during the year, should bring their shooting-irons with them, which will be passed through the Customs with their other personal effects, free. At another time I will give you more news of this very strange and interesting country. FUSIL.

RIFLES AND DEER HUNTING.

BEEVILLE, Bee County, Tex., Jan. 10.—Speaking of rifles and the different calibers used, there is here, as elsewhere, a great diversity of opinion as to the kind of arms to use in order to accomplish the best results in killing large game. I believe the general favorite is a caliber varying from .44 to .50. But after several years' experience the writer has concluded that for an all-around arm the .32 or .38 caliber is most preferable. I have killed deer all the way from 50 to 250 yds. with the .32cal. Winchester rifle, and just as often dropped them in their tracks as with a more powerful arm. Unless the vital part is reached the game more frequently escapes anyway. There is one thing, though, to which I am partial and much attached, and that is my Lyman sights, which are far superior to the ordinary peep sights.

Although it is somewhat uncommon to make double shots at large game down in this neck of the world, especially of the fowl family, with the rifle, I was much surprised recently by having brought down three large sandhill cranes at one shot with my little .32; and having never heard of an instance which paralleled it, I would be pleased to have some older Nimrod rise and give in his experience.

My friend F., living in Beeville, shot a large doe about a year ago, which had three distinct horns, two of them projecting from the same side of the head, all having several prongs, which I think is a freak of nature without a parallel.

AN ESKIMO RELOADING TOOL.

AN ESKIMO RELOADING TOOL.

MR. T. S. O'LEARY, of the U. S. Hydrographic Office, brought down with him from Hotham Inlet, in northern Alaska, a unique contrivance, made by a native, for reloading Winchester rifle shells. From the accompanying figure it will be evident that the common reloading implements carried north by white traders have given "points" to the Eskimo; but he has ingeniously combined all the details and laboriously worked them out in walrus ivory. It is interesting to note how the natural deficiencies of the tusk are overcome by splicing.

The materials used in this reloader are four pieces of ivory, a brass rivet, parts of two empty brass shells, an iron pin for the head of the decapper and a seal-skin thong for lashing the two parts of the decapper together.

Near the middle of the base of the implement there is a circular hole about two inches deep and of the right diameter to admit a shell of about caliber .40. This hole extends almost through both pieces forming the base and is continued by a smaller hole of sufficient diameter to allow the passage of a primer. The arm has a depression deep enough to admit the iron point of the decapper and small enough to arrest and support the end of the loading peg. The loader and decapper is about two inches long, and has in one end a small iron pin about one-fourth of an inch in length. About two inches from the free end of the base a hole is bored and in it is inserted, for a lining, a brass shell which has all of the head except the rim smoothly filed away. In the arm, directly opposite, a round ivory peg is set, to serve as a recapper. The handle where it joins the straight portion of the arm contains a piece of a shell about 9in. long, with its head all filed away except the rim, fitting into a conical depression of proper size to receive a bullet. Opposed to this on the base is a slot to admit the head of a shell when applying pressure to force home a bullet. Where the free ends of the arm and base come together the arm has a guiding-peg fitted into a cavity in the base.

The two parts of the base are securely lashed together by means of a seal-skin thong, which is passed through two holes in each part four times and two turns finally taken around each lashing. The handle contains two Eskimo faces close together and chin to chin, each pierced for two labrets. On the free end of the base a third face is carved, apparently a woman's face and with no indication of labrets or other ornaments.

The inner surface of the base contains a rude figure of a fox. The inside of the arm has a very poor hair seal. The top surface of the arm bears figures of three male and one female caribou and of a dancing Eskimo. On the side of the base not shown in the drawing are caribou. The story told on the surface taken for our illustration is pretty clear—a hunter on snowshoes following a caribou, while his dog team comes along in his wake. At the right a net stretched in the runway of a caribou has ensnared one of those animals and the hunter has apparently left his bidarka and assumed an ungraceful, but probably effective attitude for increasing his cache of reindeer meat. The double bladed paddle would furnish a clue to the northern origin of this implement, as it is rarely found south of the Norton Sound region. We cannot interpret the presence of the sandhill crane behind the sledge and doubt whether the artist could do any better. The profuse ornamentation by means of concentric circles is characteristic and yet no one appears to have learned by observation how it is done. Mr. W. L. Howard, of the U. S. Navy, who has traveled extensively among the Eskimo of Northern Alaska, and who visited Hotham Inlet last summer, does not attach much importance to the picture writing of these people. One of his interpreters would carve anything that he thought would excite the admiration of the white people whether or not the subjects had any relation to his personal experience. I have also seen Eskimo artists produce old curiosities from perfectly new materials in a single night.

The reloading implement is about 9in. long. It is substantially made and is admirably adapted to the purpose for which it was intended. As far as we know it is a unique product of Eskimo skill and patience.

T. H. BEAN.

ROCK HILL, S. C., Jan. 15.—I spent over two months of last winter here, was charmed, and this season I have been here for some time and again am delighted, both with the town, community, shooting and hotel accommodations. I find quail quite plentiful (10 to 15 coveys a day) and large and plump. Claiming none of the proclivities of "the hog," I mention this that other sporting brethren may have a chance.—E. M.

The "Perfect" Pocket Oiler is a handy little contrivance, made with special reference to the uses of sportsmen. It can be carried in the vest pocket, and is neatly finished in nickel. See advt. of Cushman & Denison in another column.—Advt.

DUCKING ON GREAT SOUTH BAY.

IT was about 5 o'clock on a bleak afternoon in November, as the Professor and Sport, with their guns and gripsacks, alighted from the train at Babylon, anticipating a pleasant day's outing for the morrow. Entering a stage they were at once driven to the dock, where Bill, skipper of the Leona, and his man Friday, were found awaiting them.

The boat, a cat-rigged craft of 30ft., lay at the dock, and smoke issuing from the funnel of the cook stove suggested possibilities of supper, which on investigation were amply realized.

Bill suggested that the weather being a trifle wild, it would be pleasanter to spend the night at the dock, but public opinion being strongly against this, all hands proceeded to make sail for the ducking grounds, which were quickly reached after a fifteen minute sail over the moonlit waters of the Bay, and soon the ticking of the clock and the whistling of the wind—which was now blowing half a gale—were the only sounds heard.

It seemed but a few moments before the sleepers were shaken in their blankets and told that breakfast was ready, and that it was time to turn out, the hands of the clock marking the hour of five.

But the day was dawning bleak and cold, and the high wind continuing, a consultation was held and it was decided to "fix out" the battery and decoys in the lee of a friendly reef, this being the only place where the battery could be expected to remain without swamping.

After a few moments of waiting by the gunners in the battery, a rustle of wings is heard and a bunch of broadbills appear out of the semi-darkness; and swinging into the decoys, are met with a broadside; and leave three of their number dead in the water, while the fourth—a cripple—makes desperate efforts to swim out of range. A confiding redhead, which lights and swims among the decoys, is the next victim, followed by a sheldrake, which discovering his error as he supposes in time to escape, towers in the air and is off down wind; but the chokebored barrel of the "apple-stock" covers him and he doubles up and drops in the water, fully 75 yds. away.

Again a short wait and a larger flock of broadbills come toward the decoys and four float in the direction of the Leona—now half a mile to leeward—and soon we have the satisfaction of seeing Friday reaching for them with the scoop-net.

Another interval and more birds come in, and when we again look for the Leona, we find that she is cruising about a mile to windward of us.

But the wind, which had lately moderated, has again risen and the short and choppy waves are beginning to wash in over the low sides of the battery—creating a doubt in our minds as to how long we shall remain afloat—so we rise to the occasion and laying aside the guns, trim our craft to best advantage and stand by with the bailers and look anxiously for the boat which has now squared away for us and is running very fast under a four-reefed mainsail before a smart snow squall.

A few moments of anxiety, during which, however, we appreciate the wintery picture presented to us and the fine effect of the houses and boats at Babylon, reflected against the dark gray background of the on-coming snow squall, before the Leona is within hailing distance and our rescue is effected by Bill in the skiff, just in time to save us from an ice cold bath.

The cabin stove looks tempting, but we tear ourselves away from it to inspect the dead, which are displayed on deck to the number of twenty, and we again seek the stove, satisfied with our morning's work, although with more favorable weather the bag might easily have been doubled. Dinner and a "siesta," and as we smoke our local "Perfectos" we listen dreamily to the yarns of Bill and Friday about former ducking exploits. B.

THE CENTRAL NEW YORK GAME AND FISH PROTECTIVE ASSOCIATION was formed at Auburn Jan. 14, with W. L. Gavitt as President, E. N. Bostwick and Chas. A. Bannister Vice-Presidents, and Jasper Hammond Secretary and Treasurer. The society will meet annually on the second Wednesday of January. A number of amendments urged to the game law were adopted. Messrs. Kinney of Ithaca, Stebbins of Oswego, Jas. F. Lawrence of Seneca Falls, and Gavitt of Lyons, were appointed a committee to send in names for membership. The purpose of the movement is to provide for conferences of sportsmen to discuss game and fish legislation; and a letter from Gen. R. U. Sherman was read, commending the society and its object.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A MICHIGAN DEER SCRIMMAGE.

KANKAKEE, Ill., Jan. 13.—*Editor Forest and Stream:* The deer mentioned in the item "Locked Antlers" taken from the *Gazette*, were killed during the latter part of October and fore part of November, open season. There were other and larger parties than ours in that region. A few days since one of the proprietors of saw mills in that country informed me that our party had better success than any other. Probably one reason for it was that my friend and myself have had considerable experience during the last thirty-five years and over in still-hunting deer, not so much, of course, as professional hunters. Another reason was luck; some would call it chance. Our hunting has been entirely by day; we know nothing practically about fire-hunting.

During our last four years' hunts we have seen abundance of "sign" there of hunting out of season, and that too by fire-hunting. The information we received in that region is that it was done by the Indians for pelts, but I fancy some of the Indians were white. If that out of season pursuit and style of hunting were discontinued, there would be an abundance of game for legitimate sport.

They have a statute in Michigan prohibiting the exportation of game, which compels the sportsman to sell his game for a trifling sum to local dealers. For myself, I care nothing about it, because probably there cannot be a man found who likes an occasional hunt better than I do, and who cares less for game for table use.

If my State should discriminate against the people of another State in any respect, I would be ashamed of it, or rather of our representatives. We should be one people in spirit; every move in legislation should tend, so far as it can rationally, to the cultivation of that spirit.

By the way. A few days before we broke camp last fall a teamster of the Ford River Lumber Co., driving two span of horses and an empty freight wagon along the road through the timber a few miles from our camp, espied two bucks engaged near the road in a lively tilt, paying no attention to the team. He dropped his lines, seized his axe, thinking to knock the bucks in the head, but when he reached the bucks his courage failed him and he threw the axe at them, which frightened the bucks and they ran in the direction of the team, frightening the team so they ran away, but the teamster reached his wagon in season to seize the lines. In some way he became entangled and thrown down, the wagon running over him, breaking several of his ribs, and a hub of the wagon striking his head. When we left he was lying at Camp 8 of that company.

The evening before we left the foreman of that company at that camp, Peter McCrimmon, informed me that the man was in a precarious condition. They feared his skull was fractured. H. LORING.

GAME OF MAINE FORESTS.

THE shooting season has closed in all of the States where any pretense is made toward game laws and their enforcement, and it is only to be hoped that the statutes will be better observed, especially on the larger game. Nature is favoring the game in New England this winter. There is a wonderful absence of snow, and there has been very little cold weather thus far. Ice has not yet formed thick enough for cutting, even in the northern lakes of Maine. Such weather is remarkably favorable to the game birds. The grouse have had no damp snows, followed by crusts, to pin them down to their destruction. The quail have been able to feed in the open fields and hedges all winter so far. One killed the other day—by accident, the killer says—had his crop full of seeds and grain. Every day of such winter tells favorably toward the game supply of another season, provided the extreme is not followed by something much worse than usual. Even at the very worst the number of cold and stormy days must be few, for the sun is already marching rapidly toward the vernal equinox.

The big game from Maine has certainly fared no worse than usual from the arms of the hunter this fall, and now that the season has closed, and there is very little snow in the woods, the chances for the poacher to crust-hunt are being reduced to a minimum. By the way, the story of the killing of a deer in that State came to my ear the other day. It was early in the open season—the month of October—and the killing would have been nothing very remarkable but from the way it was done. Perhaps the hunting was legal, but at the same time I am sorry for it, and I wish that the slayer had let the deer go. Tom French is a good deal of a hunter, and generally his ideas are about right on the game question, except that he will shoot from his little steamer on Richardson Lake. He runs a steamer on that lake, and he is after the patronage of sportsmen who frequent the Androscoggin Lake region. Now right here I want to whisper in his ear that every duck he shoots from the deck of his steamer, or allows any one else to shoot, is a step toward driving the attractions from the lake where he expects to earn his money. Every loon that he fires his rifle at is worth dollars as an attractive feature to that lake region, and he will agree with me that the loons are rapidly disappearing.

But to the story about the deer. Early in October Tom had occasion to go to the head of the lake. When right opposite Camp Stewart he saw something odd in the water a little way ahead. In a moment he saw that it was the head and antlers of a buck, swimming for the other shore. It took but a second to change the course of the little steamer and give chase. Another person, one of the guides at Birch Lodge, also saw the deer, and put out in a boat after him. But the little steamer, with Tom at the helm, or first at the helm and then in the bow, was too swift for the oars of the guide. By considerable tacking and turning the deer was overtaken, so that a rope was thrown over his horns, and he was towed ashore. To use Tom's expression: "By the Mighty, I never saw such an ugly creature. Jump! You bet he did! Then sulk, till some one tried to get near him." It was a fine three-year-old buck. Now, this fun would have been all right if they had let the deer go. But no, they cut his throat. That is just what I am sorry for. How the buck came to be in the water at that time of day, is the question. The water was rather cold, and he might very easily have gone round the head of the lake, if he desired to cross; for he was within a few rods of the upper end, where he was swimming, when discovered. There are dark hints that there was a dog in the case. Report says that there was a foxhound at the Upper Dam, three miles

below, and that he was out that day. Besides, it is admitted that the dog would run deer, if allowed. It is more than probable that the poor buck had taken to the water of the lake in order to escape his dreaded enemy—the dog. That is another good reason why I am sorry that the deer was killed. Fair hunting, without dogs, is one thing. Running a deer with a steamboat, a deer that is trying to escape the dogs, is another thing.

There is still another deer story to tell this season, and then, perhaps, I am done. This was a case of the hunter being attacked by a wounded buck. It happened at Alligator Lake, in Maine, the other day, and it is to be hoped that it was before the end of the open season. The hunter has slain many a deer, though he is not a resident of the State of big game, but goes down there every fall, to add to his score of deer killed. This fall he had good luck. The snow was just right for tracking, and he had already killed two deer. But he wanted another, and so, on the fall of a light, fresh snow, in the night, he was out early in the morning. It did not take him long to start another deer, and soon came up with him, near enough for a shot. He took good aim with his rifle, with the deer head on. He was so near that he could see his magnificent antlers, and he aimed to hit him directly between the eyes. He fired. The deer fell to his knees, at least, and dropping his rifle, the hunter rushed to the scene, with his hunting knife, all ready to cut his throat. But the deer was on his feet by the time the hunter came up to him, and instead of turning and attempting to escape, he charged directly for the hunter. He succeeded in catching hold of one of the buck's horns, and then it was nip and tuck for the mastery. The deer was a big one, and very powerful. Once or twice the hunter threw him, and almost drew the knife across his throat. Once or twice the buck dragged down the hunter and came very near disemboweling him with his sharp hoofs. At this point the hunter made a desperate lunge toward the heart of the deer, and succeeded in wounding him badly, though too far forward to kill him at once. Again the deer dragged the man down, and the poor fellow was on the point of letting go his hold of the deer's horns and attempting to defend himself with his knife. He saw by the buck's eyes that he was fighting mad, and several times already he had almost felt the prick of his sharp prongs. But he saw that the animal was weakening from the loss of blood, and he held on a moment longer. The deer staggered, and by repeated plunges of the knife the hunter stretched him lifeless on the snow, which was trampled and crimson for more than a rod around. The hunter's clothes were nearly torn to shreds and he was a good deal scratched and bruised; indeed so much so that it was nearly a half hour before he had either the courage or strength to move. He says that the fight probably lasted five minutes, but that it seemed more than five hours before he could get any sort of a chance at the throat of the buck. Examination showed that the rifle ball had struck the butt of the deer's horn, and though shattering it and knocking the animal down for the moment, had scarcely injured his fighting qualities in the least. SPECIAL.

CHICAGO AND THE WEST.

CHICAGO, Jan. 17.—At the adjourned meeting of the Grand Calumet Heights Club last Wednesday night the club adopted the committee report recommending a ten years' lease of the ground now held, instead of purchasing the same. After a lively contest Mr. Wolfred N. Low was successful in the lots cast for the gun presented to the club by Mr. H. W. Jenney.

We are having our first cold weather for the season here. Ice is now 2in. thick on Calumet Lake, near Chicago. At Fond du Lac, Wis., on Lake Winnebago, ice is only 6 or 7in. thick. The water at Tolleston Marsh is at this date high, running clear over the boat landing.

Hennepin Club contemplates building another and larger house-boat for the accommodation of its members. This club claims that it and the Tolleston Club make the only two that had any shooting last fall. Mr. W. K. Reed, with whom I talked, attributes this fact to the feed that was put out by his club and the Tolleston. Other clubs adjacent to these two (which are 100 miles apart) did not put out feed, and had no shooting. Mr. Reed said that the Hennepins farmed forty acres of bottom corn land, and whatever share they got of this (it is farmed "on the shares") they put out as duck feed. It is the hustler gets the mallard nowadays.

I think that by this time I may let a light into the greatly talked of and much advertised so-called sportsman's paradise below Alliance, Nebraska. This region was brought into prominence by an article called "A Week in a Wagon," which appeared a year or so ago in another sporting paper. The writer vaunted this sandhill region to the skies, and it got quite a reputation through some railway circulars gotten out by an enterprising road, which accepted and quoted this article as true, as it was doubtless accepted by the paper which printed it innocently. Now, I have word from that region which says that parties have made long trips thither, only to become grievously disappointed and to become grievously angry. The magnificent lakes described as the home of the wildfowl turned out to be ponds with shores white with alkali, and with no vegetation except a few tough bulrushes. The game was elsewhere. I presume this sandhill country is like that near Sylvia, Kansas, not far from the Arkansas River. The water seeps up in countless little ponds. We sometimes used to get a few birds at these ponds. They drifted in there for shelter, but there was no regular flight and no regular feed. I never saw this Alliance country, but I spoke of it very highly indeed in a note last fall. That is an unsafe thing to do, I have learned. From what my friends tell me in recent letters from that country, I am inclined to think that "paradise" yarn was either an ignorant or a malicious fake, which it would be bad sporting journalism to leave uncorrected. Two friends of mine were going out there next season, but they will not go now till they learn more, and I would advise any who have planned a trip to that region to investigate it fully before they spend their money.

Speaking of paradises; I have just heard from two gentlemen who are lately back from a very long and arduous trip north of Lake Superior. They say they have found something better than the Nepigon country, and that there is big game as well as trout in any quantity. I shall not give further facts, for my knowledge is very

vague, and I should not wish to spoil this paper's reputation for being usually reliable in what it says on such matters; but I think so much about this particular paradise, that I shall strain every effort to get in there next summer. There is probably something in this worth writing about and worth telling the truth about, and if there is, the paper will get it and tell it straight. For any part, I am about done writing of sportsman's paradises that I never saw myself, and which turn out to be built of alkali and bulrushes. I have been guilty of it only once—in this Alliance business, and I am anxious to hedge in regard to that.

Jan. 14.—Mr. W. H. Skinner, representing the new Whitney hammerless, is in town for a short stay on business.

A Mr. Clevenger, for twelve years an employe of the Adams Express Co. here, has been adjudged insane. His physician testifies that it is from overwork. In that whole twelve years the poor fellow had never had a vacation or a day of rest. His life is now done. The corporation which will permit a state of affairs like that is an enemy to humanity, and the civilization which tolerates it is a foe to manhood and good morals.

E. HOUGH.

AIMING WITH THE SHOTGUN.

Editor Forest and Stream:

It is clear there are two distinct methods and not surprising that each should have its advocates. Leffingwell, in his work on "Wild Fowl," declares it is impossible for a snap shot to succeed in single duck shooting, especially at cross shots in the open. As I had always been an advocate of snap-shooting, at least to the extent of practicing it, I had to admit on reading this opinion that he had described the shot most difficult for me. I have decidedly improved by taking his advice. There is no reason, however, why a snap shot cannot aim ahead if he choose to. Aiming ahead of cross-flying birds is clearly a necessity, unless the gun be swung very rapidly. It is hard to do this with malice aforethought. That the same result is accomplished as by aiming ahead I think certain. I have often noticed that I rarely miss a duck, even a "green-winged teal behind time and going down the wind," if he passes behind me and I wheel to the whistling of his wings. In this case the muzzle of the gun comes around at a rate that is bound to influence the flight of the shot.

But is there any reason why one should adopt either style entirely? Every one who shoots much will soon instinctively point his gun, just as a boy throws a stone. This really must be learned before he can have time to look along the barrels if he wishes to. It seems to me, therefore, that one must become a snap shot first, and that it is good advice for a beginner to tell him to shoot just as he bats or throws a ball. Afterward he can take aim, if he finds it an advantage, though in cover-shooting it is out of the question. Practice in judging distance and rapidity of flight is more essential, if possible, than the handling of the gun.

Since reading Mr. Meyrick's opinion that one accustomed to snap-shooting will not do well with the rifle at moving objects, I have been reflecting. Of something like a dozen deer which I have killed running—at least half of all I have killed—I can only recall three purely snap shots. These were generally at short range. Beyond 60yds. I usually found it possible to cover my game with the sight. But I use a rifle fitted with a shotgun butt. If one is going to take aim, it is so much the more important that the gun come to place quickly. In fact, taking aim is about out of the question with a beginner. He can't get his gun pointed right. By the way, are there others as fully persuaded that the shotgun-shaped stock is an advantage to a rifle as I am? For me it has many advantages and nothing objectionable. AZTEC.

MEXICO.

INDIANA STATE FISH AND GAME ASSOCIATION.—Indianapolis, Ind., Jan. 15.—The Indiana State Fish and Game Association will meet in this city Jan. 30, at 2 P. M., in the Agricultural Rooms of the State House. This Association was organized Dec. 19 last, and has already become a means of arousing much sentiment throughout the State in favor of enforcing the fish and game laws. The officers are: Pres., Col. Wm. T. Dennis, of Richmond (State Fish Commissioner); Sec. and Treas., Jesse H. Blair, Indianapolis; Executive Committee, Col. Wm. T. Dennis, Col. Eli Lilly, Indianapolis; Mr. J. P. Applegate, New Albany; Hon. Thos. F. Davidson, Crawfordsville; Mr. M. D. Butler, Indianapolis.

RED DEER ON THE LOWER ST. LAWRENCE.—Within the last few years the Virginia deer have begun to make their appearance in considerable numbers on the south side of the St. Lawrence River below Quebec. Residents there state that up to a few years ago this species was unknown in the vicinity, though common about Lake Megantic, south of the City of Quebec. These Virginia deer have been observed in Kamouraske, 90 miles below Quebec.

ADIRONDACK DEER.

Editor Forest and Stream:

In a recent issue of *Utica Herald*, and also *Boonville Herald*, both of Oneida county, we read reports of a meeting of Adirondack hotel-keepers and guides at Lowville, at which a resolution was adopted recommending the adding of fifteen days to the first of the season, that is from the first of August to the fifteenth, which means fifteen more days of jacking deer, as this is the only method used at this time of the year. And it means fifteen days more of killing wet does with their fawns left to die for the want of their mother's care and sustenance, as it is well known that eight out of ten deer thus killed are does. The law as it now stands seems to many of us to go too far already in that direction. Of course an extension of time would be a good thing for these men, and would give them lucrative employment and help to fill their houses, but would be mighty hard on the deer, and is certainly the most wasteful and unsportsmanlike way that deer can be killed. They cannot be kept in the hot weather of that time of the year; and all are in poor condition; many are mortally wounded and die, and are never found until the tainted carcasses tell the tale.

The present law allows fifty days dogging deer, fifty days of driving them from lake and stream to another, until if they are not killed they succeed in reaching some other of the way pond, or St. Lawrence county, where they are safe, thanks to Gen. Curtis. I was in the southwest part of the Adirondacks for nearly two weeks last fall, and in a radius of about six miles there were over forty dogs, and more or less of them were used almost every day in running deer. All the lakes, ponds and streams were lined with men, almost all armed with magazine rifles that would give them at least five or six shots, and it would be a very easy deer if it ran the gauntlet unscathed. Over one hundred deer were killed in this section alone.

This begins the 1st of September in hot weather, when a deer killed after a hard run will not keep over night. This must be allowed for fifty days for the protection and preservation of our deer and to make him wild to save him from that awful man, the pot-hunter. This also puts money in the purse of the Adirondack hotel keeper and guide, as one man and dogs mean from \$3 to \$5 a day.

These men are almost without exception good fellows, and many of them are candid enough to admit that the present laws are ruinous to deer. They should be careful in their eagerness to get the golden eggs not to kill the bird that lays them. This, the finest deer preserve in the State, and perhaps in the Union, can stand the strain put upon it but for a few years more. Almost all dogs on the borders of the North Woods and in them are bred for running deer; and every year adds more and more to the number of them and also to the hunters that go in with them; and every year the less and less deer. With our present laws the end is not far off. Five of the principal States of the North that have any deer to protect, viz.: Maine, Pennsylvania, Michigan, Wisconsin, Minnesota, prohibit killing until the first of October, which cuts off all jacking when the weather is hot and the deer are in poor condition, and saves the fawns which need the care and sustenance of the mother, and allows them to be killed in October and November, when they are at their best; and these States prohibit hounding entirely.

There are laws that are what they profess to be and that properly protect. New York allows jacking in August; and at any time in season hunting with dogs from Sept. 1 for fifty days thereafter, with great and unavoidable waste of venison; and prohibits hounding in November, when the deer are at their best and all are saved. Our laws are not what they profess to be for the proper protection of our deer, but in the interest of a class. Of eighteen States and Territories in our latitude and the two principal provinces in Canada, New York is the only one that allows killing in August and prohibits it in November. Can it be that they are all wrong and that we alone are right?

A VETERAN.

HOLLAND PATENT, Oneida County, N. Y.

THE COGGESHALL BILL.

SECTION 1. Section one of chapter five hundred and thirty-four of the laws of one thousand eight hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," as amended by chapter five hundred and one of the laws of one thousand eight hundred and eighty-eight, is hereby amended so as to read as follows:

§ 1. The lawful season in which wild deer may be killed in this State shall commence at sunrise on the 15th day of August, and end at sunset of the 15th day of November in each year. Whoever shall hunt, kill, chase or take alive any wild deer at any other time than above specified shall forfeit one hundred dollars for each deer. Whoever shall kill more than three deer during the lawful season, shall forfeit one hundred dollars for each deer more than three. Whoever shall carry or transport any wild deer or part thereof, except during the lawful season, and as in this section specified, shall forfeit one hundred dollars for each offense. Whoever shall sell, or possess, or offer for sale, or purchase, any wild deer or part thereof in violation of the provisions of this section, shall forfeit one hundred dollars for each offense. Whoever shall set any trap or spring gun, or any artificial salt lick for trapping or killing or enticing any wild deer, shall forfeit one hundred dollars. Whoever shall hunt or pursue wild deer with dog in St. Lawrence or Delaware counties, at any time, shall forfeit one hundred dollars. The lawful season for pursuing deer with dogs in Queens and Suffolk counties shall only be during the first ten week days of October in each year. The lawful season for pursuing deer with dogs, in counties other than the four last above named, shall commence at sunrise of the 1st day of September, and end at sunset of the last day of September in each year. Whoever shall hunt, or pursue, or chase, any wild deer with dogs, at any other time than the lawful season therefore above specified, shall forfeit one hundred dollars. Whoever owns or harbors any dog is hereby at his peril required to restrain and prevent such dog from violating the provisions of this section; and the owner, or possessor, or harbinger of any dog shall be responsible for all acts of such animal, in violation of this section, whether with or without assent, to the same extent as if done by express procurement of such owner, possessor or harbinger. Wild deer lawfully killed may be carried or transported within this State, only when accompanied by the actual owner thereof to destination, between the 15th day of August and the 20th day of November in each year, but at no other time, or in any other manner, and only one deer may be carried or transported for any one owner as aforesaid. Head and feet, when severed from the carcass during the lawful season aforesaid, may be excepted from the limitation as to number, and also as to being accompanied by the owner upon transportation above stated. Heads, feet and skins, when severed from the carcass, and mounted as specimens or ornaments, are excepted from this section, provided they were lawfully killed. It shall be lawful to sell, or possess, deer or venison between the 15th day of November and the 15th day of December in each year, provided the seller or possessor proves that the same was lawfully killed during the lawful period as specified in this section. Whoever shall enter, molest or unnecessarily disturb any wild deer yard, or place where wild deer are gathered during the snowy months of winter, or whoever shall crust any wild deer, shall forfeit one hundred dollars additional to the penalties above provided as to hunting or pursuing. Whoever aids or assists, or countenances any act in violation of this section, shall also be liable to the same extent as if he were a principal. Common carriers, corporations, associations and companies, are hereby made liable for their associated agents, servants and employees, done within the scope of their employment, in the same manner and to the same extent as persons for any act in violation of this section. The several sums above mentioned are hereby imposed as penalties and in addition thereto the several acts prohibited by this section are declared to be misdemeanors, and may be punished as such, additional to the penalties prescribed.

§ 2. This act shall take effect immediately.

Sea and River Fishing.

BURNSIDE LAKE "SALMON" A LAKE TROUT.

SIX MONTHS behind a pair of wiry bronchos, tiring out one pair, then scouring hills and vales, woodlands and prairies with another, using a third to push through the hard timber region of northern Minnesota, and then to come again to the beautiful Park region to visit Detroit Lake, Lake Lizzie, Lake Lida, Pelican and Stormy Cormorant lakes to stand and enjoy the calm beauty of Interlaken, Geneva Beach and Osakis, to see others pull four or five black bass from deep Minnewaska, to enjoy the cool breezes from Battle Lake during the scorching days of August, and to hang on to the sides of the boat when a flurry struck us preceding a thunderstorm at Clithral Lake, and for the first time in twenty summers not to catch a single fish—this has been the lot of your scribbler this summer, fall and early winter; driving over 5,000 miles and yet not going out of the northern half of the State of Minnesota.

But how enjoyable to come home, and during the holidays to dive into the files of mechanical engineering, natural history and sportsmen's journals, to pick out the FOREST AND STREAM first, and to laugh over the disappointments of the "Kingfishers," memory instantly spans the shadowy distance. I hear the cordial greeting, "How are you, Norman, I am old Hickory and these are the 'Kingfishers';" strangers before, but strangers no longer; that Mancelona platform was the scene of a warm hearty greeting. My family were intent on a trout fishing trip; they were going to their old camp on Intermediate Lake, while waiting for our wagon we held a love feast, and the "Kingfishers" ever hold a warm place in Norman's family since that time.

Coming into the further northland, we have only commenced with them through the FOREST AND STREAM; but

we hope again to visit the Boardman for its trout, the Manistee and its feeders for grayling, and to spend at least a part of one summer amid scenes we learned to love so well away back in the 70s.

Anent the landlocked salmon spoken of by Mr. Hough as coming from Burnside Lake, your valued correspondent has been misled by the cook's ignorance.

I have been on Burnside Lake and Little Long Lake twice. During one trip I made the most careful inquiry among men who had caught them, at the hotel in Ely where I was stopping, and among fishermen familiar with the *namaycush* of Lake Superior. These fish are the red-meated, red-spot *namaycush* of the same kind that are found in Lake Superior.

I saw one in the hotel at Ely that was said to have been caught in Burnside Lake. This was a red-spot. A member of the Duluth Fisheries Association, who has caught the *siscowet* and the *namaycush* for years, and who has been on and around Burnside Lake iron prospecting, says these lake salmon are the red-spots, the same as found in Lake Superior.

The landlocked salmon of the Maine lakes are the black-spots, commonly so-called by those who live around those lakes.

About four years ago a gentleman in Duluth, who goes on annual pilgrimages to the Nepigon, became enthusiastic over the report that landlocked salmon were found in Burnside Lake. I obtained a careful description of them, sent them to my friend, J. G. Rich, of Bethel, Me.; he sent me a profile of an 11-pound Maine landlocked salmon caught by his artist friend and sketched in with a crayon. We concluded that this Burnside salmon is a *namaycush*.

W. DAVID TOMLIN.

DULUTH, Minn.

ANGLING NOTES.

IN Dean Sage's superb work on the salmon of the Restigouche, he mentions the fact of salmon taking a small trout which had been hooked by an angler. On at least one occasion this happened to Mr. Sage's son while trout fishing. It is generally supposed that salmon do not feed while on their way up the river to their spawning grounds, but we think this theory will eventually be found to be like the one about woodcock living by suction.

In Great Britain salmon are taken early in the season on the phantom minnow, and in many waters they are taken with worm bait. If they did not want to feed they would hardly take these things. Mr. Sage's idea that the salmon as soon as hooked throw up any undigested food they have in them is undoubtedly correct. Besides which they digest their food very rapidly, and these are probably the reasons that nothing is found in them when they are cleaned.

We presume many anglers have been overtaken by bad weather while off on fishing trips, and if the rainfall was sufficiently heavy to raise the streams to that degree that fishing became impossible, their patience has been put to a severe test.

On such occasions it is hard to fix one's mind on even the most interesting book, and if the angler has been so thoughtless as to have left home without any reading matter, he is indeed to be pitied.

The writer and a companion were caught in just such a fix once upon a time. No fishing, no books; the old papers in the little tavern had been read even to the advertisements. Watching the big drops chase one another down the window panes grew monotonous, and it was only a question of which method of suicide was the least painful, when suddenly my friend was struck by an idea. He found an old pack of cards, or rather, part of a pack, as several were missing; he then took a hat which he placed on the floor 10ft. from his chair, and we proceeded to see who could throw the most cards into the hat. This at first may seem a very childish game, but it gets to be quite exciting and one becomes very expert after a few hours of practice. The exercise is very severe, the continual stooping to pick up the cards brings the muscles of the legs into action not unlike that produced by mountain climbing, and after two or three hours of it we were as tired as if we had waded a rough stream all day.

The water in the Hudson, owing to the immense rain fall, is unusually fresh, and the yellow perch have come down the river in large quantities. At Sing Sing they are selling at three cents each, are in fine condition and just ready to spawn. The fish market displays an excellent variety of fish and they are in fine order; the shad lood as if just out of the rivers near by. The white perch are particularly large and fat. The open season will prevent the usual netting under the ice of big striped bass in the Hudson, and the anglers rejoice thereat.

TROUT LAKE.

ABOUT half a day's paddle from Tower, Minn., lies a beautiful sheet of water bearing the very appropriate name of Trout Lake. Down through a crack in the hills it pours its clear, cold stream into the red waters of Vermillion Lake, lying 20 or 30ft. below. The ground is rocky, but a well-beaten trail leads across the portage, and the carry only proves a relaxation to the tired limbs after long confinement in a canoe. The expanse of water is studded with islands. Now a low point wooded with pine and the beautiful Canadian balsam, and then a bay, whose rocky sides rise sheer up like the walls of a fortress. The water is deep but very clear, and swarms with trout averaging from 16in. to 20in. in length. They may be taken freely in spring and autumn by trolling. But during the warm summer months they retreat to the deepest part of the lake, and can then only be taken with live minnows as bait. I found it necessary to use 100ft. of line, but could easily catch more than we needed at camp. There are also in this lake perch, wall-eyed pike, pickerel and maskalonge. It was a rare thing indeed when we let out the full length of our trolling line without getting a fish. A photograph which I prize highly represents a 34lb. maskalonge, which I captured casting from the shore with a very light trout line. The land all around is high and the climate healthful. It is one of the spots I would choose for an outing.

MAC.

GRAND HAVEN, Mich.

MOUNTAIN MULLET OF VERA CRUZ.

DOUBTLESS some of the readers of FOREST AND STREAM who have enjoyed the interesting account of chitte fishing in Mauritius by Nicholas Pike, published Oct. 10, 1889, will be glad to hear something about a related species which is found in Vera Cruz. Mr. George H. H. Moore, of the U. S. Fish Commission, has received a letter from Señor Chazari, of the City of Mexico, concerning an attempt to obtain individuals of a celebrated fish called the "bobo," for the purpose of propagating them artificially. The "bobo" of Señor Chazari is so nearly like the chitte of Mauritius that Dr. Günther says "it requires a minute examination to distinguish them. The snout of the American species is comparatively shorter, and the spinous dorsal fin is situated more forward." We may add that the Central American "bobo," "chitte" or "mountain mullet" is found also in rivers of Guatemala.

The mountain mullet is a game fish of exquisite flavor, and there is some prospect of its introduction into the mountain region of North Carolina, Georgia and Alabama. The genus to which the mountain mullet belongs is peculiar to elevated regions within the tropics, and is indigenous to both hemispheres. The West Indies, Central America, New Zealand, Australia, Celebes, Mauritius and the Comora Islands contain representatives of *Agonostoma*, and all of them are in high favor as food and game fishes.

The "bobo" of Vera Cruz, according to Señor Chazari, is peculiar to a few rivers of that State. His expedition was fruitless because of an epidemic among the fishes on the coast of the Gulf of Mexico at the time when the mullet was descending to the sea. All of his collection died, and his efforts at artificial propagation had to be postponed.

The mountain mullet delights in the mountain rapids where the water is clear and cool, and yet it migrates seaward at a certain time of the year. Anglers need not be reminded of the superior claims of the mullet as a food fish. The mountain mullet is even more praised, and it has the additional renown of a game species, requiring the perfection of patience and skill on the part of the angler. We shall look forward with a great deal of pleasure to its introduction into the United States, and hope it will speedily become "a distinguished immigrant."

CHICAGO AND THE WEST.

MR. J. M. OLIVER, a very well-known attorney of this city, and a member of Swan Lake Club, tells me that he and his friends had a delightful trip of a month in Puget Sound country last fall. They had magnificent salmon fishing. Mr. Oliver took eighteen salmon in one day, using his regular Restigouche salmon rod and outfit, and substituting a small spoon for the fly. The latter they found quite useless in the water fished, although it was tried patiently. The water was very deep, 200ft. in most places, and often the fish would start straight for the bottom, sometimes at such speed as fairly to run ahead of the reel, and buckle the tip clear down into the water before the line started off fast enough. The salmon taken were of the so-called "silver-side" variety, and they afforded glorious sport. This party thoroughly explored the greater part of the sound country, and had a magnificent trip.

Mr. John A. Cooper, another Chicago attorney, was with a party last summer who found some new mascalonge country which they wish kept a profound secret. I wouldn't give it away, but it was somewhere up Manitowish River way, in Wisconsin. They had great sport.

Mr. A. S. Trude is another well known Chicago lawyer. Mr. Trude's trip last summer led him along the water trail above Grand St. Germain, clear up to Portage Lake. There was fine bass fishing, and on some of the lakes the bass were so thick you couldn't have pounded another one in with a hammer, Mr. Trude says. When I sit down and think of the bass and mascalonge fishing I am going to have next season, I almost cry for the people who can't go too. There will be new mascalonge country opened next spring.

E. HOUGH.

FLY-FISHERMEN'S CLUB OF INDIANAPOLIS.—Indianapolis, Ind., Jan. 15.—On the 10th inst. the Fly-Fishermen's Club of Indianapolis elected the following officers for the current year: Pres., Gen. Geo. F. McGinnis; Vice-Pres., M. D. Butler; Sec., Jesse H. Blair; Treas. and Librarian, W. A. Rhodes; Poet and Historian, Igratius Brown. The club is prospering; enters the third year of its existence with a membership of about fifty enthusiastic fly-fishermen. We meet twice a month, and the interest is increasing. Mr. Alex. C. Jameson is the pioneer fly-fisherman of this city, having begun in 1869. Prof. Ora Pierson, now of Battle Creek, Mich., soon joined him; slowly the number increased, until now a man is considered a "back number" who does not use the fly.

NATIONAL ROD AND REEL ASSOCIATION.—New York, Jan. 18.—The meeting of the National Rod and Reel Association called for this day was held as announced, and the attendance being limited, on motion the meeting adjourned *sine die*.—G. POEY, Sec'y.

THE annual dinner of the Megantic Fish and Game Club will be held at Young's Hotel, Boston, Jan. 28. The committee of arrangements propose to make the occasion notable for the list of invited guests.

SEAL AT GLOUCESTER, MASS.—A large seal was captured in the harbor at Gloucester, Mass., Jan. 12. The harbor seal (*Phoca vitulina*) has been reported abundant this winter on the New England coast.

PICKEREL IN MAINE.—Pickerel are abundant now in all parts of Maine. A great many are shipped to Boston from this State.

CENTRAL LAKE, Mich.—Herring appeared in the river Nov. 3 last season.—KELPIE.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—Adv.

SKINES, Nets of every description. American Net & Twine Co., Mrs. B. Commercial st. Boston, or 199 Fulton st., N. Y.—Adv.

Fishculture.

FISH COMMISSIONERS OF THE UNITED STATES AND CANADA.

(No information from those marked by an *.)

UNITED STATES—

(Office, Sixth and B streets, S. W., Washington, D. C.)
Col. Marshall MacDonald, Commissioner.
J. W. Collins, in charge, Division of Fisheries.
Richard Rathbun, in charge, Division of Scientific Inquiry.

T. H. Bean, Ichthyologist and Editor.
J. J. O'Connor, Chief Clerk.
John Gay, Inspector of Stations.
George H. H. Moore, Chief of Distribution.

ALABAMA—

Col. D. R. Hundley, Madison.
Hon. Chas. F. G. Doxter, Prattville.

ARIZONA—

T. W. Otis, Chairman, Prescott.
John Howard, Prescott.
C. W. Stearns, Phenix.

*ARKANSAS—

H. H. Rottaken, President, Little Rock.
W. B. Worthen, Secretary, Little Rock.
J. W. Calloway, Little Rock.

CALIFORNIA—

Joseph Routier, President, Sacramento.
C. M. Josslyn, San Francisco.
J. Downey Harvey, San Francisco.

COLORADO—

Gordon Land, Denver.

CONNECTICUT—

Dr. Wm. M. Hudson, Chairman, Hartford.
James A. Bill, Lyme.
Robert B. Chalker, Saybrook.
The Shellfish Commissioners are: Dr. Wm. M. Hudson, James A. Bill, until Aug. 26, 1890; George C. Waldo, Bridgeport; Bryant A. Treat, Wallingford, from Aug. 26, 1890.

DELAWARE—

Charles H. Shubert, Odessa.
Dr. E. G. Shortlidge, Assistant and Superintendent of Hatcheries, Wilmington.

*GEORGIA—

J. H. Henderson, Atlanta.
Dr. H. H. Cary, Superintendent, La Grange.

ILLINOIS—

N. K. Fairbank, President, Chicago.
Dr. S. P. Bartlett, Secretary, Quincy.
George Breuning, Centralia.

INDIANA—

Col. W. T. Dennis, Richmond.

*IOWA—

O. D. Carlton, Spirit Lake.
Ele Bjorensen, Superintendent.

KANSAS—

John M. Brumbaugh, Concordia.

KENTUCKY—

This State is said to have no Commission now.

MAINE—

E. M. Stilwell, Bangor.
Henry O. Stanley, Dixfield.
B. W. Counce, Thomaston, Sea and Shore Fisheries.

*MARYLAND—

Dr. E. W. Humphries, Salisbury.
G. W. Delawder, Oakland.

MASSACHUSETTS—

E. A. Brackett, Winchester.
E. H. Lathrop, Springfield.

MICHIGAN—

Herschel Whitaker, President, Detroit.
Dr. J. C. Parker, Grand Rapids.
Hoyt Post, Detroit.
Wm. A. Butler, Jr., Treasurer, Detroit.
Geo. D. Mussey, Secretary, Detroit.
Walter D. Marks, Superintendent, Paris.

MINNESOTA—

Robt. Ormsby Sweeny, President, St. Paul.
Niles Carpenter, Rushford.
William Bird, Fairmont.
S. S. Watkins, Superintendent of Hatchery, St. Paul.

MISSOURI—

H. M. Garlich, Chairman, St. Joseph.
J. L. Smith, Jefferson City.
H. C. West, St. Louis.
A. P. Campbell, Secretary, St. Joseph.
Philip Kopplin, Jr., St. Louis, } Superintendents.
Elias Cottrill, St. Joseph, }

*NEBRASKA—

W. L. May, President, Fremont.
— McBride, Lincoln.
B. E. B. Kennedy, Omaha.
M. E. O'Brien, Superintendent, South Bend.

NEVADA—

Geo. T. Mills, Carson City.

NEW HAMPSHIRE—

Geo. W. Riddle, Manchester.
Elliott B. Hodge, Plymouth.
John H. Kimball, Marlborough.

*NEW JERSEY—

Wm. Wright, Newark.
Frank M. Ward, Newton.
J. R. Elkinton, Pennsgrove.

NEW YORK—

Eugene G. Blackford, President, 80 Fulton Market, New York.
Richard U. Sherman, New Hartford.
Wm. H. Bowman, Rochester.
Henry Burden, Troy.
A. S. Joline, Tottenville.
Superintendents: Fred Mather, Cold Spring Harbor; Monroe A. Green, Caledonia; James H. Marks, Adirondack; E. F. Boehm, Sacandaga; E. L. Marks, Fulton Chain.
Clerk and in charge Engineer's Department: Edward P. Doyle, Room 56, Fulton & Market Bank Building, New York.
Shellfish Commissioner: Eugene G. Blackford.
State Oyster Protector: Joseph W. Mersereau, 80 Fulton Market, New York.
Chief Game and Fish Protector: Fredrick P. Drew, Albany.

NORTH CAROLINA—

No Commission.

OHIO—

C. V. Osborn, President, Dayton.
A. C. Williams, Secretary, Chagrin Falls.
John H. Law, Cincinnati.
John Hofer, Bellaire.
E. D. Potter, Toledo.
L. K. Buttain, Chief Warden, Dayton.
Thos. D. McNitt, Superintendent, Sandusky.

OREGON—

F. C. Reed, President, Clackamas.
E. P. Thompson, Portland.
R. C. Campbell, Ranier.

PENNSYLVANIA—

Henry C. Ford, President, Philadelphia.
James V. Long, Corresponding Secretary, Pittsburg.
Henry C. Demuth, Secretary, Lancaster.

Walter L. Powell, Treasurer, Harrisburg.
S. B. Stilwell, Scranton.

L. Streuber, Erie.
Superintendents: J. P. Creveling, Allentown; William Buller, Corry.

RHODE ISLAND—

Henry T. Root, Providence.
William P. Morton, Johnston.
J. M. K. Southwick, Newport.

*SOUTH CAROLINA—

Hon. A. P. Butler, Columbia.

*TENNESSEE—

W. W. McDowell, Memphis.
H. H. Sneed, Chattanooga.
Edward D. Hicks, Nashville.

UTAH—

A. Milton Musser, P. O. Box B, Salt Lake City.

VERMONT—

Hon. Herbert Brainerd, St. Albans.
F. H. Atherton, Waterbury.

VIRGINIA—

Dr. John T. Wilkins, Jr., Bridgetown.

*WEST VIRGINIA—

C. S. White, President, Romney.
F. J. Baxter, Treasurer, Sutton.
James H. Miller, Secretary, Hinton.

WISCONSIN—

The Governor (*ex-officio*).
Philo Dunning, President, Madison.
C. L. Valentine, Secretary and Treasurer, Janesville.
Mark Douglas, Melrose.
A. V. H. Carpenter, Milwaukee.
Calvert Spensley, Mineral Point.
E. S. Miner, Sturgeon Bay.
James Nevin, Superintendent, Madison.

WYOMING TERRITORY—

Louis Miller, Laramie.

DOMINION OF CANADA—

Hon. John Tilton, Deputy Minister of Fisheries, Ottawa.
Samuel Wilmot, Superintendent of Fishculture, Ottawa.

Inspectors of Fisheries: J. R. Kinney, Yarmouth, N. S.; R. C. Hockin, Pictou, N. S.; A. C. Bertram, North Sydney, N. S.; J. H. Pratt, St. Andrews, N. B.; R. C. Chapman, Moncton, N. B.; D. Morrow, Oromocto, N. B.; E. Hackett, Tignish, P. E. I.; W. Wakeham, Gaspé Basin, P. Q.; Thos. Mowat, New Westminster, B. C.; Alex McQueen, Winnipeg, Manitoba; F. C. Gilchrist, Fort Qu'Appelle, N. W. T.).

(Officers in Charge of Fish Breeding Establishments: Chas. Wilmot, Newcastle, Ont.; Wm. Parker, Sandwich, Ont.; L. N. Catellier, Tadoussac, Quebec; H. Davis, *pro tem*, Gaspé, Quebec; A. H. Moore, Magog, Quebec; Alex Mowat, Restigouche, Quebec; A. B. Wilmot, Bedford, N. S.; C. A. Farquharson, Sydney, N. S.; Isaac Sheasgreen, Miramichi, N. B.; Chas. McClusky, Grand Falls, N. B.; Thos. Mowat, New Westminster, B. C.)

WORK OF THE COMMISSIONS.

ALABAMA is doing nothing now in aid of fishculture or protection. All that has been accomplished in the State was brought about by private subscription, aided to some extent by the U. S. Government. Only one report has been made.—D. R. H.

Arizona gives her Fish Commission charge of game protection also. The new Commission was organized in October and will make no report until the end of the present year.—T. W. O.

California is devoted at present principally to efforts at restocking the rivers with salmon and the large lakes with trout. The Commission expects during the present season to hatch out about 3,000,000 salmon at the State hatchery at Sisson, and also about 2,000,000 trout for distribution in the branches of the Sacramento River and streams in the vicinity of San Francisco. During the past season a large number of black bass have been planted at various places in the State, but more particularly in Clear Lake, in Lake county, a splendid body of water, peculiarly adapted to the propagation of this fish. A hatchery was built at Tahoe City, on Lake Tahoe, the past season, from which that lake as well as Independence and Webber lakes will be restocked with trout; 2,000,000 trout have already been distributed from this hatchery.—J. R.

Colorado is endeavoring to stock the many mountain lakes that now contain no food fish. These bodies of water are well adapted to the growth of both the native trout and the Eastern brook trout. The latter (*S. fontinalis*) has shown a wonderful growth in these places, exceeding 1½ lbs. in twelve months from the date of introduction. In a trifle over two years some individuals of this species have exceeded 3 lbs. in weight. This is readily accounted for by the fact that such waters have a superabundance of aquatic insect life and also contain a species of lizard, or water dog, as the people here term them. These lizards are harmless and are found in all our mountain lakes; they have their gills on the outside. The larger trout prey upon them. The water in these elevated lakes, many of which are above timber-line, 11,000 to 12,000 ft. above sea-level, is clear, cold and very deep. Our native trout also do well when once introduced into such waters. I notice one error that has been published by some of our papers and that is in regard to the yellow fin trout of the Twin Lakes, wherein it is stated that they are found only in that particular body of water. I have myself taken and spawned them in the waters of Chalk Creek and, in fact, all the tributaries of the Upper Arkansas, though I have not taken them in any other watershed. I mention this merely to show that they do not inhabit solely a lake or a single tributary of a stream, but are in all of the headwaters of the same stream, as it is only natural that they should be.—G. L.

Connecticut has divorced the Fish Commission from the Shellfish Commission, and the two are now separate and distinct. The Legislature makes a specific appropriation each year for shad hatching and for the purchase and distribution of young trout, and the money cannot be used for any other purpose. The State is famous for its trout streams, and many of the lakes are well stocked with black bass. The country people find much pleasure in capturing the pickerel, which abounds in the rivers and ponds.—W. M. H.

Illinois is engaged chiefly in rescuing and distributing the indigenous fishes from the holes and sloughs along the Mississippi and Illinois rivers. Last season's work was the most successful in the history of the Commission. Fish were obtained mostly from the Illinois River valley. As the Mississippi did not overflow its banks the fish all sought the Illinois River, which was very high during the spawning season. Angling last season was better throughout the State than for years. On Illinois River at Copperas Creek, Spring Lake, at and near Havana, Pekin, Beardstown and Mendota I think that the catch of bass and wall-eyed pike averaged better than at the more remote and northern resorts. Fox Lake was better than I have ever known it. One catch was recorded as having been made by Charles F. Hills, of Chicago, of twelve small-mouthed black bass in one morning, averaging nearly 5 lbs., while good strings for everybody were general. I regard Illinois waters to-day the peer of any State in the Union for bass fishing. The growth of interest in the protection of fish is evidenced by the large increase in fishing clubs in this State.—S. P. B.

Indiana appropriates only \$1,000 for fishcultural operations. Up to the present time carp have monopolized the attention of the Commissioners. The Commissioner now in office has made the preservation of indigenous fishes one of his cardinal duties and also the construction of fishways at the dams obstructing the streams. About fifty fishways have been established. Indiana has the finest and most extensive bass fishing of any State in the Union. Angola, Rome City, Cedar Beach, Warsaw, Maxinkuckee and English Lake are all popular summer resorts where bass, pike, croppies and bluegills abound. A general meeting of the friends of fish and game protection was held at the rooms of the State Board of Agriculture, Dec. 19, in the Capital at Indianapolis, the object being to devise ways and means for the better protection of fish and game.—W. T. D.

Maine trout fishing at Rangeley is well cared for, and the breeding of the fish there is most satisfactory. The landlocked salmon plant is a success there, and adds much to the sport. Landlocked salmon are established also at Webb's Pond, in Weld, and in many other lakes in the State. Fish and fishculture with us are a success, and venison is eminently appreciated. We believe we have the best and most extensive trout fishing of any State in the Union. Moosehead needs no mention. Arrangements are being made there, as well as at Rangeley, for yearly stocking by establishing hatcheries and furnishing them with spawn taken from fish of the local waters. We need only intelligent legislation and means for enforcing the laws, to provide the State with a surer and better revenue than from gold mines, for it is a revenue divided among every class and to every industry, as it is sought and earned.—E. M. S.

Massachusetts has felt the remorseless grip of the petty politicians, and lost one of her best Commissioners by resignation.

Michigan has enlarged its whitefish hatchery at Detroit to a capacity of 160,000,000 eggs, and expects to handle that number this winter. The Commission is taking also a greater quantity of brook trout eggs than in former years. G. D. M.

Nevada, during the last season, hatched and distributed 750,000 Eastern brook trout, and 50,000 Mackinaw trout. For this season we have just finished a successful take from the trout in a private lake in the State, about 800,000 ova of the Eastern brook trout, and have moved them from the lake to the hatchery, about fifteen miles distant, in cans by buckboard over a mountain road with very small loss. The greater portion of this hatch will be placed in the streams of eastern Nevada, which have been somewhat neglected in the past years. I also anticipate a shipment of 50,000 landlocked salmon, for which I applied to Hon. Marshall McDonald some months ago, which will be placed in Lake Tahoe, a paradise for anglers.

Last season we were troubled somewhat in the State Hatchery with what the late Seth Green called the dropsy or blue swelling. I considered this to be caused by the crowded troughs and roiled water. This season the fault has been remedied and I expect no further trouble from this source. In October I placed in the Truckee River, below Reno, one of Col. McDonald's fishways. Owing to a delay in receiving the plans and the rains coming on, water rising, etc., I was unable to place more than one; but next summer I shall place two more in the same stream.

In the Truckee the Piute Indians, in years past, were in the habit of spearing and selling to dealers and others large numbers of lake trout that were ascending the stream on their way to the spawning beds. Last year this was comparatively stopped by warning the Indians, telling them that it was illegal, and by four arrests and convictions. I was assisted in this matter by District Attorney Allen, of Washoe, and by Constable Upson of the same place. This year the citizens are taking an active interest in the preservation of the trout, and I hope to see illegal fishing cease entirely.

The rainbow trout (*Salmo irideus*) is a native of our streams and grows to a large size. I have frequently caught individuals weighing from 3½ to 4½ lbs., and other anglers have taken still larger ones. It is very gamy, and excellent tackle is required to stand its wild rushes. It is considered the choice table fish, outranking the Eastern transplanted and the lake trout. I should like to propagate it, believing it to be the best fish for these waters; but owing to its spawning in the spring months, when the snows are melting and the waters are high, it would not be feasible.

I should like to start a controversy as to the best time to transplant the fry, the best appliances, cans, etc., to use in transportation, and all other questions pertaining to the subject.

I have been a constant reader of FOREST AND STREAM for the past seven years, and shall be pleased at any time to give it a few notes on Nevada fishing and the prospects of the Nevada Commission.—G. T. M.

New York will operate a hatchery on Chautauqua Lake for muskellunge, and M. B. Hill's hatchery on the St. Lawrence River for whitefish and siscowets. The Commission proposes to hatch more fish than ever before and distribute them in a better manner. Examination of all the streams of the State is being made with this end in view.—E. P. D.

North Carolina appointed commissioners in 1887 to determine and locate the "natural oyster beds" of the State. All the bottoms of the sounds embraced in the act, and not included in the limits of the "natural oyster beds" or "public grounds," as they were called in the act, were made subject to the entry by residents of North Carolina. Non-residents were likewise permitted to enter lands lying more than two miles from the shore. After the Commissioners had performed the duty of locating the public grounds the office was abolished, and there are now no shellfish commissioners in North Carolina.—W. J. G.

Ohio has lately purchased land at Chagrin Falls to establish large hatching ponds for breeding fishes to stock the inland waters of the State. Among the fishes to be reared are small-mouthed black bass, croppie, marbled catfish and muskellunge. Small-mouthed black bass can be successfully propagated in ponds, as we have demonstrated here during the past two or three years, and we shall now continue it on a larger scale. There are two branches of the Chagrin River, on both of which are high falls, above which there never was a small-mouthed black bass until put there about five years ago by Mr. S. J. Stranahan and the writer. In one branch we placed young bass from Lake Erie and have never seen one since. They undoubtedly went for the lake as fast as they could get there. In the other branch we placed bass taken from a stream, and last June the writer counted seventeen nests on one side of the stream in not over eight rods of the stream. In one pool have been caught last fall over 300 of them with hook and line, weighing from ¾ to 1½ lbs. each. We have 125 of the largest of these ready to place in our new hatching ponds.—A. C. W.

Pennsylvania united with the New York Commission in establishing three Rogers' fishways in the dam at Lackawaxen, near the headwaters of the Delaware River, the Legislature of each of the States appropriating \$1,500 for the purpose. The eastern station at Allentown has been enlarged at an expense of \$2,500, and is now one of the most approved and best equipped establishments of its kind. The distribution of several millions of wall-eyed pike by means of one of the cars of the U. S. Fish Commission in the important rivers of the State has been recorded in FOREST AND STREAM. The western station, at Corry, has obtained a good stock of eggs of brook trout, lake trout and hybrids, and so has the station at Allentown. The Loch Leven trout eggs, obtained from the U. S. Fish Commission have been successfully hatched and the fry planted in cold mountain waters.

Several thousand carp have been distributed among the farmers. 15,000,000 whitefish eggs will be given to the State by the general government, to be hatched at Erie for Lake Erie. The Erie station will hatch wall-eyed pike in large numbers. We are about to dispose of our entire stock of rainbow trout, and the hatching of this fish at our stations will be discontinued.—J. V. L.

Rhode Island enjoyed very good trout fishing the past season. The trout were of good size for this State and in goodly numbers. The favorable condition of our streams for the past two seasons—high water during the summer and fall and mild winter and spring—has benefited the supply of trout. We have usually put trout into the various streams in the fry state, but now we are about to try an experiment and put in trout 8 or 10 mos. old. Of course, this requires more care in rearing and transportation, but we think more speedy results may be obtained in this way.—W. P. M.

Vermont intends to plant 300,000 speckled trout, 50,000 rainbow trout, 50,000 landlocked salmon and 50,000 lake trout, besides the usual number of black bass and pike. Protective laws are becoming very popular there, and no trouble is experienced in enforcing them. The people are beginning to see the direct pecuniary benefit which they derive from anglers visiting the State during the summer and leaving their money there.

Virginia is making preparations to hatch eggs of striped bass, shad, sea trout (weakfish), porgy (or moonfish) and bonita (*Elaeidae canadus*), all of which have been manipulated more or less successfully in years past. We have established the fact that the spawning season of the Spanish mackerel is in the month of June, and not, as has been supposed heretofore, extending over the months of June, July, August, and even, according to some, as late as Sept. 15. It is true we find gravid Spanish mackerel during the whole of the period above mentioned; but they occur sporadically and not in numbers sufficient to justify any attempt at propagation after July 10. The abortive efforts in hatching Spanish mackerel formerly were due, I think, to beginning too late in the season.

The spawning season of the shad for our latitude is the month of May; but we occasionally find ripe shad as late as August, and I found one this year in September.

From June 1 to July 10, 1889, we secured over 12,000,000 eggs of the Spanish mackerel alone, in fact, from the middle to the last of June they were so abundant that we could not handle them all. Of other fish we were fortunate in securing an abundance of ova and had satisfactory results in hatching them.

If we can secure favorable legislation, we propose, in the near future, to locate a hatchery at some eligible point on the lower Chesapeake Bay for the propagation of all the food fishes that spawn in our waters, and their name legion.

The products of our fisheries, excepting the shad, which have markedly increased during the last few years, is becoming annually less, and the project of increasing them, or at least retarding their decline, is well worth a trial.—J. T. W.

Wisconsin adopted a different system for conducting the work with lake trout. Men were placed on the fishing tugs at the various fishing grounds to take the eggs, impregnate and put them on their natural spawning grounds. Better results are expected from this process than from hatching and planting the fry. The eggs thus planted last fall will reach many millions. The fishermen seem to appreciate our work and are co-operating with us. Nov. 21 we had 1,100,000 brook trout eggs in the hatching troughs, and we anticipate the largest distribution this season of brook and California trout on record. By reports from different parts of our State angling has been better than for years past. California (rainbow) trout have been taken in our northern streams weighing from 5 to 8 lbs., and they seem to be quite numerous. The work of the Commission is steadily on the increase, and they have the encouragement and good will of the people of the entire State.—J. N.

Wyoming Territory has accomplished excellent results in rearing trout. The Commissioner recently wrote to Mr. Geo. H. H. Moore, of the U. S. Fish Commission, a letter from which we quote by permission: "We have had the greatest success in all our plantings. What do you think of fry planted in the spring of 1885 in Little Laramie River? I have seen eleven trout caught this fall which weighed when dressed 30 lbs. This is one of the streams that never before contained any trout. One California trout hatched from eggs received from the U. S. Fish Commission in the spring of 1885 was found dead in the river; it weighed 4½ lbs. and measured 19½ in. in length. I found him myself and it is, therefore, no fish story. We have just completed our new hatchery and have taken to date 800,000 brook trout eggs (S. fontinalis).

Canada contemplates an extension of the work of fish breeding, and for this end Mr. Wilmot has removed to Ottawa. The law regarding the deposit of sawdust in streams is being vigorously enforced, the Department believing it to be very destructive to fish life.

RAINBOW TROUT IN MEXICO.—Señor E. Chazari, of the City of Mexico, obtained some eggs of the rainbow trout (*Salmo irideus*) and reared the young in a pond. He recently stated that the development of this trout in Mexico is extraordinary. An example captured by chance in the river, after its escape from the fish pond, weighed not less than 2½ lbs. He expects by the end of 1890 to have some eggs from this stock for artificial fecundation.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James W. Miller, Superintendent.
Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart, Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.
March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.
Feb. 17, 1890.—Meet of the Brunswick Fur Club, New Meadows, Me.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

A. K. C. BENCH SHOW RULES.

FOLLOWING are the bench show rules as adopted by the American Kennel Club Dec. 19, 1889. To take effect Feb. 1, 1890:

I. The word dog, where used in these rules, includes both sexes.

II. Every dog entered at a show held under these rules must be registered with the secretary of the American Kennel Club for publication in the *Kennel Gazette* (official blanks will be furnished on application to any show secretary or by the American Kennel Club, 44 Broadway, N. Y.). The cost of such registration is 25 cents, and the penalty for non-registration is disqualification and the forfeiture of entry fee and any prizes won at a show.

III. Every dog entered at any show held under these rules must be the *bona fide* property of the person making such entry on the day of closing the entries. The entry must clearly identify the dog to be exhibited by name, and, if known, its date of birth, name of its sire and dam, and the name of its breeder; should any of these particulars be unknown to the exhibitor it must be so stated on the entry blank and inserted in the catalogue.

No club shall receive an entry not marked registered unless the same shall be accompanied by a fee of 25 cents under a penalty of \$5 for each offense, which fine shall be collected by and paid to the secretary-treasurer of the American Kennel Club. Any club in arrears for this, or any other amount, for a period of thirty days, shall be at once suspended. Failure to pay such penalty within sixty days, the club may be expelled.

Dogs already registered in the American Kennel Club Stud Book shall be exempt from the registration required in Rule No. 2, but in all such cases the Stud Book number of the dog must be given with the entry, to the secretary of the show, and must by him be published in the catalogue. Registry in the Stud Book can be made only under the following conditions:

1st. Where sire and dam are already registered, or are directly descended from the dogs already registered in said book.

2d. Where dogs possess an authenticated pedigree extending back three generations.

3d. Where dogs (not eligible under the provisions as above required) have won not less than two first prizes in the regular classes at any show, or have been placed at any field trial, recognized by the American Kennel Club. Novice, miscellaneous and selling classes not included.

4th. After January 1, 1890, all dogs winning a prize at any American Kennel Club show, or field trial, may be registered in the Stud Book without charge, provided they are eligible under above conditions.

IV. If the name of a dog which has won a prize has been changed, the old name must be given on the entry blank and inserted in the catalogue, together with a list of all prizes won by the dog, until such time as it wins a prize under its new name.

V. If a dog has been entered without being registered and identified, as directed in rules 2, 3 and 4, it shall be disqualified and forfeit any prize which may have been awarded to it.

VI. The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

VII. A puppy is eligible for competition in the open class as well as the puppy class, but a separate entry must be made for each class.

VIII. The authorities of any show may decline any entries they see fit, or may remove any dog on account of disease, vice or other cause.

IX. A duly qualified veterinary surgeon must be appointed at each show held under these rules. Each dog received at a show must be passed upon by him before being benched. A duly qualified veterinary surgeon is one who has been properly educated in some reputable college or university entitled to confer the degree of V. S., and has received a diploma from the same; or one who without ever having held a diploma, has had at least five years' practical experience to fit him for the practice of his profession.

Any club neglecting to enforce this rule shall, upon satisfactory evidence, be fined not less than \$5, nor more than \$50, as may appear proper to the executive committee of the American Kennel Club.

X. A castrated dog or spayed bitch shall be disqualified, and forfeit any prize which may have been awarded it.

XI. Total blindness, deafness or lameness shall absolutely disqualify. If the judge or veterinary surgeon is satisfied that the deafness or lameness be temporary, the dog shall be allowed to compete.

XII. A dog suffering from mange or any contagious disease shall be disqualified, and forfeit any prize which may have been awarded to it, and shall be removed at once from the show building. The regularly appointed veterinary surgeon shall alone decide as to the mange or contagious disease, and his decision must be given in writing.

XIII. A judge may disqualify a dog which in his opinion has been improperly tampered with, subject to the decision of the veterinary surgeon. Should the judge's disqualification not be sustained, the class must immediately be re-judged.

XIV. Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judge's decision will be final in all cases affecting the merits of the dogs, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

XV. Should an appointed judge be unable to fulfill his engagement the committee shall have the right to fill the vacancy in such manner as they see fit. All the separate classes of any one breed of dogs must, however, be adjudicated upon by the same judge, or judges acting in conjunction.

XVI. In any class where there is a limit of weight, the person in charge of a dog entered in such a class may claim of the show committee the right, at any time before the judging, to have the dog weighed and the weight of the dog shall be registered and hold good at the time of judging.

XVII. Bench show committees may provide for the following classes: Miscellaneous classes, selling classes, novice classes, puppy classes, open classes, challenge classes.

1st. The miscellaneous class shall comprise all pure breeds of dogs, for which no regular class has been provided in the premium list.

2d. The selling class shall be for dogs to be sold for a maximum price, to be stated in the premium list. An exhibitor may catalogue his dog in this class for any sum less than the maximum.

3d. The novice class shall be for a recognized breed for which a regular class has been provided, and for competition in which a dog shall not have won a prize at any American Kennel Club show, or which has not won a prize in a recognized show held in England or Canada.

4th. The puppy class shall be for dogs of twelve months and under in age, excepting for the following breeds, which may be extended to eighteen months of age, at the option of the Bench Show Committee: St. Bernards, mastiffs, deerhounds, Irish setters, great Danes.

5th. The open class shall be for dogs of any age which have not already qualified for the challenge class, and for which no challenge class has been provided.

6th. The challenge class shall be for all dogs having won

four first prizes in the open classes. A dog having won three first prizes in this class shall have the privilege of the title of champion, without further competition.

7th. All dogs qualified to compete in a champion class previous to Jan. 1, 1890, shall compete in challenge class. The winnings referred to in these rules apply only to shows recognized by the American Kennel Club, a list of which, together with these rules, must be published in the premium list and catalogue of each show.

XVIII. In estimating the number of prizes a dog has won with reference to whether it should compete in a challenge class or not, the number of prizes won shall be calculated up to 12 P. M. of the day preceding the closing of the entries of the show.

XIX. In entering a dog in a challenge class it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle him to compete in such classes, as required by these rules, and this record must be given in the catalogue.

XX. If a first prize winner is disqualified, the next dog in order of merit as placed by the judge shall be considered first, and the win shall count in every respect the same as if it had been the original award. An equal first prize shall be counted as a win for both dogs.

XXI. No dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes."

XXII. No special prizes can be accepted or offered by a show committee after the regular judging has commenced.

XXIII. The age of a dog shall be calculated up to and inclusive of the day preceding the show; for instance, a dog whelped April 30 shall not be eligible on May 1 of the following year to compete in a class for dogs under 12 months of age.

XXIV. An objection to a dog may be made by any exhibitor, or any member of a club, a member of this association, but must be in writing, and be lodged with the secretary within seven days of the last day of the show. No objection shall be entertained unless accompanied by a deposit of \$5, except in case of objection lodged in the name of the American Kennel Club, which may be made at any time.

The show committee shall at once meet and decide upon any objection lodged during the show, and from their decision an appeal may at once be taken to the local delegate, or to any member of the executive committee of the American Kennel Club, who may be called upon by the show committee, provided any such member is not on the show committee. If the second decision is adverse to the appellant, the deposit of \$5 is thereby forfeited to the show committee.

Immediately upon the lodging of a protest with the secretary during a show it shall be his duty to request the judge to select reserve numbers, if he has not already done so, in order that any prize or prizes which would be affected by the disqualification of the protested dog may not fail of being awarded.

If the objection is lodged subsequent to the show, it must be decided by the committee within twenty days from its receipt. Five days' notice of the date and place of meeting for that purpose must be given to all parties in interest.

From any such decision or decisions appeal may be taken to the full executive committee of the American Kennel Club, but such appeal must be forwarded to the secretary within seven days of the decision being rendered, together with a deposit of \$10. If the decision appealed from is sustained the \$10 deposit shall be forfeited to the American Kennel Club, but if the decision is reversed then all deposits must be returned to the applicant.

XXV. Any person who has been guilty of misconduct of any kind in connection with dogs, dog shows or field trials may be suspended by the president of the American Kennel Club, or, in his absence, by the vice-president, or by the committee of the show or trial where such offense was committed. Notice of such suspension by any committee must be forwarded within twenty-four hours to the secretary of the American Kennel Club. The secretary of the American Kennel Club shall at once notify the president, or in his absence the vice-president, who shall investigate the case, and, if he sees fit, suspend the penalty until the next meeting of the executive committee. The executive committee must, in every case of suspension, at their first meeting thereafter either remove the same or impose a penalty of disqualification for such a period as they may decide upon.

The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act. The committee of the American Kennel Club are, however, empowered to use such discretion in the enforcement of this penalty as shall protect innocent parties.

Any person may prefer charges against any other person before the American Kennel Club, provided said charges be in writing, and they shall be heard at the first opportunity by the advisory committee, from whose decision, however, an appeal may be taken to the full executive committee.

No person shall, however, be disqualified or debarred without due notice and formal charges and specifications, and an opportunity given of being heard in his own defense, and the American Kennel Club will not recognize any *ex-parte* proceedings on the part of any club.

XXVI. No person under suspension or sentence of disqualification can exhibit or take a prize, or act as agent for any person, at any show held by a member of the American Kennel Club.

No person that has been expelled from a club, a member of the American Kennel Club, can be employed in any official capacity at any show held under these rules, under penalty of suspension of the club so employing him.

XXVII. Entries made in the name of a kennel must be accompanied by the name of the actual proprietor or proprietors, but not necessarily for publication. The partners in a kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name.

XXVIII. The secretary of every show must forward to the secretary of the American Kennel Club a copy of the premium list of the proposed show as soon as sent to exhibitors, which must contain a list of officials under whose management the show is to be held. The date of closing of entries shall not be changed or extended beyond the original date as advertised in the premium list. Any club receiving any entries after the original published date of closing shall be expelled.

Each of these officials, except paid employees, shall be held personally responsible for the payment of all prizes within sixty days of the last day of the show. The secretary of the American Kennel Club shall, upon evidence being produced that any such prize or prizes remain unpaid, issue notice of suspension of each and every official, and otherwise proceed as provided for in Rule 25. The secretary of every show must also forward to the secretary of the American Kennel Club a duly certified copy of the judges' awards within five days of the closing of each show.

And no club shall insist on a date conflicting with one already claimed, under penalty of suspension.

All dates claimed for shows and field trials must be filed with the secretary of the American Kennel Club, and by him published in the *American Kennel Gazette*.

XXIX. The person presenting the identification ticket shall be recognized as the agent of the owner in the latter's absence, and his receipt for prize money shall be binding on the owner, unless notice to the contrary is indorsed on the identification ticket.

XXX. All prizes offered by the club or committee in charge

of a show must be paid in accordance with the description given of them in the premium list. Prizes of silver or gold must be of the purity of United States coin.

XXXI. Only winnings under American Kennel Club rules shall be permitted in catalogues, but it is optional with bench show committees to publish any wins, other than challenge classes, etc., as provided for in Rule 19.

Only American Kennel Club Stud Book numbers shall be published in catalogues.

The list of shows recognized by the American Kennel Club must be published in the premium lists. It must be revised to include all shows held by the members of the American Kennel Club, or shows to be given by them, previous to the closing of the entries of the show to be held.

XXXII. Show committees may adopt such regulations to govern their show as they deem fit, providing they do not conflict with any of the foregoing rules.

A. K. C. MEETING.

A SPECIAL meeting of the American Kennel Club was held at 44 Broadway, New York, Jan. 18. The meeting was called to order at 12:15 P. M. The president and vice-president not being present, Mr. James L. Anthony was duly elected chairman. Present: American English Beagle Club, H. F. Schellhass; Collie Club, H. B. Cromwell; Mascoutah Kennel Club, J. Mortimer; Pointer, G. La Rue; Southern Field Trial Club, J. L. Anthony; St. Paul Kennel Club, A. D. Lewis; Toledo Kennel Company, A. P. Vredenburg; Virginia Field Sports Association, J. S. Wise. After roll call President Belmont arrived and occupied the chair.

The president stated that the purpose of this meeting was to adopt the rules as reported by the committee on rules, and as amended by the delegates at a meeting held Dec. 19, 1889. After considerable discussion the following resolutions were offered by Mr. John S. Wise:

Whereas, Questions have arisen as to whether the constitution and rules, as amended and adopted Feb. 23, 1888, Dec. 6, 1888, and Dec. 19, 1889, were legally adopted and ratified.

Resolved, That the American Kennel Club, in general meeting assembled, doth hereby ratify and adopt said constitution and rules, as amended and adopted by the executive committee, as above set forth. Adopted.

And whereas, Under the belief that the constitution and rules, as amended and adopted Dec. 19, 1889, were legally adopted, the executive committee, proceeding under said amended constitution, adopted the rules and amendments as set forth and published in the *American Kennel Gazette* of December, 1889.

Resolved, That all the acts and doings of said executive committee and of all the officers of this club acting under said constitution and rules, as heretofore adopted, be and they are hereby ratified, approved and confirmed. Adopted.

On motion, the meeting adjourned.

A. P. VREDEBURGH, Sec'y.

A. K. C. BY-LAWS.

Editor Forest and Stream:

If Brother Watson will look at the constitution of the A. K. C. which was in force at the time of the meeting of Dec. 6, 1888, and referred to by him in your last issue, he will there see that there was no constitutional provision providing for the amendments to either the by-laws or rules.

The by-laws provided: Sec. 5. That amendments could be made to the by-laws by the executive committee, and there are many decisions of the courts which hold that where there is no constitutional provision prescribing a mode for amendments, that by-laws, or rules, may provide for the amendments of either.

The management of the club, under that constitution, was vested in the executive committee, and, under that constitution, had the power to make, alter or amend the by-laws and rules.

Now, another question arises, which perhaps Brother Watson has never thought of, it is this: That the constitution of the A. K. C. which was in force in December, 1888, is, in truth, and in fact, the only legal constitution of the A. K. C. at the present time, and all of the amendments which have been foisted upon the club, under the management, up to the present time, have been in direct violation of the constitution.

As all of these matters will probably, in a few days, be reviewed by the court, I will refrain from saying any more.

PESHALL.

JERSEY CITY, Jan. 20.

REPORTING DOGS.

Editor Forest and Stream:

"Marstrand's" account of the peculiar work of the "reporter" dog, which I read in your Christmas number, reminds me of the description in Leffingwell's "Wild Fowl Shooting" of a dog which would first locate the grouse, and then drive them over to his master. The nearest approach to this which I recall in my own experience was the peculiar manner in which a dog of my acquaintance, long ago, would work up to a pack of grouse perhaps a quarter of a mile distant from me, on the prairie: come to a point, and after a moment, if tired, look back and seeing me approaching, lie down and wait until I had nearly reached him, when he would rise and resume his point.

I think something very like the "reporter" can be found in the United States.

KELPIE.

JAN. 14.

Editor Forest and Stream:

Setters and pointers are not the only "reporters." I have had a spaniel do the same thing. I had been tramping through heavy marsh land until I felt obliged to rest and sat down on a log. The Clumber that was with me did not lie down, but trotted over to a reed bed which he inspected with his usual caution, then came back to me and sitting down began to paw me, looking in the direction of the reeds. He would then run toward them, looking back for me to follow. I followed and he flushed a fine black duck almost under my feet.

CLUMBER.

NEW YORK DOG SHOW.

NEW YORK, Jan. 20.—*Editor Forest and Stream:* In addition to replies from railway and express companies published last week please state that all railroads belonging to the Trunk Line Association will carry three dogs free when accompanied by their owners or caretakers. This includes the Grand Trunk Railway, West Shore, N. Y. O. & W., Lehigh Valley, Central of N. J., Phila. & Reading, and Chesapeake and Ohio railways. The New York and Boston Lines Passenger Committee will transport dogs free on their all-rail lines at owner's risk.

The American Field pointer cup will be competed for at our show instead of at Chicago as announced last week.

JAMES MORTIMER, Supt.

COLLIE CLUB MEETING.—The annual meeting of the Collie Club will be held at the American Institute Fair Building, New York city, on Wednesday, Feb. 13, 1890, at 2 P. M. Members are earnestly requested to be present, as matters of special importance will come before this meeting. By order of the executive committee, J. D. SHOTWELL, Sec. (Rahway, N. J., Jan. 15).

DOGS OF THE DAY.

AMONG the special prizes offered at the Chicago show is one of a \$25 cup, by Mr. P. D. Armour, for the best Laverack setter. It is a reminder of old times to hear of such a special. The Mastiff Club offers two cups at this show, and I understand those who win medals will have no cause to complain of what they will receive, either as to value or beauty.

Augusta seems to have had quite a nice little show, considering the distance from where the good dogs are owned. From Philadelphia to Augusta the express charge on dogs was \$8 per 100lbs. Ben Lewis was going down if he could have got together sufficient dogs to have made it worth his while, but he could not do so, and when intending exhibitors asked at the express office for the rate for dogs there was an end of all thought of sending dogs so far. I have not seen the Augusta catalogue yet, but the *Chronicle* of that city evidently copies in full from the catalogue in giving the list of prize winners. Accepting this view as correct, there seems to be some work for Mr. Vredenburg in the way of protests. Rosa and Spot Sting, winners in the challenge classes for pointers, do not seem to be eligible for that class. Rosa is credited with winning first, New Haven, 1885; first, Atlanta, 1888; first, Augusta, 1888; first, Columbus, 1888, and first, Augusta, October, 1888; and Spot Sting has won first, Atlanta and Augusta, 1888, and first, Charleston, 1889. In the English setter class we find two Lottas, each winning a prize. Such a thing would not have happened had the A. K. C. accepted my amendment to make all registrations with the A. K. C. secretary and not with the show secretary. I am in hope of yet seeing this course adopted, for it has every reason on its side, while the only objection thereto is that it is a change.

The committee of the Spaniel Club has decided to give the first of its two challenge cups to the cockers. The full text of the conditions of the cup are as follows: "A silver cup valued at \$100, open to members of the club only, for the best spaniel under 23lbs., American bred. To be won four times not necessarily in succession, by the same exhibitor, when it will become his individual property. The cup is to be placed in competition at two shows annually. (No entrance fee)." The cup will be placed in competition this year at New York, and probably at Buffalo. Rochester might do as well as Buffalo, but as Mr. Wilmerding will judge spaniels at the Flower City, it is hardly fair to ask him to stand down with champion Doc. Mr. Mason will act at Buffalo, and as he is on the club list of judges, Mr. Bush will doubtless see that the Spaniel Club is supported so that the cup can be put up where Canadian and American exhibitors can meet half way between home and home. If the over 23lbs. challenge cup is forthcoming this year, Boston and Rochester will probably be selected as the shows where its possession will be decided.

The Squire will not remain in England till Feb. 1, but is supposed to be already on the Atlantic. Mr. Mitchell Harrison was to send him over with some horses he had bought for Roslyn Heights Farm, which were at last account booked to leave on Jan. 15. With the Squire will come two collie bitches, one of which has been bred to Metchley Wonder, and the other to Johnnie Norman. Although never shown in England, these bitches are expected to keep the Chestnut Hill Kennels in the prize list at our shows.

From San Francisco I learn that the project for the amalgamation of the Pacific and California Kennel Clubs is still uncompleted. The case stands thus: The California K. C. applied for admission to the A. K. C., and the latter instructed its secretary to ask the Pacific Kennel Club whether there was any objection on its part to another club in San Francisco being a member of the A. K. C. The Pacific Club replied that it had no objection, but suggested that the matter lie over until negotiations then pending for amalgamation of the two clubs be finished. This reply was communicated to the California Club and read at its January meeting, whereupon a committee, consisting of Messrs. J. B. Lewis, J. M. Crane, A. B. Truman and J. B. Martin, was appointed to confer with the Pacific Kennel Club, with instructions to report to the Executive Committee of their club, which was given full power to act in the matter. So certain does the consolidation seem to be that the California Club postponed the annual election of officers until the February meeting.

I really think it would be to the advantage of the Pacific coast exhibitors, as well as to the A. K. C., if a branch organization was established for that section of country. To encourage exhibitors out there they need some changes from the rules we have here, and particularly so in the "champion" conditions. With two shows a year there at most, more frequently only one, four open class and three challenge class wins is out of the question. It will be time enough for the Eastern rule when there are as many shows there annually as we have here. In fact, ours is a bit too severe, unless we have a succession of years like 1889.

Mr. A. C. Wilmerding left on Saturday for a three weeks' Southern trip and his first stopping place is Seminole, S. C. He will return in time to judge at New York. Meanwhile entries for the sweepstakes will be received by the treasurer, Mr. William West, 110 N. Second street, Philadelphia.

If views on the coursing question are in order I would like to give mine. I am quite at odds with the outcry against "gambling." What is gambling? Betting or wagering is not necessarily gambling. If it was this would be a world of gamblers, for every man who puts money out at a venture of gain or loss is wagering on the result and must necessarily be a gambler. This hue and cry against gambling is like the classifying of all theaters and plays as ruinous, and the wholesale charges raised by some people against works of fiction. Gambling is risking more money than a person can afford to lose either at cards, on a sporting event or in alleged purchases of stocks, grain, ore, etc. Betting has an influence in some sports: in foot racing, rowing or anything in which "talking horses" are the participants, it has a far too important bearing on the result. In horse racing it has no such influence as some people imagine, except at out-of-the-way places where competitors are few and a race can be "fixed." The giving up of heat racing cleansed the turf wonderfully of swindlers, the latter being the great drawback to the trotting turf. But when we come to animals contending unaided or unhindered by man this talk about gambling or, to speak more legitimately, betting, is altogether out of place. I am speaking from an intimate knowledge of every sport followed either in this country or in England, starting at horse racing and stopping this side of dog fighting. The amount of money wagered cannot affect a dog's speed or cleverness or the favoring by the hare of one dog more than the other. Coursing is one of the oldest of sports in England, and it forms there one of the greatest mediums for betting that can be found in that country. Can any one refer to a single case of suspicious running, as we hear of "suspicious riding?" Such a thing will be news to me.

My views on the subject of coursing in the East are that it should take place in an inclosed ground furnished with "escapes." Hares are too valuable here to have to provide new ones for each meeting. Let the hares have the run of

the inclosure so that they are well acquainted with the ground and "escapes" and nothing can be more legitimate in the way of sport. People who don't know anything about inclosed coursing as conducted in England are rather rash in running it down in the way they do at times in American journals. If it was cruelty as some allege, it would not be allowed, and if it was controlled or in any way affected by the betting it would soon cease to be patronized by the gentlemen of the leash. Given such men as would be permitted by the Eastern Coursing Club to run dogs at their meetings, and it wouldn't matter if the whole membership of the bookmakers' alliance were on hand to lay or take the odds. The sport would be as straight and honest as anything one can name. I suppose it will be news to a good many to know that bookmaking, if it is not conducted on legitimate business principles will result in failure. Few men who go outside of the regular business but come to grief. Bookmaking is very far removed from what is called "gambling," and bookmakers are too busy attending to the requirements of their business to go in for one fraction of the schemes laid at their doors. Put this down as a fact gained from the records of years—betting will not injure coursing unless you let crooked men run dogs, and no club will do so either here or abroad.

It may be necessary perhaps to state, that although my occupation has for years called for a pretty close connection with betting, I have never indulged in it, mainly for the reason that the chronicler of events should do nothing which would tend to give his writing a bias, or give persons an opportunity of saying such was the case. I simply object to such a sweeping generality as "gambling" for every risking of money on a future event, and the wholesale charge that betting must of necessity corrupt every sport.

Another pointer man has joined the ranks of the setter brigade. Mr. J. H. Winslow, of Philadelphia, has purchased Bob H., by Count Noble out of the Gladstone bitch Belle Boyd, and has since disposed of an interest in him to Mr. Francis S. Brown, Secretary of the Philadelphia Kennel Club. Bob H. won third money at the Eastern Field Trials of 1888.

Mr. Wade's long-looked for Russian wolfhound Elsie having at last been bred to the Hon. Mrs. Wellesley's Kributt, will soon make her appearance on this side of the Atlantic. I hear that a very fine wolfhound will be among the entries at New York show. The dog is said to have been presented by the Emperor of Russia to the Emperor of Germany, from whose kennels it was obtained.

I also hear of a dangerous candidate for the cocker challenge cup, in a young son of Champion Doc. Some persons who know something about spaniels tell me this is the best they have seen. There is another one spoken of from Canada, which will take a lot of beating according to all accounts.

A decision will speedily be obtained from the American Kennel Club, as to whether a specialty club stake win is to be treated as a dog show win, which bars the dog from the novice class. Two entries will be made at New York, one by the Chestnut Hill Kennels and one by myself, and each will protest the other's entry to bring about the desired decision. Neither of us believe in the correctness of the Canadian Kennel Club's decision, which Mr. Vredenburg said was in accordance with the A. K. C. rules, and these friendly protests will be made to bring this question directly before the A. K. C. for a decision thereon.

Roslyn Torfrida, that sweet daughter of Scotilla and Luella, which could have done some winning at New York last year but for showing chorea, leaves on Wednesday of this week for England, consigned to Mr. W. H. Charles, of Warwickshire. She is in whelp to Maney Trefoil. The new bitches for the Chestnut Hill Kennels, referred to above, are already named Roslyn Primrose and Roslyn Lottie.

We are having one of the periodical hydrophobia scares in the neighborhood of Philadelphia. Usually it is West Philadelphia that gets the credit of the mad dog, but this time the outlying suburb of Media is the scene of its exploits. Three of the dogs bitten by this said-to-be rabid animal have already been sent to the Associated Fanciers and shipped to their farm at Berlin, N. J. One time and another they have had a score of bitten dogs, some badly so, but not one case so far has resulted in rabies. A peculiar case of alleged hydrophobia is being copied widely throughout the country. The story comes from New York, and after the medical fraternity had decided that the patient, a boy, was undoubtedly suffering from that fatal disease, one of them chanced to hear a peculiar and unnatural whistling sound in the chest. An opening was made in the windpipe and efforts made to reach the foreign substance, but without avail. As a last resort the chest was cut open and the foreign matter was pushed far enough to be reached by forceps put down the windpipe. It proved to be a whistle which the boy had swallowed accidentally in falling one day. I think the daily papers are getting to a better understanding of the rabid dog question than was the case a few years ago. One cannot expect a city editor to know everything, and too many of them only think of the mad dog as a subject for a "good story" with a "display head."

Intending exhibitors at New York show should not fail to remember that entries close on Monday next, Jan. 27. Under the A. K. C. rule the acceptance of a late entry entails a heavy penalty, and the Westminster Kennel Club will live up to that rule.

Mr. Shotwell writes me that it is very hard to get entries for the Collie Club stud dog stakes, and after looking over the conditions I do not think it a matter for much surprise. Take my own case: I was thinking of entering champion Clipper and I find that in addition to paying \$10 for so doing I must nominate his get and pay \$2 each for all I so nominate, of which I can only show two. Now comes the rub. How can I tell which of his get will be entered at New York, and if I did I cannot tell which are the ones which should be entered. The idea being that the dog shall be judged by the best pair of his get out of different dams, the nominator should have no restrictions placed upon being permitted to show the best pair at the show. All I can do is to send \$10 for the entry of Clipper and \$4 for the pair of contestants without naming them. If such an entry is not valid I cannot help it. There is another peculiarity about the Collie Club stakes, which I am at a loss to understand. The year from Nov. 1 to Oct. 31 is divided into two sections, those puppies born in the first section to be shown together and the same with the second lot. Naturally, I thought the sections were each of six months, but when two months too late for entering in the sweepstakes I find that the first section consists of seven months and the second of five months, the divisions being Nov. 1 to May 31, and June 1 to Oct. 31. Eternal vigilance must be the motto of the man who exhibits nowadays.

There were several misreadings of my "copy" by the compositor last week and I would like to have two of them corrected. I am made to say that the collie Matchless is by

Rutland out of Bess, whereas it should be out of Beck. Then in the paragraph near the bottom of the first column beginning "Mr. Peshall was called upon for an explanation of my oversight," it should read, "Mr. Peshall called upon me for an explanation," etc.; and then substitute "pled" for "plead" in the next line. J. W.

TWO COURSING STORIES.

I.

AS you invite your readers to communicate doggy stories, and also their doggy experiences, I beg to give the following, which has recently come under my notice. The facts are just as I state them and can be proved by unimpeachable witnesses. The scene is a farm on the Cotswold Hills, and within the boundary of the Cotswold hunt; the *dramatis personæ* a greyhound bitch, her three puppies, a hare, and one or two human spectators. Wriggle, the bitch in question, has long grown too clever for legitimate coursing, and has now bred two or three litters of pups. She has still, however, a lingering fondness for her ruling passion, and has on several occasions been known to make poaching expeditions on the farm, generally returning with pussy in her mouth—for on this and a few neighboring farms there is no game tenant to give envy, hatred, or uncharitableness among the farmers by shooting for the market what has been raised at the expense of the farm tenant, consequently the close season is as rigidly observed as though it had already become law, and a hare is not so great a rarity as it is feared they will soon become. One day in October last Wriggle was seen to return from one of her excursions carrying a hare in her mouth; this time, however, her quarry was alive and kicking. Giving the signal to her three pups (about three months old), she led the way into the rick-yard, where she carefully loosed the hare and allowed the pups to chase her, lying by herself to watch that pussy did not escape. When this appeared imminent, she put on a spurt and intercepted her before she could reach the hedge, and brought her back into the middle of the space to give the youngsters another start. This was repeated again and again, until one of the onlookers, thinking pussy was getting rather a rough time of it in the mauling, took her from the pups and finished her. She proved to be a nice leveret weighing over six pounds, and when skinned showed no marks of injury from the dogs beyond some slight abrasions caused by the mauling of the puppies. It is quite a common thing for cats to bring mice to enter their young for the business of their after life, but I never heard of such a case in the canine world before.—*Stock-Keeper.*

II.

The most awful and unexpected things are constantly happening to our friend Mr. Nick White, of Sacramento. Not that he invites calamity—in fact, he is averse to continued excitement, but somehow his best laid plans "gang aft" and result in most extraordinary denouements. The other day he organized a coursing match at Sacramento in the hope that the citizens might be induced to love the sport. We subjoin his description of the affair.

Several embryo sportsmen—or, rather, boys—caught a jack-rabbit Saturday over on the Yolo side, and brought the long-eared animal home with them in a bag.

The services of several greyhounds, a Newfoundland, two setters and a dozen curs were secured, and a grand coursing match was announced. I street was chosen as the coursing ground, and the rabbit was turned loose. Residents of I street in the vicinity of the Court house thought all the dogs in town had gone mad when they witnessed from their windows the terrible race of yelping and stumbling canines after the fleet-footed rabbit. The race grew more exciting as it progressed, and the greyhounds were at the prey when the latter suddenly took refuge under a lumber pile.

This occasioned a temporary delay, but the festive sportsmen succeeded in chasing the fugitive out of his retreat, and then the race was renewed with increased fury, confusion and scattering of mud.

The rabbit tore along the street at a terrible rate, and finally turned into J street and headed down town. Ladies screamed and men dodged into doorways, horses began to pitch and plunge, and runaways and destruction were imminent.

Again were the greyhounds in advance, and were fast closing in upon the fleeing rabbit. But Jack was a tricky one, and just as the foremost hound opened his jaws to grab him the rabbit suddenly described a semi-circle and darted into a millinery store. But this time the dogs were not to be outdone and they, too, followed into the store in hot pursuit.

What was the result?

Well, the story about the bull in the china shop will henceforth be shelved. It is the dogs in the millinery shop now.

The dogs didn't catch Mr. Jack after all, but they created the impression—particularly at the millinery establishment—that their intentions were of the best.—*Breeder and Sportsman.*

DOG TALK.

THERE is every indication that the coming New York dog show will be the largest yet held. The honor of a win at New York is coveted by the breeder and fancier, and year by year it becomes more valuable. Entries close Jan. 27 (next Monday). The address of the superintendent is Jas. Mortimer, 44 Broadway, New York.

Spaniel fanciers are talking of two or three wonderful black puppies that are expected to sweep everything before them the coming show season. We have a straight tip that a red youngster will not be far behind when the ribbons are distributed.

The managers of the dog show that was announced to be held at Lynn, Mass., March 25 to 28, have decided not to hold a show this year.

Baltimore will hold a dog show March 18 to 21 in Natatorium Hall. This announcement will be read with pleasure by the older show goers who remember the good times when the Baltimore Kennel Club gave its show some dozen years ago. We are assured that the Maryland Kennel Club, under whose auspices the coming show will be held, will spare no pains or expense to make it a success, and those who attend will find that the dog men of the monumental city will not allow its proverbial reputation for hospitality to suffer at their hands. The celebrated "milk route," so pathetically described by Brother Peshall, will be at its best, and other attractions equally tempting will serve to give the visitor an enjoyable time. Messrs. W. Stewart Diffenderfer, W. C. Farber and Harry Malcolm are the bench show committee. The entries will be limited to 350, and we have no doubt that long before the time of closing—March 4—the list will be full.

LYNN DOG SHOW.—Lynn, Jan. 18.—*Editor Forest and Stream:* The Massachusetts Kennel Club, Lynn, Mass., wish to have the dates for their second annual bench show withdrawn from the fixture columns of your valuable paper. Owing to the late conflagration in this city the club have decided to give up the idea of holding a show this year.—D. A. WILLIAMS, Sec. M. K. C., L., M.

TRAINING HOUSE DOGS.

Editor Forest and Stream:

In looking over the various books upon training dogs, I have never met one that went beyond teaching them to perform tricks or in instructing bird dogs in their duties as such. I say, go beyond; a dog with only that much education falls far short of what a dog may be made—and is not made by his owner, to have a deportment that will make him welcome everywhere and an annoyance to no one.

It is the want of this that causes some persons to say, "I do not like dogs." "I do not care to go to such a house because they have such horrid dogs." In saying this of children one reflects upon the management of the parents; but, on the other hand, it is the poor dogs that are blamed by the speaker, whereas it is their master's neglect or ignorance. As I have been especially successful in the training of puppies and dogs, some hints may be acceptable to those of your readers who like well-behaved as well as handsome-looking animals.

A puppy should be taught obedience the first thing after he has learned to love you, which last will occupy about a week's petting and feeding him yourself. There are many dogs who will charge or heel, but who are otherwise unruly. If he jumps on sofas, chairs, etc., lift him off, giving a smart tap with a switch, saying, bad dog. I do not approve of whipping, with most dogs tying up is better than chastisement. I think the bull-terrier is the only one that really needs it. Tie a house dog to the bannisters or to some convenient piece of furniture immediately after he has misbehaved, saying bad dog, leave him quiet awhile to think over his naughtiness, and when you loose him, say good doggie, now. When a young one is very romping, call him to you, place one hand gently on the top of his head, quietly keeping it there, and he will soothe down, at first you may have to hold the collar in the other hand. No young dog should be allowed to play too much, it makes them cross and nervous. Some persons complain of the destructiveness of puppies; provide them with a toy, a ball or a rag doll, but be sure when you see it flags in the game, take it away, placing it out of the dog's reach until you give it again, which will help to teach him not to make toys of your valued things.

I hear the complaint of dogs destroying flower beds. That should never be allowed. We have several dogs, one is a St. Bernard, still we possess unmolested and most beautiful beds and borders of flowers. My oldest dog (a pointer) when he was young, had the habit of jumping over beds. What would the average master have done? Screamed, get off, or tried to drive him away, thereby confusing him and causing more damage to the plants. I went up, taking him quietly by the ear and collar, led him all round the bed, I had not to do this very many times on each repetition of the fault before he learned to go around a bed when he wished to get on the other side; but I was surprised when I saw my pointer lead off another dog who had jumped on a flower bed, taking him by the ear. One summer four years ago I found that a nicely planted bed had been selected as a place to bury bones by one of our dogs. I watched him and unearthed the bones, placing them in the crotch of a tree, in sight but out of reach, then he selected a place beneath some evergreens. I think he must have told the others about it, anyway I have never since then seen a bone in a flower bed. It seems to me that all animals have some means of conversing with each other. Trainers know the good service rendered in the field by an old dog to bring the young ones to a knowledge of their duties. The same in house dogs; a well or ill behaved old one will influence puppies or new comers for good or bad.

Many dogs have the very rude manners of making their toilet in public—to many persons the spectacle of one sitting in the parlor and licking himself is disgusting. To prevent this I take the dog's head and lay it gently on the floor, saying "Dead dog," place my foot without pressing on his head to keep it down. I sit beside him, repeating the words a few times; usually he drops asleep. It will not be long before he will learn this without being touched, so you can say "Dead dog" from across the room; but do not trifle with him and make him perform the trick when there is no reason for it, or he will refuse to do it.

The dog-owning public are gradually becoming convinced of the injuriousness of indiscriminate feeding; still there are few houses where that animal is forbidden the kitchen, and the consequent indulgence of tid bits from the servants. I would dismiss a cook who fed a dog or encouraged him in the kitchen against my orders. This I make understood beforehand. Besides the ruination to the digestion, being fed in the kitchen is the first step to stealing there or in the dining room, which fault is inherent in the animal, evolved from his wolf ancestors, making it an instinct to get his living by depredation. Thus it is difficult to train them not to be thieves, but it can be done if begun when young; no tampering allowed, no notice taken of any begging. His food should never be thrown on the ground, but put on one platter, and water put always in the same bowl, both having a spot reserved for them and not interfered with by any other animal. This teaches fastidiousness, which should be encouraged as a preventive to picking up bits—a very dangerous habit, sometimes resulting in accidental or intentional poisoning. If a dog picks up a piece it should always and immediately be removed from the mouth by the master's fingers. All of our dogs permit me to do this without trouble.

In regard to feeding them there is much advice given about the desirability of giving them but one meal a day. It certainly is not best to have them fat, but I doubt if the one-meal-a-day plan works well. One time we wished to reduce a bird dog's flesh, and so sparingly fed him. It was noticed he disappeared at a certain hour every day, on which we discovered that he ran some distance to a district school where he picked up the bread and butter thrown out of the children's lunch baskets. After that we deemed it better to increase his rations than to have him go on a picnic. Of course he might have been tied to his kennel, but tying up a dog for hours a day spoils its shape. Dogs recognize their rights, and have better memories than one gives them credit for. One of mine once accompanied me to a friend's place; the owner saw him as he ran into the place before she saw me, and ordered him off. Ever after this lady called on us he violently barked, even as she left the house, as if to retaliate for her action to him. With this memory and this intelligence they are far happier as well as far better, if developed and educated, than if just allowed to grow up, except for some special training for hunting or trick performing. I know a setter who has been allowed to follow his own will until he is an annoyance to every one, save his mistress, whose apologetic remark is, "Carlo is such a happy dog." He is a most unhappy one, never knowing whether he is doing right or wrong, with no responsibilities, no duties to perform to make him feel he is of some use. This Carlo is quite disobedient when called, racing over fields while his mistress screams his name.

When a dog is to be called it is well to habituate him to a whistle got for the purpose, the sound is clear and distinct, remaining the same no matter who blows it, which is a convenience should the master be away. It will also be noticed when out with you and running ahead he will return quicker to a whistle than to his name. Of course if you have a number of dogs they all obey the whistle, the old ones teaching the young ones that it is the right thing to do. There are few dogs, except the stupid kind known as ladies' pets, that cannot learn very many words, understanding all that is said, if clearly spoken. A dog dislikes a sentimental or a vexed tone, acting accordingly. I had one who immediately behaved when I said "Be a gentle-

man," he usually went to drive with me; when inconvenient to take him I would say, "You keep house," and he contentedly remained; whereas, if I said, "You cannot go," he knew the staying at home was for some punishment.

I think I have said enough to show what a dog may be made, either a credit or a discredit to his owner, and I trust I may have been able to demonstrate how that discredit reflects upon the owner's neglect. G.

AUGUSTA DOG SHOW.

THE dog show given by the Georgia Pet Stock and Bench Show Association was held at Augusta on Jan. 14 to 18. At the same time Augusta had its carnival and the city was crowded during the week by visitors from all parts of the State. The Association had made arrangements with the railroad companies to issue coupon tickets for admission to the show with the result that the building was crowded throughout the week. The show, which included also poultry and pigeons, was opened on Tuesday morning by Judge Claiborne Stead, who delivered quite an oration upon the fur and feather displays. The display of dogs was very creditable and included several well-known visitors from the North, among them being the mastiff Sear's Monarch and the collie Clipper. The latter won his third challenge class prize and thereby became entitled to the title of champion. Mr. John Davidson was sole judge, and he got through with his work on the opening day. His duties were, as usual, carefully and conscientiously performed, and with every satisfaction to the club.

The full list of awards in the regular classes is as follows:

MASTIFFS.—Dogs: 1st, E. B. Sear's Sear's Monarch; 2d, San Souci Kennels' San Souci Luther. Bitches: 1st, withheld; 2d, San Souci Kennels' San Souci Nellie.

NEWFOUNDLANDS.—1st, Edward Collins's Doc; 2d, T. C. Jovitt's Don.

GREAT DANES.—1st, D. Timm's Grover.

GREYHOUNDS.—Dogs: 1st, W. F. Thomas's Silk Mittens. Bitches: 1st, W. F. Thomas's Purly.

POINTERS.—LARGE—CHALLENGE.—Bitches: 1st, J. P. Cartwright's Rosa.—OPEN.—Dogs: 1st, F. S. Van Pelt's Spot D.; 2d, W. M. D'Antignac's Satire.—SMALL—CHALLENGE.—Dogs: 1st, J. P. Cartwright's Spot Sting.—OPEN.—Dogs: 1st, J. P. Cartwright's Ruton Head. Bitches: 1st, H. C. Britton's Jessie Underhill; 2d, F. S. Van Pelt's Black Venus. Puppies: 1st, F. S. Van Pelt's Black Venus.

ENGLISH SETTERS.—OVER.—Dogs: 1st, J. H. O'Brien's Prince Gladstone. Bitches: 1st, A. Whitehead's Lotta; 2d, A. B. Connor's Lotta. Puppies: 1st, H. May's Miss Harry.

IRISH SETTERS.—Dogs: 1st, withheld; 2d, J. M. Weigle's McElcho. Bitches: 1st, withheld; 2d, G. C. Hamilton's Katy Putnam. Puppies: 1st, T. H. Sherman's Duke Elcho; 2d, J. M. Weigle's McElcho.

GORDON SETTERS.—1st, M. A. Jones's Vance; 2d, H. May's McMaster. Very high com., A. F. Pendleton's Dick.

AMERICAN FOXHOUNDS.—1st, withheld; 2d, H. C. Britton's Jane. Puppies: 1st, H. C. Britton's Jane.

COCKER SPANIELS.—1st, withheld; 2d, E. Collins's Tip. Puppies: 1st, E. Collins's Tip.

COLLIES.—CHALLENGE.—1st, Jas. Watson's Clipper.—OPEN.—Dogs: 1st, San Souci Kennels' Ben Ladie; 2d, O. H. P. Scott's Cubel. Very high com., San Souci Kennels' Ben Ladie. High com., W. J. Cranston's Rex. Bitches: 1st, O. H. P. Scott's Lady Nepht; 2d, G. W. Sentill, Jr.'s, Beulah S. Puppies: 1st, San Souci Kennels' Ben Ladie; 2d, A. Berling's Major. Very high com., San Souci Kennels' Ben Ladie. High com., G. W. Sentill, Jr.'s, Beulah S. Com., G. W. Walker's Toss Ben.

BULLDOGS.—Bitches: 1st, J. Lee Taylor's Columbine.

BULL-TERRIERS.—Dogs: 1st, W. M. Henderson's Jack. Bitches: 1st, D. Malone's Nellie; 2d, W. M. Henderson's Patience.

BEAGLES.—1st, withheld; 2d, San Souci Kennels' San Souci David.

FOX-TERRIER.—1st, W. F. Thomas's Zip.—WIRE-HAIRED.—1st, J. Lee Taylor's Capiscum.

SCOTCH TERRIERS.—Dogs: 1st, J. Lee Taylor's Glencoe, Jr. Bitches: 1st and 2d, L. Brown's Queen Lily and Fannie.

BLACK AND TAN TERRIERS.—1st, S. H. Myers's Bijou.

TOY TERRIERS.—1st, J. F. Cronin's Maud.

PUGS.—Dogs: 1st, Miss Hopkins's Scamp. Bitches: 1st, L. Brown's Tortoise.

ITALIAN GREYHOUNDS.—1st, Mrs. Wilberforce Daniel's Effie.

BAY CITY DOG SHOW.

FOLLOWING is a list of the awards at the dog show of the Michigan Poultry and Pet Stock Association, held at Bay City, Mich., Jan. 6 to 11:

AWARDS.

MASTIFFS.—Dogs: 1st and 2d, L. T. Kinney's Grover Cleveland and Plato; 3d, J. M. Turner's Clement. Bitches: 1st, Thine and Sir Gibbie; 2d, W. Brook's Signal. Bitches: 1st, Thine and Sir Gibbie; 2d, W. Brook's Signal. Puppies: 1st, Michigan Cigar Co.'s Royal George; 2d, E. Berry's Don. Bitches: 1st, Michigan Cigar Co.'s Countess Selover.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, J. E. Davidson's Sailor.—SMOOTH-COATED.—Dogs: 1st, A. F. Mann's Leo.

NEWFOUNDLANDS.—Bitches: 1st, R. W. Turner's Nellie.

GREYHOUNDS.—Bitches: 1st, C. W. Sarvis's Lady Olivia.

POINTERS.—Bitches: 1st, A. Powell's Hypolita.

ENGLISH SETTERS.—Dogs: 1st, J. W. Winslow's Diamond; 2d, G. W. Ames's Sport; 3d, L. L. Culver's Bang. Bitches: 1st, F. Marble's Blue Bell.—PUPPIES.—Dogs: 1st, F. Marble's Ashmont.

IRISH SETTERS.—Dogs: 1st, G. Covert's Dick Swiveller. Bitches: 1st, Campbell & Blake's Biddy Clare.

GORDON SETTERS.—Dogs: 1st, F. H. Mason's Dandy; 2d, G. H. Kruse's Sport. Bitches: 1st, G. Beckley's Nell.—PUPPIES.—Dogs: 1st, 2d and 3d, G. Beckley's Clipper, Ned and Jumbo. Bitches: 1st, G. Beckley's Daisy.

COCKER SPANIELS.—Dogs: 1st, A. W. Pancoast's Trixey; 2d, J. A. Beaulander's Sport. Bitches: 1st, Campbell & Blake's Fan II.; 2d, W. Kelly's Flo.

FOXHOUNDS.—Dogs: 1st, W. N. Armstrong's Chemung; 2d, H. J. Smith's Jim; 3d, T. Tannell's Towser. Bitches: 1st, V. Caumpau's Fan.

COLLIES.—Dogs: 1st and 2d, Thine & McFadden's Bonnie Stewart and Sir Gibbie; 3d, W. Brook's Signal. Bitches: 1st, Thine & McFadden's White Heather.—PUPPIES.—Dogs: 1st, 2d and 3d, Thine & McFadden's Charleriot, Sir Gibbie and Seaton. Bitches: 1st and 2d, Thine & McFadden's Flotilla and White Heather; 3d, V. Liddicoat's Winnie.

FOX-TERRIERS.—Bitches: 1st, Campbell & Blake's Belle.

BULL-TERRIERS.—Dogs: 1st, Campbell & Blake's Trouble. Bitches: 1st, Campbell & Blake's Mope.—PUPPIES.—Dogs: 1st, withheld; 2d and 3d, R. Mathewson's Bonnie Pilot and Pilot.

BLACK AND TAN TERRIERS.—Dogs: 1st and 2d, Campbell & Blake's Prince and Nanon; 3d, V. Liddicoat's Sunset. Bitches: 1st, V. Liddicoat's Tiny; 2d, F. Gore's Daisy.

SKYE TERRIERS.—Dogs: 1st, A. Richardson's Jock; 2d, J. H. Brown's Skye.

PUGS.—Dogs: 1st, L. S. Hudson's Lord Clover; 2d, H. Heinlein's Trix. Bitches: 1st, W. H. Gray's Lady Bell; 2d, L. S. Hudson's Lady Flash.—PUPPIES.—Dogs: 1st, L. S. Hudson's Lord Lansing. Bitches: 1st, L. S. Hudson's Lulu Clover.

WHIPPETS.—Bitches: 1st, Campbell & Blake's Maggie.

SPANIEL CLUB MEETING.—The annual meeting of the American Spaniel Club will be held at the American Institute Rink, New York, Feb. 12, at 4 P. M., the second day of the Westminster Kennel Club dog show. A full attendance is requested.—A. C. ILMERDING, Secretary.

THE TOBIN TROPHY.

men. The shooting was made with the .45cal. revolver. The winner of the first grand prize was George Naude, of Paris, with the very good score of 59 out of a possible 60, for which he was awarded the first prize of 200 francs.

Mr. Jas. S. Conlin, with his usual enterprise, is always on the lookout for something new to give the many patrons of his world-famous gallery, corner of Broadway and Thirty-first street, secured one of these targets and reduced it to his 12-yard range, to enable the marksmen of the world to do a score with the French-made .45cal. revolver. Mr. George Bird, the expert of experts, has succeeded in making the best score ever made on this target. The revolver used by Mr. Bird is the Smith & Wesson .45cal., Frontier model, using the Russian model shell, loaded with figs. of powder and a round ball. The inclosed is a *fac simile* of his wonderful good shooting on this target at 12yds.

ST. LOUIS, Mo., Jan. 18.—The dates, May 7, 8 and 9, for holding an American Shooting Association in this city are most favorably received by the trap-shooting fraternity in this city and vicinity. There is a large number of trap-shots in this city, but they will not attend tournaments where the "cracks" are allowed to take part and gobble in all the "stuff." With all shooters classified this city alone will send enough shooters to make the affair a complete success, without any outside assistance. There is no question but what the attendance from nearby points in Illinois will be large because there is a large contingent to draw from.—UNSER PRITZ.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, rams, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

1,500 MILES IN AN ADIRONDACK BOAT.

PART IV.

ERIE CANAL, Sept. 17.—Wednesday.—The boat having heeled during my sleep, the latter part of my slumbers were pleasant as the port side of my blankets were found to be soaked through. I had to get up in the cold and bale out, then went to rest again, trying to imagine I was dry and the covers were not cold and wet, a delusion which only my exhausted condition made at all real. At 7 A. M. I rowed a half mile to the little village of Pendleton, most of whose inhabitants are old Dutch people. Having begged for breakfast at four lowly cottages being refused, the chances for a meal began to look slim, when I happened across a Deutcher who could murmur a few syllables of English.

I loosened his tongue still more by a quarter, and it was amusing to hear the fellow beseech the good ladies of several houses for my breakfast. Being opposed in every instance, he changed his tactics, and found admission at last in a dirty little shanty by promising to pay for the meal. After a laborious and unrewarded search, I found a pause, continuing suggestively, "I have been rewarded," then "At last the effect, and the good woman's heart became touched; whereupon an indigestible breakfast followed. At 8 o'clock the wind began blowing almost as hard as yesterday.

At Pendleton the canal enters Tonawanda Creek, and so continuing its junction with Niagara River at the town of Tonawanda, where Ellicott Creek joins the former. A fair dinner was rowed ten miles I passed Martinsville, and two miles further came Tonawanda. This last two miles I walked, the wind becoming so strong that headway could be made against it in no other way. From Lockport to Pendleton the canal tends nearly south, thence to Tonawanda its course is southwest, the creek being very crooked, and from Tonawanda to Buffalo a due south course is again taken. The current in the creek is quite rapid, and the canal boat meeting me when towing my boat compels me to unharness myself and crawl under the ever-present tow rope.

I saw vast piles of lumber and many saw-logs and canal boats at Tonawanda, this being a large place. It resembles a new Western town somewhat. The Michigan Central or Southern Railroad comes through from Buffalo. A fair dinner was to be had at the American Hotel, and before starting off I ate a basket of the indigenous fruit of the country. The current in the Niagara River here runs at the rate of three miles per hour, so I took the canal for Buffalo. It keeps very near the river, and from the towpath a fine prospect is visible. On the way to Buffalo I alternately walked and rowed, as the wind allowed; rowing altogether about eight miles and walking four. The banks being quite high, by hugging them much of the wind was avoided. My first view of Canada was had just after leaving Tonawanda; I saw a large sea-going steamer run down the Niagara River, the forerunner of "wide water" beyond.

Just before reaching Black Rock, four miles from Buffalo, I passed another large guard lock, which had to be opened for me, although the river was but 2 ft. Here the current in the canal ran three miles per hour, and this, with the wind, made a propulsion by means of oars impossible, so I walked and towed for the remainder of the way to Buffalo. Just before reaching the city Lake Erie bursts on one's vision, extending to the horizon like the sea itself.

About half a mile from the end of the canal I clambered down into my boat again from the high bank wall, and rowed into the center of the place, where was a maze of wharves, docks and slips, the water running in all directions, while the Erie Canal itself was fairly choked up with hundreds of boats—a busy scene. The darkness, however, had fallen before I arrived, this making matters worse, while it was a dangerous place for a small craft at the best of times. The dim was fearful, and I had to keep a sharp watch so as to avoid being run down or jammed between two vessels. Eventually I shot into a side slip, leaving my boat tied to the stern of a friendly canal boat. To climb up on the dock was a job, but once accomplished, I bade farewell to the great canal on whose surface I had come 359 miles across the widest part of the Empire State.

Upon my arrival at the canal wharves I heard a familiar voice, and lo! the owner of the boat to be an old friend, who accompanied me a short distance with his canalboat five days before, and whom I had also seen ten days before, when a little west of Albany. His astonishment at my appearance was as genuine as his greeting was hearty. Since morning the day's run comprised 24½ miles, all of them hard and laborious; and I was consequently filled with joy on landing in Buffalo. I walked about one mile up-town to the Genesee Hotel, a fine house with every luxury and convenience. Here was my valise from Albany, and my dress was soon changed to more civilized attire for a short period.

So ends the first stage of my journey; I have been 11½ days, traveling time, on the way, an average of 31½ miles per day. I walked 70 locks, I drew many drawbridges and other obstructions, together with heat, wet grass, head winds, currents and the accidents to my car combined to detain me more than would appear at first thought. In addition to these, my oars became so weak that I was afraid of putting any great strain upon them; one in fact for the greater portion of the distance being so much heavier than its mate that my speed was decreased to no inconsiderable extent. Much time was also lost in the towing. The far delays outside of the detentions in traveling were one-half day, not including locking, stoppages for meals, winds and other obstructions. The log shows nearly as follows: Rowing, 323½ miles; paddling, 5½ miles; walking, 24½ miles; total 353½ miles.

The Erie Canal is a magnificent work, reflecting much credit on its engineers, as well as the munificent community by whose efforts and means it was constructed. An enormous amount of freight is yearly shipped over this great waterway from the West, even with the excessive competition of the many lines of railway; and though it has lost its prestige as being the main artery of transportation between the Atlantic seaboard and the great grain-growing States of the West, yet the bulk of lumber trade and other industries is still its own. Its tariffs, however, are very low, and the canal is doubtless before long will succumb to more rapid means of transit; while the far-reaching effect it once had in opening up our western territory, will be a thing of the past; though the enterprise of its founders, and the enormous good that it has done for the country, will never be forgotten.

The canal, in 1883, was open from May 7 to Dec. 1, 209 days, though it has been in continuous operation in some years for 245 days. In 1883 the tonnage transported was 5,664,056 tons, a daily average of 27,101 tons of merchandise. The amount of grain in transit during the year was 42,850,916 bushels. The cutting away of the Adirondack forests has caused a material fall in the water supply of the canal, but by increasing the number of reservoirs, etc., this loss has been more than made up. The splendid working order of the canal is apparent in the case of the boat C. G. Lane, which made 11 round trips from Albany to Tonawanda, and one to Rome, carrying 1,955,000 ft. of lumber; one of these trips from Tonawanda to Albany

and return being run in the extraordinary time of 14 days, and this with a load of lumber. The canal throughout has been "free" since 1882, thenceforth belonging to the State. Its prism dimensions are 10 ft. wide at the surface, 70 ft. on the bottom, and 9 ft. depth, though at places the depth is much greater. Every lock is manned by two hands, day and night; and the total working force of the great waterway is an army of men.

Buffalo, Sept. 18, Thursday.—I rose at a more leisurely hour this morning, had a comfortable breakfast, and then repaired to the collector's office, where was a Mr. Shanahan, Superintendent of the State Canal, and Mr. E. W. Rogers, collector, both of whom were courteous and polite, giving me much information. After rowing my boat round on the lake front, and leaving it at a boat house slip, I took a car for Porter avenue, two miles up town, at the foot of which street live Supple Bros., boat builders, who agreed to make me a stout pair of oars. The remainder of the day I was spending with the Queen City, doing errands, and visiting Glasgow Lake Erie.

Sept. 19, Friday, Lake Erie.—It took some time to get all my things together, as I had to have several articles made to order, and they came late in the morning. However, Mr. Supple, with a handsome pair of ash oars, called at the hotel for me in his buggy, and we went thence to the lake. After packing all snugly I bade him adieu about 12:30 P. M. In order to cheer me just prior to starting I was told that Mr. E. W. Rogers, collector, had ordered to cross to the Canadian shore from here, and was never seen again. To avoid the current near the entrance to the Niagara River I kept well out in the lake, making for a stone-pier light-house, about two miles distant, and keeping south of the light-ship. This pier is called the "Third Light-house." Though I kept well out, the current setting toward the river was plainly visible, and my sailing was very slow, though at least 2½ miles intervened from the outlet itself.

Anchoring close to the pier, I ate some sandwiches and milk obtained in Buffalo, and while thus employed much enjoyed the fine view of the city and its surroundings. The Canadian shore, which I was hereafter to follow, was sandy, with some high banks thickly wooded, while to the south and west the great in-reflecting blue of the sky, stretching away to the horizon. There was scarcely any wind, the air being calm, and the lake was comparatively calm, though the boat rose and fell considerably. What air was stirring was dead ahead, and a few small waves jumped over my canvas decks.

After lunching I directed my boat's head for Windmill Point, 5 miles distant to the west. The current along the shore is quite strong until this point is rounded, so it was necessary to keep well out in the lake. I was not far from the shore when I saw most part the shores appeared desolate. There were the ruins of an old windmill on the point, standing well out on the beach, and looking very picturesque. My next goal was a sandy point which had high banks of the white sand lining it; then I steered for Cape Albino, a blue line on the horizon. From Windmill Point a sailing was seen for 10 miles, and the shores were thickly wooded a short distance from the water. Though rowing hard and steadily, Cape Albino neared so gradually that it seemed as if I should never gain it. Meanwhile the wind rose, coming from the southeast, putting me off a lee shore and necessitating my pulling half against the waves. As these were becoming higher and higher with the increasing wind, I had to use much circumspection to avoid disaster; as it was, several waves broke over the boat. Unfortunately, rowed by the calm aspect of the lake at starting, I had neglected to put my apron over the well, and so shipped considerable water, only avoiding swamping by careful management. The boat, being very buoyant, would generally avoid a heavy breaker by riding over it, though frequently the top of a wave would flop over the coaming and duck me badly. My course was about one or two miles from shore, but the wind blew me considerably off the track. Cape Albino ran quite a distance into the lake, and a straight course for it lay far from shore. On rounding it, however, I was a quarter of a mile from the beach. Midway off the Cape, the waves were leaping over a huge wreck, which looked so suggestive that I endeavored to keep nearer shore. The breakers were pounding on the shoal beyond Cape Albino, and the scene was most dreary. Two miles beyond darkness fell, but while yet dusk I tried to run in between some shoals and the coast.

The waves, having risen considerably, were making a great roaring on the rocks, which were nearly one mile from the main shore. As I could not well round them, owing to the direction of the billows, I came very near shipwreck. For a moment or two I hesitated as to what to do, as the wind drove me toward shore, and I could not all go back and around, with my boat, and became shallower, and great and small boulders appeared. As the waves made a great noise, it being dark, and far from shore, the prospect seemed very gloomy. At one time I thought it was all over, as each wave threatened to dash me on a rock.

It soon became evident that the boat and I must part, so without further ado I was knocked to pieces leaped overboard, using my toothpick to keep a footing on the slippery rocks. Wrapping the boat's painter around my body I essayed the passage of this miserable reef; though not over 5 ft. deep the water was very cold, and the waves would occasionally throw me headlong. Plunging on for 100 yds., I managed to get into the boat again without cursing and thankfully pulled on, none the worse save for a few bruises and a sound ducking.

As the billows were mounting and threatening to swamp me utterly, I kept within half a mile of shore thenceforth, and after hard rowing for an hour sighted the lights of Port Colborne. Rounding the lightship off the harbor, I pulled into the basin of the Welland Canal, with a high breakwater on each side. Drenched, cold and tired with the hard rowing and the unceasing watchfulness, I found my little boat on a slip, very thankful at reaching dry ground once more. The only way a man viewed the wet cargo to see whether it contained anything ditable.

A rainstorm began just as I arrived, but making all haste I got under the roof of a vile little hotel and was soon dry and comparatively comfortable again. The run from Buffalo here by the boat was exactly 22 miles.

Welland Canal, Saturday, Sept. 20.—It rained and stormed hard during the night, but at 8:30 A. M. it cleared, and with a strong nor'wester for me to fight against. The wind so far has changed against me at every turn. A pass through the Welland Canal was obtained of Mr. McFarland, the collector and customs officer, after showing him my consular credentials. He is an Englishman and lives in a small little house near the basin. The town is a most desolate one, boasting nothing but the only attractions being the view of the lake and the splendid structure of the canal.

I got off at 9 with the majority of the population looking on and passed through an open lock 300 ft. long. I proceeded 2 miles against the fierce wind, when overtaking a three-master, the Ark of St. Catherine, which was being towed through the canal, I kept under her stern to avoid the wind. I rowed thus for 18 miles, the ship slowing up only when passing the guard locks, all being one continuous level. The captain frequently leaned over the stern and invited me to "hitch on," but I declined. The banks were so high that I could see nothing beyond, the view being limited to the massive granite walls and the well graded canal. The canalboats or towpaths to trouble here, but I missed them sadly.

We passed through some fine drawbridges, on two of which cross the Canada Southern and Grand Trunk railroads. There were but two towns of any size, Port Robinson and Welland, where was some shipping. The canal lies in Welland and Lincoln counties. At the town of Welland the river of that name is crossed; it flows here into the Niagara River. The direction of the ship canal is mainly northerly. The first lock was 12 miles from Thorold, and I went through with the vessel. I came a large basin capable of holding two Atlantic steamships, which opened into a smaller lock 25 ft. long. The locks were operated by several men, and the masonry and mechanism were of the highest order.

The next level was 12½ miles long, to the town of Thorold, 5,000 inhabitants, reached his place ahead of the steamer, and did not get through the lock until she came up, as she had signalled first by her whistle. After rowing 20 miles from Port Colborne, I arrived in Thorold at 3 P. M. There are nearly 18 locks beyond to Port Dalhousie, on Lake Ontario, none of them opened on Sunday. As I learned that, though but 8 miles, it would take until midnight to get through the locks with the steamer, I thought it would hardly pay. The captain of the friendly steamer was sorry that he could not take the boat on his deck; but his papers did not allow this, as I was an American establishment. The services of a Mr. Rogers, livery man, in town, however, were gained, he agreeing to wagon me to Queenstown on the Niagara River, 8 miles.

At the little inn where I had a cold lunch, was a remarkable dwarf, about 40 years old and but 3 ft. high, though having a large head. He acted as porter, but was a most horrible object. I had bags stuffed with shavings for the boat to rest on; while Mr. Rogers brought out a spanking pair of blacks and a spring wagon.

After laying in a stock of canteloupes, we shot off to the eastward, leaving the boat, alternately eating and singing, while Mr. Rogers sat on the end of the boat, singing and driving. We had a nice chat together, and I gained much information

from him. The views of the country to the north were grand, the farms were of a high order, the orchards numerous and the stock in good condition. The scenery resembled New England, and was exceedingly picturesque and quite lovely. An English origin claims the majority of the people.

Just to the north the land slopes down precipitously to the level of Lake Ontario, which stretches away into the hazy distance like another ocean. It was but ten miles to the shore from the road, and one could see every foot of country between. The road passed under the Welland Canal by a narrow tunnel; here Mr. Rogers unfortunately sat too far back to avoid colliding with his head against the roof, and so broke a rib of my forward deck.

On nearing the Niagara River a grand view met us, the whole course of the stream to the lake being visible. We saw the steamer Chicora, an old blockade runner, steaming up to Lewiston, having just come from Toronto, on the north side of the lake. The road finally wound down a long and steep hill to the river by the little village of Queenstown, directly opposite the town of Lewiston on the American side. At the summit of this hill is a fine monument, 150 ft. in height, in memory of General Brock, while a granite slab in the little vale marks the spot where he fell in the War of 1812. The scenery hereabouts is very fine, the ridges along the Niagara being lofty and covered with pines, cedars, etc., and in marked contrast to the country further back.

I rode across far into Mr. Rogers and launching pulled half a mile across for Lewiston, where I came to within 5 miles of the river, and while crossing two eddies the boat was nearly turned round. The view of the wild gorge above was grand, and the end of the rapids could be seen with the remains of an old suspension bridge that was disastrously blown down some years ago.

Leaving my boat in the care of a bathhouse keeper, and changing for my best knickerbockers I ran about one mile to the railroad station, arriving in time to catch the 6:05 train for Niagara Falls. Lewiston is a small place back from the river, and its little railroad is a branch of the New York Central. While in Lake Erie yesterday, my oilcan, containing 1½ quarts of kerosene, upset when a heavy wave struck the boat and caused her to assume a perpendicular position, the contents of the can saturating my coat. To-day this was so odoriferous that every one avoided me, right and left, while it was as much as I could bear to be inside of it myself. On the 8 mile run from Niagara Falls one has quite a good view of the river from the train. On arriving I went to the Spencer House, had supper and then viewed the Falls by electric light from Prospect Park. There was also a brilliant display of fountain jets there, with lights of different colors reflected through them.

I rode at 10 P. M. having ridden 30½ miles, made by team 9 miles, by train 8 miles, and walked altogether 3 miles. M. B.

PHILADELPHIA, Pa.

[TO BE CONTINUED.]

W. C. A. EXECUTIVE COMMITTEE.

THE annual meeting of the executive committee of the Western Canoe Association was held at the Gibson House, Cincinnati, on Jan. 11.

In the absence of Commodore Stedman, Vice-Com. T. J. Kirkpatrick, of Springfield, presided, there being present also Rear-Com. T. S. Gates, of Columbus, O.; Sec.-Treas. J. B. Keogh, of Chicago; Hon. G. W. Gardner, of Cleveland, and J. R. Bartlett, of Fremont, O., of the committee. As in previous years the event was made the occasion of a general reunion of W. C. A. men, about forty from their respective appearances, among them G. H. Gardner, O. H. Root, W. H. Huntington and A. A. Fuller, of Cleveland; A. W. Kitchin, C. W. Lee, J. L. Ware and H. C. Waters, of Chicago; G. A. Warder, of Springfield, O.; T. P. Gaddis, O. A. Woodruff, J. F. S. Crane, W. H. Crawford, and T. P. Daniels, of Dayton, and Hon. N. Longworth, G. B. Ellard, J. O. Shiras, H. D. Crane, Chas. Weeks, W. D. Breed, J. A. Henshall, T. Grosbeck, Lucien Wain and W. A. Clark, of Cincinnati.

At the suggestion of the executive committee the business meeting took the form of an informal conference or caucus in which all hands participated, the action of this caucus being subsequently presented to the committee in the form of a recommendation and by it formally adopted.

As to the time and place for the next meet of the Association the time was decided to hold the next annual meeting at Ballast Island, Lake Erie, from July 12 to July 23, and the Executive Committee was requested by a unanimous vote of those present to extend to the Central Division of the American Canoe Association a cordial invitation to meet with the W. C. A. at Ballast Island and participate in its races.

It was further decided to devote from Tuesday to Saturday of the next week the racing program, which was reported by the Regatta Committee and adopted, as follows:

1. Sailing, Classes A, B and C, twice around regular course.
2. Sailing, Classes A and B, 3 miles (Record).
3. Sailing, Class C, 3 miles.
4. Paddling, Class I, ½ mile.
5. Paddling, Class II, ½ mile (Record).
6. Paddling, Class III, ½ mile (Record).
7. Sailing and paddling, Classes A and B, sail first half mile, paddle second half mile (Record).
8. Novice Sailing Race, Classes A, B and C, open only to canoes who have not sailed a canoe prior to Sept. 1, 1889.
9. Sailing for Gardner Cup, Classes A and B, 6 miles (Record).
10. Sailing for Longworth Cup, Class C, 6 miles.
11. Man Overboard! Crew to throw overboard, astern, on leeward side, a paddle, to pick it up, and continue on course across the line.
12. Sailing for W. C. A. Trophy, Classes A and B, 7½ miles (Record).
13. Consolation Race (Sailing), Classes A, B and C, 3 miles. Winners of first or second places in Events 1, 2, 3, 7 and 8 excluded.
14. Passenger Race (Sailing), Classes A, B and C, 3 miles.
15. Carnival.

A discussion followed as to the expediency of amending the sailing rule as a rule, but energetic minority contending for the rescinding of the present rule prohibiting standing rigs in Association races. A motion to amend rule 1, so as to remove all restrictions as to rig in classes A and B, was amended to embrace Class C also, but amendment and original motion were voted down in turn, and sails that may be lowered and reefed will be the rule for another season.

At the meeting of the executive committee which followed, the action of the caucus was formally ratified, the commodore was instructed to appoint a committee of three to arrange for the annual hop; the vice-commodore was appointed a committee of one to provide a dark room and convenience for photographers at the meet; and the secretary-treasurer was instructed to give public notice that the provision of Article III. of the constitution relating to the right of vote to canoe owners would be strictly enforced at the July meeting.

In the evening a banquet was tendered the visitors by the resident canoeists at the Queen City Club, and the following day was devoted in part to an excursion to the far-famed Ross Lake, where the visitors were appropriately entertained by the Cincinnati C. C.

Mid-winter canoeing in that latitude is usually associated with the open fireplace, a crackling wood fire, comfortable arm-chairs and the et ceteras which cheer the inner man, but old Sol, seemingly impressed with the importance of the occasion, assumed his most cordial manner. "Shiny" hats were laid aside for "tams," and the strange sight of canoes under sail with crews in shirt sleeves, winding up with the ducking of a couple of the more sturdy, who cut the water like a wedge, was a sight to be seen. The re-unions was a most enjoyable one, and augurs well for a brilliant and successful meet in July.

NORWALK C. C.—Editor Forest and Stream: At the annual meeting of the Norwalk C. C. the following officers were elected: Com., M. Beardsley; Capt., L. M. Seares; Sec.-Treas., J. C. Green; Messrs. Thos. Benedict, Jr. It was decided to change the club colors to blue and white. The flag being a pointed burgee, white field with the design, a letter N in a circle of rays, in blue. Through the courtesy of the owner, Mr. Burdard, arrangements have been made for the use of the point known as the Knob, about one-quarter of a mile east of Wilson's Point, to establish a summer camp. We will make this place their headquarters during the coming season, and should any canoeists be in our neighborhood we would be glad to have them give us a call.—J. C. GREEN, Sec'y.

THE "PEN PUSHERS."—Mr. S. R. Stoddard has given this title to a picture taken last summer at the A. C. A. meet. It is a group of five, Messrs. W. F. Stephens, of the FOREST AND STREAM; C. B. Vaux, of the Salt and Paddle; W. G. MacKenzie, of "Mac"; Geo. A. Warder, of "Jabberwock," and David A. Fox, of "Retaw," all tolerably well known to the readers of FOREST AND STREAM.

AN AMERICAN CANOE FOR ENGLAND.—Mr. E. J. Edwards, Mersey C. C., has ordered a racing sailing canoe from the St. Lawrence S. C. & S. L. Co., of Clayton.

NICHOLAS LONGWORTH.

It will be sad news to many an old member of the A. C. A. that the leader and ruling spirit of the Association in its early days is dead, while not yet past the prime of life. In all the early meets of the young Association at Lake George the central figure was Com. Nicholas Longworth, of the Cincinnati C. C., who in the second year was chosen commodore of the Association. Com. Longworth was already a canoeist of some years standing, and a regular visitor at Lake George, when in 1879 he became interested through Mr. N. H. Bishop in the latter's project for a national association of American canoeists. Entering into the idea with the enthusiasm and energy which were his marked characteristics, he came to the lake in 1880 to the organization of the A. C. A., with a number of canoeists from Cincinnati, and worked then, as for several years afterward, to place the young Association on a permanent basis. His manliness, his kindness of heart, and his wonderful versatility soon won him as great a degree of popularity among canoeists as had already been bestowed on him in his native city and at Harvard, where he had graduated in 1864, when but twenty years old.

Com. Longworth was the eldest son of Mr. Joseph Longworth, a prominent and wealthy citizen of Cincinnati. After his graduation he spent some time abroad and then settled down to practice law in Cincinnati, where in 1876 he was elected Judge of the Court of Common Pleas, and in 1881 Judge of the Supreme Court. The latter office he resigned in 1883. After his father's death in the same year he abandoned his profession, being possessed of a large fortune. Much of his time was taken up in traveling, yachting and canoeing in this country and Europe. In 1887 he visited England with his family and spent the summer in a cruising yawl along the English and Scottish coast. He made similar cruises at times along the Atlantic coast, and some five years since he built a very shoal stern-wheel yacht, in which he explored many of the Western rivers. Of late years his time has been given to yachting rather than canoeing, and last winter he built the sloop Minx, in which he spent the summer on Lake Erie.

Com. Longworth was not only a man of remarkable ability, but his attainments covered an unusually wide range; and whatever he undertook he made himself thoroughly proficient in. He made himself a reputation both at the Bar and on the Bench, he was an orator of rare eloquence, he was recognized as an equal or superior by professional chemists and photographers, he might have attained fame as an engineer; while he was an adept in most mechanic arts. Not the least remarkable of his gifts was his memory, to which was joined a sincere love for poetry and a hearty admiration of Scott's poems. Among the many pleasant recollections of past camps, the pleasantest by far are the nights beside Lake George, when his magical voice seemed to people the silent water with all the *dramatis personae* of Marmion and the Lady of the Lake, endowing the old favorites with undiscovered beauties. A week in camp with him was something to think of and look back to with pleasure for years.

Of his own works the first was a metrical translation of the "Electra" of Sophocles from the original Greek. This work was published in 1878 by Robert Clarke & Co., and had been kept in the original manuscript for ten years before its author would publish it. Then he thoroughly revised it, and, strange to say, made very few corrections. The translation showed a high order of literary merit, and was everywhere received with commendation. "The Marquis and the Moon," an Italian story, beautifully idealized, has been selected by Miss Braden as the subject of a painting. His last novel is entitled "Silas Jackson's Money," a romance of Anderson's Ferry, and on the title page has a quotation from his favorite author, Walter Scott's "Lay of the Last Minstrel." It is a charming story, being founded on an incident of the late war, and the preface bears date Nov. 15, 1889.

Of his skill in photography a friend speaks as follows: "He was no common amateur photographer, who went about pointing his machine at everything, from a yellow dog to a meeting house; but he was a scientific photographer. He was a skilled chemist, and made many valuable discoveries of the greatest value to the art. He was the first in the West to procure from Dr. Monckhoven, of Ghent, in Belgium, the first dry plates that ever came to this country. Such a man was a benefit to photography."

On his estate in Cincinnati he built some years since a "Palace of Delight," as he called it: a building fitted up on the lower story with lathes, planers, forges and metal and woodworking tools of all descriptions, while the second story was given up to a fine photographic laboratory.

Although somewhat unwell, he last week attended the inauguration of Gov. Campbell, being a colonel on Gov. Foraker's staff. A cold resulted from the exposure, leading to pneumonia, and on Saturday morning the end came. Mrs. Longworth was in Boston at the time, where one daughter was at school, the son being also at Harvard, so that only his youngest daughter was with him.

RED DRAGON C. C.

Editor Forest and Stream:

The Red Dragons held their first "smoker" in their new quarters Jan. 15, the object being general hilarity, and to throw the new house open to their friends. It is needless to state that the new house was warmed with all due ceremony the occasion required.

The evening passed very pleasantly and all too quickly, as good things do, with toasts, speeches and music. The commodore secured the services of a quartette of burnt cork artists, whose music, singing and dancing greatly enhanced the pleasure of the occasion.

Several members performed on the guitar and one contributed a hornpipe with several original features on his own.

The vice-commodore stepped out upon the balcony and sent the club's well-known bugle call ringing out over the waters for the first time in '90.

A collation was served in regular camp style and disposed of with miniature single-blades instead of the customary table articles.

Among the invited guests were Messrs. Lucas and Sigler, of the Trenton C. C.; all who have had the good fortune to meet the genial Bobby know what a great addition his presence was to the pleasure of the entertainment. His toast, "The Trentons and Red Dragons are one," was received with cheers and acted upon with Red Dragon punch.

Those attending the Atlantic Division meet remember this famous beverage.

Joy reigned supreme until it was discovered that the Philadelphia contingent must leave if they intended reaching home that night. "Lights out" was ordered, and after locking the dragon in the cellar, all dispersed with pleasant memories of first "smoker" and admiration for the new house, where we hope to hold many others, to which we extend a hearty invitation to all members of the A. C. A.

MAX.

A. C. A. MEMBERSHIP.—Eastern Division: Jas. B. Griswold, Lyme, Conn.; Francis R. Wheaton, Howard E. Jepson, James H. Hutchings, Henry B. Stevens, all of the Puritan C. C., Boston. Atlantic Division: Jas. P. O'Shea, New York. Northern Division: A. J. Snow, Ottawa.

BROOKLYN C. C. ANNUAL REGATTA.—The annual regatta of the Brooklyn C. C. will take place on June 23.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1883, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

WHITE WINGS.

THE yacht whose lines are here given is specially interesting at the present time in connection with the proposed classification, as she represents one type that, judging from her excellent record, might be expected to prove fairly successful under a classification by corrected in place of waterline length. While it is impossible to make any satisfactory comparison between her and the forty footers on the coast, it is certain that she is, in spite of some serious drawbacks, a very fast boat, and if enlarged to a corrected length of 48ft., the measurement of most of the forties, by greater length and sail together, she should prove a very lively competitor. The boats of her class against which she has raced are by no means equal to the new forties, but at the same time her performance with such larger craft as Oriole and Wasp, of 70ft., is sufficient proof of her speed. If built up to 48ft. corrected length, White Wings would be about 45ft. l.w.l., 15.5ft. beam, and with 2,600ft. of sail; by no means the narrow cutter which has

SAIL PLAN OF "WHITE WINGS," BUILT BY CAPT. ALEX. CUTHBERT.

been held up as the inevitable outcome of the classification, but a normal centerboard craft, wide and of moderate draft.

White Wings is purely a "rule of thumb" craft, the most successful effort of the late Capt. Cuthbert. She was built, we understand, by first getting out the keel, stem and sternpost, setting them up with rough trial moulds on them, and running battens over the latter and altering them until they suited the builder's eye. She was built in 1886 at Trenton, Ont., for Mr. P. J. Cooley, of that place; being raced a few times before being finished, but without success. Early in 1887 she was bought by Messrs. Jarvis and Osborne, of Hamilton, Ont., who still own her. In all her races in the past three seasons she has been sailed by Mr. Jarvis with a Corinthian crew and usually with but one paid hand.

Her construction is of the ordinary sort, all wood, but with very light scantling. Her rigging, canvas and general outfit is very much inferior to the standard of the coast fleet, and she could be much improved in these respects. Apart from her model she has an advantage in her comparatively light construction and in being uniformly well handled in her races.

Her arrangement below is of the usual fashion, stateroom to starboard, passage to port, very small fore-cabin, and a cabin divided by the trunk. Her board is so wide that when raised it projects some 18 in. below the keel. The lines were taken from the yacht in 1888, the waterline being with crew on board and in cruising trim.

The reason for the curious stem, as well as for the third hobshtay, we have not discovered, but since the lines were taken off the stem has been cut away, removing a lot of deadwood and materially shortening the waterline, while the sail plan has also been reduced since the drawing here shown was made. The boat is very fast in rough water, and at all times is noticeable for her small wave disturbance.

WHITE WINGS' DIMENSIONS AND ELEMENTS.

Length over all.....	52.00ft.
L.W.L.....	43.50ft.
Beam, extreme.....	14.75ft.
L.W.L.....	13.17ft.
Draft, extreme.....	4.00ft.
mean.....	3.14ft.
with board.....	11.00ft.
Least freeboard.....	2.00ft.
Displacement, long tons.....	16.54
Ballast inside.....	8.00
Ratio of ballast to displacement.....	48 per cent.
Area midship section.....	257.0sq. ft.
L.W.L. plane.....	360.60sq. ft.
lateral plane.....	186.75sq. ft.
centerboard.....	47.00sq. ft.
Fore side of stem to midship section.....	59.54ft.
center of effort.....	22.90ft.
lateral resistance.....	23.45ft.
buoyancy.....	24.86ft.
SPARS, SAILS, ETC.	
Mast from stem.....	14.00ft.
deck to hounds.....	38.50ft.

new S. C. Y. C. rule.....	2,556sq. ft.
Y. R. A. rule, with jibheader.....	2,556sq. ft.
with clubtopsail.....	2,792sq. ft.
Corrected length as first raced.....	47.60ft.
1889.....	46.74ft.
L.W.L. 1889.....	42.83ft.
Sail area, 1889.....	2,368sq. ft.

White Wings' record up to Aug. 3, 1888, was published in the FOREST AND STREAM of Sept. 13, 1888. Since then it stands as follows:

Sept. 15.—Hamilton Y. C., championship; wind fresh, N.E. Starters: White Wings, Coquette, Cyprus, Alert, Psyche, Stella, Cornet, Flight. Finish, corrected time, White Wings, 1:53:45; second boat Coquette, 2:01:45. Distance, 10 miles.
Sept. 22.—Toronto Y. C., cruising race, Toronto to Oakville; wind N.W., moderate to fresh, smooth sea. Starters: White Wings, Rives, Condor, Verve No. 1, Escape, Sea Bird. Finish, corrected time, White Wings, 5:40:12; second boat Rivet, 5:58:23. Distance, 19 miles.

For season of 1888, 11 starts, 11 firsts.
July 1, 1889.—Toronto Royal Canadian Y. C., sealed handicap race; wind fresh, E., moderate sea. Starters: Oriole, schooner; Aileen, White Wings, Condor, Verve No. 1, Verve No. 2, Rivet, Aggie. This race being a handicap, is not included in her record. The Oriole (70 l.w.l., by A. Cary Smith) and White Wings were on scratch, Watson's Verve No. 2 received 19m. 6s. allowance, or 18m. more than her time allowance. The result was that White Wings only took third place. She had over five times her time allowance on Verve. Distance 20 miles.

Aug. 15.—Rochester Y. C., first of the L. Y. R. A. circuit races; wind N.W., moderate gale, heavy sea. Starters: Endie, White Wings, Verve No. 1, Verve No. 2, Madge. In this race she got into difficulties with her rigging early in the race, and when one-half the course was completed she was 13m. behind Verve No. 2, the leading boat. For balance of race she gained, passing all the fleet, but was beaten on time allowance by 20s. by Verve No. 2. Corrected time, Verve, 3:34:40; White Wings, 3:53:00. Distance 24 miles.

Aug. 19.—Hamilton Y. C., second race of L. Y. R. A. circuit; wind variable, fresh to calm. Starters: White Wings, Condor, Verve No. 1, Aggie, Madge, Verve No. 2. In this race the schooners Oriole, of Toronto, and Wasp, of Cleveland, started at same time over same course. As White Wings left her own class so fast and far behind, interest centered on the question whether she would beat Oriole, which she did handsomely. In this race her rivals were greatly retarded by a shift of wind at the latter end of race, but she had earned her place before the shift came. Finish, corrected time, 5:04:16; second boat, Verve No. 1, 5:45:50. Distance, 24 miles.

Aug. 21.—Toronto Royal Canadian Y. C., third race in L. Y. R. A. circuit; wind strong S.W., shifting at latter end of race to squall from N.W., which again assisted the leading boat. Starters: Cygnets, White Wings, Condor, Verve No. 1, Aggie, Madge, Verve No. 2, Whistling. The outer buoy was difficult to find and all stood too far out into the lake. This lost White Wings all the lead she had to this point, and gave Verve No. 2 a start; further

on in the race when the squall struck her, White Wings carried away her gaff, which lost her more time. She won, however, easily. Finish, corrected time, White Wings, 5:28:57; second boat, Verve No. 2, 5:46:42. Distance, 30 miles.

Aug. 23.—Cobourg, town regatta, open; wind paltry S.S.W. calms; squall at finish from N.N.W. Starters: Endie, White Wings, Verve No. 1, Madge, Verve No. 2. The old Madge sailed or drifted very fast in this race and led for the first round, 15 miles; but White Wings eventually caught her. Finish, corrected time, White Wings, 6:51:05, Madge, 7:05:00. Distance, 30 miles.

Aug. 27.—Oswego, N. Y., fourth race, L. Y. R. A. circuit; wind fresh at start from S.S.W., decreasing all day. Starters: White Wings, Verve No. 1, Madge, Verve No. 2. Finish, corrected time, White Wings, 5:09:45, Verve No. 2, second boat, 5:20:52.

SUMMARY OF RECORD.

1887.....	9 starts:	7 firsts.	2 seconds.
1888.....	11 starts:	11 firsts.	
1889.....	5 starts:	4 firsts.	1 second.

25 starts: 22 firsts, 3 seconds.
This does not include R. C. Y. C. sealed handicap race.
The White Wings' hull always finished first, and when beaten it has been on time allowance.

ROYAL NOVA SCOTIA YACHT SQUADRON.—This organization has lately purchased a piece of wharf property at Halifax, on which a boat house 40x80ft. has been erected, and by spring a handsome club house will be ready in addition. It will be situated on the northeast corner of the property, and the balcony, which will be 12ft. deep, will face about 12ft. from the end of the wharf. The balcony will also extend for about 20ft. on the south side of the house. The building will be 30ft. square; the ground floor will be partially unfinished for the present, but will contain lavatory and water closets. The first floor will contain a large club room, 17ft. by 29ft., opening on to the balcony referred to, a locker room and secretary's office; and the second floor affords comfortable quarters for the club janitor and family. It is proposed to lay out the grounds as rapidly as practicable consistent with economy, so as to provide for such games as may be desired—quoits, bowls, etc.—and ornament with trees. The house is situated so as to command a view of the usual race courses throughout their entire lengths, from Dartmouth Cove to Litchfield Buoy, and embraces the most beautiful view to be had of our glorious harbor. The measurement rule has been amended to restrict spinakers. The cup presented by the citizens of the United States in 1887, the Jubilee year, and won by the schooner Wemona, has been presented by her owners as a perpetual challenge trophy, to be raced for on Halifax Harbor, not less than a 30-mile course, under the rules of the Squadron, but open to all yachts enrolled in recognized clubs.

CORINTHIAN MOSQUITO FLEET.—The annual meeting of the Corinthian Mosquito Fleet was held on Jan. 20, with Commodore Smith in the chair. The following officers were elected: Com., Thornton H. Smith; Vice-Com., Walter Thompson; Sec'y., Dr. Theodore Ledyard; Treas., J. Maxwell Williams. Executive Committee, W. P. Stephens, Harold Forwood and Henry Stanton. Some minor changes were made in the by-laws, and the dues were increased from \$1 to \$3 per year.

TACKLING SHIP OFF SHORE.

THE weather-leech of the topsail shivers,
The bowlines strain, and the lee shores slacken.
The braces are taut, the lithe boom quivers,
And the waves with the coming squall cloud blacken.

Open one point on the weather bow,
Is the light house tall on Fire Island Head,
There's a shadow of doubt on the captain's brow,
And the pilot watches the heaving lead.

I stand at the wheel, and with eager eye
To sea and to sky and to shore I gaze,
Till the muttered order of "Full and by!"
Is suddenly changed for "Full for stays!"

The ship bends lower before the breeze,
As her broadside fair to the blast she lays;
And she swifter springs to the rising seas,
As the pilot calls, "Stand by for stays!"

It is "Silence all!" as each in his place,
With the gathered coil in his hardened hands,
By tack and bowline, by sheet and brace,
Waiting the watchword impatient stands.

And the light on Fire Island Head draws near,
As, trumpet-winged, the pilot's shout
From his post on the bowsprit's heel I hear,
With the welcome call of "Ready! About!"

No time to spare! It is touch and go;
And the captain growls, "Down helm! Hard down!"
As my weight on the whirling spools I throw,
While heaven grows black with the storm cloud's frown.

High o'er the knighthoods flies the spray,
As we meet the shock of the plunging sea;
And my shoulder stiff to the wheel I lay,
As I answer, "Aye, aye, sir! Ha-r-r-d-a-lee!"

With the swerving leap of a startled steed,
The ship flies fast in the eye of the wind,
The dangerous shoals on the lee recede,
And the headland white we have left behind.

The topsails flutter, the jibs collapse,
And belly and tug at the groaning cleats;
The spanker slats, and the mainsail flaps;
And thunders the order, "Tacks and sheets!"

'Mid the rattle of blocks and the tramp of the crew,
Hisses the rain of the rushing squall;
The sails are aback from clew to clew,
And now is the moment for "Mainsail, haul!"

And the heavy yards, like a baby's toy,
By fifty strong arms are swiftly swung;
She holds her way, and I look with joy
For the first white spray o'er the bulwarks flung.

"Let go and haul!" 'Twas the last command,
And the headsails fill to the blasts once more;
Astern and to leeward lies the land,
With its breakers white on the shingly shore.

What matters the rain, or the reef, or the squall?
I steady the helm for the open sea;
The first mate clamors, "Belay, there, all!"
And the captain's breath once more comes free.

And so off shore let the good ship fly;
Little care I how the gusts may blow,
In my fo'castle bunk, in a jacket dry,
Eight bells have struck, and my watch is below.

WALTER MITCHELL (born in Nantucket, Mass., 1826).

CAPTAIN ALEXANDER CUTHBERT.

Editor Forest and Stream:
I send you herewith a brief sketch of the late Capt. Cuthbert, partially prepared by myself and with necessary corrections as to matters of fact.

Capt. Alexander Cuthbert, the well known designer and yacht builder, died at Trenton on Tuesday, 4th inst., in the 50th year of his age. Capt. Cuthbert was born in the north of Scotland and came to Canada at an early age. His youth was spent at Cobourg, where he learned the trade of shoemaking. He spent, however, much of his time in sailing and afterward in modelling yachts, in which he developed great skill. In 1838 he built the John A. Macdonald in Cobourg, his first attempt at yacht building. She proved a great success for several years. He next built the Lady Stanley at Cobourg, and subsequently at the same place the Annie Cuthbert. With the latter, owned by himself, he won the Fisher cup at Detroit, beating the Cora very badly. And in 1883 the Atlanta beat this same Cora out of sight at Chicago. The Cora was built by F. McGeehan, of Paramo, New Jersey. These were followed by the Countess of Dufferin, of Chicago, the Katie Gray, of Oswego, and Surprise, of Trenton, all of which were built by him at Cobourg. Next he built the Madcap at Belleville, the Wideawake, Emma, Escape, Guinevere and Bloodhound (now Norah) at Trenton, the Atlanta and Iolanthe at Belleville, the Minnie M. at Chicago, the Vision at Cobourg, the White Wings and a 45-footer at Trenton, and at the time of his death he was busy at Cobourg with a 45-footer to beat White Wings.

Every yacht that this remarkable man designed developed great speed. In a word, he swept the lakes in all classes, and today Atlanta, Norah, White Wings, Minnie M. and Iolanthe are at the head of their respective classes. He twice endeavored with the schooner Countess of Dufferin, in 1876, and the sloop Atlanta, in 1881, to win the America's Cup, but failed, chiefly through the lack of means to properly equip his vessels. In addition to the famous yachts mentioned above, Capt. Cuthbert had also built others of lesser note, as well at several steam boats, steam yachts, etc. Besides successes gained by his own craft, he also won many races for others. On one occasion he handled the Ida, of Lachine, which was matched against the Gorilla, of Cobourg, for \$1,000. The race was sailed in an gale of wind, off Cobourg, the Ida, which was only a ten ton yacht, badly beating the Gorilla, a first class yacht of thirty-eight tons. Many will mourn the genial Cuthbert, whose genius placed the flag of Canada far in the van of yachting on the great lakes.

PORT TACK.

BELLEVILLE, Jan. 18.

CORINTHIAN Y. C. OF MARBLEHEAD.

THE annual meeting of the Corinthian Y. C. was held in the Parker House, Boston on Jan. 8, with Commodore Crowninshield in the chair. The report of the measurer showed the club to have had last year 347 paying members, who paid in \$3,470. Reports of the secretary, house committee and the regatta committee were next presented and accepted. The full amount collected by the treasurer was spent by the house and regatta committees. It was voted to devote \$500 yearly to a sinking fund until the indebtedness on the new house is paid. The club will probably have but three races in the midsummer series instead of five as last year. The regatta committee reported that the Chiquita and Papoose were tied for the Augustus Hemenway prize of \$300. The owners of the yachts were notified of this effect, and they have requested that the money be used as a prize for racers during the coming season. The club will also have a cup valued at \$25 for 50-footers and one worth \$100 for boats under 21ft.

The following changes in the rules were made: Classification—Yachts shall be divided into classes according to waterline length, as follows: First class yachts, 25ft. and less than 30; second class yachts, 21ft. and less than 25. [Any yacht enrolled in the

club list Jan. 8, 1890, exceeding the upper limit of the second class by not more than a foot, shall be eligible to sail in the second class until sold out of the club.] Third class, centreboard yachts, 18ft. and less than 21ft.; fourth class, keel yachts, 16ft. and less than 21ft.; fifth class, keel yachts, 14ft. and less than 21ft.; fifth class, centreboard yachts 16ft. and less than 18ft. If a yacht has no competitor in her own class she may enter at her usual rating the class of the next lower number in which there may be a starting yacht.

Sailing Rules—In all races the wheel or tiller of each yacht shall be held only by an amateur who must be a member of this club or the club from which the yacht is entered.

Yachts in the first and second class must carry two serviceable life buoys; and yachts in the third, fourth and fifth one serviceable buoy, placed within easy reach of the helmsman. The regatta committee will not award a prize to any yacht not conforming to this rule.

The following officers were elected: Com., B.W. Crowninshield; Vice-Com., C. H. W. Foster; Sec'y, Everett Paine; Treas., J. B. Rhodes; Meas., J. H. Keating; Executive Committee, W. S. Eaton, Jr., and E. F. Peabody; Regatta Committee, W. P. Fowler, F. C. Newhall, A. G. Van Nostrand, G. W. Mansfield and J. H. Paine; Membership Committee, C. S. Dennison, F. M. Wood, W. L. Smith, S. W. Sleeper and Arthur Binney; House Committee, F. A. Seaman, B. W. Russell and E. W. Hodgkins; Board of Judges, D. Appleton, G. W. Mansfield, J. A. Paine, F. E. Snow and E. L. Rhodes.

It was voted to withdraw from the New England Y. R. A.

PHILADELPHIA MODEL Y.C.—The Philadelphia Model Y.C. began the third year of its existence on Jan. 11, when the annual meeting and election of officers took place. The secretary reported a membership of 18, 10 of whom are model owners. Six new members were admitted during the past year. The number of models owned by members is 33—24 sailing and 9 steam; 21 are on the sailing register as follows: First class—Length 3ft., 2 models. Second class—Length, 30in., 2 models. Third class—Length, 2ft., 9 models. Fourth class—Length, 18in., 6 models. Steamers—Length, 4ft., 3 models. Eight club prizes were distributed last year, together with several prizes given by individual members, following are the officers for 1890: Pres., Geo. A. Koenig, Ph. D.; Vice-Pres., Rev. R. M. Luther, D.D.; Com., T. E. Biddler; Treas., Ed. Bancroft; Sec'y, E. W. Fowler; Sailing Committee, Rev. R. M. Luther (chairman), Capt. Biddle and Wm. Porter.

KNICKERBOCKER Y. C.—Officers, 1890: Com., D. Rousseau, sloop Nyssa; Vice-Com., J. F. Black, sloop Tourist; Rear-Com., Charles Coughtry, cutter Nanita; Sec., Alfred Varian; Treas., Jabez Harris; Meas., E. P. Mowton; Fleet Surgeon, Dr. E. Ringer. Board of Directors: E. E. Colell, O. H. Chellborg, G. H. Bourquard, J. A. Morrison and E. Macdonald.

CHART CORRECTIONS.—The monthly notice of chart corrections includes a number of corrections of interest to yachtsmen in Fisher's Island Sound, Hempstead Harbor, Execution Light and Hell Gate. Owners of 40-footers will be glad to know that the depth of water over the rock off 34th street ferry, marked by black buoy No. 1, has been increased from 10 to 16ft. at mean low water.

SAVIN HILL Y. C.—Officers, 1890: Com., F. O. Vegelah; Vice-Com., J. Howard; Treas., H. G. Patten; Sec'y, J. H. Shaw; Meas., A. L. Kidd. Directors, W. H. Besarick, N. T. Robinson and J. H. Tuttle. Regatta Committee, W. H. Besarick, James L. Corr, H. G. Patten, R. K. Rice and G. A. Swallow. Delegates to the New England Yacht Racing Association were also elected.

FALL RIVER Y. C.—For several years past there has been considerable racing at Fall River, but no club; this year a club has been organized, and with good water for racing there will probably be a lively season.

NEW YACHTS.—In spite of the many reports of a new 70 from Fife, for Sir Roderick Cameron, that gentleman denies positively that he is to have a new boat. It is reported that Mr. E. D. Morgan has ordered a new 40 from Mr. Burgess.

ROCHESTER Y. C.—This club is doing good work during the winter by a series of talks and lectures. On Jan. 16, Mr. E. W. Wallbridge addressed the club on the subject of the use of the log and local pilotage about Lake Ontario.

MASSACHUSETTS Y. C.—The first of the winter course of lectures of the Massachusetts Y. C. was given on Jan. 17 by Commander Eaton, U. S. N., who spoke on the subjects of magnetism and the mariner's compass.

SEAWANHAKA CORINTHIAN Y. C.—On Jan. 18, Com. Center delivered a very practical and interesting lecture on the subject of "Cruising Yachts and Yacht Cruising," to a large audience at the club house.

MAYFLOWER, schr., has been sold by Mr. F. T. Underhill to Mr. W. A. Gardner, of Boston, owner of the schooner Rebecca.

AMERICAN Y. C.—The American Y. C. has settled on July 7 as the date for its sailing regatta on the Sound.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

S. C. wishes address of a Nebraska taxidermist.

BROOKLYN SPORTSMAN.—We do not know the address of the trap maker.

L. B. A., Princeton.—The New Jersey law does not apply to the species you name.

J. C. B.—The several barrels of the three-barreled guns shoot as effectively as if they were different arms.

D. M. T., Mahanoy City, Pa.—Fritz, A.K.R. 268, is not a champion. Princess Draco II. is registered No. 2,171 A.K.O.S.B.

C. E. N., Hagerstown, Md.—The partridge and rabbit seasons vary in the different counties of your States, but the latest seasons closed Jan. 15.

J. L. B., Philadelphia.—Will you kindly state the difference between "trap shot" and "chilled shot," as to size, condition of hardness, etc. The term "trap shot" relates to size, "was shot at hardness." Trap shot of a designated number is smaller than other shot of the same number; and may be chilled or soft.

W. T. R., Ridgeway, Va.—I have a .22-cal. Marlin rifle, rim fire, which I would like to have bored to a .25-cal. Will you please inform me if it can be done; if so, who to send it to to have the change made, and the probable cost. Ans. Yes, it can be done; but would it be more advisable to get a new arm. See our adv. columns for gunsmiths.

R. B. S.—A few weeks since a pigeon match was shot under the Hurlingham rules, with an agreement between both parties and 50yds. boundary; and within the boundary is situated a club house, left of the traps and a little behind the score. In the house, the shot was fired, a dispute arose over a bird that was shot at and flew into the club house, the doors being open. Not knowing the exact part of the inside of the building (which is one story) where the bird alighted, the bird was uncovered, and upon examination was found to be dead. Would it be in accordance to the Hurlingham rules be pronounced a dead bird? Ans. It was a dead bird.

G. D. L., Landis Valley, Pa.—1. What size round ball can be used in .38cal. Marlin to give satisfactory results? 2. Also, how are they to be loaded? 3. In what particular is a Damascus barrel superior to a twist barrel? 4. Does the quality of the arms justify a man in paying the difference? 1. Use a ball dropping snugly into the muzzle; reduce charge in proportion to loss of weight in bullet. 2. Use annular cork wads to center the ball. 3. It gets a more intimate union of metals and has more strength for the same weight. 4. Yes. The better-priced arms are generally better finished throughout.

G. W. R., Yale College.—In the second volume of "Shooting" (Badrington Library) is the following statement: "Wild Duck.—The male is properly known as a 'mallard,' the female as a 'duck' or 'wild duck.'" Is this distinction made in America? If not, what fowl is known as the 'mallard' and what as the 'wild duck'? Also, what is the best scientific work on American fowl? Ans. 1. Trumbull, in "Names and Portraits of Birds which Inhabit Gunners," gives to *Anas boschas* the names mallard, green-

head, wild drake, wild duck, common wild duck; and he adds this explanation of the curious name duckinmallard, a term used by Lewis and Clarke: "If the word occurred but once it might be considered a typographical error, but it certainly seems to have been so printed intentionally. Old writers commonly referred to this fowl as the 'duck and mallard.' Bartram, for example, in his 'Travels Through North and South Carolina,' etc., 1791, speaks of 'the great wild duck, called duck and mallard;' not meaning duck or mallard (though, as previously stated, the single word 'duck' sometimes distinguishes this from all other species) but duck and drake-mallard being derivatively male. The above queer name is therefore believed to have grown from this old custom." The term wild duck as used in this country commonly applies to no particular variety. 2. The best book is Gordon Trumbull's work already quoted. We can supply it.

LUNCHING ON SHOE-BLACKING.

AN effort on the part of the Polar bear to digest a box of French shoe-blackening has aroused a speculative interest in the minds of the keepers at the Zoo. Nearly all shoe-blackening contains sulphuric acid, an ingredient which causes the paste to dry and glister when rubbed with a brush. Although sulphuric acid is sometimes administered in extremely diluted compounds to the diseased human economy, its effect upon the interior of a Polar bear has never been conclusively shown by experiment of absorbing interest. The bear is still living, although from the general way he deports himself there is a suspicion that he wishes he were not living.

The keepers have found that the blacking was thrown into the cage with a vicious motive by an Italian bootblack who went into the garden to shine shoes contrary to the regulations and was stopped by the keepers. When he left the garden he revenged himself by giving the bear the box of blacking.

The bear worked the box about and finally worked the lid off. Then he smelled it with manifest signs of an appetite, and, feeling quite positive that it was a palatable and delicious substance for food, he dug out small chunks and ate them. His eyes snapped with approval, and he was having a regular picnic, when he was discovered and a frantic effort was made by the keepers to dislodge the box from the cage.

Long bars, sticks and everything else that could be stuck in between the bars were used with dexterity and desperate perseverance until the bear was driven at bay and the mischievous box secured. Around the mouth the bear began to resemble a black bear, and his teeth looked as if they had been carbonized. He howled resentfully at the way he had been despoiled of the only delicacy and variety of food he had known during the monotony of this long captivity. A little later on he grew quieter and more serious. He appeared to be buried in abstract contemplation.

Occasionally he would shake himself and throw out an expression from his eye that was very ugly. He grunted and swore—at least he made sounds in an accent, with accompanying looks and gesture that corresponded closely with an explosion of profanity from the human breast. The keepers tried to comfort him, and were filled with anxious solicitude for his future. He got over it slowly. Now he is considerably better, and on a fair road to recovery. His experience has developed an ineffaceable suspicion that he was betrayed, that he was victimized by a cowardly, degraded and contemptible imposition, and while the internal fires are fed by this burning consciousness of abuse, it is better to keep away from him. For some time to come patrons of the Zoo will be warned not to approach the Polar bear's cage, and naturalists will find all interesting new channel of research founded upon the chemical combination of vitriol and carbonized bone with the digestive fluids of a bear.—Philadelphia Telegraph.

A YANKEE SKIPPER IN FLORIDA.

KEY WEST, Jan. 16.—Capt. Lane, of the schooner Hattie S. Clarke, owned in Gloucester, Mass., was indicted by the Grand Jury on the last day of the last term of the Circuit Court, the 11th inst., and is now under bonds to answer the same at the next term. The *Times-Union's* correspondent called on Capt. Lane at Tift's wharf, and there found him engaged in mending some seines and preparing to go out for another haul. Capt. Lane spoke as follows: "Previous to coming down here I fished in Tampa Bay all last winter and sold my fish to merchants in Tampa. Last April I came to Key West for a load of pineapples, and on my way up I ran into several schools of fish which I knew to be Spanish mackerel, and so I came down to fish, and fished. Since my arrival here in November I have shipped several thousand dollars' worth in ice to Tampa and New York."

"Captain, how came you to be indicted?"
"Well, you see, I don't know; but a certain gentleman came to me and wanted to go into partnership with me. Of course, I could not agree, as I am not the owner of the boat, and the crew of ten men are all hired on shore. This gentleman then went to the Collector of Customs and reported me, and from what I hear it was not the partnership he cared so much for, as he said so to the Collector, but that he wanted to find out how I fished. However, the Collector could not do anything for him, as there is no United States law to prevent me from fishing on the Florida coast, nor any State law, unless I fish in the rivers or creeks. I think I have at least as good a right to fish off the coast as the Cubans or Bahamians."

"Captain, how do you fish, that you want to keep it a secret?"

"It is no secret, sir. Why, the children in Gloucester can fish as well as I can. There is my seine (pointing to a huge pile of corks, seines, etc., lying on the deck); it is what fishermen call a 'purse' seine. We go along until we see a school of fish, perhaps a quarter of a mile off; then we prepare our seine, which is 180 fathoms long, and drop it, the crew taking the dings, or little boats, and carrying the seine go on each side of the school until they surround it, the seine in the meantime forming a purse, which incloses the fish. This is how we catch them.

This is how the Yankee fisherman does his hauling, while the Key West fishermen go out in little boats with hook and line (as a boy would on a river bank to catch a trout), and fish from dawn to dark, catching a few hundred, which are sold here, and oftentimes one cannot find a mackerel in the market, although the gulf is teeming with millions. No doubt if they only had the appliances, and knew how to use them, the amount realized from the fisheries of Key West would equal those of the Chesapeake Bay or New England, and, instead of being only \$40,000 or \$50,000 per annum, would be at least a couple of millions, as is evidenced by the success of this now indicted Yankee fisherman.—Jacksonville (Fla.) Times-Union.

HONORED WITH A MEDAL.—Charley Crew, a Marion, Ohio, jeweler, has completed a medal which is to be given to Ira Williams. Mr. Williams is the farmer who had the following sign posted on his farm regarding hunting: "Hunt all you please, and when the bell rings come in to dinner."

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanite," "Glean," "Dick Swiveller," "Syllabene" and other competent authorities to be the best treatise on the subject extant.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

HARE COURSING AND DEER HUNTING.

A BILL has been introduced at Albany, the purpose of which is to exempt from interference by the Society for the Prevention of Cruelty to Animals the coursing of hares, when conducted by regularly incorporated coursing clubs. This measure originates with the Eastern Coursing Club; and it has been criticised as being a virtual acknowledgment by the coursing men, that their practice would naturally fall under the head of cruelty to animals, unless so exempted by special statute. Such, however, is a decidedly erroneous view to take of the bill, as is well understood by those who are cognizant of the circumstances which have led to its preparation.

When the Eastern Coursing Club announced its first meeting, the Society for the Prevention of Cruelty to Animals decided that it would make a crusade against coursing. Its officers arrested two of the participants; but after trial by jury they were acquitted of the charge of cruelty. At the next meet the same performance was gone through; arrests were made and trial and acquittal quickly followed. Having entered on this campaign, however, the S. F. P. C. A., it is understood, proposes to keep up the programme of arresting, even in the face of the certain acquittals; and thus to worry and annoy the coursing men until they shall give up the meets. It is to escape this interference, which may well be termed persecution, that the members of the club have sought to secure relief by statute.

In this connection it should be remembered that the S. F. P. C. A. derives its powers from special statutes; and by some of the individuals who are at this time the guiding spirits of the Society, those statutes are regarded as giving it a field whose scope is not fully realized by the public. Thus the president of the Society holds that hunting deer with dogs in the Adirondacks and on Long Island is cruelty to animals within the law; and that it would be the Society's duty to punish the deer hunters were there not a special statute legalizing this form of

sport. The Long Island hare coursers are then only asking for a statute which shall afford them the same immunity which his special statute gives to the Long Island deer hunter. To aver that in doing this the coursing men acknowledge the cruelty of coursing is no more logical than it would be to contend that because of their deer hunting law the deer hunters concede the cruelty of their sport. It is a logical conclusion that if the Legislature of New York is to be guided by the notions said to be entertained by the S. F. P. C. A. respecting the pursuit of wild game, and shall refuse to enact the law asked for by the coursing men, it should for consistency's sake take from the deer hunter his permission to kill deer. It must not be forgotten that those who are opposed to hare coursing are also opposed to certain other practices which have always been regarded and are to-day upheld as legitimate, manly, healthful sports. Their views have not been held by former Legislatures, as our game laws prove; we do not believe that there is any large proportion of the present Legislature holding to the opinion that they should be guided by a sentiment which classes hare coursing and deer hunting together in the category of cruelty to animals.

THE NEW PARK BILL.

SENATOR VEST'S bill for the protection of the Park, introduced in the Senate Dec. 4, and referred to the Committee on Territories, has been favorably reported by Mr. Manderson. The bill, which is known as S. 491, differs somewhat from that which passed the Senate at the last session of Congress. It is provided in the first section that the northern boundary of the Park shall follow the northern boundary of the Territory of Wyoming, from the northwestern corner of that Territory as far east as its intersection with the meridian of 110° west longitude, thence it follows that meridian south to the parallel of 44° 50', thence due east along this parallel to the meridian of 109° 30' west longitude, thence south to the 44th parallel, thence west along this parallel to its point of intersection with the western boundary of Wyoming, and thence north to the point of beginning. This section provides for an accurate survey of the boundaries so established.

Sections 2 and 3 set aside the Park as established as under the sole and exclusive jurisdiction of the United States, provide that the laws of Wyoming shall be enforced in it, and that, until otherwise provided, the Park for the purposes of this act shall constitute a part of the third judicial district of that Territory; the land in the Park is specially withdrawn from settlement, occupancy or sale, and the territory so set apart is placed under the control of the Secretary of the Interior.

In Section 4 the Secretary is authorized to make regulations for the protection of the Park, to call on the Secretary of War for troops to enforce such regulations, and to employ five civilians as scouts and policemen. All sums received from rents, or from fines or forfeitures, shall constitute a separate fund to be applied to the care and preservation of the Park in its natural condition.

Section 5 prohibits hunting, killing, wounding or capturing wild animals or birds, except dangerous animals; prohibits the taking of fish except by hook and line; provides that offenders against this prohibition shall be fined for each offense not less than \$50 nor more than \$200. Possession of the dead bodies of game unlawfully taken is to be *prima facie* evidence that persons having the same are guilty of violating the act; persons transporting such game or fish are to be fined \$250.

Section 6 permits the leasing of small plots of ground, and provides that structures erected on such leased land must be approved by the Secretary of the Interior. In Section 7 the President is authorized to appoint a commissioner, to reside in the Park, who shall hear and act upon all complaints made of violations of the law or of the regulations. The commissioner's powers are defined.

Section 8 provides for the payment of court expenses and makes the violation of any regulation established by the Secretary of the Interior a misdemeanor, to be punished by a fine of not more than \$100 or by imprisonment for three months or both.

Section 9 provides for the erection of a jail in the Park. Section 10 requires the Secretary of War to detail an officer of the Engineer Corps to reside in the Park at least three months in each year and specifies his duties.

It will be observed that the present bill cuts off the narrow strips of the Park territory lying in Montana and

Idaho, and makes the northern and western boundary coincide with the boundary line of Wyoming. The bill extends the southern boundary of the Park to the forty-fourth parallel, or about nine and one-half miles southward; the extension eastward is about twenty-five miles, so that the added area is, all told, about 2,000 square miles. This added territory consists wholly of very high rough mountain country, which is absolutely valueless for agricultural purposes and is destitute of mineral wealth. Its sole value is that of a water preserve.

It is unnecessary to go over again the reasons which make the passage of this bill most desirable. They have again and again been printed in FOREST AND STREAM. Without the enactment of some bill such as this, the forests, the game and the natural wonders of the Park are likely to be destroyed, and close upon the heels of any destruction of the forests will follow the drying up of streams which now supply water to a great area of territory on the plains east and west of the mountains. At its lowest stage, the Yellowstone River below the lake flows 84,000,000 imperial gallons of water per hour, and it is estimated that the amount of water flowing out of the National Park through its five main drainage channels would make a river 5ft. deep and 190ft. wide with a current of 3 miles per hour. This water for several months in the year is used by the farmers on the plains to irrigate their fields. They cannot do without it. If it ceases to flow they will be ruined.

Besides the question of water-supply, game protection and the preservation of natural wonders, that of the personal safety of visitors to the Park demands consideration. Instances where visitors have been robbed in the Park have not been very infrequent, and there is now no law to punish the perpetrators of such offenses. The present bill provides the appointment of a local magistrate, who shall have power to try minor offenders and to arrest and hold those committing indictable crimes.

On the whole it may be said that the bill now before the Senate is one which ought to become a law, and should reach the House as soon as possible.

SNAP SHOTS.

MR. C. J. JONES, of Kansas, perhaps better known as "Buffalo Jones," was in this city last week on his way to Washington, D. C. Mr. Jones had with him some capital photographs of buffalo. What was much more remarkable than the buffalo photographs was a lot of buffalo meat, taken from a buffalo steer, which Mr. Jones killed shortly before he left Kansas. This meat was fat, juicy, tender and delicious, and those who had an opportunity to taste it will not soon forget its delicacy and its rare flavor. It is many a long year since we have tasted fat buffalo meat, and the dinner that we ate with Mr. Jones seemed to carry us back into the past more years than we like to count. The eating of buffalo meat at the present day, and in New York city, is such a remarkable event that it deserves to be chronicled.

The Maine courts have decided that a person who captures alive game in the close season acquires thereby no title to the game; and in the specific case under discussion it was held that a game warden could not be held liable for having released a live moose captured in close time. It was also held that the warden was liable for having set at liberty a live deer which the owner of it had captured in the open season, and to which good title had thereby been acquired. The text of the decision will be given in full in our next issue. The case will serve as a precedent; and the Commissioners will probably see their way to stopping the practice of capturing alive large game in the deep snows of spring and holding it for sale. This was a test case, several parties having combined to put it through the courts; and the decision was given by the full bench of judges.

Judge Sidney T. Holmes, who died at Bay City, Mich., Jan. 16, was a fine example of the hard-working professional man, who seeks and finds recuperation in the sports of hunting and fishing. Occupying a foremost rank at the bar, charged with many important responsibilities, Judge Holmes found time, or made it, to engage in these out-door recreations, of which he was fond. He took an active part in the Michigan Sportsmen's Association, and was always alert in schemes to promote the highest interests of legitimate sport.

The Sportsman Tourist.

STANLEY.

BY K. H.

A GAIN from the sunland,
Where the blue eyes
Of Nile's new-born sources
Stare at the skies,
The solver of riddles
Breathlessly asked,
Steps out of the silence—
Broken at last.

For heart-burning questions
Pressed on the earth;
The fate of a brave band—
Passing, in worth,
A continent's secret—
Was to be read;
Now told by their voices
Woke from the dead.

The wilderness opens,
Yields up its prey,
Tramped down to submission
Footsteps that stay
For no cry of danger
Stretching their chain,
Strong welded by heartbeats
Out from the main.

Through vine-woven jungles,
Savages' camps,
Close coils of treachery,
Festering swamps;
The thread of a sunbeam
Searching the grave
Of primeval forests
Emin to save.

All hail to the heroes,
Living and dead,
Whose names mark the pathways
Knowledge shall tread;
And trade's restless armies,
Faith too, and love,
The new realms of power—
Gifts from above.

BY THE WAY.

IN this day civilization crowds nature so closely that not infrequently do her children in their journeying to and fro within the supposed precincts of their wilderness, come plump upon civilizing man actually engaged in his despoiling work. What was but yesterday a quiet recess in the woods, where perhaps the liveliest disturbance ever occurring is a strong breeze shaking the top-most branches of the tall and thick-set trees, or rattling their hard, dry leaves in autumn to the ground, echoes of a sudden with the axe, the tools of the sapper and miner, and in the twinkling of an eye is transformed into a summer resort, a railroad station or a miner's camp.

As we came out of the woods we were told that on the day before a youthful sportsman had shot an unsuspecting doe on the edge of the clearing almost as he turned about from lifting his duffle and his gun off the platform of the car at the station furthest in. She died like a fish on the beach gasping for the receding tide. The deer and the "iron horse," as the locomotive is figuratively and expressively called, well illustrate the whole range of incongruity between nature and the type of modern civilization—the railroad. The result of the struggle between them where we were was plain to be seen, and the unseemly haste of its approach offensive.

We talked with a pioneer of the country. Quite three score and ten her courage and habit of work were ever manifest as she busied herself about her house. Her children, too, showed the characteristics of their parent, though less directly and more self-consciously than did their mother. Now, when the other world is beckoning her to join the partner of her venturesome, lonely and valorous life, hardly sustained for many years out of the cold and rocky soil, the habit of labor binds sufficiently her thoughts to earth. Almost less than the face of nature about her dwelling has she herself changed. Society with its arts, its railroads, fine clothes and comfortable ways of living, may have changed and may continue to change, her children, her house to some extent may change, but her groove of life has been cut too deep and long for any such thing.

One son outstrips even his progenitor. If she is a driver, he outdrives her. He takes in the whole situation. He is down to bed rock principles of trade, finance and barter, and no diverting taste or thought or sympathy thrusts him aside a moment in any waking hour from getting and gaining. Even his Irish wit busies itself solely with the humor of business. We numbered three lawyers in our company, but this native bargainer shut two of us up with a word apiece, and settled the third in a short but sharp encounter over his compensation for carrying our traps into the woods. Everything went his way. Already were his affairs getting beyond the paltry. When we came out we learned that he had sold a few acres of land on a neighboring lake for fifteen hundred dollars. It was dazzling to think what schemes and enterprises would go on now at the instigation of this person equipped with so substantial a sum.

Thankful were we to reach the river and the hunting lodge on its banks in the vast wilderness of the woods. Here a worthy citizen of an interior town came, erected a simple and substantial house, and year in and year out lives, when in the lower altitude of his civilized residence he must die for lack of air for his enfeebled lungs. You, who have not dwelt long enough with nature to learn the satisfaction she gives to her steadfast lovers, would shudder at the monotony, the long winter, the lingering spring, the deep snows, the fast-bound ice, the bitter cold. However, he may find these things in their time, certain it is that no more cheerful and contented spirit has appeared to us. He is very simple in affairs. The innocent air with which he receives somewhat acrid

criticism on the lack of method displayed in the disposition of his now numerous guests cripples its force. He placidly tells us, too, how late in the last fall, when up the river looking for deer, he was waited on by four bears, two adults and two well-grown cubs, and how from his vantage seat in a tree he slew them every one with his repeating rifle.

Five miles further in, over which we walked the next morning, in a mean cabin on the bank of the river, we "met up" with a somewhat interesting specimen. Upward of seventy years of age, in solitude save when passing sportsmen make him a call, lives "the Judge"—title earned by years of faithful pettifoggery in justice courts of the neighboring county in the days of his prime. Now he rises betimes in the morning, seeks the places where the trout hide, catches his breakfast, reads his papers and books, dreams and dozes, writes such worthy thoughts as his surroundings breed in him, eats again and sleeps again, and thus fares along. We swap stories with him, get the best of the bargain and on we go.

Three dogs are our companions, and like human kind each has its character. One whom we call Lady Branch was easily the favorite. She was a deerhound, small and delicate, with pendulous ears and dewlap. Led in leash she would trot hour after hour close at the heel of her leader, unobtrusively, save when a deer had too recently crossed the trail. Then her instinct got the better of her discipline and frequently she had to be cuffed into submission. Her eyes had the habitual mournfulness of the eyes of a dog, but vouchsafe to her so much as a word or touch and instantly delight, vivacity and interest flashed from them. What could be more touching, more sympathetic, more appreciative than the caresses she showered upon any known friend of hers? And yet let her range in the aisles of the forest until her nostrils met the faintest odor of the deer, and entreaty, command and cajolment went for nothing. She has been known to run for days until brought to the ground from utter exhaustion she lay awaiting some helping hand or death. She was so small, so delicate, so frail, it seemed impossible that she should wish long to pursue, much less to harm, the least of all her fellow creatures.

It would doubtless take more space than it is worth to lay down the lines of character belonging to our guides. If nature ever moulded a man for the woodsman's art she moulded one of the two. Tall, but not too tall, lithe, muscular, enduring, patient, courageous, cool, intelligent, with keenest sight and hearing, and withal silent and thoughtful. If the face be a good index of character it seemed as if much of his might be read there. It was impassive, but strong, intellectual, and for that matter handsome. No creature of the forest—not even the fabled fox—could equal him in cunning, and of this his dark and restless eyes, lacking in openness, told. He cared nothing to tell of his exploits. The story of the two panthers he killed the last winter had to be dragged from him with an ox team. The only circumstance of his career that he ever volunteered was one night when we stumbled and felt our way along a devious woods trail by the light of a couple of lanterns to the night shelter of a bark "lean-to" after "jacking" for deer. He told how, when caught out at night in the late fall with no light, he traveled by the bank of the river until he struck the same trail on which we were, and how in the impenetrable darkness of the forest he made his way for six miles to a hunting shanty, where he stayed till dawn. One who has never traversed the woods at night can hardly appreciate the magnitude of this task.

Favorite guides are commonly expert paddlers, crack shots and good cooks. Certainly no guide anywhere in the vicinity was in such demand as this man of ours. But to say nothing of these commonly vaunted qualities, he had an unusual strength in the lines that mark strong men in any walk of life. His acquaintance with the geography of the woods was celebrated, and it is said that dropped out of a balloon anywhere he could take the shortest line to a given point.

Our other *courreur de bois* made up in capacity of amusement if he fell short of the exceptional other in professional skill. While the woods and the life there was the thought and existence of the other, this one had other channels of interest and energy. He was the hewer of wood and drawer of water, who knew the trail sufficiently well, and who could "paddle a man up to a deer." He was a Hibernian, and nature had not denied to him the proverbial wit of his race. With this splendid coin he more than paid up for any deficiency. To hear him tell the story of how he got even with a mean neighbor who shot down his dog was as good as a play, although a reproduction of it by the writer without the unction of his humorous expression and casual manner may leave the reader in doubt whether any but a somewhat harsh fun could be extracted from an account of so severe an incident. It must suffice to say that weeks, if not months, after his enemy had supposed from lapse of time and apparent indifference that Mr. Horrigan had buried all unkindness, he was one evening quietly unharnessing his team, when the fellow appeared, and taking his place on the opposite side of the horses from our friend, opened an ordinary conversation. Mr. H., with perhaps unusual deliberateness, continued unbuckling straps, until in the natural course of the business he came round to where his unthinking victim stood, when without any preface he hit him in the "tushes," i. e., the teeth, and felled him to the ground, where he belabored him a few times, permitted him to arise, challenged him to resent his treatment, and on his declining, hit him again and sent him home. "I made it 'torching' (his word for scorching) hot for him," he said.

One day as we slid our boat on to the shelving shore of a neighboring lake, a bluejay fell out of the sky among the rushes not far away, and sat screaming, his wings wide spread, apparently sick or hurt. We picked him up still clamoring at the top of his lungs. He showed such spirit and was so beautiful in his mottled blue coat and gay crest, that we led him away captive to our camp. There he was installed in a pack basket turned on its side, with mosquito netting stretched across its opening. He would not eat and yet never showed a white feather in fear or depression. All the evening he worked unflaggingly upon his prison walls,

striking his sharp bill into the netting, without a symptom of his former illness or injury, so we kept him, waiting to see if in the morning his proud spirit would at all be humbled. Alas! on the morrow he was dead and our remorse was great.

What was the secret of his taking off? What brought him down at first to lie helpless against our capture of him? He bore no visible mark of hurt, no feather was ruffled or displaced, yet he lay among the tall plumes of grass powerless to escape us. No bird is wariar than he of any enemy, nay, he delights in the office of warning other birds and animals of the forest of the approach of an intruder. It is said that bluejays often meet their death at the hands of the hunter, who, deprived at the final moment of the wary deer by their shrill and discordant call of alarm, have in revenge turned against their breasts the shot intended for a nobler game. He forgets or neglects after his warning to the deer, to find safety with them in the dense copes of the wood. Did a hawk turn on his accustomed prosecutor and slide his sharp beak or claw between the close-lying feathers of his breast in deadly thrust, or did a night owl, catching him unawares in the silence and darkness of some glade, thus strike him and vent the heaped up wrongs and persecutions that have come to his tribe from all the tribe of jays? Or did some nut, or seed or berry plucked for breakfast beneath some tall tree, or as he swayed at dawn on the depending branch of some fruitful bush beside a distant lake or stream, poison his blood and destroy his life? We could not tell. Perchance it was, that if we had not robbed him of his liberty, he might have cured his hurt and lived, finding a balm that nature's children know in some juice of balsam tree or fir or other simple of the wood. Perchance it was the breaking of his proud spirit, by our confinement of him, that broke at last his heart and stripped him of all courage to fight successfully the trouble that only momentarily palsied his life when we secured him. Remorseful thought!

OSWEGO, N. Y., November, 1889.

Natural History.

OUT-OF-DOOR PAPERS.

X.—OTHER MEN'S OBSERVATIONS.

IT is comforting sometimes when not over well pleased with one's own performance, to see how other people have fallen short of absolute accuracy; and, for my own part, in order to obtain complete satisfaction, I frequently go back two hundred years or so to those early observers who wrote when the world of things was fresh and undiscovered. There is much besides science in their writings, and a man might grow old guessing, if he tried to determine what is meant in all cases; but with all their mistakes and superstitions these old books are none the less excellent and pleasurable reading. What can be better than good Sir Thomas Browne's experiment to discover whether an ostrich can digest nails, feeding one on the tenpenny article till it died, and then gravely lamenting that he had not more ostriches whereupon to experiment further? We follow him with a lively interest while, in language more latinic than Latin, he discourses on such deep questions as, whether the diamond is softened by goat's blood; whether elephants have joints in their legs; "why the bittens' voice differs from that of all other volatiles"; "the anthropophagie of Diomedes his horses"; and the probable non-existence of griffins, basilisks and the phoenix—weighty chapters in which Browne in the text is overpowered by Ross and Dean Wren in the foot notes; who, being men gymnastically composed in their intellects, as Sir Thomas might say, halt at no leap in order to reach their conclusion; the phoenix must certainly be alive, have retreated into the wilds of Scythia for safety, says Ross; "for had Heliogabalus, that Roman glutton, met with him he had devoured him, though there were no more in the world!"

But there is no need of going into the wilds of Scythia for wonders; the early voyagers brought them to our own doors. For one thing, they were all interested in snakes, as if they had all just come from Ireland, and they spend pages in describing these "terrible creatures, carrying stings in their tails." That doughty warrior, Sieur Champlain, who writes of the rarities of America with a hand unprejudiced in favor of the facts, produces the most remarkable: "As large as one's arm, his head as large as a hen's egg, upon which they have two feathers. At the end of the tail they have a rattle, which makes a noise when they crawl; they are very dangerous as to teeth and tail, nevertheless the Indians eat them, having cut off the two extremities." The plate (drawn by Champlain himself) represents a creature with head decorated with two ascending plumes and tail finished by a knob the size of a mainmast truck; its body is disposed in three complete loops, which would necessitate rolling sideways like a spiral spring had not the artist made locomotion impossible by turning two of the coils one way and the third in the opposite direction. "There are also dragons," says Champlain, who was nothing if not superstitious, "of strange shape, having a head approaching that of an eagle, wings like a bat, a body like a lizard and only two feet, sufficiently large, and the tail very scaly, and is as large as a sheep; they are not dangerous and do injury to no one, although to see them one would think the contrary;" that is if they at all resemble M. Champlain's picture. But then Champlain helped invent the Gougou, which is much more terrible, so that possibly he didn't mind the little dragons.

Not only are mythological creatures introduced in impressive numbers, but our old, familiar animals appear in new lights. "The porcupine I have likewise treated of," says John Josselyn in his "Two Voyages," "only this I forgot to acquaint you with, that they lay eggs and are good meat."

"The mink is of the otter kind, and subsists in the same manner," writes Capt. John Carver, "In shape and size it resembles a polecat, being equally long and slender. Its skin is blacker than that of the otter or almost any other creature, 'as black as a mink' being a proverbial expression in America; it is not, however, as valuable, though this greatly depends on the season in which it is taken. Its tail is round like that of a snake, but growing flattish toward the end, and is entirely without hair." Capt. Carver's ornithology is one degree worse. "The whetsaw is of the cuckoo kind, being like that a solitary

bird and scarcely ever seen." "The kingbird is a swallow, and seems to be of the same species as the black martin or swift." "The loon is a waterfowl, somewhat less than a teal and is a species of the dobochick."

From such science perverted it is a relief to turn to Josselyn's account of the birds of New England. "The partridge is larger than ours; white-fleshed, but very dry; they are indeed a sort of partridges called *grooses*." He tells us that there are "ninemurders, little yellow birds; New England nightingales, painted with orient colors—black, white, blue, yellow, green and scarlet—and sing sweetly; wood larks, wrens, swallows, who will sit upon trees; and starlings, black as ravens, with scarlet pinions. Other sorts of birds there are, as the troculus, wagtail or dishwater, which is here of a brown color; titmouse, two or three sorts; the dunneck or hedge sparrow, who is stark naked in his winter nest; the golden or yellow hammer, a bird about the bigness of a thrush, that is all over as red as blood; woodpeckers of two or three sorts, gloriously set out with varieties of glittering colors; the colibri, viemalin, or rising or walking bird, an emblem of the resurrection, and the wonder of little birds."

This list raises a number of curious questions, not least among them being the identity of the hedge sparrow, which passes the winter so coldly. The yellow hammers, "red as blood," need not disturb us if we recollect how frequently in the seventeenth century and before, blood was called "golden" and gold "blood red." The colibri, that "wonder of little birds," is the humming-bird which was supposed to pass the winter in a torpid state. Gabriel Sagard, a French missionary and an admirable naturalist, writing in 1684, says of it: "This bird, as one might say, dies, or, to speak more correctly, puts itself to sleep in the month of October, living fastened to some little branchlet of a tree by the feet, and wakes up in the month of April when the flowers are in abundance, and sometimes later, and for that cause is called in the Mexican tongue the Revived." It is not twenty years since a similar error died out. It used to be no uncommon thing to hear stories of digging swallows out of the mud in winter, and to add to the credibility of the tales the narrators embellished them with vivid accounts of how the frozen wings would snap, and how under treatment the birds would revive and fly about the house, affording great pleasure to their kind benefactors.

While it would be an ungracious task to pick flaws in so good an observer as Sagard, he should not be passed unnoticed. His books are delightful reading—so unstrained and unconscious, so frank in all the personal narrative that we forget about scientific identification until we have finished the story. "It knew how to pinch with its bill when one wished to touch it," he says of a captive sea bird, and adds but two things more, that it is called a fauquet, and by the fishermen a happefoye (liver glutton) because it eats greedily the livers and heads of fish—a habit which identifies it as some species of jaeger, or skua; and, lastly, this for description—which is exquisitely humorous, and in its indefiniteness recalls Cox and Box: "It in no way resembles a pigeon except that it is twice as large."

The food problem seems to have been a trying one to Sagard; for though a missionary, he was not fed by ravens, unless, indeed, he fed upon them. He tells us of his pet muskrat, and how one night it was accidentally smothered as it slept wrapped in his robe; it made a good breakfast for his eagle, he adds. But it was not long before fish could not be procured, and the eagle was hungry; then like a merciful man he killed it and it went into the kettle to make a meal for himself; "and we found it very good," he says simply. But Brother Gabriel never complained of his cook so long as there was anything to put into the kettle. "The owls," he says, "are the same to eat as ours and differ nothing in taste as I well know from the great number I have eaten of them while I was there" (in Canada). There was only one thing for which he felt no appetite. The bullfrog did not tempt him. "For myself, I confess frankly that I did not know what to think at first hearing these great voices, and I fancied it was some dragon or indeed some other great animal, to us unknown. I have heard our monks in the country say that they had no trouble about eating them under the guise of frogs; but for myself I doubt if I should have wanted to do it, not being well assured of their neatness."

Nearly all the earlier visitors to the country speak of the frogs. John Josselyn in his "New England's Rarities Discovered" mentions "The Pond Frog which chirp in the spring like sparrows, and croak like toads in autumn. Some of these when they set upon their breech are a foot high; the Indians will tell you, that up in the Country there are Pond Frogs as big as a child of a year old." "Here, likewise," says Wood in his "New England's Prospect," "be great store of frogs, which, in the spring, do chirp and whistle like a bird; and at the latter end of the summer croak like our English frogs." "It's a strange land," said the English soldier, stuck by the same peculiarity, "where the frogs whistle and the crows bark."

"The plumbs of the country be better for plumbs than the cherries for cherries," says Wood; and of the latter he pithily remarks, "English ordering may bring them to an English cherry; but they are as wild as the Indians." Just at present they are even wilder; for he speaks of the choke-cherry. The Indians make an oil of white acorns, says Josselyn, "which they put into bladders to anoint their naked limbs, which corroborates them exceedingly." The catfish is an "excelling fish," he says with gusto; but of the walnut he complains that it is "but thinly replenished with kernels"—a disadvantage which we also have remarked in eating walnuts. "Now you must understand this whale feeds upon ambergreece, as is apparent, finding it in the whale's maw in great quantity, but altered and excrementitious. I apprehend that ambergreece is no other than a kind of mushroom growing at the bottom of the seas." "Some suppose that the White Mountains were raised by an earthquake; they are hollow, as may be guessed by the resounding of the rain upon the level on top;" and then, speaking of the Indians—for, philology or divinity, it was all one to Josselyn: "Their speech is a dialect of the Tartars (as also is the Turkish tongue). There is difference," he added with the gravity of one whose word is authoritative; "there is difference between tongues and languages, the division of speech at Babel is most properly called languages, the rest tongues."

But not all mistakes date back to the Greeks. In the second volume of the "Fishery Questions of the United States" (p. 602) we read the following, which purports to

be the sober opinion of one Prof. Anton Siegafritz, a Prussian scientist, who was sent to America to study the oyster industry: "While I was in America I saw the excitements caused by immoderate indulgence in shellfish violently illustrated. They have there a sort of political assemblage called a clambake, where speeches and music and songs are interspersed with profuse feasts upon a species of oyster called the clam. Vast crowds attend these celebrations, and no sooner are they gorged with the insidious comestible, than they became full of excitements and furores; swear themselves away in fealty to the most worthless of demagogues; sing, fight, dance, gouge one another's eyes out, and conduct themselves like madmen in a conflagration." This reads like a sixteenth century wonder. Is it, indeed, true that the national vice of shellfish eating causes disturbances in the moon?

FANNIE PEARSON HARDY.

SNOWY OWLS.

Editor Forest and Stream:

In answer to your correspondent for information concerning the snowy owl: I killed one on Dec. 26, 1889; it is a mottled female, and when shot measured 4ft. 9in. from tip to tip (across wings), and now standing stuffed on the table is the exact height of FOREST AND STREAM. I killed it 1½ miles south of town on the Platte River. There was another much larger one, perfectly white, within a short distance, which a friend of mine has since killed, and is now to be mounted. When done I will send measurements.

T. F. C.

SCHUYLER, Neb., Jan. 23.

Editor Forest and Stream:

I have mounted sixteen snowy owls this fall and winter. In the stomachs of six of them I found duck feathers, in two rabbit fur, in one grouse feathers; in the rest nothing that I could determine. Twelve of them were captured on or near what is known as Sandy Point, a point of the Lummi Reservation of Whatcom county; and were shot by a half-breed named George Boone. They were in color nearly white to a dark mottled gray. They measured from tip to tip of wings from 4ft. 7in., the largest, to 3ft. 10in.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 10, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

KENTUCKY FISH AND GAME CLUB.

THERE was organized at Louisville, on May 15 last, a club of sportsmen, and that body has already accomplished a deal of good in the way of protecting the game and fishing interests of this State. On the night mentioned, a half dozen sportsmen met and decided upon the organization of what should be known as the Kentucky Fish and Game Club. The club was duly incorporated by Col. John H. Ward, Mr. William O. Bonnie, Mr. Guy C. Sibley, Dr. J. B. Alexander and Mr. Arthur H. Robinson, and the letters were filed June 8. The officers of the club were chosen as follows: Col. John H. Ward, Pres.; Maj. J. Fry Lawrence, Vice-Pres.; Capt. G. G. Berry, Sec'y; Mr. John B. Lampton, Asst. Sec'y; Mr. Ion B. Nall, Treas. Directors: Dr. J. B. Alexander, Mr. John Fowler, Mr. W. O. Bonnie, Mr. Guy C. Sibley and Mr. W. B. Haldeman.

The main objects of the club are to secure proper legislation for the protection of game, dogs, birds and fish; the encouragement of the citizens in their efforts to increase varieties and numbers of game and fish, and the vigorous enforcement of all laws against the killing or shipment of game. The amount of authorized capital was fixed at \$2,000, in shares of \$1 each.

The club started out under most favorable auspices. Its membership rapidly increased and now there are but a half dozen less than 500 names enrolled. The first movement taken by the club was the appointment of five important committees, who have discharged their duties faithfully. These committees are upon law, fish, game, dogs and farmers. The law committee has charge of all matters pertaining to legislation and to the enforcement of the laws of the State against the unlawful killing, selling or shipment of game birds and fish in the State, and against trespassers on land.

The committee on fish has busied itself gathering information about the laws to protect fish, particularly in those States adjoining Kentucky, and arranging a fish law for Kentucky which as near as possible harmonizes with the laws of adjoining States. This committee has also watched that the present fish law is actively enforced. The game committee has taken similar steps toward framing a law for the better protection of the game of Kentucky. The dog committee has prepared an amendment to the city ordinance, and hopes to have passed a law protecting fine dogs. The farmers' committee has wisely arranged a proposed amendment, in conjunction with the game committee, protecting farmers from persons who may trespass upon them under the guise of hunting and fishing. It has offered many inducements to farmers to join with the club in protecting the game and fish in this State. This it has done by taking many farmers into membership.

One of the first needs observed by the Fish and Game Club was a law for the better protection of the game birds and animals. The present State constitution permits counties to be exempt from laws, or to alter them for their own districts as the members see fit. This has led to much confusion, for in some places there are no laws, and in others, adjoining counties have seasons which close at times a month or two apart. The constitution will be amended this year, and the club will endeavor to have a law passed that will as near as possi-

ble suit all parties. The law, if passed, will be a very simple one. It provides that deer shall be protected from Jan. 15 to Sept. 15, turkey from March 1 to Oct. 1, and pheasants, quail, woodcock, snipe, ducks and geese from Jan. 15 to Oct. 15. The law will naturally meet with some opposition, but the farmers are beginning to realize its necessity, and many of them will work hard for the passage of the law.

The fish committee has accomplished an important work. Soon after the organization of the club it was realized that the finny tribe must be protected. The Cumberland and Kentucky rivers afford as fine fishing sport as can be obtained in any State. But in these and nearly all other streams the fish were being dynamited at such a rate that their entire extermination seemed imminent. Laying the matter before the club, it was determined to offer a reward of \$25 for any information of a case of fish dynamiting. Posters were printed and tacked up throughout the State. In a short time news was received of six different cases of fish dynamiting, and Capt. G. G. Berry was sent out to make up and prosecute the cases in the name of the club. Four men were convicted and fined for illegal fishing in the Cumberland River, one in Salt River, and the sixth in a little stream near La Grange. These prosecutions have had their effect, and though the rewards are still offered not a case of fish dynamiting has been reported.

The dog committee is an important one and has an amendment to the city ordinance already passed upon by the members of the board of councilmen, and it will shortly come up before the Board of Aldermen. The State law makes a dog private property, and a man can be prosecuted for felony for the theft of one on the same charge as horse stealing. Fine dogs, therefore, are seldom stolen. The sportsmen suffer some expense from men who seize their dogs and hold them until a reward is offered, and then returning the animal with the story that it was found. The amendment to the city ordinance compels the finder of stray dogs to bring them to a pound, where they shall receive a reward. A person who then detains a dog is guilty in the eyes of the law and can be prosecuted. The dogs impounded are sold, if at the expiration of ten days the owner cannot be found, although if a dog be registered the pound-keeper must notify the owner, who can reclaim the animal upon the payment of twenty-five cents for each day the dog is impounded. The law makes any dog liable to arrest who is found on the street without an agent or master.

The Kentucky Fish and Game Club opens the year of 1890 with the most bright prospects before it. If the present laws are passed, the club hopes to extend the open season for a year or two and allow the amount of native game to increase. When the club was first organized it labored for some time under a disadvantage. The farmers thought the object of the club was to make laws to suit the city men, but the club soon exploded their ideas. They spent a small sum for literature, which they sent to the farmers for perusal, with the invitation to take stock in the club at half rate. The result was, that the applications of the farmers came in at a terrific rate, and now the badge of the club will entitle the wearer to hunt on the majority of farms throughout Kentucky.

The work of protecting the game will be continued with greater vigor this year, and after the passage of the laws a close watch will be kept upon all the game markets, and the nativity of all game offered for sale out of season will be inquired into. If the game proves to have been illegally killed in this State, the hunter will be prosecuted if he can be found.

C. A. D.

CONCERNING HAPPINESS.

Editor Forest and Stream:

Your recent editorial on "closet philosophy" did not, it seems to me, touch the main point. That we sportsmen are cruel brutes, enjoying the sight of the sufferings we inflict is, of course, absurd; but there is another question that deserves more attention. Are we right in destroying happiness by taking life? Game birds must get a great deal of happiness from their lives. Their only troubles—fear, cold, hunger and wounds—seldom afflict them. They do not brood over their fears as we do. I have seen quail scattered by a hawk and fired at by a man as they flew to escape their feathered foe, ignorant of my presence alighting close to me, after a moment of hiding forget all about their enemies and begin to pick up seeds, apparently as happy as ever. Nor do they often suffer from cold and hunger, while on the other hand they must derive great pleasure from the exercise of their faculties in finding food. The number of wounded birds that escape is comparatively very small, and if men should cease to shoot them the danger of their suffering from wounds would be entirely eliminated, while in the meantime we cannot defend our shooting them on the ground that somebody else does it anyway. On the whole, then, they lead happy lives, and therefore in killing them we destroy happiness.

But it might be urged that in taking the life of a bird we save the lives and therefore the happiness of a great many insects. Perhaps, but by the same reasoning, if we kill a sportsman we may save the happiness of a great many birds; yet nobody would say that this justifies the killing of the sportsman. This, then, raises another point, that the happiness of the higher order of being is more to be considered than that of the lower. Both dog and man are higher than the birds, and in destroying happiness in the birds we create it in both dog and man. What can equal the intense pleasure which the sportsman feels as he watches his dogs range through the stubble, sees one begin to make game and then point, the other staunchly backing, sees the birds fly up ahead of him and one or two fall to his shots, sees his dogs at command go forward, point dead and retrieve? How great too is the dogs' delight as they do their part. Both the actual hunting and the knowledge that they are pleasing their master gives them untold enjoyment, that lasts from the time when in the early morning the gun is taken from its case till in the late afternoon they are called in to heel for the tramp home.

The sportsman has created more happiness than he has destroyed, and he has caused little unhappiness—a moment's fear, an instant's pain, that is all—nothing nearly equal to the final misery from which he has saved his game—a lingering death in the talons of a hawk, in the jaws of a fox.

SETTER.

ALABAMA

BUFFALO TYPES.*

THERE has recently been issued from the Government Printing Office an extremely interesting volume entitled "The Extirpation of the American Bison." The author, Mr. W. T. Hornaday, Superintendent of the National Zoological Park, was sent out in the year 1886 to collect for the National Museum a series of specimens of the buffalo from the few which were still known to range on the heads of Dry Fork and Porcupine creeks in Montana, where in the rough bad-land country there still remained some survivors of the large band from which the Crees and Northern half-breeds made their last great killing in 1883—practically the last robes that were traded on the Upper Missouri. Mr. Hornaday succeeded in securing from these scattered individuals a fine series of specimens, some of which, beautifully mounted, now grace the halls of the National Museum at Washington. Besides the specimens which he had collected, Mr. Hornaday brought back with him from the West a great enthusiasm for the buffalo, which led him to investigate the subject of its extinction and the causes of this extinction, and the results of his studies on this subject are given us in this interesting paper.

This volume forms a part of the Report of the National Museum for 1886-87, pages 509 to 548, and includes XXII. plates and a map. It is divided into three parts; the first treating of the life history of the buffalo, the second of its extermination, and the third of the Smithsonian expedition for specimens. All these parts are fully dealt with, and a great deal of interesting information is brought together which is of permanent historical value.

In Part I. Mr. Hornaday tells us of the discovery of this species, its geographical distribution, abundance, character, habits, food, mental capacity and disposition, value to man, and of the economic value of this animal to Western cattle growers, a subject which has for some years been more or less prominent in the newspapers, and one whose importance cannot be doubted. In Part II. he gives the causes of the extermination, the methods of slaughter, the progress of the work of extermination, a history of the legislation looking toward the protection of the species, remarks on the completeness of the animal's disappearance, the effects of its disappearance, and the preservation of the species from absolute extinction. In Part III. the author tells us of the exploration of his expedition for specimens, of the hunt, and finally of the grand results now in the museum at Washington.

The excellent illustrations add greatly to the value of the work. They include a grand group of buffalo, various illustrations of different ages and sexes, as well as certain crosses with domestic cattle, scenes taken from the old "buffalo skinning" days, and a variety of scenes of hunting by Indians, mostly taken from Catlin. The latter are certainly not out of place in such a work, though to those who have thoughtfully watched the progress of the extinction of this noble animal, the plates which illustrate the methods of the hide butcher, the real destroyer of the buffalo, are incomparably more interesting. Mr. Hornaday has done a good work in gathering together in compact form this mass of material. His paper is a useful contribution to American history, and is of great scientific value. He is to be congratulated on it. He makes now and then a statement with which we find ourselves unable to agree, but if he has occasionally fallen into error, this is only through lack of experience with the animal which he is treating. His experience of the buffalo does not extend back many years, and he was unacquainted with the animal's nature. The buffalo that he knew were a few frightened specimens that survived after the great northern herd had been extinguished.

An erroneous statement is made when the author asserts that "by a combination of unfortunate circumstances, the American bison is destined to go down to posterity shorn of the honor which is his due and appreciated at half his worth," and expresses his conviction "that confinement and semi-domestication are destined to effect striking changes in the form of *Bison americanus*." He says that the body of the captive animal becomes astonishingly short and rotund, and that the living animals which we see to-day "but poorly resemble the splendid proportions of the wild specimens in the museum group." In making these statements Mr. Hornaday falls into a natural but serious error, and generalizing from insufficient data, draws conclusions which are exactly opposed to the truth.

Mr. Hornaday assumes that the buffalo which he killed were typical North American bison. This is not the case; they were specialized individuals of this race, which owing to the circumstances of their lives, had changed in form and appearance, developing a new type which differed in many respects from those buffaloes which grazed the prairies when the whites first saw them.

A curiously similar mistake, though in quite the opposite direction, was made by old hunters on the southern range during the last years of the buffalo's existence there. These men believed that the buffalo which they killed during these last years were not the same animals that formerly ranged the plains, and crudely expressed this belief when they stated that these must be the "southern buffalo." They called attention to the fact that these "southern buffalo" had longer legs and lighter and longer bodies than those of old times, and to the further fact that they never grew fat.

On the northern ranges, a thousand miles from where these "southern buffalo" were killed, we have talked with many men who all their lives had hunted these animals for food. These men, who include Indians, half breeds and whites, are unanimous in stating that during the last few years of this animal's existence they got no fat buffalo. The herds were constantly on the move, scarcely got time to eat or sleep, were subjected to constant and long chases, and became continually more and more wild. They seemed to change their form, too. "They got to be like those dogs," said a half breed once in speaking to the writer on this subject, and he pointed to a lot of gaunt greyhound puppies playing before the door.

That the buffalo of captivity and semi-domestication and that of the last few years of the existence of this

species on the plains are very different in appearance is unquestionably true. The two animals are as unlike as a short-horn beef steer and a gaunt Texas range cow; as a fatted Berkshire hog and a wild swamp boar of the Southern States. The question as to which of the two types is the better has nothing to do with the matter in hand; but which, if either, was the true, the natural, type? We have not the slightest hesitation in stating that the buffalo of, let us say, Hon. C. J. Jones's herd are, as nearly as the eye or the memory can tell, of precisely the same type as those which we used to run twenty years ago.

The buffalo that Mr. Hornaday killed were developing; they were changing from the old-time, fat, sleepy beasts that the hunter could shoot down by the score from his stand, to a race of alert, keen-eyed, greyhound-like animals that were ever on the go, and were all muscle. It is as if one should take a short-horn bull and put him in training, like a race horse, from the time that he was a young calf until he was six or eight years old. His body would lengthen out, he would become a bundle of muscles, even his form would appear to have changed. How would such an animal compare with others of his race that had been kept in a pasture and fed on the best of food? The explanation of the erroneous view taken of the figure of the buffalo by Mr. Hornaday is this: During the last ten or fifteen years of the life of this species it was undergoing a process of evolution, or rather a process of specialization, which is one of the steps in the evolution of any species. This specialization was chiefly in the direction of speed. The old-time buffalo were in summer, autumn and early winter, fat, short-backed, and, to the eye, short-legged. As they rushed along on the prairie in their headlong flight their bellies seemed almost to sweep the ground; but when constantly harassed and pursued, the buffalo lost this fat, became to the eye—though perhaps in this short time not actually—longer-legged, lighter-bodied and certainly much swifter.

In the early days most of the hunting of buffalo in the northern country was done both by Indians and whites by means of running, and in this chasing the fattest and so the slowest of the buffalo were killed off, and there was a constant tendency for the race to grow relatively more light and active, to develop speed, to become more like race horses. The slimmer, the more active, the faster the buffalo, the more likely it would be to escape its pursuers. The progeny of these slim, active and swift buffalo would be likely to inherit the characteristics of their parents, and those which inherited these characteristics in the greatest degree would have a better chance to survive the dangers of the chase than their fatter fellows. This process, which at first would be slow as the number of buffalo was large in proportion to the number of their pursuers, would become much more rapid as the great animals diminished, and at last, as the dangers to which the species was exposed were more constantly present, and the buffalo were continually on the move, the change would take place rapidly. The development would be in one direction, that of speed, and the fittest would survive. The great band of buffalo, of which the specimens secured by Mr. Hornaday were the survivors, was that followed for a number of years previous to its extermination by the Northern half-breeds, the Crees, the Blackfeet, the Piegiens, the Bloods, the Assinaboines, the Gros Ventres, the Crows, and some bands of the Dakotas. The pursuit of these tribes was unceasing, and it was uniformly done on horseback. The result was the development of a type of buffalo entirely unlike the old animal of twenty years ago—making, in fact, an animal formed for racing. These were the buffalo that Mr. Hornaday killed.

In confinement or in domestication the buffalo reverts to its old type, loses the special greyhound-like form which it had developed through much chasing, and becomes short-bodied, round-hipped, the fat, logy animal that we used to know in early days; in other words, return to his natural type.

We have not space to discuss at length, as we should like to, the many interesting points which suggest themselves to us as we turn over the pages of this fascinating book. The statistics of the slaughter of the buffalo—incomplete though they are—are exceedingly interesting, though we imagine that they give but little notion of the numbers of buffalo really killed. All this must be mere guesswork.

The account of the efforts made by members of Congress to secure legislation for the protection of the species and the supineness of that body as a whole, form a curious commentary on the carelessness and ignorance of the Federal Legislature. This capital review of Mr. Hornaday's will make the Americans of twenty-five years hence think that their fathers were a set of extraordinary fools.

Mr. Hornaday's book can hardly fail to work great good in the special direction of large game protection and we could wish that it might have a wide general circulation. The buffalo is gone beyond recall, but from the story of his extinction we may draw lessons which shall teach us how to preserve the elk, the moose and the deer. It is to be hoped above all that legislators may read this book, and that the lessons which it teaches may be duly pondered and acted on.

WOLVES IN MAINE.—Boston, Jan. 25.—*Editor Forest and Stream:* This report is "important if true." "The increase in the number of deer in all parts of the Maine woods south of Mt. Katahdin is now accounted for by a very different fact from the protection afforded by the game wardens. The woods above the junction of the two main branches of the Penobscot, and all north of the Katahdin, are said to be infested by big gray wolves. These marauders from Canada and Labrador are driving the deer, and the hunters' fear will ere long exterminate them." Can any of the FOREST AND STREAM readers give information on this subject?—T.

WHERE VENISON IS CHEAP.—Portland, Me., Jan. 25.—Venison has been plenty and cheap in our market all winter, most of it being meat seized in transit to the Boston market and sold by the warden to local dealers. It is a pity snared partridges never seem to attract his notice. What has become of "Awahsoose?" His papers on "Reynard, the New England Outlaw," and winter scenery have never been excelled by Thoreau or John Burroughs. We miss him.—C. D. S.

IN WISCONSIN WILDS.

SEVILLE, Ohio.—*Editor Forest and Stream:* On the 14th day of last October, the writer, in company with six other kindred spirits, left our homes in Ohio for a few weeks' sojourn in the woods and among the lakes of northern Wisconsin. The prime object of the expedition was the cutting down, to some extent, of the superabundance of large game supposed to be running at large in that region, and the thinning out (the mitigating as it were) of the overcrowded condition of the numerous schools of large-mouthed bass said to people all the lakes of that locality. Some of the party had been there on previous occasions, and the yarns they told the rest of us were something fearful and wonderful to hear, of deer snorting and pawing around the camp at nights until sleep was well nigh impossible. Then as to fish, why all one had to do was to build a raft of logs, shove it out into any one of the lakes, bait your hook with anything almost that came handy, and then hire an Indian to help carry home the fish. I didn't just swallow all these yarns at first, but as they—the boys, not the yarns—were a pretty reliable crowd on general principles, and I had read E. Hough's experience of bass fishing somewhere in Wisconsin, I concluded to go and see for myself. And I saw. Now, if any of the readers of this paper should happen to be in that section on a fishing trip next season, and should notice that most of the large bass are gone, and that the others are scattered and few in number, they will probably try to lay all the blame on us as having been there before them. But I don't want any one to get any such impression, for I should be very sorry to be called a "bass hog" or anything of that sort. I know I should from the fact that one of our party came mighty near saying something of the sort about me while we were in camp, and it "rankles in my bosom" yet. It was just after breakfast and we had fish too, I remember; possibly something occurred during the meal to bring the subject to his mind. I don't know now whether it was the cook or the "Deacon" who said it, but it was one of them. To tell the truth, I don't think we went fishing more than a dozen or fifteen times while we were there, and we had plenty of bass to eat—once anyhow. It is barely possible that something was wrong somewhere, in fact I know there was, but whether it was the fault of the raft, the water, the bait or the bass I am not going to attempt to state.

The particular locality referred to is about fifteen miles from the town of Florence, in Florence county, Wisconsin. This region is heavily timbered with maple, birch and other hard woods interspersed with pine, hemlock, cedar, balsam, etc. The water supply is furnished by several small lakes of clear cold water, and the Pine River also winds its crooked way through these almost virgin forests. This region is a fairly good one for sporting purposes; I say fairly good, for that is the best that can be said of it at present. What it might have been or what it might even now be made, is another thing entirely. The trouble is not with the country itself, but with the inhabitants thereof. The people of the town of Florence as a rule seem to regard every sportsman from a distance as a proper person to be swindled by them in the purchase of such supplies as he is unfortunately enough to require; and that he is probably in their section bent on violating the game laws and slaughtering all the deer in the country, consequently the game warden must keep his eye on him or soon there will be nothing left for the poor down-trodden Florentine, but to starve or go to work. Even the solitary newspaper published in the town sets up a howl and mourns the constant yearly decrease of game, at the same time laying all the blame on the hunters from abroad. Now the editor of that paper knows as well as any man in that section that hunters from a distance are there during the open season only; that they as a rule shoot or fish in a lawful manner, and that not one deer is killed by outsiders, where dozens are slain by residents.

The game laws are a dead letter there, so far as the residents are concerned; but look out, my friend from another State, don't have a headlight among your camp duffle or a bird dog in your company; if you do the warden will be very likely to introduce you to the county judge, who is also justice of the peace, and who will likely mete out to you the fullest measure of legal punishment possible. No use kicking about technical irregularities in testimony for the State, in such cases, everything "goes" in that region. I was told while in the woods, by reliable people too, that the judge whose term expired last December, was guilty of more violations of the game laws than any other man in town, that he was well-known to have killed deer in June, and yet he was not molested. Then in the face of all this he had the gall to post notices in a couple of clearings over which he assumed control away out where we camped, fifteen miles from town, forbidding any hunting. I hardly think they served his purpose, however. The fact of the matter is, every one who lives in that region hunts and fishes when and how he pleases. "Any way to git 'em," is the way they put it. If you talk with a resident there on the hunting question, he is pretty sure to tell you about shooting deer with the aid of a headlight, but he will hardly advise you to do the same if you come from a distance, and he is your friend, for he knows mighty well that the warden or some other fellow is "laying for you," waiting for you to do just that thing. One man who lived about six miles south of our camp, told us that headlights were so thick at night in his neighborhood, that he was afraid to be out after dark. In the summer when deer resort to the water, the night-hunter gets in his work with deadly effect, and this goes on at all times when practicable.

Of course this has nothing to do with the decrease of the deer, oh, no; it is the hunter from another State, who shoots only in a lawful way and during the open season, that is cutting off the deer supply. The man from town who goes out in the summer and kills the does by the light of dark lanterns, leaving the fawns to shift for themselves, is likely a benefactor, judged from a Florentine standpoint. And likewise it is the angler from other parts, who, with rod and reel, is playing havoc and working the destruction of the bass and trout. Of course it is. The miner from the iron mines and the gentleman from town, with their packages of dynamite, have nothing to do with clearing the lakes and streams of fish. Certainly not. Such a theory would be untenable.

It rather strikes me that the residents of Florence, and likewise of many other towns similarly located, would

very much miss the crop of good hard dollars left them each year by sportsmen from abroad; and it seems that if they knew their own interests they would not try their level best to destroy all those things which make this region attractive to these men, but would rather try and preserve for future reference "the goose that laid the golden eggs." Perhaps they will see things in this light some day themselves, but I doubt it, for very likely when the last deer has been hung up and the last fish has yielded his life to dynamite, the judge and the editor will call an indignation meeting at "McGinty's saloon," and the popular verdict will be, "Twas the foreign hunters did it."

CHIPPEWA.

RUFFLES IN NEW JERSEY.

THE melancholy days had come, the saddest of the year, especially for the birds and cottontails. We had been looking forward to these days with a great yearning, and as we read the glowing accounts of other contributors to the *FOREST AND STREAM*, did not our hearts burn within us? At last the appointed day came. The evening previous was spent in carefully loading shells and packing our paraphernalia. The alarm clock is carefully set; and fearing lest it should neglect to do its duty we stay awake to see that it goes right. After a time the steady tick-lock of the little clock lulls us to slumber, and we sleep the sleep of the just, when suddenly a driver from somewhere goes *bun-r-r*, and gets out of bounds before a shot can be fired. To jump out of bed on to the pup, who has come up-stairs to see me, is but the work of a moment, and to jump off again an even less time. I pick up his pupship and proceed to the window, and examine the starry firmament above me, while the pup gently chews my hands, oh, so gently. After satisfying myself that it won't rain unless it wants to, I proceed to dress and to breakfast. I try to eat, but make a dismal failure of it. The fact that I was going to leave home for two days was too much for me. At the train I find my partner in distress waiting. At last the train came, we get aboard and are whirled along at the dizzy speed peculiar to milk trains.

We had nearly reached our destination by rail when two hunters boarded the train with a hound. As the train started up again the hound concluded he would rather walk than endure our society; so he jumped off. The hound stands irresolute for a moment, but in response to the whistle of his master his pedal extremities are set in motion and he follows as hard after us as the wraith after Tam o' Shanter. For the first mile it was an even thing with odds in favor of the hound, when we strike a down grade and the faithful hound begins to fade in the distance, and keeps fading, still fading. The two men on the platform exchanged objurgations at each other and at the hound. The hound was steadily losing ground; and his master, fearing he should lose him altogether, jumped off. I saw the faithful creature reach his master, and when I saw the caress with which he was greeted I said to myself: "Old man, you have gone up in my estimation a good deal." At this point the train rounded a curve and we saw them no more.

Now comes the grandest part of our ride. The train wheels down a steep grade on the side of a mountain. The valley lies stretched out below us. It is a beautiful picture; and for a moment our thoughts wander back to the valley where a merry, tow-headed boy used to fish for pumpkins in the old mill pond. But we are literally jerked back to the sterner present by a sudden lurch of the train, and soon the door opens and the brakeman calls out the name of our destination.

Dinner over, the batteries are unpacked and we take a short run in the brush; but, besides flushing several birds wild and shooting at a woodcock and trying to shoot a partridge with seven pink-edge wads and 14oz. of shot, the afternoon was eventless. After breakfast the next morning the forces are marshaled on the back stoop. There are four of us. G., the senior member of the party, is a crack shot, and uses a 10-gauge Greener. J., his brother, shoots a 12-gauge Lefever; and a partridge that sits still under a bush is liable to feel very unhappy if J. finds him, and if he gets out he runs big chances of getting badly demoralized. C. is noted for the length of his stride and the rapid rate in which he gets over the ground: it is enough to make a fat man weep even to think of following him, to say nothing of actually doing it; he shoots a 12-gauge Clabrough. F., the writer, shoots a 12-gauge L. C. Smith. We are off, headed for the tamarack swamp, and reaching it we start to beating the cover; we have do a good deal of that ourselves, as we only have one dog, the two old dogs having died some time before. The sprouts on the edge of the swamp furnish good cover, and we expect to find some birds there. Nor are we disappointed; but they flush wild and fly into the swamp, and we are then compelled to let them severely alone. Thick tamarack trees and mud and water up to your neck are a bad combination for a man, unless he has a vein of "mud turtle" in his composition; none of us being built that way the birds were safe. We shift our quarters a little, when the dog makes signs of game, roams for a short distance and draws to a point. G. walks up and flushes a partridge; the gun springs to his shoulder; the chicken caller calls its wandering chicken, and it strays no further, but obedient to the call drops prone to the earth from which it had so recently departed. Failing to find any more birds in this piece, we proceed toward more promising grounds, and have scarcely touched it, when a bird flushes wild, followed a moment later by a second. We mark them down as nearly as possible, and proceed to work the remaining cover. Suddenly, without even calling "pull," out goes a bird near Jim; and the Lefever rises to the occasion; crack! and 349 little messengers of death, more or less, are hurled after the fleeing bird. Stranger, you need not ask, did he kill? Cannot you see the fog is dispelled in his vicinity? It is no new luminary that has sprung into existence, 'tis but the naturally bright smile of Jim now brighter than ever.

Some time has elapsed and we have killed nothing but time, when the writer flushes a bird, and soon his form is seen gliding over the rocks and through bushes. Like a fiend incarnate he nears his victim, who lies closely hidden by yonder boulder. The ruthless Anglo-Saxon approaches, when whirl, out darts a brown streak and the gun sounds twice. A long silence succeeds, broken only by that long sigh that would roll up from his boots, though oft depressed. "Did you get him?" some one calls. "No. Which way did he go?" "He went home." "Shall we follow him?" "Yes." Soon

we near a likely place; the dog strikes a trail, roads, points again, roads and points again, this time freezing in his tracks. Evidently the bird is a pedestrian. The game is on George's territory, so Jim and I back him. He walks up to flush. No bird is to be found. He turns to us and says: "Fooled." Whirr! bang! thud! Set 'em up in the other alley! That bird would stand anything but having a man tread on the tail of his coat. We move on. Soon from the ledge of rocks on our right comes the report of Jim's gun, and when he once more heaves in sight the formerly attenuated left game pocket sticks out in an unusual manner, and the last faint glimpse of a departing smile is seen. About this time the scribe is in the valley of humiliation. He has missed ingloriously; and the good-natured banter of "Throw away your gun and buy a Lefever," makes him vow to exterminate the next bird that dares to come within range of his L. C. Smith. Like Hamlet, he stalks along brooding, brooding, brooding, when lo! a change comes over the spirit of his dream. The dog crosses his territory, and as it catches the scent of the hidden bird, stops and then draws slowly on and points. I speak "Steady, boy, steady." Whirr! crack! "Dead; go fetch!" The obedient animal retrieves nicely and then the smile returns.

Now we retrace our steps in the direction of home for dinner. After dinner we take a new direction. Charley has to go home, so our little circle is broken. We strike out for the mountains; and soon are at it again; and the woods are full of feathers, falling limbs and powder smoke, with three bipeds with guns gesticulating wildly. We gather up the slain and count them; two birds, one to Jim's gun and one to George's. I was too tender hearted to kill one of the little innocents. We now hunt up the scattered birds. Presently the dog scents one; and marches straight to him; points and turns his head for a moment toward us as much as to say, "Come, shoot him. I have got him foul," and then resumes his point. We do our best, but he puts a ledge between us and we fail to connect. We follow him down a ravine, flushing a steer in the thicket, that almost runs over the bird, but fails to point it; but as the steer was going down wind we excuse him and flush the bird ourselves; but fail to get a shot, as we were busy with all our might trying to keep our balance on a wet log. We do succeed even in this, but slip off and get a jab in the neck with a protruding snag. With some difficulty we tear ourselves from the embrace of the berry vines and proceed. I hear George whistle softly, and answer; I go in his direction.

I found him with a bird in a ledge of rocks. At his request I go in to flush, when the bird bursts out almost in my face and skips over my head in a twinkling. The sharp report of George's gun rings through the woods, and sounds the death knell of one of its most noble denizens. I turn quickly to get a shot, slip on the rocks and descend rapidly, reach the bottom safely and turn round and gaze in a pensive manner upon the destruction I have wrought on the face of nature. The soft, velvety moss that once covered the rock has been sadly disfigured, a little sapling that had clung to its rugged side has been ruthlessly torn from its hold and lies at my feet, my feelings have been hurt, but thanks to a kind providence and a strong pair of pantaloons no further damage is done. While I am practicing this pantomime and arranging the scenery for the next act, my companions have gathered the bird and we are ready to move on. This country is mountainous and very rough. The timber that once clothed its rugged side has mostly been cut off, and in its place the second growth has reached the height of from 6 to 15 ft. This cover is thickly strewn with boulders, ledges and small stones in endless variety and numbers, with here and there a small grove of the native forest trees stand pitiful mementoes of former grandeur. Ever and anon a mountain stream is seen dancing down among the boulders. Some of these streams once contained trout, but they have yielded to the deadly angle worm, as the forest has to the axe. The water from all these streams is pure and sweet. A dog, to be a success in this country, must have bird sense. His range may be ever so nicely regulated, but without bird sense he will be more or less of a failure, while a dog that will hunt with his head as well as his nose will fill the bill exactly.

After hunting for some time and failing to find any more birds, we strike lower down the mountain, on the edge of some cleared fields, where we find three more birds. They flush wild, but we shoot at them to make them lie more closely, and then follow them up. Jim flushes one and kills it, and George, beating back over the ground I had just been over, shoots ones over a point within five feet of where I crossed the brook.

The other bird, having gone in a different direction, we take his line and follow, but do not find him, but we do find a tree on whose bark are cut these words: "Found Dead," with day and date. At the foot of this tree, about five years ago, there lay down to sleep the sleep that knows no waking an old and homeless wanderer, with no covering but the snow and no one to minister to his last earthly necessity but the mother of us all, on whose bosom he sleeps his last sleep. We turn from this spot more sober if not better men; and as the lengthening shadows tell of the coming night we turn our faces homeward. On the way we come to a murmuring rill, whose crystal waters reveal the sandy bottom with its ever-shifting sands. As the water is not deep, George steps in, when he found that the sand was but a mask that covered the treacherous mud beneath. He comes up out of the water a sadder but wiser man, sits down on the bank, and we help him off with his boots. After this episode we reach home without further accident. The evening is spent much as the preceding one in pleasant conversation and singing. The morning dawns bright and warm; and as this is to be the last day of our stay, we intend to get the most of it and get an early start. Breakfast over, the dog called up and fed and we are off. Again the fog hangs low in the valley below us, but the day is as clear as a bell above. A short ten minutes' walk brings us to the ground; and soon the sharp whistle of a woodcock's wings causes us to bring our guns to a ready; but no one gets a shot and we pass on; and soon the report of George's gun peals out on the morning air, but without effect. We follow him up, and soon the dog pins him along a stone fence surmounted by a rail one. We both make up together, when out flies a beauty; two quick reports; two little puffs of smoke; and a bird vanishes in the dim distance. How did it happen? Both too quick. "Cause, both wanted to get there first. Result, neither got there. Moral, take your time.

Pursuit being useless, we turned our steps toward pastures new, when the scribe struck it rich. Suddenly two partridges, not liking my warlike look, burst from the cover in front of me. I killed those birds and then sat down on a rock and figured out the proper distance I should have held ahead of those birds, and left it there for the benefit of any hunter who might find it. After this I had great difficulty in keeping my hat on. I had hardly gone a hundred yards when out went the birds again. One came down on the left; feathers floated in the air on the right, some of them fast to the bird, some of them floating aimlessly with the wind. Then I made a beeline for the brook and flopped myself down among the water cress and leaves, regardless of what my wife will say to my bedraggled condition. My canine friend acting on the principle that medicine should be stirred before being taken jumps into the brook above me. Did you ever see a dog that would go below you? A dog that will do this is one of the seven wonders of the world.

After a good drink and a short rest, we follow the wounded bird, which George finally brought to the ground. But to Jim we must yield the palm. We were on our way home when he saw a cottontail vanishing in the distance; to cover that retreating flag of truce was the work of a moment; and as the report of the gun broke the stillness, a partridge flushed and without taking his gun from his shoulder Jim killed it. One shot penetrating its head, caused it to go up like a rocket only to fall at last after a vain struggle.

Our vacation was over and soon we are home, busy again in struggle for the things that perish; but who shall say those days were wasted. I am firmly convinced that these days of recreation will add years to our lives providing they be properly spent. We killed thirty birds in the two and one-half days of hunting; and some of our friends can bear testimony that they were good to eat.

RUFFLES.

AIMING THE SHOTGUN.

WHILE in the employ of Mr. Neumann, the famous gunsmith in Aix-la-Chapelle, I had occasion to manage a good many glass ball and pigeon shooting matches. That year (1880) there were among the visitors to the famous bathing place an unusually large number of expert shots. Among these was Mr. Charlier, a gentleman who was noted not only for his scores at glass balls as well as live birds, but the rapidity of his aiming and firing, the snap shot *par excellence*.

Being questioned, "Do you take aim?" he would always reply, "Certainly." Yet, not being a talkative man, he did not care to explain. But it was done by hard work only. He would take small rubber tips, similar to those which are placed on the ends of fencing foils, place them over the plungers of his gun and then practice aiming, cocking his gun each time and pulling the triggers, the rubber tips over the plungers preventing any injury to the gun. I have seen this gentleman do this for half an hour, commencing slowly and aiming deliberately, then aiming quicker, and finally snap shooting in his garden, taking any chance object he might see. And he told me that if he failed to practice he was sure to miss it in the actual match.

One day I asked him, "Is there any difference between aiming a rifle and aiming a shotgun?" No, sir," was the prompt reply. "To take aim is to bring three points, namely, your rear sight, front sight and your object into a line with your eye, and that is and must be done with a rifle as well as a shotgun in order to make a good shot." "Do you see anything of the barrels in aiming a shotgun?" "Nothing whatever; I have all my guns stocked to suit me, so that when I aim, I take the highest visible point on the breech, as the rear sight, using a large ivory front sight"—the same which Mr. Lyman advocates. "But do you not shoot low that way?" "I will answer that question by an actual test."

The test was made as follows: In a circle, the radius of which was 40 yds., were dug four holes 25 yds. apart, large enough to admit a frame 10 ft., 3 ft. wide, provided with two sliding targets, and the same affording good shelter for a man to handle the targets. For targets were used sheets of white paper 3 ft. square, with a black center of about 2 in. diameter. Then Mr. Charlier shot at the four targets, taking deliberate aim. Those targets were taken off and brought to us by men manipulating the frame. Then each man took back with him a thin rope, the end of which I kept in my hand, and which they fastened to a bell hung on the frame. Having the four ends in my hand, and standing about two feet behind Mr. Charlier, he first made four snap shots at the targets, all four being together. Then he made four snap shots at targets as I pulled the bells, imitating glass-ball shooting as close as possible. When we gathered the targets and compared them, I found that Mr. Charlier had answered my question very effectually. In fact the snap-shot targets were, as to pattern, a trifle better than the targets at which he had deliberate aim. And Mr. Charlier was not only an expert shot at the trap, but also in the field.

Practical experience has shown me that the success of using a shotgun is largely dependent upon the way the gun is stocked. I have often seen two men do very well with their own guns, but when changing guns neither of them could do anything. Now, I cannot agree with Mr. Lyman on the subject of stocking a gun. If you want to aim, and especially if you want to aim quick, it is necessary to have the gun stocked so that when you bring it to your shoulder you do not have to do any twisting or craning, or bending of the neck; but that cannot be avoided in a gun stocked too straight for the person using it. In fact, I think that too much bend is the lesser fault of the two.

Especially in cross shots I have seen the effect of a suitably stocked gun. Among the great number of shooters, whom I have had occasion to observe while in the act of pulling the trigger, the majority did not swing the gun to a cross shot, but brought the gun to the hip while whirling around, and, when seeing the object, brought the gun to the shoulder and fired, aiming ahead of course. While both ways are difficult, both are made easier by practice, and especially practice at home.

LOUIS HARTMANN.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sylvillene" and other competent authorities to be the best treatise on the subject extant.

CHICAGO AND THE WEST.

BLACKHAWK CLUB AND LAKE KOSHKONONG.

CHICAGO, Ill., Dec. 9.—There was in store at Blackhawk club house an experience which I am sure I wish could have been shared by all readers of FOREST AND STREAM. It is not all of fishing to fish, as I am confident all will agree who follow the directions given here for the cooking of fish, in the only way which fish ever ought to be cooked. Some fish are good, and some are not. Some folks like fish, and some don't. But this method of cooking fish, just as Mr. Wentworth displayed it at the club house that cool November morning, lifts the fish, fishing and fish eating clear above the level of the purely practical, and transports the question into the upper realms of poetry.

In the first place, you catch your fish, which must be a small-mouthed black bass weighing with his clothes on about two and a half or three pounds and having a red and wicked eye. This fish must be caught in cold water, or taken from cold water such as that of the fountain tank where we caught ours. After breaking the spinal cord just before breakfast and back of the head, you skin the bass, following precisely the following directions: You make an incision on the right hand side of the backbone, extending from the neck to the end of the top of the tail; then you make a similar incision on the left hand side, meeting the first one in the tail. Those cuts go deep enough down to sever and remove the bones lying below the back fins. You lay hold of this strip behind the south back fin, and pull out the entire strip, skin, fins, bones and all. The skin must be pulled from the tail toward the head, or the fish will not taste so good. You now turn the fish over, and remove a similar strip of skin from the middle longitude of the abdomen, observing the same care to pull the skin from the tail forward.

You have remaining two strips of skin, one on each side. Remove the skin from the right hand side first, and be sure to pull the skin from the head backward toward the tail. Any mistake about this will vitiate the results. The left hand side is skinned in precisely the same way. During these operations the fish should be kept with the head pointing to the north as much as possible, in order that the electric currents may be afforded freer passage.

The head and viscera of the fish are now removed, and the fish is dried with a clean napkin. It is then rolled lightly in cornmeal dust, and is ready for the cooking. It must not be cut into pieces, but cooked whole. The actual cooking is neither frying nor boiling, but both, and both at once. A pot is half filled with lard, and this is heated until it actually boils—not sizzles, but boils. Into this boiling lard the fish is dropped bodily. At once the entire surface is seared, and the taste or odor of the lard never penetrates the fish, although the latter is left in the pot for several minutes, until it is thoroughly crisp and brown. Then it is coaxed out on to a hot plate and drained. The man who can't eat the whole three pound bass, or what is now left of it, never ought to think of being the head of a household.

Fish cooked in this way comes to the table dry and flaky, and quite free from the suggestion of moisture always to be found under the skin in fish boiled or fried with the skin on. The action of the hot lard curls the ribs back upon themselves, and loosens the flesh upon all the bones. At the touch of a crust the white and flaky segments fall away from the backbone, and the smaller bones arrange themselves in a pile at one side of the plate. There is no trouble about eating fish cooked in this way, except the trouble to get enough to eat. Care should be taken to follow the directions implicitly, or the Koshkonong grade of excellence can not be guaranteed. This is the real, only, genuine Blackhawk way of cooking fish, and the credit of its discovery and perfection is due to Mrs. Wentworth. It was Mr. Wentworth who cooked the fish for our breakfast, there being but three of us at the club house, which was officially closed for the season. He assured me that he couldn't cook fish a little bit beside his wife, but if this be true there are beatific realms in gastronomy which I for one dare not visit. I should not wish to catch a whole boat load of fish on one day, and eat them all for breakfast on the next.

It was at this same breakfast that I was offered a peculiarly sweet and pleasant sort of jelly, with the remark that I couldn't guess what it was made of. I couldn't. They told me that Mrs. Wentworth made it from wild thornapples. I believe this is something else new under the sun. The flavor was indescribably wild and sweet.

Lake Koshkonong is remarkable for the size of its black bass. The small-mouthed and large-mouthed run about equal in numbers, and the sport in season is fine. One afternoon we were visited at the club house by Mr. G. W. Esterly and Mr. E. D. Coe, of Whitewater, both members of the club. Mr. Esterly was for a number of years president of the club. He has been very prominent in matters of State protective legislation, as I have mentioned in an earlier paper, in company with Mr. Coe, who is proprietor of the Whitewater Register. Around the stove there was a general talk on game laws, in which we were presently joined by Mr. Duane Starin. The latter gentleman has not been satisfied with the result of the late laws, and expressed himself as being in favor of a law restricting the shooting to three days of the week. As I understood it, such a bill was attempted to be placed before the last Assembly; but the bill had a string to it. It wanted to have only three days shooting in each week on Lake Koshkonong, but carried a repeal clause abolishing all other former laws on this head. This would be protection with a vengeance. If Mr. Starin does not know that the measure he favors has been presented with just such a big reservation to it, he should investigate the matter. A law which will keep the present laws, and restrict the shooting by one-half more, is all right. But nobody with good judgment wants the present law repealed at any cost. It gives the wildfowl the open water, and if they have that they can take care of themselves pretty well. Three days a week of "floating" would disturb and unsettle continually. Make it not easy, but hard to kill a canvasback. Then we will have canvasbacks to look at, anyhow, and will appreciate one when we do get it.

From the talk of these gentlemen, I learned that the foolish law permitting fishing through the ice was allowed to go in as a sort of compromise measure. Something had to be done for the poor, down-trodden farmer who wants to catch a mess of fish for his family, and who

would be prevented from it by the hard-hearted and grasping sportsman! So the down-trodden farmer snakes out game fish by the barrelful, and sells them in Chicago right along.

There is a law in Wisconsin forbidding the hunting of rabbits with dogs. This also was a sop to the farmer element, who didn't want city "fellers" coming out with dogs to run across their land. To gain elsewhere, the sportsman yielded here. It is pretty safe to say that rabbits are not hunted with dogs in Wisconsin, and deer are.

The river froze across while we were at the club house, and Mr. Wentworth and I had a great time getting a boat across when we started over for our visit to Mr. Gordon, at Koshkonong Place, on the bluff. We passed a good many pot-fishermen waiting for the ice to harden on the lake.

We saw a grand flock of prairie chickens, about thirty, sitting on the ground and in the trees, right on Blackhawk's old corn ground. There were enough in that one bunch to make a good start for next year's crop, if let alone.

"I caught a man trapping chickens, last winter, over there in that field just beyond the timber. We found three birds in the traps one morning, and from the blood and feathers it looked as if the fellow had caught plenty more before that. We took him before an enlightened J. P., who imposed the terrible punishment of a \$2 fine! That's about how much our justices are in sympathy with the law."

There was some writing in FOREST AND STREAM last summer about the error of the engraving clerk which made the Illinois open date on chickens Sept. 15 instead of Sept. 1. There was an error also in engraving the Wisconsin law on grouse, but this time the mistake was against the sportsmen and not in their favor, as it was in Illinois. The Wisconsin date was intended to be Sept. 1, but the clerk made it Aug. 1. Noble date for chickens, isn't it? There has been some mighty plain talk about the clerk who made that particular "error."

Along the foot of the lake bluff we saw countless springs bursting out among the rocks, and saw the great spring by the big rock, where Blackhawk is said to have gone down for his water supply. It is no wonder Koshkonong is a cold lake.

We could not help noticing also the countless "Indian mounds" which cover the whole surface of this bluff. Among these are some of the largest and most regular ones to be found anywhere in this region. Many, however, have irregular and fantastic outlines. The old "sacificial mound"—so-called by the State expert who opened many of these mounds—stands near the spacious and comfortable house where Mr. Gordon makes his home.

We also saw Mr. Gordon's flock of wild turkeys running around in the yard, or rather a part of the flock, for it is broken into a number of bunches. Mr. Gordon has more than 200 wild turkeys on his place, all showing the distinctive chestnut bars and red legs that distinguish the Mexican or southwestern wild turkey from the wild bird of the northern latitudes. This band is the growth from two pairs of wild birds brought up from the Indian Territory, together with some crossing of tame stock. The birds are not fed until winter time, and thrive splendidly, the loss in nesting being practically nothing, although the turkeys all nest out in the woods, wild. Last spring 20 pairs went off and gathered up tame flocks for over 20 miles, getting down into the country as far as Johnstone. They never came back again. Their owner thinks that wild turkeys are not desirable game birds for a preserve, as it is impossible to keep them on a territory in numbers beyond what the local insect life will naturally support. When this food grows scant, they "swarm" and work away to other covers. For this reason Mr. Gordon is selling off his turkeys, intending to cut down the size of the flock.

Immediately about or near to the residence house Mr. Gordon owns about 400 acres of land, and himself and wealthy Chicago parties own about 250 acres more. This, as I understand it, is arable land, and on this is fed Mr. Gordon's herd of registered Guernseys, numbering 120 head. Last year Mr. Gordon sold 100,000 of butter to one Chicago restaurant man. This is said to be the largest and best Guernsey herd in the world. I am not sure just how much is the entire acreage controlled by the Koshkonong Place people, including all the marsh lands, but their prestige and influence about the lake is very considerable indeed.

We were fortunate in finding Mr. Gordon at home, and were welcomed by him and his assistant in the herd management, Capt. F. E. Drake, being received in the great hall, half study and half hunter's room, which is the chief place of resort in this delightful abode. There is a royal great fireplace here, and a good gun rack, and all sorts of things appurtenant and dear to whoso maketh or loveth a gun. I doubt the propriety of going further into the appointments of a gentleman's private home, and will merely say that I should think Mr. Gordon could manage to worry through the winter there if the wood and water hold out.

We were treated to a rare sight here, and one which I do not think is offered often to any sportsman. The view of the lake from the gallery of Koshkonong Place is a grand one even to the unaided eye. Increased by the aid of the fine four-inch telescope which is kept mounted there, it becomes magnificent. The lake at this time was under the first freeze of the season, and was covered with a light coat of tough ice over the greater part of its surface. Here and there, out toward the middle, and in one or two spots near to the cover-line, there were some small open holes, and into these all the ducks remaining about Koshkonong had piled headlong. When we turned the great glass upon one of these holes a beautiful picture was presented. The ducks appeared just less than life size, and their every motion could be seen with perfect distinctness. They were feeding, and we could see them diving and coming up constantly, and once in a while we would catch sight of another bunch, circling in and alighting among the contented party already engaged in the celery lunch. The ducks were mostly blue-bills and goldeneyes. We saw no canvasbacks in any of the holes upon which we turned the glass. Away out in the middle of the lake we could see two boats slowly breaking their way to some spot of open water. Good shooting could have been had on Koshkonong that day, even from an open boat, at one of these holes, and a flat boat or white blind, if legal, would have insured a great quantity of game. This was Nov. 26.

After we had enjoyed the curious antics of the ducks a while we formed a little hunting party of four and went out after some of Mr. Gordon's rabbits, of which we saw a good many, thanks to the virtue of preserved grounds. The cover was very thick, and we had a great amount of sport without hurting the rabbits very much, either in the morning or in the little hunt after luncheon. It was very delightful, this wandering around in the brown woods and thickets; and all the time we were hardly a mile or so from the house. Mr. Gordon may certainly flatter himself on the quality of the entertainment he can offer a shooting guest. There are few localities which offer so wide a range of sport. With the wildfowl, the snipe, the plover, grouse and rabbits, a great portion of the year is covered, to say nothing of the fishing.

Squirrels are not shot on the grounds of Koshkonong Place, neither are the crows, hawks or owls. There are not any quail on these grounds, nor, indeed, anywhere about the lake, as far as I could learn. Yet they are native to that country and were once very abundant there. A better quail country could not be asked, so far as feed and cover are concerned. Mr. Gordon expressed an intention of stocking the farms with quail. I wonder would he trade live wild turkeys for quail? There is one good covey of partridges in the woods. We saw but one of these, which got away from us very smoothly. That is great ground for rabbits, for it is cut up with burrows of ground hogs, etc., into which they run. Late in the evening they seemed to come out. We saw many more rabbits then, and as we walked home after dark we could hear them pattering along in the dry leaves on either side of the road.

There is an odd character on Koshkonong by name of Hancke, who traps, fishes, sells minnows and does similar work for a living. We walked down through the woods to his cabin, which lies below the bluff, near a strong spring, which bubbles up and runs into the lake. Hancke was not at home and the door was locked, but we could look through the window and see on the opposite wall a part of the great collection of flint arrow-heads and spear-heads which he has made from this region and which is probably the best of the kind in a long distance. Hancke had the smaller pieces nicely arranged in order of size and fastened against the wall. Upon a shelf near by we could see a number of stone axeheads and other implements of that curious time, of which we have so many similar evidences.

The chief attraction of this odd little corner of the woods, however, was the great spring which here gushes up from the earth. This spring was boxed into several compartments, the largest of which was perhaps 8 ft. square. Each box or room had a cover upon it, and all were connected so that the water passed freely through from the upper to the lower one. The water was about 2 ft. deep, and the bottom, wherever we could see it, was a pure white sand, out of which the water sprang over a wide surface. I say, where we could see the bottom, for it was hardly visible by reason of the thousands and thousands of minnows whose black masses constantly swarmed and surged about, filling the great boxes, it would seem, almost as full as they could hold. This was Hancke's bait box. He sells live minnows to the winter pot-fishermen who fish through the ice, charging them usually about a cent apiece for them. We made a rough estimate by measurement, and thought that Hancke must have 30,000 minnows, or nearly that, now on hand. He travels the country far and wide, and seines these minnows out of the creeks. He feeds them by hanging a piece of liver in the box, or tossing in a little cornmeal. This is as nearly perfect a live bait box as one will be apt to see. It shows the importance of the ice fishing on this lake, and indicates the extensive preparations made for it.

Hancke has desecrated this spring, for this is what is known as the old Mission Spring. There was once a Jesuit chapel near where Hancke's cabin now stands, and here the Indians gathered in numbers to hear the teachings of the pale-faced priests. *Tempora mutantur!*

There is an old trail running near this spring, and this we were told was the old Chicago land trail from Green Bay, in the fur-trading days.

There was too much to see and talk about, and too much in Mr. Gordon's invitation to stay the night; so that Mr. Wentworth and I did not get back to Blackhawk club house that day, but passed the evening in a yarn-spinning assemblage by the big fireplace, and the night in sweet and dreamless sleep. There is no conscience can trouble a consistent ranger of the woods.

We said *adios* the next morning, hoping to meet again. We hail and vanish, so many friendly sail!

Walking along the edge of the frozen lake near where the springs kept the ground soft at the foot of the bluff, I saw two jacksnipe and was wicked enough to put up one of them and shoot it. It fell upon the ice and I walked out and picked it up. This was, I believe, Nov. 27.

Jan. 23.—To-day Mr. W. W. Carney writes me from Great Bend, Kansas, the following interesting account: "You know that it is often said the coyotes run jacks. Well, the other day I saw a pair chase and catch a white-tailed one. I did not give them the pleasure of eating it, for I chased them away and examined it, and so far as I could see it was a full-grown jack, and perfectly sound, excepting what they had injured it."

It has always been generally supposed that the full-grown jack-rabbit could escape from one or even two coyotes. Mr. Carney does not say whether he saw the whole chase or not, or whether the coyotes hunted in their usual "relay" system. He may have seen only the close of the course. I wish he would be good enough to describe this wild coursing more fully for us.

Another Kansas friend, Mr. M. E. Allison, writes by the same mail. I am sorry to see that in his despair about any more big game hunting he has sold the pair of foxhounds which gave us so much fun in the Nations one time. I am sorry also to see that these dogs are now being used in hounding deer. The boys will make nothing at that, even in New Mexico. Better confine the sport to cats and bears. The dogs will make noise enough in the hills, at that. Mr. Allison says:

"I have not had a hunt this winter, and I have got the best pack of big game dogs (greyhounds) I ever owned and nothing for them to do. They have not been out of the kennels this winter. I have six big young dogs that will catch and kill anything. They ought to be out in some of the Western Territories, where their value would

be appreciated. I have seen the time that \$500 would not buy them, and it almost makes me sick to think of giving up big game hunting for rabbit chasing. They have grit, speed and endurance, all the elements of big game dogs, attained after fifteen years' experience in breeding for this very purpose. I sold Buck and Drum (the foxhounds) to a party at Raton, N. M., and they are more than pleased with them. Up to Jan. 1 they had killed twelve deer and several wildcats, and treed two mountain lions and chased bears all over the mountains. These men sent me a special invitation to come out and have a hunt with them; but I could not get away. I will long remember the sport these two hounds furnished us in the Indian Territory, where we were entertained by the 'Spirits of Greever's Camp.' How I would enjoy another trip just like that!"

E. HOUGH.

WESTERN LARGE GAME.

Editor Forest and Stream:

I have been somewhat interested in the articles on the destruction of game in the West, and have noted especially the article of J. Q. A. Jones, in regard to hunters from other States and also the extract from a letter from a ranchman near Casper, Wyo.

Now I wish to say that I think Mr. Jones is in the main wrong, and the correspondent from near Casper explains the situation which is about this: That nine-tenths of the destruction of large game in the West is due to local hunters who simply kill game for market and for hides; and when they kill game for market they only save the best parts, and in many instances those who hunt for hides leave the carcasses entire for the beasts and birds.

I base my conclusion on the matter upon personal observation and from talking with the hunters themselves. One man told me a year or so ago that he alone had killed the previous fall some seventy-five deer; and another, that he and another hunter had killed fifty elk in two months. Now from what I know of hunters and sportsmen from other States hunting in the mountains, they usually take care of what game they kill, and as suggested in a late article in the FOREST AND STREAM, they pay well for their game in the expenses of the trip and leave a great deal of money with the citizens near the hunting grounds.

I think that if the Wyoming Legislature, instead of forbidding by statute any non-resident hunting within her borders, would look after the men who are destroying the game in fact, she would make a step forward in game protection. Then in addition limit the number to be killed in any season by any person, resident or non-resident, and strictly enforce the law by the appointment of game wardens; and she would have little to complain of in regard to non-resident hunters. Of course there are exceptions to the above, in regard to non-resident hunters, but I think they are comparatively few, and the major part of non-resident hunters would be glad to see a good game law well enforced, and would aid to the extent of their ability in its enforcement.

I hope you will still keep this matter stirring.

HUNTER.

THE CHEAT MOUNTAIN ASSOCIATION.—There was a large attendance of members of the Sportsmen's Association of Cheat Mountain at the Hotel Duquesne, at Pittsburgh, Pa., Jan. 20. The report of the treasurer, D. P. Corwin, showed that the association was in a most flourishing condition financially, with a healthy balance in the treasury. The following officers were elected for the ensuing year: President, William M. Kennedy; Vice-Presidents, W. K. Shiras, Pittsburgh; W. S. Edwards, Charleston, W. Va.; D. McK. Lloyd, Pittsburgh; Utiles Baird, Allegheny; Hon. Nathaniel Ewing, Uniontown, Pa.; Secretary, Theophilus Sproull, Pittsburgh; Treasurer, D. P. Corwin, Pittsburgh; Naturalist and Surgeon, Dr. W. J. Riggs, Allegheny; Board of Directors, Hilary S. Brunot, Greensburg, Pa.; Howard Hartley, Pittsburgh; William G. Brown, Kingwood, W. Va.; William H. Tallman, Wheeling, W. Va.; C. C. Scaife, McKeesport, Pa.; Dr. Joseph N. Dickson, Pittsburgh; James B. Dewhurst, Allegheny. Members were present from various parts of the State and after the result of the ballot had been announced there were many good stories told of success and failure of the members in pursuit of deer and trout during the past year. More deer were killed and more trout caught during the past year than ever before, and yet there seemed to be no diminution in the supply. The Cheat River and its tributaries throughout the preserve furnish more than 100 miles of the finest mountain trout fishing in the world, and throughout the entire length and breadth of the immense preserve both large and small game flourishes in abundance. Several parties were made up to visit the club house during June, July and August next on a trout fishing expedition.

ST. LOUIS, Mo., Jan. 24.—A spell of cold weather for the past few days has caused the lakes and sloughs hereabouts to be covered with ice two inches thick, and the result is that the webfeet have hid themselves to a more congenial climate. The superintendent of the Dardenne Club's preserve, in St. Charles county, was in the city today and informed your correspondent that ducks were a "mighty scarce" article in his country. There were a few, he states, yesterday sitting upon the ice, very desolate looking sprigtails, evidently praying for "old Sol" to assist them out of their trouble. Geese are still very plentiful up in that section, and the numbers to be seen daily on the wheat fields are considerable. They are molested little, and the result is that their numbers are increasing almost daily, being reinforced from adjacent localities.—UNSER FRITZ.

OHIO.—Wilmington, Jan. 20.—Quail and rabbits were abundant here, with a good number left over at the close of the hunting season. The winter has been very warm up to date, and I think with a good breeding season there will be plenty of birds next fall. A great many farmers have their farms posted to keep off pot-hunters. There is no protection on rabbits here, and a great many who are not sportsmen take advantage of it, so that quail and small birds have to suffer. I think if there could be a law passed allowing no rabbits to be killed after the quail season is over, it would be of great benefit to the quail. The squirrels here are about equally divided between the gray and fox varieties; they are scarce and hard to find on account of being almost constantly hunted during the season, which lasts from June 1 to Nov. 1.—G. D. H.

GIVE THEM A CHANCE.—Editor Forest and Stream: In 1856, when my father came from Kansas, where he had been living, to his former home in Connecticut, he brought a long, heavy Kentucky rifle that he used while in the Territories; and having no further need of it, gave it to me, at that time a tough, hearty boy of thirteen years. Many were the good times I had with that rifle. It was so heavy that I could scarcely aim it off-hand; but I would manage in some way to get it rested against a tree or over a stone wall when I had occasion for a shot at any game, and what a pleasure it was to me when I could bring down a gray squirrel from the top of some tall tree. Since then I have owned and used a goodly number of both rifles and shotguns, and have hunted deer in the North Woods, partridge in Massachusetts, prairie chickens in Illinois and Missouri, and water fowl on Barnegat Bay, besides in other bays and inlets further south. But never since have I had as much solid enjoyment as with that old rifle up home in northeastern Connecticut. Had I a dozen boys, or girls either, if they cared at all for such sport, I would give them firearms, with instructions in using and taking care of them. I have a daughter of fifteen years at my present home in Asbury Park, N. J., who can handle a rifle as well as any other girl of her age, or a boy either. She has a Ballard .32cal. and 26in. barrel, and but a few young persons can make a better shot than she at a target from 100 to 150yds. distant. As I said before, by all means let every young person of either sex learn to use and take care of firearms if they care at all for the sport.—A. L. L.

WHATCOM, Wash., Jan. 20.—Deer have been captured among the islands in numbers, from two to sixteen very frequently, and are quite plenty upon the mainland. Ruffed grouse were plenty this season. Ducks were numerous in many places in the inlets and bays. In a few localities mountain goats were captured, seven on one peak or range, three on another. Now that there is a trail opened east across the Cascade Mountains goats will be captured more frequently, as it affords opportunities to prospectors and hunters to get the game to market.—J. Y. C.

FOOD OF QUAIL.—Mendon, Mass., Jan. 18.—In your issue of the 9th inst. one of your correspondents mentions finding beans in quails' crops. In the latter part of December I found a quail whose crop was full of something that I had never seen in their crops before, and I do not know what it is. Can you tell me? Please find a few inclosed. Birds were more plenty the past season than for several years, and hunters more plenty than birds.—C. T. [The seeds are those of the skunk cabbage.]

QUAIL STOCKING.—Saratoga, N. Y., Jan. 21.—Some time ago Mr. Schaffer, of the Delaware and Hudson railroad restaurant, received a number of wild quail from his friend, C. R. West, now in Kentucky, which were mostly killed and duly served. Some half-dozen were saved alive, however, and those in possession of them have about concluded to get some more and have them set free in the spring in some locality near here, where they can be cared for and allowed to breed.—DON RICARDO.

TO CLEAN METALLIC SHELLS.—Referring to inquiry made some time since by one of your readers as to best method for cleaning metallic shells, here is a practical one which I always use; it is quick and effective: Take a pail of hot water, into which put a lump of caustic soda the size of your fist. Dissolve the latter, then throw in your shells, stir them around with a stick, rinse them off in straight hot water, throw them out and they will dry themselves. That is all there is to it, and it beats single entry to death.—H. A. P.

CANADIAN GAME INTERESTS.

MONTREAL, Canada, Jan. 25.—The Fish and Game Protection Club held their annual meeting at the club rooms yesterday afternoon, the president, Mr. L. H. Stearns, occupying the chair. In his opening remarks, the chairman congratulated the club on its good financial standing, and then referred to the bill which had been lately read in the Legislature, making duck shooting legal until May 1. He deprecated such action as being contrary to the welfare of our game protection laws, and advocated a movement which would have for its object the abolition of spring shooting. As it was now the amendment had been rushed through the House so quickly that nothing remained for them to do but to petition the Legislative Council to disallow the amendment. The secretary, Mr. John Nelson, being absent, Mr. A. N. Shewan read the annual report as follows:

"Your committee, in laying before the members their statement of the work done during the year just ended, have to report but few successes for infringement of both the fish and game laws, sixteen actions in all being taken. Your committee is, however, fully aware that a great many birds and fish have been killed during the prohibited time, but the great difficulty is getting proof of the charges, it being almost impossible to secure witnesses. As far as the gamekeepers are concerned, they are of little or no use. This may be easily understood, as in the majority of cases they had no satisfaction in receiving no pay, and naturally hesitate before taking action against their neighbors and friends for any infringement of the game laws. The committee wish to reiterate here what they have continuously mentioned in the annual reports, that until such time as the Government realizes the necessity of attaching a salary to the office of gamekeeper, it cannot be expected that the laws will be enforced. Last March the president, Mr. L. H. Stearns, and the secretary, proceeded to Quebec to oppose a bill then before the House extending the open season for ducks to the first of May. A petition was before the Assembly at the time, signed by several thousand persons in the Grand Nord and the neighborhood of Lake St. Peter. After a week spent at the capital, and several interviews had been had with the Premier and his colleagues and many of the members, the delegation had the satisfaction of seeing the bill defeated, though only by the small majority of two. In this connection, Mr. Arthur Boyer, M.P.P., was of the greatest assistance. We have recently been informed that another such attempt would be made at the present session. With regard to moose, a law had been passed protecting this animal for five years, which time has now expired. This legislation must have been done very privately, as no notification was ever received by the club of the change, allowing moose to be hunted in the autumn of 1889. Much controversy has arisen out of this, and the president and the secretary of the club have several times been appealed to for information from sportsmen in the United States as well as Canada, as to where the law really was concerning moose. The natural cry was that moose was protected until October of the present year, and this placed the officers in an awkward position, when on inquiry at the department it was learned a change had been made.

"Ducks have been plentiful, but the same cannot be said of smaller birds, such as cock, snipe and plover, which appear to have abandoned their old haunts and taken to pastures new in the interior of the country. This is probably due to the wet summers we have had lately. Big game, moose, caribou and red deer, is reported plentiful; a herd of twenty-one caribou was seen within a few days on a lake belonging to one of our clubs, and five were killed by members of the F. & G. P. C.

"Reports have been received from different parts of the Province stating that the wild rice sown by the club is doing very well.

"It is to be hoped that the Government, if petitioned to extend the open season for duck shooting to May 1, will be firm and refuse. If spring shooting could be stopped altogether, what a boon it would be, not only to the sportsmen but to the very people who oppose them.

"As regards the close season for fish, it appears to be the opinion of the majority that the 15th of May should be the opening day for bass and maskinonge, as well as dore, which is allowed to be taken from that date, but the rod also should be used.

"Letters frequently appear in the newspapers finding fault with the club for the small amount of work done by its members, but it should also be remembered that little or no encouragement comes from the public. The Government, too, might do worse than assist us in the work we have undertaken.—JOHN NELSON, Hon. Sec."

The secretary's report was adopted and the treasurer's was equally satisfactory. In discussing the reports Mr. Shewan called attention to the sawdust nuisance in the Ottawa River, which kills more fish than netting or any cause in season or out of season, and related some experience of his in those waters during the past twenty-five years, which went to show how under the present system the rivers were being rapidly thinned of their fish.

Mr. Geo. W. Stephens spoke in much the same strain and protested against the granting of net licenses in Cisco Bay.

In speaking of the falling off in bass fishing Mr. A. A. Wilson had some things to say, and, instanced Rivers Beaudette and Du Loup, both of which are famous for miling purposes. There are no fishways in these dams, and bass and other fish find their usual spawning grounds close to them. Fish of the sucker variety are perhaps three weeks ahead of the bass, and the latter, finding it impossible to pass the dams, deposit their eggs along the shores of the St. Lawrence. When the early spawners come down the river, the spawn of these eggs are eaten and millions of bass are destroyed.

Mr. Wilson then moved a resolution that the Government be petitioned to enforce the laws regarding dams and fishways and that the size of the mesh for netting be increased to 2½in.

It having been suggested that the Provincial Government would make some improvement in the game laws if there were any direct revenue to cover the expenses, Mr. Wilson advocated the imposition of a gun tax, an idea that seemed to meet the approval of the club.

It was then resolved that a delegation wait on the Premier and the Legislative Council at Quebec, with the particular object of having the latest amendment to the game laws rejected by that body. The delegates will be Messrs. L. H. Stearns, G. W. Stephens, A. Wilson and H. W. Atwater.

The election of officers resulted as follows: President, Mr. G. W. Stephens; Vice-President, Mr. H. W. Atwater; Secretary, Mr. A. N. Shewan; Treasurer, Mr. H. W. Beckett; Committee, Messrs. L. H. Stearns, John Nelson, A. Boyer, M.P.P., Dr. T. C. Brainerd, L. A. Boyer, Geo. Horne, W. H. Parker, A. A. Wilson, H. R. Brown, A. Henderson, Geo. H. Matthews, J. W. Skelton, H. R. Jones, W. H. Rindoul, Selkirk Cross.

It was resolved that the Government be memorialized with a view to the abatement of the sawdust nuisance.

After resolving that the Fish and Game Protection Club heartily co-operate with the Fish and Game Club, the meeting adjourned.

It may be as well to put a few words here as to the reasons given by the Fish and Game Protection Club for not wishing the duck shooting season extended, and it can perhaps be as well done by quoting the petition which last year defeated the extension amendment:

To the Honorable Legislative Assembly of the Province of Quebec:
The petition of the Fish and Game Protection Club of the Province of Quebec humbly sheweth: That a bill has been introduced in your honorable House, making it lawful to hunt and kill wild ducks in the Province of Quebec, from the 1st of May to the 1st day of May; that it is a well known fact that many of the ducks that visit our waters in the spring, such as black ducks, wood ducks and teal, have commenced laying before the 1st of May in some years, and that all of them, including such ducks as golden eyes, which breed in the north, are mated by the 1st of May; therefore it is cruel and unnatural to hunt and kill such ducks at that season, besides being destructive to the species and calculated rapidly to exterminate it.

Therefore, your petitioners would humbly pray that from motives of humanity as well as those of good policy, in preserving the duck species, your honorable House would be pleased not to pass that portion of the said bill permitting the killing of all kinds of wild ducks up to the 1st of May in any year, but that the law may be allowed to remain as it is at the present time.

As an instance of the destruction of wild ducks that has taken place under a law similar to that now proposed to be enacted, and that will assuredly occur again, your petitioners would mention the fact that before the 1st of May in one year, as many as two thousand couples of black ducks have been exposed for sale in the Montreal market alone at one time, thus entailing the destruction of the number of broods, averaging at least ten each. When to this is added the immense numbers that are disposed of outside of Montreal, the destruction that results from spring shooting will be seen to be fearful, and will lead at no distant day to the entire extermination of the species.

And your petitioners, as in duty bound, will ever pray, etc.
The Fish and Game Protection Club of the Province of Quebec.
L. H. STEARNS, President.
JOHN NELSON, JR., Hon. Secretary.

NEW YORK GAME LEGISLATION.

Editor Forest and Stream:

The Coggeshall bill limits the hunting to the month of September, and closes the season Nov. 15. The restriction of the hunting to September is the best feature of the bill. If hunting can be restricted to September, I dare say it will save about a thousand deer annually. I can figure up 150 deer killed last fall by hunting in October, in my immediate vicinity, and this is only a mite to the whole wilderness. I am in favor of this bill as being the best we can expect to do, and now think I shall do all I can to secure its passage.

XX.

Camp-Fire Flickerings.

"That reminds me."

297.

SOME years ago the veteran trout fishermen, George Lyman and Gardener Knapp, tried trouting on Plum Creek, in Wisconsin, near Lake Pepin. There was a Swiss settlement along the stream, and the farmers were not partial to strangers. The consequence was that some reaches through meadows were not accessible. The next season the veterans tried another plan. They carried a fiddle and a flute. Reaching the creek they notified every family along its banks that there would be a dance that night at Linder's, their stopping place. Night found the settlers out in force, and Knapp with his fiddle and Lyman with his flute made music while the Switzers, male and female, danced as they had not done since leaving the old country. After that "dot old Lyman and dot old Knapp just went where they pleased."

No handsome creel of brook trout was ever seen than was carried in one day during their stay by Mr. Lyman. There were 60 trout, weighing 20lbs., and there was not an ounce difference between any two of them.

INDIANA.

JAP.

At the recent annual dinner of the famous New England Society at Delmonico's, in New York, a *bon mot* was made by the Rev. Dr. Wayland, which brought down the house with roars of laughter. He said among other bright things that it seemed rather hard on old New England for her sons to sit here enjoying themselves in such a luxurious fashion, when even Plymouth Rock pants for three dollars, and moved that a collection be taken up to relieve the distress!

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

ON THE NORTH SHORE.—I.

A THREE WEEKS' TROUTING TRIP ON THE NORTH SHORE OF LAKE SUPERIOR.

"Of recreation there is none
So free as fishing is alone;
All other pastimes do no less
Than mind and body do possess:
My hand alone my work can do;
So I can fish and study too."

THE ardent angler who voyages to the north shore of Lake Superior for sport with the feathery lure will not be disappointed in his pleasurable anticipations. Its 800 miles of serrated coast displaying its debris of shattered rocks and beetling cliffs, its 20,000 or more islands*, its marvelously deep, clear and cold waters, which flow through Michigan, Huron and Erie, giving birth to Niagara—the wonder of the world—fills the basin of Ontario and rolls a mighty flood down the valley of the St. Lawrence to the Atlantic, evidently tend to make it an attractive haunt for the crimson-stained *Salvelinus fontinalis*. Its deep and icy waters also harbor the great *namaycush* or Mackenac salmon, while other fish of grosser stock sport and thrive in the great reservoir. The dotted beauty, however, is the fish *de resistance*, as it attracts from every quarter anglers of high and low degree, all bent on its capture according to their education in the gentle art. It may be a fly, or bait, or troll, as to method, but he who would guide this princeling of the lake with other than fly artistic is lost to all the emotional beauties of the delightful recreation and is other than a true disciple of the great Sir Izaak, the king of rod and fly.

Having had a surfeit years ago of trout on the famed Nepigon, I was anxious for an outing on the north shore of Lake Superior, and so arranged for the trip last summer. My friend Ned, to use brevity as to name, who was to accompany me, agreed to meet me on July 15 at the "Soo." We were prompt as to time, he arriving in the morning and I in the evening of the appointed day.

Ned is a trout *par excellence* from "way back," and is never so happy as when whipping the water with his favorite rod and fly. When a beardless boy he fished in the "ould country" along the mossy banks of the beautiful Tweed, and adown the rippling waters of the Dee, and though now past three score, still has as much love for the sport as ever. He tells with unctuous humor how his predilection for poaching when a youngster resulted in his father paying a fine of £10 for him in consequence of being caught by a watchful bailiff taking trout by the tickling trick. Since his advent here he has amassed a fine fortune as a contractor, and made himself a lasting monument in the building of the Sault Ste. Marie Canal, considered the finest piece of work of that character in the country. He refers to it with commendable pride as his last and best work. As a camp associate his qualities are unquestionably of a gilt-edge character. Among his many accomplishments he rejoices in being one of "Israel's sweet singers," and can charm you with an operatic aria or delight you with a comic ditty, and is

"So full of pleasing anecdote,
So rich, so gay, so poignant in his wit,
That time vanishes before him as he speaks."

With such an entertaining angler, camp life must necessarily be one round of pleasure.

Three days after our arrival we had everything ready for the trip. Two half-breeds with their Macinac sail boat were engaged and provisions sufficient for a month were secured. Knowing from ample experience that much of the enjoyments of camp life depend on the commissariat, we laid in not only substantial, but many of the delicacies in the canned goods, and were luxurious enough to provide mattresses, pillows, mosquito bars, etc., and in fact all that was necessary in an outing of this character. We gave instructions to our boatmen to be on hand at the head of the "Soo" canal with their boat early on the morning of our departure. Being eager to leave, I arose that morning at early dawn full of pleasing anticipations of the trip, but when I looked out of the window as I was making my toilet, my hopes were sadly blighted by noticing a leaden sky and a slight fall of rain, which soon increased before I had finished my matutinal meal. Although disheartened by the damp and gloomy weather, I was not entirely discouraged, and with a grim determination to leave rain or shine, I ordered everything we were to take aboard the boat. Ned was not very anxious to go just then, but hung back a while, but after the rain had ceased he got into the wagon which had our complete outfit and we were driven to the boat. I wondered how we were to get all our supplies and traps into the boat, as it was a small affair, and not at all suitable for stormy weather, but admirable as a coaster. The half-breeds, who rejoiced in the names of Joseph Peters, who was the owner of the boat, and Peter —, showed admirable skill in getting everything stowed carefully away, though the boat, when the job was completed, was so full that I doubted if when we were in there would be space enough left to squeeze in a canary bird.

Just before sailing Ned's wife and her handsome daughter were seen waving handkerchiefs at the mouth of the canal. Ned beckoned them over, and after an unpleasant tramp through a rough field of broken stone and huge boulders, they reached us quite out of breath. Says Ned's wife as soon as she recovered her breath, "Your boat is too small, and in a rough sea will prove a wet one." She was prophetic as to the boat being a wet one, for such it proved to be on more than one occasion. I was averse to taking it, but Ned, who had made several trips to the north shore, said it would answer, and so I relied on his experience as to the sea-going qualities of the craft for the trip, and felt assured it was all O. K. Ned finally kissed his wife and daughter a good-by, and on our stepping aboard we shoved off and were soon abreast the waters, amid the flashes of the silver-winged gulls, with life and its worries behind, and headed for the haunts of the trout radiant. The wind, which was scarcely perceptible, was dead ahead, and the ashen blades the motive power we depended on for progress.

* Capt. Bayfield in his (unpublished) chart of Lake Huron, is said to have laid down 30,000 islands, on 20,000 of which he has landed; the remainder in Lake Superior cannot, I should suppose, fall much short of this.—"Lake Superior: its Physical Character, etc.," 1860; Agassiz.

We had scarcely gone a mile before the sky grew dark, then an ominous growl of thunder, a flash of lightning, and soon a rhythmic beat of rain drops set in, much to our discomfort. Rubber coats were now resorted to, and an umbrella, which I had tied among my rods, did good service. Our dusky boatmen took the rain with the utmost good humor, and kept up the stroke of oars with clock-like regularity. This dismal condition did not last long, for soon the sky brightened, the sable clouds displayed their silver lining, the patter of rain ceased, and the sun began to play hide and seek with the scudding clouds. Ned's face wreathed in happy smiles at this delightful change, and to add paeans of joy to the occasion, sang with the clearness of a bugle's ringing note to the tune of "All in the Downs."

"All in the fragrant prime of day,
Ere Phoebus spreads around his beams,
The early angler takes his way
To verdant banks of crystal streams,
If health, content and thoughtful musing charm,
What sport like angling can our cares disarm."

At this vocal display the boatmen smiled, and then ensued a jargon of Indian dialect, doubtless a criticism on the rejoicing singer. Ned kept up his vocalism for some time, varying from the sentimental to the comic, much to the delight of all. A slight breeze had now sprung up and a resort to the sail was made. We had, however, the same dead ahead wind as at first, but even with this disadvantage, and the exercise of considerable patience, we at last reached Point-aux-Pins. It is about six miles from the "Soo," and as the wind appeared to be on the increase, we concluded to remain until the next morning.

The point is a mass of sand and gravel mingled with large stones, while the ground which skirts the river is covered with moss and low bushes. A short distance from the river bank you find the white pine, canoe birch, aspen and maple, but before you strike the wood there is an abundance of strawberries, raspberries and blueberries, which attract, during the season, the Indians and half-breeds from the "Soo" and Goulais and Bachewananung bays, who make good wages in gathering the luscious fruits. There are splendid camping quarters here, but nothing very picturesque about the place. If you are sentimentally inclined you may find the river with its charm of beauty and magic of song, admire the alternate lines of silver and crimson on the rippling waves, see the kingfisher dart along the shore, watch the gull with his snowy breast as he follows in the wake of a steamer, or view the flocks of pigeons as they dash hither and thither.

A few signs of civilization are apparent in the three log houses clustered here, a farmer occupying one, the lighthouse keeper another, and a half-breed fisherman the remaining one. A small community truly, but varied enough to prevent absolute monotony. Our boatman soon had our supplies ashore, the tents pitched, and then began the preparation for the noonday meal, our first in camp. Ned suggested that I go to the farmhouse for some fresh milk, while he would get the table in position on the front gallery of the cabin belonging to the fisherman who was absent at the "Soo." It was but a few steps to the farmhouse, and I was soon in communication with the fair maiden that presided over the pails of the lacteal fluid. She gave me a pint for three cents, but when an old crusty curmudgeon emerged from the dwelling and looked into the pitcher, which I had borrowed and which contained the milk, he threw up his hands and said there was nearly a quart, and insisted on an additional penny. Of course I made no objection to the extra penny, but was provoked that he came between me and the pretty milkmaid, whose acquaintance I had been swimmingly cultivating. I strode off half angry at the intrusion, and the old curmudgeon, for such he was, followed in my footsteps. Ned had the table and camp stools all ready, and a cribbage board and a pack of cards at hand, and challenged me to a short rubber. He was a capital player at crib, and as I considered myself no slouch at the game, was confident I could keep him down to my level. I cut and won deal and first game. He scored the second, and the third and concluding game came to my side of the table. During our play old curmudgeon looked on deeply interested, and once in a while tried to prompt Ned to make a false play through mere ignorance of the subtleties of the game. After we had finished, he said he would like to try a game with me. I acquiesced; cut for deal and won, and after the cards had been shuffled and hands dealt, I turned quite innocently to him and said:

"What shall we make the stakes, one or five dollars?"
"I am no gambler, sir."
"Neither am I, only I wanted to make the play interesting."
"You didn't play for money with your partner."
"Indeed I did."

And pulling out a memorandum book showed him a tabular statement of the games I had played, which I stated were for five dollars each, and which account we settled at the termination of the trip.

"Well, you can't gamble with me!" he emphatically exclaimed.

At this juncture, seeing one of our pitchers in the hands of Joe, who was busy cooking, he insisted on my pouring the milk into that, which I did, and then old curmudgeon took the borrowed vessel and hastily departed, and never again came to our camp, thinking doubtless that we were of that order from which gamblers and bunco men came. Ned told me after he had left that he was a large land owner there, and that he did not belong to the cottage at all where I had procured the milk, and that he was glad I had bluffed him so decidedly, as he was not only avaricious but very mean.

The lighthouse keeper, bronzed and weather beaten, now put in an appearance, and after a brief inquisitive conversation inquired if we would like to purchase a few quarts of strawberries. Who could resist the luxury of that sweet and succulent berry of which Dr. Boelter said: "Doubtless God could have made a better berry, but doubtless God never did." We secured a few quarts, for which we paid a price far below the market rate at the "Soo." That lighthouse keeper had sized up our epicurean appetites accurately and thereby profited.

Dinner being announced we took position at the table with keen appetites. Our bill of fare was not extensive; but it was all a camper desired.

"Dire was the clang of plates, of knife and fork,
That merciless fell, like tomahawks, to work."

Everything was nicely cooked, and the tea especially

delicious. Joe, who was *chef de cuisine*, evidently understood to a dot how to prepare the savory dishes. He was a bonanza to us and relieved us of all the anxiety on the subject, as we were in doubt when we started relative to his skill as cook. If there is anything in camp that is an absolute misery it is poor cooking, for no matter how carnivorous you are, unless you are a cannibal it will soon nauseate the stomach.

After dinner Ned, who had filled his pipe and prepared for a luxurious smoke, advised me to go down to an old decaying pier at the river bank and ascertain if the trout would entertain any proposition for sport. He stated there were none but small ones there and that it was impossible to get them to rise to a fly. Such, he said, had been his experience on several occasions. I agreed to go, but demurred to his idea of the use of bait. He smiled at my refusal to take a small box of angle worms which he had brought for this especial locality, and was willing to wager a small sum that I couldn't raise a trout with a fly in an hour. Off I eagerly started in hopes of making the feathery lure secure the desired trout, and at the same time teach him a lesson in the gentle art. The pier was a treacherous pile of timber in the last stages of decay, and nothing was left of it but its trembling frame-work and a few planks placed here and there in order to reach its outer edge. I got "position on the narrow timber outside and started" flies on a graceful sweep to the surface of the flow stream. It required an effort to keep balanced on the uneven surface, and several times I came near throwing myself into the stream instead of the flies.

I kept this work up for over an hour, taking in the entire length of the pier, and changing my flies every now and then in hopes of securing a victim. I looked back at Ned occasionally, and always saw the picture of dreary indolence in the gentle angler as the clouds of smoke from his pipe wreathed above his silvery locks. He was watching as well as smiling at my efforts, and seemed content with the situation. Being within hearing distance, he frequently interrogated me as to my success, as much to perplex as aught else. He evidently didn't desire his prognostications to fail, and it seemed to me he was perfectly secure in them, as I had about abandoned all hope of getting a rise. My arm was severely taxed from my strenuous efforts in casting, and I concluded to cease from work and muse over the situation. Is it possible, I thought, that I have to lower my pride and resort to the contemptible anglerworm? It looked like desecration to toss a hook with a squirming bait into waters so pure and clear, and that flowed so gently o'er sparkling pebbles and golden sands. It was a fit abode for Neptune and Aphrodite, or "the gay creatures of the elements that in the colors of the rainbow live," and to soil its purity with pot-hunting tactics and bait would mantle with shameful blushes the cheeks of any true disciple of the gentle craft. The trout were there disporting, as I could plainly see them; but they were determined not to be caught with any kind of bunched feathers, no matter how attractive or deftly thrown. They were everything but foolish trout, if they were young, and seemed to "know a hawk from a heronshaw," though their greediness for a worm brought them much trouble. At last I became a desperate convert to Ned's theory, and as a *dernier resort* and with head bowed, I went to the boat and like a thief sneaked out the little box of worms, and then sneaking back, affixed a naked hook to the leader, impaled a worm thereon, tossed it in the current, and in a few minutes there was a vigorous bite and an 8-inch trout landed, his neck broken, and then released from the cruel hook. Ned all this time was watching my movements and enjoying my confusion, and after I had landed another, he very deliberately put his rod together, placed thereon his reel, and, attaching leader and hook, came to the pier, as he said, "to have a little fun with the little trout with a little worm."

He poked any amount of humor at me about my resorting to bait, but, by way of consolation, said it would be the only place we would desire to use it; and so it was, for the fly thereafter was our sole dependence. It goes hard to make a confession of ever using a bait in Lake Superior, but like that immortal little boy with the historic little hatchet I cannot tell a lie. I feel much better after this confession, and if, dear readers, you have the patience to follow this scribble through you will soon ascertain that we nobly redeemed ourselves by remaining faithful ever after as true members of the guild.

We caught nine trout here, of which nine ran over 10in., and then discontinued fishing, satisfied that we had enough for a good mess. While we were at the pier two steam barges put in here to lay by till the wind lulled some, as it was now blowing fiercely with a heavy sea prevailing outside.

Going back to camp we had another contest at crib, and tiring of that took in the surroundings by a tramp, and then again sought the shady porch and watched the white-plumed gulls as they flew o'er the waters, listened to the tender music of the robins, the solemn note of the white-throated sparrow and drank in the beauties of the bright sunlight playing on rock and tree, waving grass and flowing river.

After we had partaken of supper, beds were carefully prepared on balsam boughs and then the evening hours at the camp-fire were enlivened with cheery songs and entertaining stories of adventures in woods and on waters. We planned to make Gros Cap Island next day, where we expected some good angling.

CINCINNATI.

ALEX. STARBURCK.

A FRIEND IN NEED IS A FRIEND INDEED.—Coralville, Iowa.—I have been so gratified with the results of some information obtained from the FOREST AND STREAM, that for a long time I have desired to tell your readers about it; but I have not been able to undertake it, nor can I now, though I hope at some time to do so, more particularly as articles of such merit as the one by which I profited, should not be permitted to go unnoticed. I would like to tell how in my efforts to restore a favorite rod by substituting new ferrules for the old, which had become worn, I utterly failed, after weeks of delay and disappointment, in my frequent attempts to procure ferrules of the proper size; and how, after all, under the directions of your correspondent "Californian"—whose article on ferrules in FOREST AND STREAM of August 27, 1885, I think, in many respects the best that I have ever seen—I was enabled to restore the old ferrules to even a better condition than their original one.—J. G. D.

ANGLING NOTES.

MR. G. W. THORNE, of Colorado Springs, one of the prominent anglers of Colorado, stated in a recent conversation with the writer that the most killing flies in the Upper Rio Grande were the following: Coachman, royal-coachman, cowdung, brown-palmer, gray-palmer, black-gnat and brown-hen. They should be dressed on sprout hooks Nos. 4, 5 and 6. He owns a ranch at Wagonwheel Gap, and speaks in the most enthusiastic manner of the fishing there. The water is exceedingly cold, and the trout (*Salmo purpuratus*) are very large and good fighters.

A great many fishermen lay in a stock of live minnows in the fall, to be used as bait for pickerel fishing through the ice. They are easily kept in any place where the water will not freeze. While this style of fishing is not of the highest grade, yet in winter when there is no other sport it is not to be despised. It affords the angler an excuse for being out of doors in good, healthy, bracing weather, and there is considerable fun and excitement when fish are reasonably plenty. A good fire on the shore with a sufficient supply of refreshments for the inner man will add to the comfort of those engaged in the sport; and if the wind sweeps over the ice as it generally does on those mountain ponds, one can not be too warmly

One of the best and most convenient things in the way of refreshments on a cold day is the liquid condensed beef. It comes all ready seasoned in small glass bottles, and each bottle will make twelve or fifteen cups of beef tea. All that is necessary is a tin cup, and the sportsman can have his hot or cold cup of beef tea with very little trouble. Two teaspoonsful of the liquid to a cup makes it plenty strong enough. It is far better than liquor in any shape.

A recent letter from St. Stephen, New Brunswick, mentions the fact that they, too, are having a very open winter. No snowshoeing up to date and the streams yet open. Everything looks like a good winter for fish and game, and an early fishing season is predicted, especially for salmon.

Complaints are still coming in regarding the lawlessness about the Raquette Lake region of the Adirondacks. A gentleman recently returned from there says that no attention is paid to the enforcement of the game laws in that part of the country. Guides, sportsmen (?) and hotel keepers do as they please. Neither did the authorities seem to make the slightest effort to arrest the thieves that committed the robberies in that section last season.

A letter from Orange county, N. Y., states that the brooks are open, wild flowers to be found and trout rising, as if it were April instead of January. The same writer states also that there is a fair stock of ruffed grouse left, and as the farmers are killing a good many foxes, there is some hope for good shooting next fall.

Speaking of foxes, it is singular that one so rarely sees them while out in the woods. During a shooting and fishing experience of over thirty years the writer has never seen but two. While wading quietly down a trout brook these ran across the stream on a log; they were quite young and very pretty. It is not unusual to see deer, mink, otter, beaver and very many other wild animals; but wolves and foxes seem very hard to see. Probably they do most of their hunting at night.

THE YELLOW-FIN TROUT.

THE following description of the yellow-finned trout of Twin Lakes, Col., is given by David Starr Jordan and Barton Warren Evermann, in the forthcoming Vol. XII. of the Proceedings National Museum:

Salmo mykiss macdonaldi subsp. nov. Type in U. S. National Museum.

Head, 4 to 4½ in length; depth, 4½ to 5; D, 2, 12. A, 1, 11. B, 10. Scales, 40-184-87, about 125 pores. Length of type, 10in.; other specimens from 5 to 8in.

Body more elongate and more compressed than usual among the trout; head long, compressed, the snout moderately pointed; mouth rather large, the jaws subequal, the maxillary extending beyond the eye, 1½ to 2 in head; hyoid teeth present, small; opercle longer than usual, its greatest length 4½ in head, somewhat greater than eye, its posterior margin strongly convex. Eye 5½ in head; snout 4½; gill rakers short, x + 10.

Scales quite small and regularly placed. Pectoral fin moderate, 1½ in head; ventrals 2. Caudal moderately emarginate, the lobes equal, 1½ in head.

Color silvery-olive, a broad lemon-yellow shade along the sides; lower fins bright golden yellow in life; no trace of red, except the usual crimson dash under the lower jaw, never wanting in *Salmo mykiss*.

Body posteriorly and on dorsal and caudal fin profusely speckled with small pepper-like spots, smaller than the nostril, and smaller than in any other of the forms of *Salmo mykiss*. Occasionally these spots are numerous on the anterior part of the body, and even on the head, but usually they are very sparse before the dorsal fin. A round dark diffuse blotch on cheek behind eye.

Pyloric coeca about 40.

Stomach containing some vegetable matter, bones of suckers, and what appears to be a very large flat white worm, apparently swallowed as part of its food.

About ten specimens of this species were taken with the fly in the lower Twin Lakes, about 15 miles southwest of Leadville, a beautiful mountain lake tributary to the Arkansas River.

Most of the specimens were taken by Mr. George R. Fisher, of Leadville, a very enthusiastic and very well informed angler, who first made known to us the existence of the species and accompanied our trip in search of it.

There are two kinds of trout native to this lake, the yellow-fin or salmon trout, above described, and the smaller "greenback trout," also found in the Arkansas and Platte, *Salmo mykiss stomias*.

The yellow-fin trout lives largely on the gravels and about the north or sunny side of the lake. It reaches a weight of 7 to 10lbs., the very large fish being usually taken with the spear; specimens of 13lbs. weight are reported. The species never leaves the lake except to

spawn, and most of them spawn in the lake. It has never been seen in the river, and rarely in very deep water.

This fish feeds very freely on young suckers and even on young trout. It spawns in spring, and the suckers infest its spawning beds, devouring the eggs.

The flesh of the yellow fin trout is very pale, and more watery than that of the other trout of Colorado. In flavor its flesh is not inferior to the other species. The color of the flesh may be due to the fact that it feeds on fishes rather than crustacea. The "greenback trout" (*S. m. stomias*) feeds on crustacea and has very red flesh.

We have taken pleasure in naming this species for Hon. Marshall McDonald, U. S. Commissioner of Fisheries, in recognition of his services in spreading the range of *Salmonidae* in America.

UNIVERSITY OF INDIANA, Jan. 10.

OREGON SALMON ANGLING.

HERE is a letter sent by one of our Portland (Oregon) readers to a friend in New York. The information will be welcomed: "Last year was the first time to my knowledge that salmon would take the fly in Oregon waters away from tide water. That they would do so was discovered accidentally by a gentleman who was fishing for trout in the Clackamas, a mountain stream about twelve miles from here. The fishing was best from May 20 to June 15, and many large catches were made. My brother landed fourteen in one day, the largest of which measured 39in. in length. They ran from 24in. to 36in. in length, and were all landed without help and after strong fights. My brother's catch was only an average one and was excelled on several occasions by gentlemen of my acquaintance.

"Most of the fishing is done in a beautiful pool 200yds. long and 40yds. wide, where the water is shoal on both sides, quickly deepens to a depth of 6ft. or 7ft., and at its head has a current of about ten miles an hour.

"The favorite fly is of a reddish cast and is a hard one to describe, but can be procured here from local dealers. The most killing fly is one with wine body and brown speckled wings. Others used were black-hackle, coachman, professor and bright red flies. If you come out bring a salmon rod with you, as the work is too heavy for a trout rod, and the best success is had from long casts well out in the current, the fisherman standing on the shore or wading out in the stream as he may prefer.

"June, July and August are considered the best months to visit Puget Sound and Alaska, and I would advise you to engage your passage north as far ahead as practicable, as the steamers can seldom accommodate all the tourist travel that offers.

"Should you come out here I will be glad to assist you in having some good sport with the rod, and if the salmon take hold this year as well as they did last year you will be able to 'catch more fish than you can carry.'" W. F. B.

MYSTERIOUS STOCKING OF PONDS.

Editor Forest and Stream:

Will you explain correctly how it is that fish are found in ponds of water having no outlet? For instance, here in Texas stockmen build large reservoirs by digging out the earth and building embankments which never overflow, and in the course of a few years they are well stocked with fish. I have heard this accounted for in various ways, but not to my satisfaction. Possibly I have not read FOREST AND STREAM closely enough. T. J. S.

[Artificial ponds such as you describe may be stocked with fish in one of several ways: (1) By human agency; (2) by means of fertilized adhesive eggs carried on the feet of aquatic birds or the bodies of insects; (3) by the action of wind storms. We have been fortunate enough to receive specimens of fish which were rained down in the streets of a Nebraska city and found them to belong to a species common in the vicinity. If you have the opportunity, send to FOREST AND STREAM some examples of fish discovered under the circumstances related and we will be able to tell whether or not they are indigenous to the region in which your ponds are located. You can mail them in dry salt, or, better still, soak them a week in alcohol, then take them out and wrap them in cloths moistened with alcohol, place them in a pasteboard or wooden box and send by mail. The dispersion of freshwater fishes is one of the most difficult and interesting problems of ichthyology, and you can do us good service by aiding in its elucidation.]

BROOK TROUT SPAWNING IN JANUARY.—Baltimore, Jan. 14.—Editor Forest and Stream: Many thanks for copy of FOREST AND STREAM of Jan. 9 instant. I was already in possession of the number. I take it regularly from our news dealer, Crowley; can't do without it, must have it, and hope to live long to enjoy its contents. The "Fish of Florida Waters" is very interesting and the pictures of those fishes are beautiful. What labor it must be to kill the tarpon; all labor and very little sport. I am very much of the same mind as Dr. Henshall. "I do not particularly fancy that kind of angling." I will stick to the brook trout and wade in our mountain streams so long as the good Lord gives me strength to cast a fly. Yesterday, the 13th, the mercury registered 60°, and I went up the Northern Central Railway thirty miles to kill a few trout for an invalid. After taking a dozen or more I dressed them and found in one, Sin, in length, ova almost ready to spawn. I stopped fishing at once. Now I will ask if this is not remarkable, that trout will spawn in January?—E. S. Y. [In Pennsylvania the spawning season of the brook trout usually begins in October and continues until the middle of December; but in FOREST AND STREAM will be found records of spawning as late as April in Massachusetts and in May, June, July and August in Michigan. See FOREST AND STREAM of May 16, June 13 and Oct. 3, 1889.]

ICE FISHING.—Portland, Me., Jan. 24.—I am sorry to say the parties suspected of the outrage at the landlocked salmon hatchery at Edes Falls have again escaped justice, the Grand Jury failing to find a bill against them. This I believe is the third time an attempt to hold them has fallen through. Ice fishing for pickerel has been carried on with great success all about Cumberland county this winter, favored by the absence of snow and the prevailing mild weather. Local fish dealers report handling larger quantities of this fish than for ten years past.—C. D. S.

AN INDEFATIGABLE ANGLER.—Chicago, Jan. 18.—Editor Forest and Stream: I have lived during the months of March and April at my winter home, Buena Retiro, near the village of Enterprise, Fla., for five years. There I became acquainted with that noble old man and indefatigable fisherman, Mr. Benson, who, I am informed, had made his home at the Brock House and fished the waters of Lake Monroe for nearly twenty years. The other day my Florida paper, published at Orange City, briefly noticed his death. It was a death notable for its appropriateness. He died suddenly in his boat while playing a splendid bass. He fell suddenly and uttered no word. He often told me that he believed he would die in that manner. I have no particulars of his life, but I think he was a native of Boston and fished the Northern waters in summer. He must have reached the age of eighty, if not more. He usually went to Enterprise in December and remained till May 1, fishing every day except Sunday. He was a man of large means and very benevolent. If any of your readers know more about him the facts ought to be given.—E. M. H.

INDIANA BASS BASS IN JANUARY.—North Vernon, Ind., Jan. 11.—I saw to-day six bass, ranging from 1½ lb. down, caught by Mr. A. Johnson with hook and line in one of our streams, the Muscatatah, within a half mile of town. It is unusual to catch bass in any of our streams later than Dec. 1 or earlier than March 1. I have never seen any caught between these dates until to-day. The fish were caught with minnows and were gamy. Our county (Jennings) has fifty miles or more of good bass waters. The large and small-mouth are both plenty. The streams are rocky, with numerous riffles, and the pools between are never over 6ft. deep at an ordinary stage. Would like to know if any bass have been caught since the first of the year in similar streams.—W.

WEIGHT OF LAKE TROUT.—Albany Jan. 19, 1890.—Please give me the weight of the largest lake trout caught in Schroon Lake, N. Y.; if there is no such record give me the weight of the largest one caught that you have on record.—W. P. W. [We have no complete record of weights of lake trout from Schroon Lake. In Dr. Good's "American Fishes" you will find a statement concerning an example of 4ft. 5in. It is not uncommon to hear of individuals weighing 40lbs.]

TARPUM IN TEXAS.—Beville, Tex.—Recently experienced anglers have discovered that we have the genuine tarpon or silverfish in the bays that fringe the Gulf of Mexico; and the sport of hooking them, but seldom landing the game, affords both amusement and excitement, as any one will testify who has experienced this rare sport.—T. J. S.

THAT FLORIDA NUMBER (Jan. 9) was a grand one. The retrospect by "O. O. S." was worth a year's subscription. His picture of the pine land orange grower would be hard to beat, and the Charlotte Harbor fishing paper by "F. S. J. C." is well done. But what is the use to specify all we get in the FOREST AND STREAM?—G. A. B.

A FISH HE WILL REMEMBER.

THE following ingenuous note comes to the FOREST AND STREAM bearing the postmark of a railroad station within three hours of New York city. The hero of the story has not seen ten summers; when he shall have become old and experienced in the art of angling, it is safe to predict, he will still rehearse with pride and pleasure this first youthful exploit with the big bass:

Editor Forest and Stream:

One day last summer Papa, Harry and I went fishing on Lake. We were on the lake almost an hour; and I began to think I wouldn't get a bite, when all of a sudden something gave the line a terrible jerk, and the pole bent way down in the water, almost pulling me out of the boat. I was frightened and called to Papa. He said hold on to the pole until he could get there. It was a big black bass; it weighed 8 pounds and 6 ounces. Just as we pulled him in, he bit the line right off. It does not seem much to write it, but when I felt it jerking at the pole I thought it was an immense fish, perhaps a shark. But the best sport is trout fishing, and when the season opens again, as the law is on now, I will send you down two nice ones. WILLIE CASH.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—Adv.

Fishculture.

THE HOWIETOUN FISHERY.

THE current price list of this famous establishment of Sir James Gibson Maitland, Bart., announces the successful exportation to New Zealand of over half a million eggs of salmon taken from the Tay, Forth and Tweed districts.

Atlantic salmon have been artificially landlocked, but with no results of commercial importance. They have proved valuable, however, for crossing with Loch Leven and brown trout.

American landlocked salmon have yielded eggs in ponds at Howietoun, but the variety is much more delicate than the artificially landlocked Atlantic salmon. Rainbow trout have prospered far more than our landlocked salmon and have bred in confinement.

Crosses between salmon and trout have been carried to seven-eighths blood of trout and one-eighth salmon. The rate of growth and ratio of weight to length have increased, but there has been a slight decrease of fertility, especially in the case of female crosses, and sexual maturity has shown itself earlier in some female crosses than is usual in either parent.

Attention is drawn to the great success of redds in stocking large bodies of water. Eggs on the point of hatching are used for this method, and they are laid on gravel and require no care if the location be properly selected.

Yearlings are recommended most highly for general purposes, because of their ability to stand transportation, find their own food and accommodate themselves readily to ponds.

No difficulty has been experienced in shipping trout in iced water for a journey of twenty hours duration; but if placed after such a journey in water of a higher temperature, some loss will arise from inflammation of the gills.

March fry are considered best for English waters and May fry for Highland water.

CARE OF YOUNG TROUT.

Editor Forest and Stream:

The writer earnestly desires the restocking of our depleted, and in some cases exhausted, trout streams. For some years past he has been procuring alewife trout and liberating them in such brooks, leaving them to care for themselves thereafter. He now asks such readers of FOREST AND STREAM as have had experience in such matters, and who feel sufficient interest in the work so to do, to give its readers the benefit of their experience.

He would like particularly to learn whether it is best to put the young trout in the open brook where there may be a few old trout and let them shift for themselves, or whether it is not better to build a rearing pond beside the brook and deduct a portion of it to feed the pond, making suitable provision for the overflow, and thus be able to confine the trout until say one year old, when they would be better able to protect themselves. And if such rearing pond be preferable, what should be its size for each thousand fry, how best constructed, and what care would the young fish require?

Where there is an abundant water supply would food enough probably be supplied by it, or would artificial feeding be necessary? If food enough would be better supplied by the running water, how large a stream or quantity is required? And if not, what food would be best, how prepared, when and in what quantity fed? In all the questions it will be understood per thousand fry. This information and much more bearing upon the same subject can be furnished by readers of FOREST AND STREAM, and if they will kindly do so they will contribute to a timely subject, materially aid in a good work, and help others as well as the writer.

G. M. C.

WORCESTER, Mass.

[Leaders in fishculture now believe that in order to make a speedy and permanent impression in waters stocked with species of the salmon family, yearlings should be used for the planting, and not alewife. Results furnish complete proof of the soundness of this opinion and the Government is especially committed to this method of introduction. A pond 50ft. long, 12ft. wide and 3 to 4ft. deep in the deepest portion, from thence sloping to the inlet, and with a good flow of water, will easily carry 1,000 yearling trout, provided they are properly fed. A trough 16ft. long, 18in. wide and 8in. deep will accommodate 20,000 fry, allowing one month for absorption of the sac and two months for feeding. Some fishcultivists prefer to give the young fry fresh beef liver until they are six months old. They crush it to a soft mass and feed the fish several times a day when they first begin to feed. Older fish can be fed once daily and adults once in two days. The old fish can take finely chopped "lights" also. There is no fixed rule as to quantity of food, but the trout should have all they will clean up. See this journal for Dec. 26, on Mr. Atkins's method of feeding young *Salmonidae* with larvae of flies. There is no doubt that live food is the best if it can be obtained. As a rule open waters do not contain sufficient food of a kind suitable to the wants of trout.]

PROVIDING NATURAL FOOD FOR FISH FRY.

THE writer has been very much interested by Mr. C. G. Atkins's experiments in rearing larvae for feeding fry. The present method of planting yearling *Salmonidae* is a great advance over the system of planting fry, and now if some economical method of providing natural food for them can be evolved it is possible that trout culture may be placed on a still more favorable basis. There has been a recent application by natives of Switzerland (so I have been told) for an American patent on a system (patented in Europe) of feeding fish by having a series of ponds in which natural food is allowed to propagate, and from one to another of which the fish are transferred as sheep would be transferred from one pasture to another. The idea is a good one, but it is as old at least as the knowledge of the value of selective breeding of fishes in Japan or China, and simply makes complex what is otherwise a very simple matter—the rearing of the food and its transfer to the fish pond.

Dr. Wm. H. Wahl, editor of the *Manufacturer and Builder*, and the writer have for years engaged in the careful cultivation of Japanese goldfish by selection, resulting in the possession of no doubt the finest long-finned goldfish in the country. These are spawned, hatched and reared in tubs, tanks, aquaria and small cemented ponds. They are fed during the early part of their lives on animalculæ and small crustaceans. The rearing of all fishes within limited areas is, of course, only a question of food supply. A pond or trench, when devoted to raising food alone, develops prodigious quantities of life, because, in the absence of fish to prey upon it, production is unrestricted.

In the application for patent referred to, the use of dung, offal, etc., is recommended as a stimulus to the rapid development of larvae, crustacea, etc. While it may attract insects, it is not necessary to the development of minute crustacea, as these find their food in the still more minute animal and vegetable life developed under the same conditions. Take the sphagnum swamps of New Jersey for example. These dry up in the spring or early summer, and remain so dry throughout the summer that there will be cracks in the earth two or three inches wide. They will also be subjected to severe freezing before they fill up. Within a few days after filling up, however, *Daphnia* and *Cyclops* will appear to the eye, and in two or three weeks they will be literally teeming with minute life, all developed from eggs lying dormant during all the months of baking and freezing—*Daphnia*, *Cyclops*, the larvae of gnats, crane flies, ephemera flies and water beetles, the boat fly, and the curious phyllopod crustacea, etc. The bottom of these swamp ponds is soon covered with a luxuriant growth of sphagnum and other plants. One of them would supply the fry of quite an extensive hatchery.

On the outskirts of the city of Philadelphia Dr. Wahl and the writer have for years found stagnant ponds or accumulations of water, some of them clean and pure and some of them to some extent sewage-fed, where with a few scoops of a cheesecloth net myriads of these creatures could be taken. And in this way we provided our young fry with an abundance of natural food, only resorting to propagating it when the ponds or ditches dried up.

While attending the Ohio Valley Exposition at Cincinnati the writer found similar stagnant bodies of water, to some extent sewage-fed, and reached by back water from the Ohio during freshets. They were so teeming with the larvae of mosquitoes and small crustaceans, such as *Daphnia* and *Cyclops*, that as much as half a pint of them could be taken at one scoop of the net, and they were fed to the fish in the aquaria in clouds. These ponds were also alive with small fish, numbers of which were caught with the clouds of crustacea.

The small ponds among the hills on the coast of Massachusetts, when filled with water, swarm with these crustacea, and it is probable that they may be found in such numbers everywhere. The point sought to be advanced here, however, is that they may be bred in incalculable numbers in small artificial ponds or trenches. Neither summer heat nor winter's cold seems to affect them with the exception that when there is a considerable accumulation of ice they diminish rapidly in numbers. Were trenches covered with hotbed sash, however, so as to prevent extreme freezing, there is no reason why they could not be produced in abundance throughout the year. This is only applying the methods of the gardener.

The crustacea will be found on the lee side of a pond in greatest numbers when the wind is blowing and the sun is

shining, but will sink to the bottom if cloudy. When the wind is not blowing they will be found on the sunniest side. The breeding of larvae of gnats and mosquitoes in an open pond is much like inviting a plague. During the past summer, however, the writer was able to feed many hundreds of goldfish on mosquito larvae developed in a large cemented cistern, underground. It was necessary to keep a fine gauze cover over the mouth of the cistern to prevent the escape of the mosquitoes. The gnat and mosquito larvae are of no use only when fish have attained a length of say three-fourths of an inch. They will kill and devour newly hatched fish. Just to what extent this system would be practicable, or as to whether there are limitations to its value in the larger fishculture operations, is a question which may be easily determined by devoting small ponds already constructed to the experiment, and it would be well worth the trial. In many kinds of fishculture in the near future it is probable that the most advanced methods will devote much more space to the production of a natural food supply than to the fish themselves.

WM. P. SEAL.

PROFITS OF TROUT CULTURE.—Does raising trout for market pay under ordinary circumstances if a party has a good pond well located? Is the work on trout culture advertised in your "Sportsman's Library" complete and reliable? I have a good pond in view, but have read in papers that men always lost about all they put into the business. G. H. S. [We do not believe that trout culture pays as a rule, although we know some successful establishments. The book referred to is good and reliable. Write to Commissioner of Fish and Fisheries, Washington, D. C., for his Report on the Wytheville Station, which contains valuable information on this subject.]

FIXTURES.

DOG SHOWS.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

March 4 to 7, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. 3 to 28, 1890.—Meet of the Brunswick Fur Club, Great Island, Me.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. O. H. Odell, Mills Building, New York, Secretary.

INTER-STATE FIELD TRIALS.

[Special Report.]

THE Inter-State Field Trial Club's first annual trials commenced at Lafayette, La., Jan. 13, and were finished Jan. 22. The club deserves great credit for their fair management. They gave their prizes to be won by the best dog and every movement showed that they wanted fair play given to all. They were very kind and courteous to every one present. The judges were Mr. A. H. Starr, of Marshall, Texas, Judge Clagge, of Lafayette, La., and Mr. N. D. Wallace, of New Orleans, La. Judge Clagge and Mr. Wallace were called away on business two days each, and in their absence Mr. R. M. Hutchins acted in their places. There can be no question raised about the judges' honesty toward every one, and there were no favorites among the dogs. They adopted the plan of deciding each heat at the end of 30m. If either dog had any advantage of any consequence in their favor, and they stuck to this rule in nearly every case. They made a few mistakes in taking up good dogs on a short margin in favor of one dog, and they did not properly direct handlers so that they could thoroughly test the actual hunting quality of a high class dog. There were on many parts of the trial grounds entirely too many birds to thoroughly test the actual hunting qualities of dogs, and in such cases the judges should have taken the dogs off of single birds and worked them for new bevs. This they did not do in many cases, and beat some very high class dogs with dogs that were not near their equals, and another fault that I have to find with them and most other judges at field trials is, they try to stick to the old point system too much. It seems to be hard for judges to come down to the strict letter of rules to grade pointing under the heading of nose. They kept account of the actual number of points and flushes a dog makes, and at the end of the heat they count up the number of points that had been made, and the dog with the greatest number always won. This is not a correct way to judge the nose of a dog. One dog might make six points to the other's three and then not have near as good a nose as the one that made three. The actual number of points in a 30m. heat is often due to luck.

The country around Lafayette is a level prairie country nearly all in cultivation, and cut up in small farms with three and four-wire fences, and cultivated mostly in cotton and corn. Every cornfield is thick with cockle burrs, making it impossible for a setter to hunt anywhere without being covered from head to foot with burrs. The cotton grows very large and rank, and the ground is perfectly bare in most of the cotton fields. There are more birds on these field trial grounds than any that I have ever seen; have seen five or six bevs in a 30-minute trial. They stay out in these open cotton and cornfields, and when a dog points a bevy they frequently run several hundred yards before they can be flushed. They generally light out as soon as they strike the ground, making it very hard to find them. They sometimes fly to hedges, making it impossible to work them, and taking the character of the ground, the great quantities of birds, and the way they ran, into consideration, it is very hard for judges to do justice to all, and they certainly deserve credit for their attempts. Their decisions were accepted by every one present except Major Purcell, who annoyed the judges and management no little by kicking and entering a protest on nearly every heat that he run, some of them being six or eight pages of foolscap. They are entirely too long to think of copying, or asking any paper to take space to publish them. The Major started three dogs in the Derby and five in the All-Aged Stake and did not win a single heat. It is true that this was hard luck, but there was no one present except Major Purcell that will not fully agree with the judges in every decision that was made against his dogs. Those who saw them here and out East know what they are. They are dogs with some better, more

natural qualities than the record shows, but the Major has none of them broken nearly well enough to think about running in field trials.

The most of the sportsmen stopped at the Star and Crescent House, where they got royal, first-class accommodations, much better than we got at the Eastern trials. The proprietor, Mr. John H. Conliff, tried to accommodate every one in all their wants, and he will long be remembered by the sportsmen present.

The club should be very proud of their great success in their first effort. The entries show that they had quite a lot of the best dogs in America, in fact, more field trial winners entered than I have ever known to be entered in any one trial before.

MEMBERS' STAKE.

On Monday, Jan. 13, at 8:30 A. M., the Members' Stake was begun. The first brace was Mr. R. M. Hutchins's liver and white pointer dog Spring (Mainspring—Curfew), handled by owner, and Mr. Omer Villere's lemon and white pointer bitch Lillie Talbot (pedigree not given), handled by owner. They were worked through large cotton, corn and weed fields. During the heat there were eight bevs found by the spectators and dogs, but there was very little work done, Lillie making four points and Spring two, the birds generally went to such thick heavy cover that it was impossible for the dogs to get in much work, but they should have done much better than they did. Spring had a decided advantage in speed and range, but showed very poor nose and did poor work on game. They both made flushes that were inexcusable. Lillie broke shot once and was unsteady to wing several times. Spring behaved well to shot and wing. Lillie retrieved, Spring not having a bird killed over his point, did not have an opportunity to retrieve. They were ordered up at 11:44. Down at all 3b. 14m. The judges gave the heat to Lillie. This heat undoubtedly was a very hard one for the judges to decide, and it looked like they took time enough and found birds enough to test any two dogs not evenly matched, Spring having a decided advantage in speed and range and showed up to be a thoroughly broken dog, easy to handle. The judges should have given Spring an opportunity to retrieve a bird, and if he did retrieve he should have won the heat. Under the rules no unsteady dog that has not very high natural qualities should beat a well-broken dog with better natural qualities on a question of three points.

At 12 M. Mr. F. F. Myles's black, white and tan setter dog Ben Hur (Paul Gladstone—Lottie), handled by owner, and Mr. Omer Villere's black, white and tan setter dog Lee (Boyd—Gipse) were cast off in a thick, heavy cornfield, both dogs showing fairly good speed, range and style. Ben having a decided advantage in these respects. They both got in several points and flushes, Ben having the best of it. Lee was unsteady to wing twice, neither dog had a bird killed over him; at the end of 45m. they were ordered up and a bird was thrown and both dogs retrieved. The heat was then very properly decided in favor of Ben Hur.

F. F. Myles's black, white and tan setter dog Bob McCargo (Count Oberon—Blanche), handled by owner, and Capt. R. W. Foster's black, white and tan setter dog Capt. Bethel, handled by owner, were cast off in a cornfield. In speed, range and style in motion Capt. Bethel had a big advantage, being a far-ranging dog, but he did not make a point during the heat, and flushed one bevy and chased it and refused to back, went in and flushed and was unsteady to shot. Bob made two good points and would have made the third one if Cap had not flushed his bird. At the end of 45m. Bob was declared the winner.

After a first-class luncheon Mr. N. D. Wallace's black, white and tan setter dog Bang (Mark Twain—Lena R.) and Mr. J. K. Renard's lemon and white setter dog Ned White (Mark Twain—Lena R.) were put down. As both of these dogs had been handled by Mr. McCargo and did not know their owners, they agreed that Mr. McCargo should handle both dogs. They were worked on two bevs and but one point was made, Bang getting that. They both flushed badly and were unsteady to wing, and Ned chased twice and Bang once. They both ranged fairly well and with a fair amount of speed, Bang having a slight advantage. At the end of one hour the judges ordered them up and out of the race.

The next brace was Mr. F. F. Myles's black, white and tan setter bitch Dimple (Gordon—Blanche), handled by owner, and Judge J. M. Thompson's black, white and tan setter dog Mark Twain, handled by Mr. Renard. In speed, range and style they were a nice brace, Dimple having a slight advantage. In work on game they were both fairly good, but Dimple also had the advantage in this respect, and at the end of 45 minutes Dimple was declared the winner. This ended the first series.

Ben Hur and Lillie Talbot were the first brace in the second series. In speed and range Ben had a decided advantage, in style they were about equal. There was lots of work done in this heat, Ben getting a decided advantage. Lillie was also unsteady to shot and wing. At the end of 1 hour and 15 minutes Ben was declared the winner. This ended the day's work.

On Tuesday morning the Derby commenced, and the Member's Stake was finished by new judges, so your reporter was not present to see the work done. It resulted as follows:

Dimple beat Bob McCargo, both dogs owned by Mr. Myles. Ben Hur beat Dimple and won first, Dimple second, Lillie Talbot third.

THE DERBY.

The Derby of the Inter-State Field Trial Club began on Tuesday, Jan. 14. A list of the entries was published in FOREST AND STREAM Jan. 16.

First Series.

F. F. V. AND SIMONIDES

were put down at 9:04 and worked through open corn and cotton fields, where both dogs had a good opportunity to show their speed and range. Simonides had a decided advantage in speed, range and style. Both showed good nose. F. F. V. made three points and two flushes, and was a little unsteady to shot twice. Simonides made two points and was steady to shot and wing. Both backed well. Toward the end of the heat both dogs showed very poor speed and range, and were about equal. At the end of 30 minutes the judges very properly gave the heat to Simonides. F. F. V. was handled by Major Purcell and Simonides by Rose.

HOPE'S RAY AND BANG BANG.

Mr. Wallace, one of the judges, owing Bang Bang, retired through this heat, the other two judges deciding it. The dogs were put down at 9:45 and worked through open corn and cotton fields throughout the heat, with nothing except burrs to hinder them from going as fast as they liked. In speed and range they both did fairly well at first, but toward the end of the heat they slowed down considerably. Bang had a slight advantage in speed and range. They were about equal in style. There were three bevs found in this heat. Hope made three points, and was steady to shot and wing and backed well. Bang made only one point; refused to back and went in and flushed. He also made one other flush that he should have pointed. If he had been properly broken the heat would have been much closer and he possibly would have won it. At the end of one hour the heat was awarded to Hope's Ray. Ray was handled by Rose and Bang by McCargo.

TRANSIT AND LILLIE TALBOT

were cast off at 10:50 in the open cornfield, where the last brace was taken up and were worked through the heat in

this same cornfield, this however being a very large, level field where they could show all the speed and range in them. They both showed rather poor speed and range, and there was but little to choose between them. Lillie had some the advantage in style and completely outworked Transit on game, finding nearly all the birds. She made two points, three flushes and a bad break-shot. Transit made only one point and that was on birds that Lillie was pointing when he was called up to back; he also made one flush and a false point; they both backed. This was a poor heat. If Lillie had been steady to point and shot, she would undoubtedly have been the winner. Transit won. Down 30m. Transit was handled by Short and Lillie by her owner.

NED WHITE AND ANNIE F.

were cast off at 11:40 in open cornfield, and worked through a hedge out in large plantation of cotton with a few patches of corn, with no cover for birds except in an occasional briar patch. This character of ground was worked throughout the heat. In speed and range they both showed up fairly well at first, but Ned slowed down considerably after the first half hour, while Annie was going at a good pace to the end, having a decided advantage in speed, range and style. Annie found and pointed two bevs, and was steady to shot and wing. Ned pointed one bevy, flushed one single bird and chased it. All of the bevs flew to thick hedges, and no single-bird work was done. Both dogs backed well and were steady to shot. Both made a false point. Immediately after Annie found her last bevy they were ordered up and the heat awarded to her. Down 1h. 15m. Annie was handled by Avent and Ned by McCargo.

DAD WILSON'S BOY AND FLAKE OF FLOCKFINDER, JR.

After lunch, at 1:53, this brace were put down in open corn and cotton fields, mostly cotton, where nearly every place that a bird had to protect himself in was burned off. The first bevy was seen running on the bare ground where sedge grass had been burned, they ran in a thicket and both dogs were worked to them with a strong damp wind in their favor, and neither dog showed any sign of smelling them. Dad flushed two of them and stopped to wing. They were then taken out of the thicket to the open, and after a long search the handlers flushed a bevy in an open cornfield that flew over Flake, and she chased them a long way to where they went into a hedge. Shortly afterward she flushed a single and stopped to wing. After a long search again in a cornfield Flake flushed a bevy and again chased. They were then ordered up without either one making a point. Neither showed much speed or range. At the commencement of the heat Dad had a slight advantage in speed and range, but at the end of it Flake had a little the best of it. Dad had a decided advantage in style. This heat was the poorest one run so far, but if they had been put down in a good field where birds were plentiful they probably would have done much better. I asked the judges for their decision and they told me that they had ordered both dogs out for want of merit, and I telegraphed the same to your paper, but on the following day their attention was called to the fact that their rules do not give them the privilege of ordering any dog out for want of merit. Therefore they have changed their decision and declared Dad Wilson's Boy the winner. The rules are very weak to compel their judges to keep two worthless dogs down, perhaps for hours, to see which is the poorest of the two, when it is frequently the case that it is very plain in the thirty minutes time that the two dogs running have no showing whatever with the best dogs in a stake, and it is nonsense to have a set of rules that keep such dogs in a stake for the second series. In all such cases as this the spotting system saves a great deal of valuable time that might be spent in testing the natural qualities of the best class of dogs in the stakes. Dad was handled by Titus and Flake by Major Purcell.

DAD WILSON, JR., AND HARRY C.

were put down at 4:00 in an open cornfield. After drawing some ground blank Dad flushed a bevy. Then in a cotton field Dad wheeled to a good point on a bevy and was steady to shot. Harry then pointed a bevy, and Dad flushed a bevy at the same time 50yds. to the right of Harry. Harry then pointed in a cornfield a single and Dad one in a thicket by road. Harry then pointed a single in the thicket and was steady to wing. Working on by railroad track Harry pointed just as a bird flushed and was steady to wing. In a cornfield Harry pointed a bevy, Avent shot and killed and the dog was steady. In a briar thicket Harry did some work the reporter did not see, pointing and roading some birds that flushed wild. Then both dogs pointed false. In open Dad pointed a single. Short shot and missed. In sedge Dad made an indifferent point and Harry an excusable flush. We think the heat should have been decided here in Harry's favor, as there was no difference in range and speed; Harry having by odds the advantage in style on point and equal style in motion. The judges decided to give the dogs fifteen minutes in the morning, and they were taken up for the night at 5 o'clock. On Wednesday they were put down at 8:51 to finish their undecided heat. Dad roaded a bevy to a point; Harry coming up down wind flushed it, not seeing Dad. Sent on Harry pointed a bevy, and Dad, off to the left, pointed a bird that flushed wild. On Harry pointed a single. They were then taken up for water, and after ten minutes put down again in corn. Dad pointed a bevy in good style and won. Down one hour.

HEINEKIN AND FRED GATES

were cast off in an open cornfield, with nothing except burrs to keep a dog from showing all that was in him. Neither of them showed any great amount of speed or range. Fred had a slight advantage. In style he was much the best. Fred pointed a bevy that he broke in after when flushed. Rose brought him back and gave him a good whipping. On the scattered birds both did some rapid pointing, Fred clearly getting the best of it. Heinekin broke shot, but stopped to order after several yells from Major Purcell. Heinekin soon afterward made a good point, the Major shot, but did not kill and Heinekin again broke shot with the Major shouting, running after him and throwing cornstalks at him; but with all that he did not stop and chased the bird over 100yds. At last he returned, apparently thinking he had done what his owner wanted him to do. Just at this time a heavy rain commenced falling and the dogs were ordered up, being down only 15m. It rained until evening. At 3 o'clock it looked like we could get a heat or two run between showers, and we again left town. Fred Gates and Heinekin were put down to finish their heat. They were started off in a cornfield, and before Fred had gone 50yds., he wheeled on a nice point to a bevy. By this time it commenced raining again and the birds only flew a short distance in corn, where both dogs made several points in rapid succession, Fred getting a decided advantage. The birds were running badly and to a flush of Heinekin Fred made a short chase. At the end of the fifteen minutes the dogs were ordered up and the heat very properly awarded to Fred Gates. Down in all 30m. By this time it had commenced raining hard and no more attempt at work was made. Heinekin was handled by Major Purcell. Fred was to have been handled by Mr. Blunt, but as he was not in a proper condition the dog was placed in the hands of Rose, who handled him very well, notwithstanding he was entirely unacquainted with him.

VAL AND ROYAL C.

On Wednesday the sun rose clear with some little frost and a cool west wind blew all day, making it a fairly good day for the dogs, but birds were hard to find. The start was made four miles north of town on entirely new grounds that

were not as good as some that we have worked over. The fields were nearly all small inclosures with wire fences around them, and the land was very flat with very heavy swale grass and briars around the uncultivated ground. [In the published list of entries Daisy Girl appears instead of Dr. O. L. Abner's black pointer dog Val (Broncho—).] They were put down at 10:45 in an open cotton field and worked down wind for nearly a mile. In speed and range Royal had a slight advantage. In style they were about equal. Val worked close around his handler while among single birds, and completely outpointed Roy, making six points to Roy's two. Val would not back, and was a little unsteady to shot, but was much easier to get among the birds than Roy. There were two bevs found in this heat. Down in all one hour and thirty minutes. Val won. Val was handled by owner and Royal by Avent.

TRIBULATION AND ROWDY ROD.

As Rowdy Rod had won two firsts in the East and Tribulation had won first in the All-Aged Pointer Stake at the Southern Trials, there was a great deal of interest manifested about this heat, and as no one present except his handler had ever seen Rowdy in the field, and quite a number had seen Trib in his heats at the Southern, the majority present thought Trib would beat him. They were taken to open corn and cotton fields, where all could see them go to their heart's content. They both went at a high rate of speed and wide range, but Rowdy set the pace and range not leaving anything for Trib to find. Often during the heat Trib would follow Rowdy on his wide cast, but would not stay out at his work as well as he did. Rowdy found four bevs and pointed three of them nicely, and was steady to shot. One of the bevs flushed wild down wind out of an open cotton field. Trib did not make a single point throughout the heat, except a false point and a point on a rat. Trib backed well and was steady to shot. The first three bevs flew across a slough and were not followed. The last bevy that Rowdy pointed went to an open weed field, but time was up and it was clear to all that Rowdy had him beaten. He was awarded the heat. Down 45m.

This ended the first series, Roy Wilson having a bye.

Following is the summary:

Simonides beat F. F. V.
Hope's Ray beat Bang Bang.
Transit beat Lillie Talbot.
Annie F. beat Ned White.
Dad Wilson's Boy beat Flake of Flockfinder, Jr.
Dad Wilson, Jr., beat Harry C.
Fred Gates beat Heinekin.
Val beat Royal C.
Rowdy Rod beat Tribulation.
Roy Wilson a bye.

Second Series.

ROY WILSON AND SIMONIDES

were cast off in an open cornfield and worked through corn and cotton fields throughout the heat. Neither dog showed any great amount of speed nor range, but Simonides had a slight advantage in this respect. They were about equal in style and both showed good nose and were steady to shot and wing. Simonides made two points and showed a much better character of work on his game. Roy also made two points and one or two false points. At the end of 30 minutes they were ordered up and the heat awarded to Simonides. Roy was handled by McCartney.

HOPE'S RAY AND TRANSIT

were cast off at 12:50 and worked through corn, cotton and burr fields, where they could show their speed and range to the best advantage. In speed, range and style there was but little to choose between them, both ranged only fairly well. They were worked 30 minutes before lunch, each dog making two points on singles. Hope was a little unsteady to shot once; they backed well. After lunch Ray made two undecided points on single birds, one flush and one false point, while Transit got nothing to his advantage, and at the end of the 15 minutes time they were ordered up and Hope's Ray won. Down in all 45 minutes.

ANNIE F. AND DAD WILSON'S BOY

were at once cast off in an open cornfield and worked in adjoining field where some one had evidently been hunting, as there was nothing found except an occasional single bird. Both dogs seemed to get disheartened and soon went to chasing and pointing sparrows, and this they kept up throughout the heat. In speed, range and style Annie had a decided advantage. Annie only found and pointed one single bird, both were steady to shot. Boy did not make a single point and only flushed one bird. After working them a long time in this field and at the end of an hour, they were ordered up and Annie awarded the heat. We then drove two miles toward town to better fields, before the next brace were cast off.

DAD WILSON, JR. AND FRED GATES

were cast off at 4:40 in an open cornfield and worked through several corn and cotton fields before finishing the heat. In speed and range there was but little difference, both did well. In style Fred had a decided advantage. Fred pointed two bevs nicely and was, I think, pointing the third one, when the handlers walked into it, but neither the judges nor I were in a position to see for certain what the dog was doing. Fred also made three flushes, two chases and broke in twice. Dad made two bevy points and one false point, and they both backed well. There was no single bird work done in this heat. At the wind-up both dogs were on a stiff point on a bevy not over 100yds. apart, and when the handlers went to flush they walked up the third bevy that flew over Fred's and away his bevy went with him in full chase after them. Dad's birds were soon afterward flushed, making three bevs in sight almost at the same time. This being Fred's second chase they were ordered up, and as it was nearly dark we started for town.

ROWDY ROD AND VAL

were cast off at 8:30 and worked in cotton, corn and weed fields. In speed, range and style Rowdy had a decided advantage. Rowdy made the first point on a bevy out in a cotton field. Val came up, refused to back and flushed the bevy. One of the birds flew over Rowdy's head, and after standing and looking at it for a while he chased it some 75yds. before Avent could stop him, he being some distance from the dog. On Rowdy's return he got a royal good whipping. They were then taken to a new field, where Rowdy cut loose much better than he had before, and soon pointed a bevy. Val came up and refused to back; went in, drew too close to bird that flushed. Avent shot and killed, and Val broke shot and retrieved. Rowdy was perfectly steady to shot. The remainder of the bevy ran away and both dogs roaded them some 200 or 300yds. before catching up with them, and they flushed before the dogs could locate them. Further on, Rowdy pointed a single that flushed, and Val flushed a bevy that Rowdy had commenced roading some 75yds. up wind. They were ordered up and the heat given to Rowdy. Down 30 minutes.

This finished the second series, with the result as follows:

Simonides beat Roy Wilson.
Hope's Ray beat Transit.
Annie F. beat Dad Wilson's Boy.
Dad Wilson, Jr., beat Fred Gates.
Rowdy Rod beat Val.

Third Series.

ANNIE F. AND SIMONIDES

were worked in a cornfield on the scattered birds of the two bevs found in the last brace. On these birds both dogs did some miserable bad-work. Sim made the most flushes,

but he was steady to wing. Annie also made quite a number of flushes, and was unsteady to wing several times, showing a strong inclination to chase. They were about equal on point. Annie had a slight advantage in speed, range and style, but not enough to make up for her unsteadiness and pointing stink birds. Down in all 1h. and 45m. Simonides won.

HOPE'S RAY AND DAD WILSON, JR.

were worked through cotton, corn and weed fields. They were nearly equal in speed and range. Hope had the advantage in style. Dad did not show near the speed and range in this heat that he did in his heat with Harry C., and his work on birds was of a very low grade, making flush after flush of birds that he should have pointed. Hope also did poor work on birds, making some flushes, but he completely outworked Dad and won easily. Down 30m.

This ended the third series, Rowdy Rod having a bye.

Following is the summary:

Simonides beat Annie F.
Hope's Ray beat Dad Wilson, Jr.
Rowdy Rod a bye.

Fourth Series.

ROWDY ROD AND SIMONIDES.

There was quite an argument between Mr. Rose and the judges about making Rowdy Rod run a side heat. They first decided to run one heat in the All-Aged Stake and then run Rowdy and Simonides, their heat giving Simonides the rest while two heats were run, but that was not satisfactory, so they decided to run Rowdy Rod a side heat and then put them down the last brace in the evening, which they did, and at 4:10 they were cast off in a cotton field and ordered to take a short circle around a thicket to a bevy that had just been found by the last brace. While making this circle Simonides pointed four birds and Rowdy was whistled in to back, which he did well, both were steady to shot. They were then worked a few minutes after the scattered birds without finding them, and were then sent on around the thicket to the other bevy. Simonides being near his handler pointed, and was steady to shot. Rowdy came up and pointed an outlying bird of the same bevy, and was steady to wing. The birds flew over a hedge in a cornfield, some of them them stopping in the hedge. Rowdy pointed in the hedge. Avent went in to flush and the bird ran across the road in plain view of judge Clagge, and as it was in a hedge that it was impossible to flush, the dogs were ordered on in the cornfield. Simonides pointed just as a single flushed. Moving on not over 50yds. Rowdy pointed a bevy. Sim also at the same time pointed a little to one side and behind Rowdy, the same birds. Avent shot and killed and both dogs were steady to shot. The birds were marked down in an open cotton field, where Rowdy pointed a single; Avent flushed but did not shoot. Rowdy was steady to wing. Some 75yds. to the right in cotton Simonides pointed. Rose failed to flush the birds, which were evidently running. Then both dogs commenced roading carefully in different parts of the cotton field, and the birds flushed some 20yds. ahead of both dogs. Rowdy then pointed a single that flushed a few moments later. Sim pointed but Rose failed to flush. The judges ordered up the dogs and consulted, and in the meantime the spectators had marked a bevy in a bare cotton field, and the judges ordered the dogs back to them. Avent asked for the dogs to be worked in some straight direction so that speed and range could be tested before finding a new bevy, but the privilege was not granted him and the dogs were sent directly to the marked bevy. Rowdy was seen some distance away on a point on bare ground in a cotton field. Avent flushed a single, but did not shoot. Rowdy was steady to wing. They were then twisted around in many directions to try and find the scattered bevy, and in the meantime Rowdy pointed in a hedge. Sim backed, but nothing was found. The handlers then started for a new bevy, but the judges stopped and consulted until the handlers went some 150yds. then the judges called them back into the open cotton field again. Soon after entering it Sim made a nice point to a single that Rose shot and Sim was steady to shot. At the same time Rowdy was lost in cotton and found on point in the far corner of the field. Avent going up to flush, the birds were seen on the ground and Rowdy was steady to shot. The remainder of the bevy ran out into a cornfield, where Sim commenced drawing and drew too close to a bird that flushed; he then roaded on some distance and located one. Rowdy then pointed a stink bird. They were then taken across the hedge, and before the handlers had gone 200yds. Sim swung around a briar patch near his handler and pointed a bevy. Rose flushed three of them, shot and killed one, the remainder of the bevy ran out on the opposite side of the briars and Sim, at once took the trail, and roading them about 75yds. pointed the remainder of the bevy. Rowdy had made a wide cast and before he came back the birds were all flushed. He came up and pointed where the bevy had been flushed. They were then ordered up, and in this heat the judges did not give either dog any chance whatever to show their speed nor range. When they started they were ordered to take a short circle to a bevy that the other brace had found, and from this on they were twisted around and around after marked birds on the bare ground in cotton fields and corn. The birds were running badly, and Rowdy got somewhat rattled at this kind of twisting around and did not work the single birds as he should have done, but still he did not make a single flush nor commit any errors except one false point, only he appeared to be a little rattled and did not show his usual snap in his work. The way in which the heat was managed undoubtedly beat a very fast, wide-ranging dog, by a dog that did not show in any heat any high-class work. He has not much speed nor range compared with Rowdy, Tribulation, Fred Gates and several other dogs in the stake. The judges were perfectly honest in their decision and undoubtedly tried to do justice to every one, but they did not seem to realize that natural qualities are of more value than the actual number of points in a heat, and they did not seem to know how to direct the handlers so that a good dog could show his speed and range, and in several cases they worked unintentional injustice to high-class dogs in this way. In this country, where it is often the case that in 20 minutes' time the dogs are worked on 4 or 5 different bevs, being on game from the time they are started until the end of the heat, making it impossible for a fast dog to cut loose and show his natural high-class hunting qualities. This gives a poor dog an equal chance with a good one, and the judge should in all such heats manage to give a high-class dog a showing to compare his natural searching qualities with those of a poor one.

This ended the fourth series, Hope's Ray having a bye.

Simonides beat Rowdy Rod.

Hope's Ray a bye.

Final for First Place.

SIMONIDES AND HOPE'S RAY.

The heat for first place was run on Saturday morning after one brace had been run in the All-Aged Stake. They were cast off in an open cornfield. They both worked nicely to their handlers, but they did not show much speed and range for dogs that were running for first place. They were worked throughout the heat in open corn and cotton fields. Shortly after starting Simonides made a nice point on a small bevy in an open cotton field, and was steady to shot. The birds went to a hedge and were not followed. After drawing several fields blank Simonides drew up to a small bunch of briars and stopped just as a bird flushed. He stood

to wing and Rose cautioned him, and then he wheeled around, left the remainder of the bevy, and ran back to Rose, and he could not be induced to go back and point the birds, which soon flushed wild. They were marked down near by in sedge and the dogs were worked after them. Hope made one flush and was steady to wing. After working for them some time the judges and reporters flushed several. At the end of the thirty minutes the dogs were ordered up and the heat and first place given to Simonides. This was too important a heat to be decided on only one actual point, and both dogs were nearly evenly matched in every other respect. They should have been run longer.

Final for Second Place.

HOPE'S RAY AND ROWDY ROD.

Rowdy Rod was selected by the judges to run for second place with Hope's Ray, but Mr. Rose contended that he must be run a side heat. Judge Starr contended that Rowdy, being the best dog beaten by Simonides and Dad Wilson, Jr., the best dogs beaten by Hope's Ray, they should have run together, I suppose, to see which of them was the best. In this Mr. Rose and Judge Starr were wrong. There is nothing in these rules or any other field trial rules to make a dog beaten by different dogs run a side heat, nor is there any rule to make one dog run a side heat to put him on an equality to run for second place. The other two judges did not construe the rule as Judge Starr and Mr. Rose did; so it was mutually agreed that Rowdy Rod and Hope's Ray would run for second money that afternoon. After giving Hope's Ray several hours' rest, they were cast off among a bevy that the last brace had found. Before Rowdy went 50yds. he flushed a single and stopped to wing. Hope also flushed some eight or ten birds off 75yds. to the left. They were then cast off in a large cornfield, where Rowdy made one of his wide casts and pointed a bevy nicely, and was held some time for Ray to back, which he did well. A vent shot and killed, and both dogs were steady to shot. The birds were marked in open sedge. Rowdy made a wide cast for them, but missed them, and went a hundred yards beyond them. Hope caught wind of a single and the bird flushed as he turned around; he dropped to wing. He then made a nice point to a bird that flushed wild. He again dropped on a point before Rowdy got back from his cast. Rowdy, when whistled around to back, also pointed a bird that was some 15 to 20yds. behind Roy. Both birds flushed and the dogs were steady to wing. The dogs were ordered on out to open, when Rowdy went some 200yds. almost as straight as a line to the two birds and pointed. At this time Rose had started in the opposite direction. Judge Starr said he saw one bird flush wild in front of Rowdy's point, but he was so far away he could not fully determine whether or not it was a quail or a lark, so the point was not allowed. By this time Rose and his dog were still working in the opposite direction some 300 or 300yds. away. A vent put chain on Rowdy and led him after Rose, until at last Judge Starr rode up to Judge Wallace and told him to stop Rose until A vent could catch up. The dogs were then worked through an open cornfield to the scattered birds of first bevy. Rowdy pointed a single bird and the judge called A vent's attention to his dog being on point just as the bird flushed wild. Rowdy was steady to wing. He marked it and went straight to it and pointed it. The bird ran, and as handler and judges came up the bird flushed. On a short distance in a bare cotton field Hope flushed a single and dropped to wing. A few moments later Rowdy pointed a single and was steady to shot. Time was then called at the end of 30 minutes. Rowdy cut loose well and showed a much higher class dog in every respect than Ray. Rowdy Rod was then announced winner of second, and Hope's Ray third. This ended the Derby. Following is the summary:

First Series.

Simonides beat F. F. V.
Hope's Ray beat Bang.
Transit beat Lillie Talbot.
Annie F. beat Ned White.
Dad Wilson's Boy beat Flake of Flockfinder, Jr.
Dad Wilson, Jr., beat Harry C.
Fred Gates beat Heinekin.
Val beat Royal C.
Rowdy Rod beat Tribulation.
Roy Wilson a bye.

Second Series.

Simonides beat Roy Wilson.
Hope's Ray beat Transit.
Annie F. beat Dad Wilson's Boy.
Dad Wilson, Jr., beat Fred Gates.
Rowdy Rod beat Val.

Third Series.

Simonides beat Annie F.
Hope's Ray beat Dad Wilson, Jr.
Rowdy Rod a bye.

Fourth Series.

Simonides beat Rowdy Rod.
Hope's Ray a bye.

Final for First Place.

Simonides beat Hope's Ray and won first prize.

Final for Second Place.

Rowdy Rod beat Hope's Ray and won second prize.
Hope's Ray was placed third.
First, Simonides; second, Rowdy Rod; third, Hope's Ray.

ALL-AGED STAKE.

First Series.

FRED GATES AND DON'S DON.

Fred Gates and Don's Don was the first brace in the All-Aged Stake. They were put down at 12:30 and worked through an open corn and cotton field. Fred had a great advantage in speed, range and style. He also outworked Don on game, and won with something to spare. Down 1b. 35m. Fred minded his handler, Mr. Blunt, much better than he did Mr. Rose in the Derby, and showed to be a better dog. Don was handled by Major Purcell.

ROY WILSON AND F. F. V.

were put down after lunch in a cotton field and worked through cotton and cornfields throughout the heat. In speed and range neither had much to brag of, with a slight advantage in favor of Roy Wilson. Roy also had the best of it in style. This heat was one of the poorest run during the trials. Roy had four points to F. F. V.'s one, and F. F. V. had at least six flushes to her credit. Neither dog retrieved. Both dogs backed well. At the end of 45m. they were ordered up and Roy Wilson won.

STUBBLE AND BEN HUR.

the next brace, were put down at 3:22 and were worked through open corn and cotton fields. Ben had a decided advantage in speed and range, neither showing a great amount; they were about equal in style. Ben made the first two bevy points to Stubble's two flushes and one false point, and at the end of 30 minutes Ben Hur won. Stubble was handled by McCartney and Ben by McCargo.

TENNESSEE BOB AND CHANCE.

The Derby was then continued, which occupied the balance of the day. Saturday was a beautiful day and birds were found very plentiful. The dogs were put down at 9:40 and were worked through cotton and corn fields throughout the heat. Chance had the advantage in speed and range, although he did not show nearly up in his usual form; he

appeared to be very sore from a severe attack of mange, every movement showing that he was entirely out of condition. They were about equal in style. Chance pointed three beves and was steady to shot, and made no flushes. Bob made one single bird point and broke shot, and he also made one or two flushes. At the end of 30 minutes Chance was declared the winner with something to spare. Bob was handled by Stephenson and Chance by A vent.

DAISY'S HOPE AND BEPPO III.

After the last brace were taken up a heat in the Derby was run and this brace was put down at 11:25 and worked through corn and cotton fields throughout the heat, except on one bevy that went to high grass. In speed and range Hope had a great advantage, but Beppo would frequently tail after her until he would get lost from her, or his handler would whistle him in. In style Beppo had the advantage. Hope was very hard-headed and paid very little attention to her handler's orders. She had to be whipped in the heat to make her pay any attention to the whistle. In this heat there were four beves found, but not a single point was made until the last bevy. Hope made four points and four flushes. Beppo made two points and three flushes; on his last flush he quit hunting entirely and came to heel and stayed there for some time. Hope made a retrieve, backed and was steady to wing and shot. Beppo did not have an opportunity to retrieve, as he failed to find the only bird that Short killed; he backed and was steady to shot and wing. At the end of 1b. and 15m. the heat was awarded to Daisy's Hope with some to spare.

HEINEKIN AND TRANSIT

were put down at 1:05. They were worked through the heat in cotton and cornfields. Neither dog showed any great amount of speed or range. Transit had a slight advantage at first, but at the wind-up they were about equal. At the end of 30m. there was not enough work done to justify the judges in deciding the heat and they were ordered up until after lunch. During the heat there were six beves found and only three points made. Transit made three points and about five flushes. Heinekin did not make a single good point during the heat and had seven or eight flushes to his credit. He also broke shot once, when Short shot over Transit's point. Transit was steady to shot and wing. Neither one had a bird killed to retrieve. This was a very poor heat. Transit won. Down 1b. 15m. Heinekin was handled by Major Purcell and Transit by Short. After this heat the Derby was finished.

FRANK FLOCKFINDER AND CAPTAIN BETHEL

were cast off at 4:02 and worked through corn and cotton fields throughout the heat. Captain Bethel ranged wide and showed good speed and style. Frank showed very little range and speed, and ran with his nose continually on the ground. There was quite a lot of birds found, but neither dog did any pointing of note, but after one hour and fifteen minutes of miserable flushing, Capt. Bethel was declared the winner.

TENNESSEE CHARLEY AND ROWDY ROD.

Monday was a beautiful day for good work. The dogs were put down at 9 in open cotton and cornfields, both showed good speed and range, but Rowdy had the best of it in these respects. There were four beves found in this heat, Rowdy having much the advantage in the work, and at the end of 30m. he won with something to spare. Charley was handled by Stephenson and Rowdy by A vent.

CORSAIR AND SPRING

were put down at 9:40 and worked through corn and cotton fields throughout the heat. In speed and range Corsair had a slight advantage, in style he had much the best of it, but Spring completely outworked him on birds, making four points and no flushes that were not excusable, while Corsair made only two points and four flushes. They were both steady to shot and wing, and both retrieved well. At the end of one hour and fifteen minutes Spring won. Corsair was handled by Stephenson and Spring by his owner.

DAD WILSON, JR. AND LADY ZEAL

were cast off in open cornfields at 1:15. In speed and range Dad had a decided advantage. His style in working his game is very poor; he rarely ever makes a stiff point, and makes lots of bad flushes. In this heat he did not make a single point. Zeal only made two points. This was a very poor heat, neither dog showing much merit. At the end of 30m. Lady Zeal won. Dad was handled by Short and Lady Zeal by Stephenson.

JOY OF PRINCE WILLIAM AND GALENA.

Toledo Blade was withdrawn on account of a swelling on his throat, and Dimple being in season was also withdrawn. This brought Joy and Galena together. They were put down at 12 M. and worked through corn and cotton fields throughout the heat. In speed and range they were both far behind the best dogs in the stake. In style Galena had the advantage. There was very little work done on game. Galena made two points and was steady to shot and wing. Joy made no point and broke shot. At the expiration of 45m. Galena won. She was handled by Stephenson and Joy by her owner.

Bloomo II. having a bye, this ended the first series with the result as follows:

Fred Gates beat Don's Don.
Roy Wilson beat F. F. V.
Ben Hur beat Stubble.
Chance beat Tennessee Bob.
Daisy's Hope beat Beppo III.
Transit beat Heinekin.
Capt. Bethel beat Frank Flockfinder.
Rowdy Rod beat Tennessee Charley.
Spring beat Corsair.
Lady Zeal beat Dad Wilson, Jr.
Galena beat Joy of Prince William.
Bloomo II. a bye.

Second Series.

BLOOMO II. AND FRED GATES.

Short, the handler of Bloomo, was sick, and she was handled by Stephenson. They were cast off at 1:02, and worked through corn and cotton fields. In speed, range and style Fred had much the advantage, cutting out all the work, Bloomo never making a wide cast unless she was close after Fred. She acted throughout the heat as near like an idiot as any dog I have seen in a field trial. Fred completely outworked her on game and won easily. Down 1b.

BEN HUR AND ROY WILSON

were cast off at 2:55 in open corn and cotton fields. In speed and range Ben had the advantage; in style Roy had slightly the best of it; in work on game neither dog did much, Roy doing all that was of any note, beating Ben without making a retrieve. Down 15m.

CHANCE AND DAISY'S HOPE

were then cast off and worked across a large cornfield. On the opposite side Chance was found pointing. Hope came up, refused to back, went all round him and then made a short cast off about 50yds. and also pointed. A vent came up and seeing Hope's performance thought there was nothing in front of Chance, and ordered him on. Just as he moved a bird flushed a little to one side in the next corn row. Titus flushed a single in front of Hope, shot and killed it. Hope was steady to shot and retrieved it. The dogs were worked on down the hedge row where Hope picked up three more good points on scattered birds that no one knew anything about, while Chance made one point on a dead bird and flushed one bird on bare ground. Hope was very lucky

and sharp in this heat; she stuck to this old hedge row closely, picking up the single birds in good shape, while Chance was out hunting a bevy. Just after Hope had made her last point on one of the single birds the 30 minutes' time was up and the dogs were ordered up and Hope won. In speed and range they both went at a clipping gait, clearly outclassing any brace that had been run before. This was entirely too short a heat to test two high-class dogs. It is true that in the 30m. Hope was undoubtedly ahead, but if they had run an extra 15m. the result would probably have been different, as will be clearly shown by Hope's running and by what the judges thought of her later on by giving Chance part of third and leaving Hope out. There is no doubt by the decision in third place that the judges saw by Hope's performance in the first and last heats that they made one of the greatest mistakes of the trial by deciding this heat in so short a time.

ROWDY ROD AND LADY ZEAL

were the next brace. They were worked through corn and cotton fields, where Rowdy showed wonderful speed and range, cutting out all the work ahead of Zeal. He also found the only bevy that was found, doing a fine piece of work on it, and he made one more point than she did. They were both steady to shot and wing and retrieved well, they both backed, and at the end of thirty minutes Rowdy was the winner with lots to spare. This ended the day's running.

SPRING AND GALENA.

Tuesday was a bright, cool day, all that we could ask for for a day to do first-class work. Birds were found plentiful and satisfactory work was done all day. At 8:40 the dogs were cast off two and one-half miles south of town. They were worked exclusively through cotton and cornfields. In speed, range and style they were about equal. Galena had the luck in getting in the greatest quantity of work, and won in forty-five minutes. This ended the second series. Transit did not run and Capt. Bethel had a bye. Following is the result:

Fred Gates beat Bloomo II.
Roy Wilson beat Ben Hur.
Daisy's Hope beat Chance.
Rowdy Rod beat Lady Zeal.
Galena beat Spring.
Capt. Bethel a bye.

Third Series.

FRED GATES AND CAPT. BETHEL

were the next brace. They were cast off at 9:47. In speed, range and style they were a rattling good brace. They both went well from beginning to end, and were about equal in these respects. Capt. Bethel got in some first-class work on game, pointing three beves and one single. He was also steady to shot and wing; retrieved nicely. He made three flushes. Fred only made one good point, that was on a bevy. He also made three flushes and chased once. They both backed, but not well. This was a surprise. Every one expected to see Fred beat Captain easily, but the Captain beat him hands down in 30 minutes.

DAISY'S HOPE AND ROY WILSON

were cast off at 10:30 in a large cornfield, and worked through corn and cotton fields throughout the heat. Daisy went off at a good rate of speed and ranged well, but she was not uniform in her work. She did not work as she should when on birds, but she completely outclassed Roy. Roy had the advantage in style. They made only one point each, and were both steady to shot and wing, and both backed. At the end of 45 minutes Hope was declared the winner. In this heat Hope did not hold up to the end as she should have done.

ROWDY ROD AND GALENA

were cast off at 11:32 and worked through open corn and cotton fields. Rowdy went off at a high rate of speed and range, and held up to the end, completely outclassing Galena in these respects. He also outworked her on game, and at the end of 30 minutes he was clearly the winner.

This ended the third series with the result as follows:

Capt. Bethel beat Fred Gates.
Daisy's Hope beat Roy Wilson.
Rowdy Rod beat Galena.

Fourth Series.

CAPT. BETHEL AND DAISY'S HOPE.

The judges ruled that Rowdy must run a side heat to put him on an equality with Capt. Bethel and Daisy's Hope to run for first place, which he did while they were running their heat. At 12:10 Daisy's Hope and Capt. Bethel were cast off in open corn and cotton fields. They both went off at a good rate of speed and ranged very wide. Capt. had the advantage in style. For twenty-five minutes Hope completely outworked Capt., and had a decided advantage in nearly every respect, but the heat was just about five minutes too long, as she slowed up and commenced loafing. Up to this time Hope had made three good points, was steady to shot and wing, and retrieved well, while Capt. only had one single bird point to his credit, a refusal to back and a flush or two. At the end of 30 minutes they were ordered up, and at that time Hope was clearly the winner, and if the judges had stuck to their rule in deciding in favor of the dog that was ahead at the end of 30 minutes, they would have given the heat to Hope; but after several minutes consultation they ordered the dogs on. Hope's slowing up in the last 5 minutes probably made them suspicious of her ability to hold up at the high rate of speed she started with. This no doubt was the proper thing to do, and it should have been done from the beginning of the trials, especially when they had two high class dogs down. But it was hard for her handler to be sent on for 15 minutes longer when he knew they had been deciding every heat up to this one in 30 minutes when either dog had much advantage.

In the last 15 minutes Capt. Bethel had a decided advantage in speed and range. Hope did not stop going, but she slowed down considerably and showed no disposition to work. Capt. Bethel made two good bevy points and four single bird points. The singles were marked by the handlers in open ground, but the harder Mr. Titus would try to get Hope around the worse she would sulk and he could not get her to make a single point. At the end of the 15 minutes it was clear to every one that Capt. Bethel was the winner with something to spare. Down in all 45 minutes. From what I have seen of Daisy's Hope in field trials I think if a straight course is followed and birds are not found too plentiful, she might beat almost any dog in a 30-minute heat. She has a good nose, but she is bull-headed and wants to have her own way about everything, and as soon as her handler tries to whistle her in to work single birds, she persists in having her own way and does very poor single bird work, and if she gets a little fatigued she foafs at times, and the more her handler tries to get her to work the worse she gets.

Final for First Place.

ROWDY ROD AND CAPT. BETHEL.

After lunch and a good long rest this brace was put down in a large open cornfield to compete for first place. In speed, range and style they were a capital brace, both ranging several hundred yards from their handlers, Rowdy having a slight advantage. Rowdy found the first bevy and Capt. backed to order. The birds flew a long ways. In needs Rowdy was drawing on a single bird, when Capt. came up, went in and the bird flushed. Rowdy soon pointed a single and was steady to shot. Moving on Rowdy pointed several single birds, that run down a ditch. A vent shot both barrels at them to make them flush, but they did not

fly. Capt. came up, went in front of Rowdy, commenced roading the running birds very fast, and flushed and broke after them, but stopped to order in a few yards. On a weed field, Capt. made a point on a single bird, Rowdy backed and both dogs were steady to shot. They were then worked for a few bevy. On one of Rowdy's wide casts he wheeled, stiffened up and ran for a hundred yards straight as an arrow and dropped on a stylish point. A vent went in, and some 30yds. in front of him flushed one bird and shot. Rowdy was steady to shot. Ordered on Rowdy made a short cast, and on his return a bird flushed wild down wind, and he stopped to wing, and a few moments later the remainder of a large bevy rose out of the cornfield near by. As soon as Rowdy was ordered on he went straight to the scattered birds and pointed them, but time was just up, and the dog was ordered up without the judges following him to his last point. This was a capital heat for Rowdy, and he was announced the winner of first money.

After the heat had been decided the judges paid Rowdy a high compliment by saying publicly, that after seeing him run through both stakes, they consider him the highest class field dog that they had ever seen run in a trial, thus showing very plainly what an unintentional mistake they made in deciding the heat in the Derby between Rowdy Rod and Simoides, and placing a third rate dog over one of the highest class dogs in America. Rowdy's record this season is, first in Eastern Field Trials Derby, first in Central Field Trials Setter Derby, second in Inter-State Field Trials Derby, and first in Inter-State Field Trials All-Aged Stake.

Ties for Second Place.

TENNESSEE CHARLEY AND GALENA

were selected to run together to see which should compete with Capt. Bethel for second place. They were cast off in an open cornfield at 3:25 and worked in open ground throughout the heat. There was a vast difference between the speed and range of this brace and the last brace run. Neither dog showed much range nor speed in this heat, but Charley had a slight advantage. Charley made two points, backed well and was steady to shot and wing, while Galena made no points, several flushes and would not back. At the end of 30m. Charley was declared the winner.

CAPT. BETHEL AND TENNESSEE CHARLEY.

After a short drive and a little rest this brace was cast off to compete for second money. In this heat Capt. Bethel did not go as fast nor range as wide as he had done with Rowdy, but he showed good speed and range and had the advantage in this respect. Charley went much better than he did in the heat with Galena. Captain did some very bad work by flushing a bevy and refusing to back and not getting a point. Charley made two points, and at the end of 30m. he was announced the winner of second place.

After a good long consultation the judges announced Capt. Bethel, Chance and Fred Gates equal third. In this decision the judges placed Chance over Daisy's Hope, and she had beaten Chance. Under the rules they had a right to do this, but it shows very plainly that they were fully convinced that in their 30 minute heat they did not take time enough to thoroughly test their actual field qualities, and that from Hope's performance afterward they considered Chance a better dog than her. Following is the summary:

ALL-AGED STAKE.

First Series.

Fred Gates beat Don's Don.
Roy Wilson beat F. F. V.
Ben Hur beat Stubble.
Chance beat Tennessee Bob.
Daisy's Hope beat Beppo III.
Transit beat Heinkeu.
Capt. Bethel beat Frank Flockfinder.
Rowdy Rod beat Tennessee Charley.
Spring beat Corsair.
Lady Zeal beat Dad Wilson, Jr.
Galena beat Joy of Prince William.
Bloomo II., a bye.

Second Series.

Fred Gates beat Bloomo II.
Roy Wilson beat Ben Hur.
Daisy's Hope beat Chance.
Rowdy Rod beat Lady Zeal.
Galena beat Spring.
Capt. Bethel a bye.

Third Series.

Capt. Bethel beat Fred Gates.
Daisy's Hope beat Roy Wilson.
Rowdy Rod beat Galena.

Fourth Series.

Capt. Bethel beat Daisy's Hope.
Rowdy Rod a bye.

Final for First Place.

Rowdy Rod beat Capt. Bethel and won first prize.

Ties for Second Place.

Tennessee Charley beat Galena.

Final for Second Place.

Tennessee Charley beat Capt. Bethel and won second prize. Third was divided between Capt. Bethel, Chance and Fred Gates.

First, Rowdy Rod, second, Tennessee Charley; equal third, Capt. Bethel, Chance and Fred Gates.

SETTERS VS. POINTERS.

BERKELEY SPRINGS, W. Va., Jan. 6.—*Editor Forest and Stream:* I write because a matter of interest has called my attention to your paper. It is setter vs. pointer. I am not interested in any kennel, nor do I own any dogs other than those I now have and shoot over for my own pleasure. I have been a rough and tumble shooter throughout the valley of Virginia and portions of West Virginia, and for many years I have shot over and handled a large number of dogs. I now own two setters, one an old dog, the other one year old, and I think them as good dogs as a gentleman need shoot over, but I have for years been a believer in the superiority of the pointer over the setter. This opinion is based upon a close and rigid observation of the dogs as they have come under my eye. I am no believer in the close haired dog of the day, but the coarse-haired, almost wire-haired pointer met with throughout the valley of Virginia, is a dog that after partridges has no equal. I have seen and shot over setters of exceedingly high price, and although some of them have been A1 dogs, I am firmly of the opinion that the average pointer is far and away ahead of the setter. Is not the question this? A lack of water on one side and a lack of willingness on the other to go into briers. As for me, I have seen pointers go into briers again and again where setters flinched from, and they beyond all question stand the want of water better than do setters. I am for the pointer, not that I have any to-day—but I have owned them—but because I believe them the best dog. When I say pointer I mean the coarse-haired, wire-haired pointer, not the rat-tail, lubred dog of the day, and in this connection I am talking of the dog good for six days in the week hunting. I should like to hear from John S. Wise, of Virginia, on this question.

N. S. D. PENDLETON.

IRISH SETTER CLUB MEETING.—The members of the Irish setter club will please take notice that a meeting of the club will take place at the Westminster Kennel Club's show on Wednesday, Feb. 12.—WM. DUNPHY, Pres. Executive Committee: Max Wenzel, B. L. Clements, Charles T. Thompson, James A. Darland, F. T. Henshaw.—DR. WM. JARVIS, Sec. and Treas.

DOGS OF THE DAY.

ON Jan. 23 I received the voting slip for the election of officers of the associate members of the A. K. C. and I did what probably the vast majority of the members did—put it in my pocket for further consideration. It is not such an easy matter to vote so as to make your vote count. For the first time we were made aware simultaneously of the names of those who had become members for the year 1890. This list, however, is indefinite in one important respect—the names of all are given, whereas only those can be elected who are not members of a kennel club. One may therefore throw away his vote unless he exercises a little care, for as I understand the programme of the A. K. C. officials they will accept the votes sent, and if a person elected is not eligible his vote will be stricken out, and the eligible member with the greatest number of votes will be declared elected. It will thus become apparent that something ought to be known on this subject in order to prevent the throwing away of votes.

In order to arrive at some more definite knowledge of what I was about to do I first decided to find out where the members reside, because I think it very essential that those selected should reside within a reasonable distance of New York in order to be able to attend the A. K. C. meetings. And here let me say, that there is a little indistinctness in the circular of instructions, which accompanied the voting slip. It says we are to vote for president, vice-president and secretary and three delegates, thereby implying that we elect six different men. Such, however, is not positively the case; we may or not, just as we choose, for the three officers can also act as delegates, and personally I think they ought to do so, for the officers as officers have practically nothing to do, and all, I imagine, will vote for the best men in their opinion as officers, and they therefore ought to be delegates also, for we want the best men for these positions also. Taking the December number of the *Gazette*, I checked off the new members whose names appeared in the list then published. The idea in that being to get the residences of the new members. As far as the presidency is concerned, I had never any intention of voting for any one other than Dr. J. Frank Perry, the present efficient and labor-giving incumbent. With him went what may be called the representation of the Eastern States and New York, and short distances thereof became easier to handle.

The list became further reduced by knowledge of certain members being ineligible to hold office, and when it came to making a choice it was in this shape: G. B. Benners, Philadelphia; C. D. Bernheimer, N. Y.; P. E. Betts, Brooklyn; J. B. Blossom, N. Y.; J. Brett, Huntington, L. I.; J. A. Burden, Jr., Troy, N. Y.; L. C. Clark, N. Y.; J. McIntosh Cox, Morristown, N. J.; Julius Fehr, Hoboken, N. J.; H. T. Foote, New Rochelle, N. Y.; L. Gardner, Mount Vernon, N. Y.; C. A. Gilberg, N. Y.; H. R. Granger, Baltimore; C. L. Griffith, N. Y.; T. Gugert, Philadelphia; German Hopkins, Hempstead, L. I.; E. L. Kalbfleisch, Jr., N. Y.; F. E. Lamb, Baltimore; F. E. Lewis, N. Y.; R. Lyon, Staten Island; J. Marshall, Troy, N. Y.; Dr. J. H. Meyer, N. Y.; James Mortimer, Babylon, L. I.; C. D. Purroy, N. Y.; C. Rathbone, Albany, N. Y.; C. Sackett, Rye, N. Y.; F. W. Sheldon, Orange, N. J.; C. Stevenson, Phila.; Moses Taylor, N. Y.; J. O. Thurston, Mt. Vernon, N. Y.; A. H. Vanderpoel, N. Y.; J. Watson, Phila.; F. Windholz, N. Y.; J. Keegan, Brooklyn, N. Y.

If any one goes over that list he will be able to select about a dozen names as belonging to men prominently known in connection with dogs and shows, and I take it that it is among that class we may expect the most interest taken in connection with the work sought to be performed by associate member representatives. I have no desire to influence any man's vote, indeed I judge every man by my own feelings, and I know I cannot be influenced against my better judgment. I am quite willing to vote for any one of half a dozen of the above named gentlemen for either vice-president or secretary, and if I know of any likelihood of concentration on any of them I would be pleased to assist in making their election more assured. My vote is therefore perfectly unbiased and it is as follows: Vice-President, Dr. J. H. Meyer of New York; Secretary, Mr. Cornelius Stevenson of Philadelphia. And for those two with President Perry to be the delegates.

It is a matter for regret that the Beagle Club is showing signs of decay, but it is easy to see wherein the trouble lies, and the remedy is therefore obvious. No club that proposes to foster and advance breeds can do any good if the prizes donated do not amount to much more than a \$5 bill in the course of a year and that divided into four prizes. The beagle men started with a cumbersome name and \$2 dues, and a year or two later changed the dues to \$1. Let them go back to first principles in the finances, and if a change must be made using something more euphonious than "American English Beagle Club." They hold in England that a badly named horse cannot win the Derby. In such a case something is always sure to happen. The horse goes amiss, his owner or nominator dies, it is sure to be something, when a good horse with a poor name is among the entries. Perhaps this is what is the matter with the Beagle Club.

It has been definitely decided by the Duquesne Kennel Club not to hold a show at Pittsburgh this spring, but there is another one looming up in that longitude. I have just received a circular of which I need say nothing, it being self-explanatory: "The Cleveland Bench Show Association contemplates holding a bench show of dogs this year. In order to make it a grand success the Association desires to increase its membership, and thereby add to the organization the support of many of our citizens who have an interest in the improvement of the dog. The Association is anxious to place itself on a firm basis, and to accomplish this would respectfully request you to add your name to its list of members. The membership fee is only \$5, and we hope you will join. Send your name to the secretary.—FRANK DEH. ROBINSON, Pres. C. M. MUNHALL, Sec'y." It is fully time that Cleveland did come into line again, for 1886 was the first and last show of the Cleveland Bench Show Association.

Chicago has another "Woolford Z" now in the shape of the Mascotah Kennel Club premium list just to hand. It is quite of the very best brand, a perfect mash. Among the first things I noticed was that I was last week led into a misstatement with regard to Mr. P. D. Armour's setter special. It is not confined to Laveracks, but is for the best in the show. The error first appeared in a Chicago paper. It is evident that the Great Dane men are going to make their display a feature, if good prizes and a German authority by way of a judge will accomplish that end. In addition to \$185 offered by the Mascotah Kennel Club, the Great Dane Club offers \$110 in specials in open competition. Mr. Gustave Lang, of Stuttgart, Germany, will make a special trip to the Windy City to award these prizes, and his work will be watched with interest by our dog men, for it should be authoritative as to type. We are to have another new face in the ring at Chicago, that belonging to Mr. J. A. Long, of St. Louis, who will place the collies. I mentioned this gentleman two weeks ago in these notes, and need not now refer to him again.

Lynn, Mass., has been unfortunately compelled to cancel its dates, but Baltimore comes to the front with a modest

bid for patronage, which is not likely to go unheeded, though now that Lynn is no longer in the field, it might not be considered unadvisable for the Monumental City club to give the dogs a week's rest after Chicago and Rochester. Owners, too, might find the change from Woolford "Z" and the famed Rochester brewings to the milk punch route a little too sudden. If a whisky story is permissible, Mr. Editor, I will tell about Woolford "Z." About fifteen years ago the city editor of a Chicago paper conceived the idea of investigating the qualities of the whisky sold in that city. Being like all editors, a highly moral and temperate young man, he delegated the testing to a chemist. Bottles of whisky were purchased at a large number of "groceries," the labels removed and a plain letter of the alphabet used to designate each when submitted to the chemist. His report was that the bottle marked "Z" contained the purest whisky of all submitted to his test. The analysis was published with the information that "Z" was purchased from the establishment of a Mr. Woolford. The latter, with an eye to business, started the Woolford "Z" brand, and made a fortune before the story faded from memory.

The question of the validity of the dog show rules has been set at rest by the action of the American Kennel Club at its special meeting held Jan. 18. The method of arriving at the desired end was not the one I should have suggested or voted for. It seemed to me to be the best way to take the rules as printed and adopt them and ignore the illegality of the Executive Committee business. In Mr. Wise's first preamble he refers to a question as to the validity of amendments adopted Feb. 23, 1888. It is difficult to carry one's memory back through two years of meetings, but if I recollect correctly, that was the meeting at which Mr. Elliot Smith presided, and as soon as officers had been elected at the general meeting he decided that all other business must be done by the Executive Committee. I objected, but it was no use. I am somewhat pleased, therefore, to find that under the new dispensation the A. K. C. recognizes that the position taken by the then president was not correct.

Mr. A. Tucker, of Charlestown, Mass., has sold the well-known English setter dog Gus Boudhu to Mr. E. E. Haines of the same city, who will keep him for his private shooting.

J. W.

"ANOTHER PHASE OF COURSING."

Editor Forest and Stream:

A word or two with "J. W.," who in current number of *FOREST AND STREAM* has a couple of paragraphs on betting.

All betting or wagering is necessarily gambling. See any dictionary, or if necessary I can hunt up an authority from the law reports.

Betting "has no such influence in horse racing as some people imagine." Bosh, even if the gentleman who had the floor speaks from an "intimate knowledge of every sport followed either in this country or in England, starting at horse racing and stopping this side of dog fighting." Bosh, I say again. Where does his experience stop anyway? Is dog fighting a sport?

As I wrote in my letter in your issue of Dec. 26, 1889, I've run inclosed coursing in Ireland and the escape racket is a failure. You must kill to finish the trial to the satisfaction of owners and backers. Did I not explain as fully as could be that the English law only prevents cruelty to tame animals, not to wild ones? Over there you can course rabbits in a pen, but you cannot a cat. If inclosed coursing is not cruelty, why the introduction of a bill at Albany by Mr. Johnson, the member from Hicksville, providing that nothing in the statutes of this State relative to cruelty to animals shall apply to coursing hares or rabbits with greyhounds when done under the auspices of a sporting club or association? Was there ever such a confession of guilt put on record?

Of course bookmaking is a business, and a bookie who keeps inside his capital is as certain to win in the end as the percentage of the mutual is to wipe out the principal invested. The bookmaker does not gamble any more than the mutual machine or the wheel at roulette. But he is the means to this end. He enables betting, which is gambling, which plays the devil with the pocket, person and character of the gambler. If he wins it goes—whiff; if he loses it goes—plunk. All racing is crooked. I saw the other day somewhere that the English University boat race is the only sporting event on which there is heavy money staked which has not been sold. It's about so. I enjoy a race with the next man. I'll join in a sweepstakes, or back third favorite to win and for place right straight along. That is a middling good martingale to play; you need not bother about form or fixing, and you are pretty sure to get a good run for your money. But it is absurd to discuss the honesty of horse racing. Why, it is not in it; that's all. Look at the people who make a business of horse racing. Go over to Guttenberg or Clifton, or, for that matter, to the grand stand outside the boxes at Morris Park or Sheepshead, and see how many invitations to the wife's next "At Home" could be fitly distributed—especially the women folk.

Coursing is fair dog racing at first, but some of the dogs get to run cunning or clever after a while. That is a dog will not exert its powers, but allow the other dog to do the work and then dash in for the pleasure of killing the hare. Then the dog is useless for racing purposes. But betting taints every sport which it affects. "J. W." concedes this when he says that he never indulged in it, "mainly for the reason that the chronicler of events should do nothing which would tend to give his writing a bias, or give persons an opportunity of saying such was the case." Betting will taint coursing if it ever gets a foothold here. Didn't they have a row at Hicksville on the second day about the judge's decisions? Is it not the fact that his fairness was impugned as well as his ability? Didn't I tell you about the row at Lisburn, when they tried to bring in a whippet for an Irish terrier?

As to the cruelty side of the question, Mr. Johnson has settled most splendidly, when it should prove that the introduction of his bill was a smart move of the S. P. C. A., which is improbable. Then just below "J. W.'s" paragraphs come a couple of stories, and if it is not cruel to turn a jack out of a bag in the crowded streets of Sacramento and hunt "several greyhounds, a Newfoundland, two setters, and a dozen curs" after it, I have not a word to say.

I've always understood that *FOREST AND STREAM* was for clean sport, first, last and all the time. It does somewhat surprise me to find in its columns a suggestion that dog fighting is recognized as sport, that "betting or wagering is not necessarily gambling," and an apology for book makers; this by a reporter of races who says he doesn't bet lest his reputation should be smirched or he be "biased" in the exercise of his avocation. However, it takes all sorts of ideas to make up your mind out of.

I saw Mr. Hough's letter, but did not bother to answer. The pith of it was that he wanted you to let up on his coursing club with the incidental information that there had been a gate-money meeting at St. Louis. There it is. They have got to have a "gate," for every course will cost \$10 for the jack and expenses. Fees for admission won't suffice; racing clubs exist only by the commissions of the book-makers. There you are—with a gamble in full swing.

I am partisan in this matter, for out of some knowledge and experience my opinion is made up, and I hope that more partisans like Assemblyman Johnson and "J. W." will proceed to angrily against me. Approval and justification in such as theirs damn the thing they would countenance more powerfully than any attempt in my power.

GRAYDON JOHNSTON.

A CASE OF DOG MURDER.

Editor Forest and Stream:

The other day I had a very valuable Irish setter killed by the electric motor of this city. The dog, A. K. C. S. B. 11,457, was trained by W. W. Titus, of Mississippi, had taken three first prizes and was a valuable stud dog. The killing was pure cussedness, which can be proved.

On asking them for a settlement they deny all responsibility under the following ruling of the Supreme Court of this State in the case of *Jemison vs. E. T. R. R.*: "Dogs having no market value cannot be considered property."

We pay city taxes on dogs and this dog was killed in the city.

I have retained good lawyers, and shall spare no time nor expense to get a new ruling on the dog question. The case will come off in about three months and I hereby earnestly request all of your readers that can give me any rulings, either in this country or abroad, that can be used in the case to do so. Also any advice by letter or otherwise will be most thankfully received. It is more a fight for the legal status of the dog than a question of compensation. Not only myself, but every sportsman in this State is interested, and we will all be thankful for any assistance we can get.

H. McHATTON, M.D.

MACON, Ga., Jan. 13.

[It is sincerely to be hoped that Dr. McHatton will succeed in bringing the murderer of his dog to justice, and we have no doubt that if the case is properly presented he will obtain a decision in accordance with those in many of the States where courts have repeatedly decided that dogs are property as much as a horse or cow. We append decisions that bear on the case. In December, 1887, the case of *Bowler vs. Davis* was decided at Hornellsville, N. Y. This was an action to recover value for two beagles shot while running a fox on the land of the defendant. The files of the FOREST AND STREAM were submitted with reports in similar cases, where it had been decided by the courts that dogs were to be treated as property; and judgment was given against Davis for the full amount of value claimed. In January of the same year the appealed case of *George Hazelwood*, indicted for stealing a dog, was decided at Frankfort, Ky., in the Appellate Court, against the defendant; Judge Holt giving the opinion of the court, deciding that dogs are property to all intents and purposes.]

CHICAGO DOG SHOW.

WE have received the premium list of the second annual dog show of the Mascoutah Kennel Club, to be held at Chicago, Ill., March 4 to 7. There are 148 classes provided for, with champion classes for each sex in the important breeds with prizes of \$20 and \$10, and \$20, \$10, \$5 and medal in the open classes. In some of the less important breeds the challenge prizes are \$10 and \$5 with \$10, \$5 and medal in the open classes. In addition to the regular prizes a large number of specials are offered. Kennels of four, of mastiffs, St. Bernards, great Danes, deerhounds, greyhounds, pointers, English setters, Irish setters, Gordon setters, foxhounds (pack of 12), collies and fox-terriers will each receive \$25. Other valuable specials are offered for the best specimens of nearly every kind.

The judges announced are: Pointers, Mr. J. H. Winslow; English, Irish and Gordon setters, foxhounds, beagles and Chesapeake Bays, Mr. John Davidson; great Danes, Mr. Gustav Lang; collies, Mr. John A. Long; fox-terriers, Mr. A. Belmont, Jr.; remaining classes, Mr. James Mortimer. Entries close Feb. 17. The address of the superintendent is Mr. Geo. H. Hill, Room 63, 175 Dearborn street, Chicago, Ill.

COLOR OF THE IRISH SETTER.—San Angelo, Texas, Jan. 6.—*Editor Forest and Stream:* Please state whether or not it is a fact, that the Irish setter is invariably of a red color? If not, state the different colors of the different types. By so doing, you will settle a controversy between two regular readers of FOREST AND STREAM.—M. M. [The standard adopted by the Irish Setter Club of the United States is as follows: "Color and markings.—The color should be a rich golden chestnut or mahogany red, with no trace whatever of black; white on chest, throat or toes, or a small star on the forehead, or a narrow streak, or blaze on the nose or face not to disqualify." Stonehenge says: "There is no doubt that the preponderance of white, so as to constitute what is called white and red, is met with in some good strains."]

SQUIRREL AND RABBIT DOGS.—*Editor Forest and Stream:* I want a combined rabbit and squirrel dog, if such an animal can be obtained. I want a dog to work fast on rabbits, bring them around or hole them in a hurry, and also make a squirrel take the first tree at hand. The fox squirrel is the only kind here, and cunning they are. If a fox squirrel once gets to his home tree, the hunter might as well abandon the chase or go into camp at once, as it then becomes a question of endurance as to which can stay the longest. I wish some successful hunter of the fox squirrel would tell me how he does it—I mean full-grown old squirrels in November and December, not kittens in July.—JAS. B. THORX.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.
Missouri Belle. By H. R. Butler, Chicago, Ill., for sedge Chesapeake Bay bitch, whelped Sept. 11, 1889, by Barnum II. (Barnum-Gympse) out of Nellie II. (Gowrie-Kate).

Wacouta Thor. By G. A. Buckstoff, Oshkosh, Wis., for fawn, black points, mastiff dog, whelped July 23, 1888, by Wacouta Nap (John Morgan's Lion—R. Morgan's Bess) out of Dolly Varden II. (champion Hero II.—champion Dolly Varden).

Kurrency. By A. E. Pitts, Columbus, O., for silver fawn pug bitch, whelped Dec. 20, 1889, by champion Kash (Bradford Ruby—Lady Cloudy) out of Daisy (champion George—Sweep).

Monarch's Flirt. By Louis Batjer, Elizabeth, N. J., for lemon and white English setter bitch, whelped Dec. 19, 1889, by Monarch's Image (Dashing Monarch—Gussie) out of Idol (Pequest—Glen Ada).

BRED.

Notes must be sent on the Prepared Blanks.
Queen Anne II.—Lord Disbro. J. C. Comstock's (La Gro, Ind.) mastiff bitch, whelped Aug. 11, 1889, by Lord Disbro (East Lake Major—Belle), Jan. 22.

Nellie G.—Leo II. J. C. Comstock's (La Gro, Ind.) pug bitch, whelped Dec. 10, 1889, by Leo II. (J. C. Comstock's) out of Nellie G. (O. O. Oldfather's Leo II.), Jan. 16.

Lill—Kash. Geo. Gillivan's (West Jefferson, O.) pug bitch Lill (champion Treasure—Peggie) to A. E. Pitts's champion Kash (Bradford Ruby—Lady Cloudy), Dec. 7.

Pearl of Pekin—Kash. Wm. Rowan's (Pittsburgh, Pa.) pug bitch Pearl of Pekin (Boycoff—Virgie) to A. E. Pitts's champion Kash (Bradford Ruby—Lady Cloudy), Jan. 4.

Countess Warwick—Baden Baden. E. C. Freeman's English setter bitch Countess Warwick (Earl Warwick—Kitty Clover) to Baden Baden (Lincoln—Blaze), Jan. 23.

Kitty Clover—Baden Baden. E. C. Freeman's English setter bitch Kitty Clover (Thunder—Livey) to Baden Baden (Lincoln—Blaze), Dec. 14.

Alida—Paul Gladstone. E. C. Freeman's English setter bitch Alida (Rex Gladstone—Leah II.) to Paul Gladstone, Jan. 18.

Alice McBeth—Forest Laddie. McBeth Kennels' (North Lawrence, O.) English setter bitch Alice McBeth (Mike—Fanny McBeth) to their Forest Laddie (Cambridge—Countess Dash III.), Jan. 10.

Clarissa—Don III. R. H. Burr's (Middletown, Conn.) Irish setter bitch Clarissa (Bravo—Leonie) to his Don III. (Elcho, Jr.—Pequot Jess), Jan. 14.

Nell W.—Little Red Rover. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Nell W. (Koko W.—Phyllis D.) to Theo. J. Hook's champion Little Red Rover (champion Obo II.—Woodstock Dinah), Jan. 22.

Molly—King of Obo's. F. J. Fitzsimon's (Toronto, Can.) cocker spaniel bitch Molly to Geo. Bell's King of Obo's, Jan. 14.

Miss Lingsham—King of Obo's. Geo. Bell's (Toronto, Can.) cocker spaniel bitch Miss Lingsham to his King of Obo's.

London Jet—King of Obo's. R. G. Wilkes's (Toronto, Can.) cocker spaniel bitch London Jet to Geo. Bell's King of Obo's, Jan. 17.

Sensation—King of Obo's. J. W. Bunting's (Toronto, Can.) cocker spaniel bitch Sensation to Geo. Bell's King of Obo's, Jan. 18.

WHELP.

Notes must be sent on the Prepared Blanks.
Lady Thora. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thora (Santa Claus—Almah), Jan. 2, seven (five dogs), by their Boycott (Duke—Bougie).

Puss B. Geo. Gillivan's (West Jefferson, O.) pug bitch Puss B. (champion Kash—Bradford Ruby—Lady Cloudy), Jan. 20, three (one dog), by A. E. Pitts's champion Kash (Bradford Ruby—Lady Cloudy).

Daisy. A. E. Pitts's (Columbus, O.) pug bitch Daisy (champion George—Sweep), Dec. 20, five (two dogs), by his champion Kash (Bradford Ruby—Lady Cloudy).

Fanny McBeth. McBeth Kennels' (North Lawrence, O.) English setter bitch Fanny McBeth (McBeth—Vick), Jan. 18, eight (four dogs), by H. A. Wise's Rollick B. (Royal Ranger—Kit Killbird).

Sally. G. Langran's (Yonkers, N. Y.) Irish setter bitch Sally (champion Chief—Princess Alice), Jan. 15, ten (five dogs), by Max Wenzel's Tim (Biz—Hazel).

Bessie Ober. McBeth Kennels' (North Lawrence, O.) cocker spaniel bitch Bessie Ober (Prince Ober—Bessie Belle), Jan. 9, ten (nine dogs), by their Toby.

Gretchen. A. E. Pitts's (Columbus, O.) fox-terrier bitch Gretchen (champion Buchanan—Marguerite), Jan. 20, three (one dog), by his Baby Signal (Raby Mixture—Rhmond Olivebud).

Merry Duchess. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—June), Jan. 28, four (two dogs), by his Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

Notes must be sent on the Prepared Blanks.
Jennie. Sable collie bitch, whelped Nov. 12, 1889, by Scott's Jack out of Colina, by Theo. J. Hook, Rome, N. Y., by L. G. Tanner, Oriskany, N. Y.

Wacouta Thor. Fawn, black points, mastiff dog, whelped July 23, 1888, by champion Wacouta Nap out of Dolly Varden II., by R. A. Craig, Indianapolis, Ind., to G. A. Buckstoff, Oshkosh, Wis.

Gypsy Queen. Light fawn mastiff bitch, whelped Feb. 27, 1887, by Judge II. out of Lady Buff, by M. G. Read, Brockport, N. Y., to G. A. Buckstoff, Oshkosh, Wis.

Devonshire Rap. Liver and white pointer dog, whelped May 3, 1889, by Quick's Faust out of Devonshire Ada, by McBeth Kennels, North Lawrence, O., to Geo. E. Wilson, Van Wert, O.

Bell Boy. Silver fawn pug dog, whelped Dec. 20, 1889, by champion Kash out of Daisy, by A. E. Pitts, Columbus, O., to Mrs. E. Tyler, St. Paul, Minn.

Onelia. Silver fawn pug bitch, whelped Dec. 20, 1889, by champion Kash out of Daisy, by A. E. Pitts, Columbus, O., to Eberhart Pug Kennels, Cincinnati, O.

Gus Bondie. Black, white and tan English setter dog, whelped 1881, by Dashing Bondie out of Novel, by A. M. Tucker, Charlestown, Mass., to E. E. Haines, same place.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.
C. T.—My dog has a tapeworm, but is in good condition, and it does not appear to give much trouble. Under the circumstances would you advise doing anything for it? Ans. See answer to "A. W. M." of this issue.

A. Reader, Tarrytown, N. Y.—I. What is the matter with my Irish setter dog? He barks and whines in his sleep, and his feet and other parts of his body twitch nervously. He is at present quite fat, and perhaps this is in a great measure the cause of his trouble. I have been told that he must have worms. He is just getting over a very sore eye, which was running continually. 2. What is a good bath for fleas? Ans. I see answer to "A. W. M." of this issue. 2. Carbolic soap. Carbolic solution 1-40, corrosive sublimate 1-3,000, Persian insect powder.

A. W. M., New York.—I have a pug dog 8 months old, once in a while he is taken with what I should call cramps. His sides are drawn in and he acts as if in pain. I have tried remedies, but they do not benefit. I think the trouble is caused by worms. Will you kindly inform me of some remedy in your next issue? Ans. Purge with full dose of castor oil. Give thirty grains of powdered area nut made into large pill with six hours after this give another dose of oil. Feed milk only during treatment. Give five grains of quinine in a pill, concealed in a bit of meat, each day.

C. E. W., Toronto.—A setter bitch has a discharge from her ear which has a very offensive smell and worries her greatly. Ans. Canker in the ear. Get the following:

R Tr. opii.....3 ii
Bromo. chloral.....3 ii
Acid carbolic.....gtt x
Aq. Sig. Let a few drops fall in the ear three times daily.

Mix. Let a few drops fall in the ear three times daily. Keep the ears clean.

C. Louisiana, Mo.—About three weeks ago my Italian greyhound seemed stricken with paralysis; on being taken from her bed she could not stand up or handle herself at all, but after rubbing her some time she got better, and has not been troubled in that way since. She has always had bad-smelling breath. She now has a very bad cough, her head is stopped up, she is very costive, has no appetite, only eating meat and not much of that. She is about five years old. It will be hard to give her medicine of any kind, and if you recommend any, please state best way to give. She also has running at the eyes. Ans. Syrup of buckthorn, teaspoon each morning; 5 grs. of quinine each day. Fowler's solution, 5 drops daily in food; very little or no meat; exercise regularly.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Jan. 25.—The Massachusetts Rifle Association held its weekly shoot to-day, with a large attendance of riflemen, and the different matches were well patronized. Good scores were made, considering the strong wind blowing from 8 to 8 o'clock, making very high scores impossible. Mr. Charles won the bronze victory medal. Following are the scores, all at 200 yds. except where noted:

Champion Off-hand Match.
H L Lee.....84 J C Mills.....71 S C Sydney.....60
W Charles.....51

Second Off-hand Match.
H L Lee.....78 H Severance.....75 C Homer.....68
S C Sydney.....76 J C Mills.....72

Record Rest Match.

ST. LOUIS, Mo., Jan. 24.—An even dozen members of the St. Louis Pistol Club participated in the last regular weekly shoot, held Wednesday night at the Laclede gallery. Summerfield made 118 on his score and captured first honors and the medal for the week. Three of the seven new members recently elected were present and shot their first scores for the club's medal. They were Schaefer, Stuessel and Barker. Out of a possible 120, the following scores were made at a 14 in. bullseye, distance 12 yds.:
M Summerfield.....12 12 11 12 12 11 12 12 118
W Hettel.....11 12 12 12 10 11 12 11 112-114
W Bauer.....12 11 11 12 12 11 10 11 112-114
Jay J Schaefer.....11 10 12 11 11 12 12 9-111
Mark Billmeyer.....10 12 11 10 12 12 11 9 112-111
F A Fodde.....10 12 12 11 11 9 12 11 10-109

UNSER FRITZ.

ROCHESTER, Jan. 24.—The annual shoot for the Belding badge was held here to-day by the Flour City Gun Club. The range was 80 yds., the bullseye 3 in., with lin. rings, and the scores out of a possible 150 are: Boyd 131, Briggs 142, Dana 119, Belding 129, Wood 125, Kay 146, Cook 140, Ries 138, Traugott 117. All the contestants but one are over 50 years of age. Kay, the winner, made eleven bullseyes. The badge is of gold and very valuable. The shooting was with peg rest.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

AMERICAN SHOOTING ASSOCIATION DATES

Feb. 12, 13, 14.—Birmingham, Ala.
Feb. 19, 20, 21.—New Orleans, La.
April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May —.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.
The Kansas City dates have not yet been determined, but they will probably be May 25, 26 and 27.

CHICAGO TRAP MATTERS.

CHICAGO, Ill., Jan. 22.—The meeting of the trap shooters called for last night to discuss plans for securing permanent trap grounds for Chicago was, as was announced briefly by wire last night, on the whole a satisfactory one, although the extremely cold weather cut down the attendance far below what it should have been. There were in all about thirty shooters present. It did not take long to develop the fact that the call for the meeting was a well-taken action, and that the contemplated movement would be made in earnest.

Mr. Fred C. Donald was called to the chair, and Mr. C. E. Willard was chosen secretary. Mr. Price stated the purpose of the meeting briefly. Mr. Jenney called on the visiting sportsmen, Mr. W. Fred Quimby, of New York; Mr. H. McMurchy, of Syracuse, for remarks. Mr. Quimby replied in a succinct account of new features shooting action, naming the successes and explaining the failures. Spirited speeches were also made by Messrs. Cleaver, Shepard, Burton, Willard, Eustis and others. All favored the movement to secure good grounds at once. Mr. Eustis spoke at some length, admitting himself, as general passenger agent of the C. B. & Q. road, to be guilty of attempting to earn his salary by inducing the gentlemen to favor a locality on the Q. road. Mr. Cleaver, however, very fairly and said he would earnestly support the project in hand, and that the grounds might ultimately be chosen. Mr. Eustis named grounds near Clyde, adjacent to the "Q." tracks, which were accessible and desirable. He thought the locality one where shooting would not be interfered with by the residents near by. These grounds, something less than 20 acres, could be leased for 10 years at \$1,000 a year. Cheap buildings could be erected, which would be bought at appraised value at expiration of lease. Mr. Quimby, by request, stated the rental of the New York Suburban grounds to be \$150 a year.

The Chair suggested, at talk of subsequent committee action, that it would be well to have the sense of the present meeting upon the matter in hand. It was moved by Mr. Cleaver and seconded by Mr. Eustis that the sense of the meeting be favorable to the early securing of good grounds. Carried unanimously.

Mr. Shepard thought it best to buy ground and not to rent. Mr. Price was of the same opinion. A strong sentiment of this sort developed. Mr. Eustis suggested good grounds for purchase near La Grange, on the "Q" road. Mr. Cleaver moved for appointment of committee to investigate localities for grounds. Mr. Price thought it better to first test the probabilities of success by soliciting subscriptions to stock for a stock company. The Chair suggested that it might be wise to have several committees. Mr. Cleaver changed the motion to one empowering the Chair to appoint as many committees as seemed best. Mr. Shepard moved to amend by making the committees two in number, one on grounds and one on organization. The motion was carried in this form. The Chair appointed as committee on grounds Messrs. E. J. Cleaver, J. W. Sloan, W. L. Wells, P. S. Burns and M. J. Eich. Of these, it is probable that a majority are in favor of purchase of grounds as against renting. The rapid enhancement of values of all real estate adjacent to the city and close enough for shooting grounds would make this almost imperative as a business move, and as a foundation for a strong stock company. It is well known that syndicates of young clerks of this city have for years been doubling the money held by any regular sportsman and sale of land not much different from some of that discussed. On ground once owned by the company large and permanent buildings could be erected, and the question of further financing would be a simple one. On a high rental basis the prosperity of the company would be in yearly doubt, and its permanency in yearly danger. The general tenor of the meeting seemed in favor of purchase and of good substantial buildings, with a keeper to be engaged who would open the grounds at any hour to non-members, at rates on birds and targets slightly above those given to members holding stock.

The committee on organization was made up of Messrs. C. E. Felton, W. L. Shepard, C. S. Burton, J. Palmer O'Neill and R. B. Organ. The understanding looks toward the organization of a stock company, the stock to be held by any regular sportsman of this city at so much per share, one share entitling the holder to the privileges of the grounds, reduced rates on targets, etc. This committee also is strong and well chosen. The movement now looks like one to be favored and backed by our business men, and it is the belief at this date that this action will at as early a date as possible result in the obtaining of grounds worthy of the city. The meeting was adjourned on call of the chair. It will re-convene, probably within two weeks. But that time the grounds committee will have made thorough investigation of localities along the suburban lines north, west and south of the city, along the C. & N. W., Wisconsin Central, C. B. & Q., Illinois Central, B. & O., and C. & R. I. & P. railways. The result is awaited with interest.

The Kay, advance agent of the U. S. Cartridge Co.'s car of trap shoots, writes me from San Antonio, Tex., under date of Jan. 15: "The citizens in every town I have struck so far are very enthusiastic over our trip, especially in this country." Mr. Kay speaks of that region as the greatest game country he has ever seen, and it appears that some of the many new friends he names as having made there have forcibly distrained him to leave business and go duck shooting for one day. Mr. Keller is expected to be in San Francisco at this date. All trap shooters are interested in hearing from him, and will be glad to hear of his success all the way around.

The team men are at this date rounding up for the Dayton meet. Mr. McMurchy and Mr. Quimby have just left here for Indianapolis and St. Louis respectively, whence they leave for Dayton

Sunday. Mr. C. W. Budd is here in town to-day. This morning I met some of the Kansas City boys who have come up to shoot to-morrow. Mr. J. A. R. Elliott is here, looking disgustingly healthy and fit, and so is Mr. Carl Guinotte, who will, I agree, shoot with Mr. Felton the small-gauge match for which Mr. McGee, of Kansas City, fails to qualify to-day. Mr. Whitfield is present as referee, I believe. Mr. Riley is in town also. This is the last of Riley's "they speak of so highly," and he is said to be "looking quite well."

This is perhaps the last writing I shall do from Chicago for some time, as I start Saturday to join the Iolanthe crowd at Dayton, for the endeavor to grapple with the problems of the long trap-shooting trip, record of which will appear in FOREST AND STREAM. Mr. W. P. Mussey, one of the best known shooters of Chicago, will, as a time-server, send in shooting news to FOREST AND STREAM from this place. At present Mr. Mussey is seriously ill of pneumonia, which fact all the boys regret very much, for unless Billy is presiding at the counter of the big billiard hall where so many of the boys meet, things don't seem just right in shooting circles here.

Jan. 24.—The weather to-day was cold and cutting, but in spite of this fact a good little crowd of Chicago shooters met at Watson's Park, at Grand Crossing, to test the gun shot between Messrs. Riley and Elliott, of Kansas City, and C. W. Budd and R. B. Organ, the former of Des Moines and the latter of this city. The Kansas City shooters were accompanied by Messrs. J. K. Guinotte, W. S. Hollivell and Jas. Whitfield, the latter editor of the *Referee*, and all of Kansas City.

McGee being absent, Mr. C. E. Felton, of Chicago, agreed to shoot with Guinotte, of Kansas City, the small-gauge match. The scoring began at A. M. Mr. Felton shot a 20-gauge Scott, using 24drms. Schultze, 7s in the right barrel, 6s in the left. Mr. Guinotte shot a 20-gauge Daly, and used 24drms. Schultze, 9s in the right barrel and 7s in the left, chilled. Following is the score, 50 live birds:

Guinotte.....121111102221100001202122102122211121111112-41
Felton.....121111102221100001202122102122211121111112-41

Dead out of bounds.
The main shoot began at once after lunch. Both Mr. Riley and Mr. Elliott seemed in good form. Mr. Organ is always in good form. Mr. Budd, just recovering from a severe spell of sickness, was known to be "off" before he pulled a trigger, and the scores were how much. Mr. John Watson was chosen referee, and the match began. Mr. Riley's missing the first bird, which was a good specimen of a lot of corking good birds.

Both Mr. Riley and Mr. Elliott showed themselves extremely fast-gaited. Mr. Riley's second barrel is a revelation. The match was courteous and pleasant throughout, and Chicago shooters were treated to a good exhibition by good men. Mr. Riley and Mr. Elliott both shot the same gun, a 12-gauge Groener. Both used 24drms. Schultze powder and chilled shot. Mr. Riley shot 8s and 7s and the latter 8s in both barrels. Mr. Budd shot 12-gauge L. C. Smith, wood powder, and 7s in both barrels. Mr. Organ shot a Francotte 12-gauge, with Schultze powder, 8s and 7s. The score, 50 live birds:

J. B. Riley.....01122211222110211222211222102210212111222-46
J. A. Elliott.....01122211222110211112221121112111211210-45
W. P. Mussey.....1212111000121121111012122102122212-40
R. B. Organ.....122221022110211211000201201102100203212-39-70

The Kansas City boys thus won with plenty to spare, and were heartily congratulated on their victory. Sweepstakes at live birds were shot till evening. To-morrow Messrs. Organ and McFarland shoot their match, and Mr. John Kleinman will also shoot Mr. Elliott. Mr. Riley appearing to be in too good shape for new news for the *Referee*, I shall not say more.

The articles are signed for the Kansas City-Chicago ten-men match, and the text is finally agreed upon as below:

"Chicago, Jan. 24, 1890.—We agree to make a match team shoot between ten men or more, residents of Kansas City and Chicago respectively, at 50 birds to each contestant, and the losing team to pay for the birds, the shoot to take place in Chicago during the meeting of the Mascoutah Kennel Club's bench show, in March, 1890. The Chicago match to be governed by the Illinois State rules, modified to allow 16-gauge guns weighing 7lbs. or under a handicap of 4yds., 12-gauge guns weighing 5lbs. or under a handicap of 2yds., and the 10-gauge gun (standard distance of 30yds. rise), and we further agree to shoot a return match (win or lose) at Kansas City, on some date to be agreed upon during the last two days of the Chicago bench show, under the customary rules governing club shoots in Kansas City. J. A. R. Elliott, J. E. Riley, R. B. Organ, C. E. Willard."

U. S. CARTRIDGE SHOOT.

[Special to Forest and Stream.]

CINCINNATI, Jan. 23.—So far things have moved along very smoothly, and our trip has been most pleasant. At the towns where we have stopped there appears to be great enthusiasm among the local shooters. At Dayton there was an attendance on the ground of 800. Here the Western team won by the following score. Whitney, of the Eastern team, was ill, and Quimby shot as his substitute. Match at 30 singles and 5 pairs bluebirds.

Western Team.	Eastern Team.
Budd.....38	McMurchy.....36
Stice.....36	Wolstencroft.....40
Heikes.....34	W. E. Perry.....37
Caboon.....33	Quimby.....19
Rublee.....34-180	W. S. Perry.....34-166

Heikes of the Western team and McMurchy of the Eastern shot a live-bird match of 25 singles, Heikes winning with 20 to 18. The Kansas Hand Protector Company presented the winners with \$25 cash.

At Cincinnati there was great enthusiasm and a large crowd—nearly 1,000 people. Here the Eastern team won by a score of 186 to 178, as follows. The Bandle Arms Co. and Lafin & Rand Powder Company presented five handsome cups to be competed for. The scores to-day for the Eastern team were: McMurchy 39 out of 40, Wolstencroft 39, W. E. Perry 38, Whitney 35, S. Perry 31. Western team: Budd 35, Stice 36, Heikes 37, Rublee 35. The teams will start for Louisville to-night.

KNAPP VS. DOLAN.—Philadelphians were heavy losers in the recent live-pigeon match at the Westminster Kennel Club grounds, between H. Yale Dolan, of the Riverston Gun Club, and Dr. Knapp, the veteran of the Westminster Kennel Club. The stakes were \$1000 a side; 10 live pigeons each, 30yds. rise, 60yds. boundary, 12-gauge guns weighing less than 7½lbs. Shortly after the arrival of the train, at the Kennel Club grounds, the match was started, no time being lost by preliminaries. The wind was blowing lively, though not as hard as the day before, and favored the birds, blowing a little diagonally to the right, from the shooter to the trap. The birds were as good as could be secured. The doctor won the toss and killed a rapid fire driver, using both barrels. Mr. Dolan opened the ball not so lucky. He got an equally quick driver and feathered the bird with both barrels, but all the same, it went out and on. Out of the first 10 birds the Doctor had 7 hard drivers and 3 out-quarters, and only failed to kill his tenth bird. Mr. Dolan had six hard drivers, two out-quarter and two incoming birds, all fast birds, and he failed on 5 out of the 9 drivers, all of which were hit, but they simply beat the gun at the distances they were shot at. Mr. Dolan's eleventh bird, also one of those ghost-like visions, was lost, and the Doctor's thirteenth, a swooping incomer, got away unhurt. Mr. Dolan then killed twenty-two straight and so did the Doctor. The match was shot out, although the result was settled at the nineteenth bird. The Doctor was very busy retrieving during the match, beautifully. He saved two or three birds which probably could not have been gathered by hand. One of Mr. Dolan's birds had down, body hit, right to the boundary, a 15 to 18in. wire cloth fence. Instead of running right up to the bird, the dog jumped the fence some 25yds. from the bird, keeping it in sight, however, all the time, and drove it back toward the trap. The Doctor then shot the bird, and it was saved by quick work of Mr. Walker, who was handling the dog, to perfection, and the alertness of the dog. The bird, an incomer, was but slightly hurt and was coming for the rear line like a streak, about 4ft. off the ground. Mr. Walker called "dog" in time for Doc to intercept the bird within a few feet of the line, and jumping high in the air, caught the bird. Each performance of the dog was a fine thing to see. The Doctor then used his Gnyot hammer gun, weighing a little less than 7lbs., and Von Lengerke & Detmold's match shells. In the right barrel he used 33drms. of Schultze powder, wadded with one greaseproof and 3 pink-edge wads and 14oz. No. 7 chilled shot in 2½in. cases. In the left barrel, 34drms. of Schultze, same wadding, with 14oz. No. 7 chilled shot. Mr. Dolan used his 7½lbs. Scott hammer-guyot, with 24drms. Schultze, large cap, but no greaseproof, and 34drms. of Schultze and a scant 14oz. of No. 6 chilled shot. The Doctor was wadded with one felt and 3 pink-edge wads. Dr. Knapp used his second barrel 43 times on birds killed, of which thirteen were for safety only, on birds brought to the ground with first. Mr. Dolan used his second barrel 36 times, of which, also, ten were for safety only. Dr. Knapp 89, H. Yale Dolan 76.

CLAREMONT, N. J., Jan. 25.—There was some good shooting at Claremont to-day, despite the strong south wind that blew across the traps and made the birds a strong set of flyers. Twelve events were shot off in about two hours' time, which is pretty lively shooting, considering the wind. The events were all sweepstakes of 10 birds per man, 50 cents entrance, bluecock targets. The scores follow:

First event:	Johnston.....9	Russell.....8	Sigler.....7
Second event:	Deacon.....8	Hathaway.....7	Lindsley.....4
Third event:	Sigler.....9	Lindsley.....7	Hathaway.....5
Fourth event:	Johnston.....8	Russell.....6	Deacon.....3
Fifth event:	Sigler.....10	Johnston.....8	Hathaway.....6
Sixth event:	Deacon.....10	Johnston.....8	Lindsley.....6
Seventh event:	Russell.....10	Hathaway.....8	Johnston.....6
Eighth event:	Sigler.....10	Moffatt.....8	Deacon.....6
Ninth event:	Johnston.....10	Moffatt.....8	Russell.....6
Tenth event:	Lindsley.....10	Moffatt.....7	Hathaway.....6
Eleventh event:	Sigler.....10	Deacon.....8	Johnston.....6
Twelfth event:	Hathaway.....10	Russell.....9	Lindsley.....7

CAMDEN, N. J., Jan. 25.—Scores of match between our club and the Haddonfield Club, of Haddonfield, N. J. The match was at Camden, N. J., between teams of 13 men, at 15 single and 5 pairs of Keystone inanimate targets per man, from 5 traps:

L. J. Kelton.....0101110011001	00 01 10 11 10-14

Feb. 1 our club shoots against the Atlantic City Gun Club at Atlantic City, Feb. 8 we shoot the Haddonfield (N. J.) Club at Haddonfield. Feb. 15 we shoot the Philadelphia Sportsmen's Club on our grounds. Feb. 22 we shoot our monthly field contest in club classes. During January we have shot over 6,000 birds from our club grounds.—C.

CLEVELAND VS. DAYTON.—Dayton, Jan. 22.—The second telephone match between the Dayton Gun Club team of ten men and a similar team of the East End Gun Club, of Cleveland, was shot to-day, and Dayton was again beaten. Paul North witnessed the shooting here, and Scott McDonald was on the same detached service at Cleveland. Conditions were 50 singles targets to each man, 3 traps, new rules, for expenses. Snow covered the ground here, and for the first time of the shoot a cold, chilly wind prevailed. The contest was won by Chris. Kiefaber was judges, and W. J. Kneisly referee. The score was:

Dayton Team.	Cleveland Team.
Heikes.....48	Sheldon.....47
Pratchett.....39	Gault.....42
Tippy.....44	Byrnes.....39
Keenan.....38	Auld.....46
Bacon.....40	Phare.....43

Knight.....41	Jones.....42
Snyder.....40	Forester.....41
Smith.....42-414	Ellworthy.....40
	North.....46-425

TORONTO, Jan. 21.—The members of the Owl Gun Club held a shoot at pigeons, Owl Gun Club rules (single barrel), for the cup presented by Mr. J. P. Moore, and also for prizes given by the club, at C. Stark & Co.'s grounds, on Saturday and Monday, which resulted as follows:

J. Douglas (27yds.).....11	T. Loudon (27).....9	R. Powell (21).....7
A. Austin (21).....11	J. Montgomery (27).....8	W. Perry (27).....6
V. Charles (27).....10	G. Ayre (27).....8	S. Longbottom (26).....6
W. McDowall (27).....10	C. Kemp (27).....8	J. Bloor (24).....6
A. J. Tymon (27).....10	H. Townson (24).....8	H. Page (24).....6
J. Rice (24).....9	J. C. Unwin (24).....7	W. Ward (21).....6
J. Townson (21).....9		

The ties on being shot off resulted in the competition being closed as above. Mr. James Douglas being warmly congratulated on his success in securing the much-coveted trophy. The McDowall cup, representing the live-bird championship of Canada, is now on exhibition at the store of Mr. Wm. McDowall, 51 King street east. The cup will be shot for on Feb. 12. The entries, which close Feb. 4, are beginning to come in, and the committee in charge of the shoot are confident that it is going to be the most interesting one ever held in Toronto.

WEST FARMS, N. Y., Jan. 25.—The Bronx River Gun Club held their monthly shoot at 25 bluebirds, Chamberlain rules. Mr. Charley Zorn won the gold medal and Mr. William Bridenbach second prize:

Biggs.....0100101010101-8	Travers.....010011010101-9
Wm. Pringle.....1011011011111-53	Keys.....1001001010011-8-45
Match free to all, 6 Standards, 16 and 18yds.	
Clark.....4	R. Bond.....5
Gorman.....3	McClennan.....4
Davis.....3	Willey.....6
Same conditions:	
R. Bond.....6	McClennan.....3
Gorman.....3	Bond.....3
Clark.....3	Travers.....3

Tie for third won by Clark.
Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

WELLINGTON, Mass., Jan. 25.—A regular gale blew across the traps from the southwest to-day, and a large majority of the clay-pigeons and bluecocks thrown from the several traps escaped untrapped. It was a very difficult thing to break a bird down against the wind, as the gunners were unable to judge its direction long enough to sight it, and it generally sailed in several directions before it dropped. The birds thrown with the wind did not fare so well, and most of them were broken. The first match for the silver pitcher, under the new conditions, was shot to-day, and the man who wins it must have the best seven scores out of ten, at clay-pigeons and 10 bluecocks. In this match to-day Sanborn was first with 15. The other scores were: Scott 14, Bond 13, Olive 12, Melcher and Chase 12, Stone and Payson 10, Bradbury, Schaefer and Baker 9, Short 8, Moore and Warren 7, Leslie, Brooks, Webster and Roston 6. In the merchandise match, at 15 bluecocks, Scott was first with 14. The other scores were: Sanborn 12, Leslie and Bradbury 10, Bond, Stone and Warren 9, Gale 8, Chase, Dill and Webster 7, Melcher 6, Brooks and Moore 5. The merchandise match for January closed to-day, the conditions being that the best three scores at 15 bluecocks to count. Perry won first prize with 38, Sanborn, Warren and White second with 30, Bond third with 33, Dill, Short, Chase and Bradbury forth with 32, Melcher fifth with 20.

BOSTON STAGE SHOOT, Jan. 25.—At the Howard this afternoon Fred Bennett was defeated at a match in glass ball shooting, which included 15 singles and 5 doubles by Mr. Deacon of Michigan, known among rifle and shotgun men as "Left Hand Charlie." Two or three nights ago Mr. Damon was defeated by Bennett with the revolver, and not being satisfied with the match, challenged Mr. Bennett to shoot with the shotgun for \$50 a side. The match was won by the Michigan man by a score of 24 birds to 18. Damon is a very quick, clean shooter, and he made the team one of the inanimate targets before their flight had taken past the center of the stage. In the evening contest W. W. Bennett shot against O. R. Dickey with a shotgun, 15 singles and 5 doubles. Dickey is considered in the "A" class in trap shooting, and Fred Bennett in announcing the match, stated that he thought the contest would be close. But it was not, for Dickey shot away calmly, while Bennett appeared to be a bit unsettled, and did not care to shoot in the doubles, saying that it was impossible to tie Mr. Dickey, as he had already lost two points. After repeated calls Bennett finished the shooting and missed three of the glass balls. Dickey was an easy winner with a score of 24 points to Bennett's 20. Dickey was remarkably self-possessed and hit the balls in the center. A. W. Gore, referee.

ST. LOUIS, Jan. 24.—The appearance in this city of the touring champion trap-shooters is eagerly awaited by local enthusiasts. Next Thursday is the day set for them to shoot at Compton Avenue Park, and should the weather prove pleasant a large crowd will be present to greet them. Much talk is being indulged in as to the superiority of the two teams, with the sentiment in favor of the Western team. When occurred sectionalism they say no, emphatically no! But argue that they have not yet seen how the compared records and they can't for the life of them see how the Western team can come out behind. The two-team matches at live birds between McMurphy and Whitney on one side against Budd and Stice on the other will be far more interesting to the general shooting public than the regular event at targets, because it is more lively than the smashing of mud saucers.—UNSER FRITZ.

BERGEN GUN CLUB.—There will be three days of shooting on the grounds of the Bergen Gun Club at Cherry Hill, N. J., Feb. 4, 5 and 6, Tuesday and Wednesday bluecocks, Thursday live birds. Grounds within three minutes' walk from Cherry Hill Station on New Jersey & New York R. R. Trains leave foot of Chambers street, Jersey City, 7:52, 8:45, 9:52 A. M., 1:2 P. M. Shooting will begin at 9:30 each day. An interesting programme has been prepared, and all are invited to attend. For particulars address R. G. Chaffee, care of W. Fred Quimby & Co., 291 Broadway, N.Y. It stormy on Tuesday, shooting will be postponed until Wednesday, Thursday and Friday of same week.

RIVERSIDE, California, Jan. 11.—The annual meeting of the Riverside Sportsman Club, held on the 10th inst., showed the affairs of the club to be in a flourishing condition. Vice-President E. J. Davis occupied the chair, and the election of officers resulted as follows: President, E. J. Davis; Vice-President, B. F. Burr; Secretary, J. E. Reamer, re-elected; Treasurer, J. H. Goodhue. Capt. J. M. Lewis, Board of Directors, S. R. Smith, B. W. Handy, C. E. Packard, committee composed of C. F. Packard, J. Hawkins, Jr. and R. Year was appointed to select a suitable trophy for the ensuing year.—J. E. REAMER.

PHOENIX CLUB.—One of the most unique rules in the by-laws of the Phoenix Gun Club is the one which forbids the giving of any prize whatsoever. The club does not, as is usually the case, buy a medal; no member of the club is allowed to put up a prize to be shot for at the club shoots; sweepstake shooting is interdicted, as far as the posting of stakes is concerned, and a penalty in the shape of a fine will be imposed on the rash member who forgets himself so far as to bet on any event during the club's shoot. The ten members unite in the statement that they go out for the sport of shooting and not to win prizes, and they claim that the honor of having the top score at the shoot is a sufficient reward.

RED BANK, N. J., Jan. 24.—The Riverside Gun Club held their weekly shoot to-day. The opening event at 10 single clay birds was won by E. M. Cooper, who made a clean score. John Cooper got second money with 9. William Little third with 8, Fred Bell and Ed Throckmorton each broke 6. E. Russell and Ira Waymeyer broke 5, James Cooper 4 and J. B. Bergen 2. The second event was a team shoot, 7 men each, 10 singles and 5 pairs, double rises. The teams were captained by John Cooper and Commodore Russell. Cooper's team won with a total score of 78, Russell's team only breaking 62.

BROOKLYN, Jan. 25.—The return match between the teams of the Amersfort Gun Club, of Flatbush, and the South Side Gun Club, of Newark, N. J., took place this afternoon on the former organization's grounds at Flatlands Neck, L. I. In the ranks of the visitors were a number of the best-known trap-shooters in the country, while the home club, although containing some of Long Island's most skillful marksmen, belongs more strictly to the ranks of amateur associations. South Side 253, Amersfort 218.

RIVERSIDE, N. J.—A shooting match between L. P. Meeks, Riverside, and J. B. Dukes, of Vincetown, and A. B. Evans, of Mt. Holly, for \$25 each, to be shot under agreed rules, 30yds. rise, one ounce of shot, two barrels, 15 birds each, 80yds. boundary, barring scaps. It is to be shot on Friday, Jan. 51, 1890, from five traps, English rule, both barrels, at Riverside, N. J.

A PIGEON SHOOTING CASE has just been decided in the Pennsylvania courts, to the effect that pigeon shooting is cruel and punishable. The case was that of the Woman's Branch of the S. F. C. A. against Clarence Moore; and the gist of the decision is that while it is not cruelly to shoot from the trap and kill instantly, it is cruelty to shoot and wound, even though the wounded bird be killed as soon thereafter as possible.

THE FOREST GUN CLUB, Davenport, Ia., will hold a tournament Feb. 11, 12, 13 and 14, at their park, A. S. rules, Keystone system. Address J. W. HOWARD.

Dachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1833, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

PLEON Y. C.—The annual meeting of the Pleon Y. C., of Marblehead, was held at the Parker House, Boston, on Jan. 22, at 3 P. M.; Com. A. G. Wood presiding. The following officers were chosen for the ensuing year: Com., W. T. Palmer; Vice-Com., S. W. Sleeper; Sec'y, E. O. Poole; Treas., F. B. Litchman; Mens., C. M. Barker, Regatta Com., C. S. Street, P. L. Rhodes, H. W. Perry, A. G. Wood, H. Whitcomb. Membership Com., W. Sleeper, F. B. Litchman, C. S. Bridge. Social Com., F. C. Munroe, H. B. Perkins, D. W. Lane, W. T. Palmer, H. Whitcomb. The reports of the sec'y and treas. showed the club to be in a good condition, having a total of 62 members and a fleet of 38 boats. The following classification was adopted: All boats from 13ft. sailing length to 16ft. waterline shall constitute the first class; all boats from 10ft. waterline to 13ft. sailing length shall constitute the second class; all dories under 16ft. waterline shall constitute a special class.

almost as little danger of getting wet as if he were promenading through one of our city streets on a rainy day—I beg pardon; I mean immediately after a rain storm. At high water, however, a vessel drawing less than 4 ft. can manage to squeeze through the narrow opening and be quite secure from any storm. It is such an obscure and out-of-the-way place that I cannot refrain from

I DO not think it is necessary to describe or name the persons who participated in this trip, further than to state that there were four of us. The general reader of such accounts is, I imagine, more interested in the craft, where she went, what they encountered, etc.; consequently we will be nameless on this occasion and the sketch of the crew must serve as an introduction.

We had a reason for making Wading River our objective point, not that it is a very interesting place to visit, for it offers very few inducements to outsiders, especially cruisers. The stream is well named, for at low water one can walk in the river with

head rig and still no favoring puff; and, as a last resort, we put out an oar, but it was useless. We were getting ready for the catastrophe when suddenly a gust of wind struck our mainsail like a battering ram, and the Monatipee heeled over until her topmast passed clear under the bowsprit, and we then shot out into the river.

We did not get far that afternoon. Off College Point the wind died out, and shortly after dark we tied up at Whitestone for the night and turned in, hoping for a favorable breeze next day.

When the cook and I awoke about six o'clock in the morning, we could see white foamy water rushing past the cabin windows, and the yacht was listed considerably to starboard. The captain and the fourth member of our party were not in the cabin. It was evident, therefore, that we were under way. A look out of the companionway proved this to be the case. A fresh N. E. wind was blowing. The captain was forward setting the clubtopsail, while our guest had the tiller, and we were a mile from Whitestone. The air was quite chilly, and our friend at the helm had his coat well buttoned up.

While beating out by Stepping Stone Light and City Island the steward and I prepared breakfast. The short choppy waves, aided by the wash from the incoming Sound steamers, made things decidedly lively for us. Besides this the yacht was heeling pretty well down, so that it was impossible to keep the stove on a level for any length of time. My duty consisted in holding the cooking apparatus down on the floor while my accomplice did the cooking. We finally succeeded in setting forth an appetizing breakfast, which disappeared in a remarkably short time.

Helloa, there! What's this? No wind? Sure enough, the morning breeze had flattened out and left us to drag along, with an occa-

reminding the reader that it is situated about fifteen miles east of Port Jefferson, L. I., and fronts on the Sound.

We had a week free from business, and we decided to make a cruise in the Monatipee. As I remarked, we had an object in going to Wading River. While discussing where we should go, one of our party reminded us that some of our friends of the feminine gender were summering at the above-named hamlet. From that moment we agreed unanimously that Wading River was the only sensible place to visit. Therefore, Wednesday morning, Aug. 7, 1889, found us assembled on board ready for the occasion.

Since the trip through Great South Bay in June, 1888, which was published in FOREST AND STREAM of March 14, 1889, the Monatipee has been altered into a keel yacht; and, although drawing but little more water, we have found her superior both in windward work and stability, besides giving more cabin accommodations. Taken altogether she is a vast improvement on the old center-board boat. She now has seven hundred weight of ballast outside and about the same amount of ballast inside.

We left Bay Ridge at nine o'clock and stood out into the harbor close hauled on the starboard tack. The wind was light and northerly and the tide still running ebb. Having hopes of a better breeze springing up, we concluded to get under way and set as far along as possible before the flood tide overtook us. When we started we could point up for the Statue of Liberty, but we went about off St. George, S. I. Seeing that it was useless to try to beat against the strong current with so little wind, we dropped anchor and determined to wait until the tide turned, spending the next two hours in cooking and eating dinner. Shortly after 12 o'clock a fresh breeze sprang up and we hauled up the anchor and stood across for Buttermilk Channel. When half way over we met the flood tide, and with the wind increasing, we were soon romping along through the East River, dodging about to keep out of the way of tugs, ferryboats and all manner of river craft, one minute being whirled along at the mercy of the current, and in imminent peril of being run down by unscrupulous pilots, or being carried against some of the pier heads.

A more trying or disagreeable place for a small yacht to sail through can not be found than the East River from Governor's Island to Hell Gate. However, we met with no mishaps, and went through all right. We had one pretty close shave though near the Navy Yard. We had steered toward the Brooklyn shore to get out of the way of a large tow, when suddenly the wind dropped and we were carried along with the swift current directly toward the bow of a large ship which was lying at the end of a wharf. If we were carried under the bowsprit of the vessel something would have to break, and it would very probably be our mast. A calamity seemed unavoidable; we were within ten feet of the dangerous

sional air which would lift the sheets for a moment, then dying away let them drop in the water once more. This lasted all day, with slight variations, until five o'clock, when we had got as far east as Eatons Point. It was a scorching hot day, and all except the helmsman had turned in to sleep and kept out of the sun. They scrambled out quickly, though, when shortly after en-

entering Smithtown Bay a rattling breeze suddenly set in from the southward, compelling us to take in the jibtopsail which we had been carrying all day, but was now bending the topmast like a whip. There was no more sleeping now. The Monatipee began to tear along at a great rate, and the prospect of getting to our destination seemed brighter.

That was a glorious sail across Smithtown Bay; the breeze freshened as the sun sank in the west; we hung on to the topsail, although she was burying the lee deck until the water came spurling through the upper deadeyes of the main shrouds, and occasionally washed the cabin windows. The topmast bent and twisted until we really expected to see it go overboard, but it proved to be a tough little sapling.

It was dark when we passed Crane's Neck and the light on Old Field Point was casting its rays out on the Sound.

Should we keep on and try and reach Wading River, or should we make Port Jefferson for the night, was the question put forth at this juncture. Our chart only showed us as far as Miller's Place, about ten miles west of Wading River, and none of us were acquainted with the coast further on. "Well," said our Captain, "we've got a fair wind, a moonlight night and smooth water, and I think we had better keep on. It ain't more than eighteen miles further, and we ought to cover that inside of three hours at this rate. It is now ten minutes past eight."

The result of this little speech, delivered in a very deliberate way and with an occasional puff at his briar, that we decided unanimously to continue on our course.

Just past Old Field Point we passed and spoke the cutter Fly, of the Knickerbocker Y. C., bound for Port Jefferson. It was a beautiful night, although with clouds overhead, some of which would now and then hide the moon from sight. The lights at Port Jefferson could be seen as we passed by about a mile off shore.

Presently they passed from our sight and it began to look rather ghostly when we got Mount Misery towering on our starboard beam. From here on the land rose in a continuous line of sandy cliffs, averaging about 50 ft. in height. The top of the bank was covered with trees and bushes, some of which grew down the face of the cliffs for a short distance. Between us and the shore all was darkness, and we could not even see the beach, though we were not more than 300 yds away.

We had got past Miller's Place and were bowling along at a good seven knot pace. We had not thought it necessary, or rather we had not taken the precaution to keep a lookout forward, but at this point we were made aware of the necessity of it. The steward and our guest were in the cabin getting something to eat, while the Captain and I sat silently in the cockpit. Suddenly he pointed to leeward and exclaimed:

"Look there, what do you call that?"

I gazed under the mainsail in the direction indicated and could discern a long, dark object sticking out of the water about three

or four feet. It was about twenty yards off and fair ahead. Almost before we had time to make out what it was it had faded away in the darkness astern. "That was too near for comfort, I think you had better get forward and keep a sharp lookout ahead. There is no telling how many of those rocks are strewn along here."

The night air was decidedly cool, and I was forced to haul on an extra pair of unmentionables and tie a stop around my waist. No more rocks were met with, and we continued to make good headway.

Ten o'clock! We must be very near our destination. Ah, what's that? A break in the bank? No; fooled again. Eagerly we gazed into the darkness and cast our eyes along down the line of bluffs until they blended with the darkness of night. Several times we were positive that a break in the cliff, which would denote the entrance to Wading River, was visible a short distance ahead; but each time we were disappointed. The effect of the white sand and the dark growth of shrubbery at intervals was very deceiving to the eye, and the more intently we gazed at it the more confusing it became, until all seemed a blur of impenetrable darkness; and one could imagine he was sailing through space were it not for the regular swish-swash of the water as our little craft parted it beneath her bow.

On we went for another half hour, when suddenly the bank terminated, and only a low-lying beach was visible for a short distance. Then the cliff rose again as far as the eye could reach. We stood along the beach for about a quarter of a mile until we perceived the inlet into which we silently glided, and the next minute we were in Wading River. There was not a vessel, house or human being in sight; but some lights were visible, apparently

about two miles inland. There was no wharf, only a very slippery mud bank into which several stakes had been driven. We got out lines fore and aft to the stakes, and then took another, with an anchor attached to it, across the river (distance about 30 ft.) and dropped it to keep the yacht off the bank when the tide fell. It was now half-past 10, and we all felt pretty well tired out after our long day, so we concluded to turn in and seek some needed rest. As we had eaten supper coming down along shore, there was nothing to do, after everything was snuggled up on deck, but to roll into the blankets.

When we awoke it was raining a fine misty drizzle, and the landscape, which lay spread out before us, was anything but cheering. The stream we were on coursed inland through flat, marshy ground for a distance of half a mile, until it met the rolling farm land, which rose to some height in lumpy hills, some of which were densely covered with a growth of small bushes and trees, with here and there an ancient-looking farmhouse peeping out from among the foliage. Had it been a pleasant day the scene might have been more charming; as it was we were somewhat depressed in spirits, not only on account of the aspect of

going on, and decided to run back into Stony Brook. It was a nasty place to take a thunder squall; and, as there was a harbor so near, we thought we might as well avail ourselves of its advantages, and then, if there was no wind after the storm was over (which is quite sure to be the case), we could lay there for the night. Accordingly, after considerable discussion, we put about and headed back for the inlet, now several miles away.

The wind had gradually decreased until there was scarcely a breath, except an occasional puff, which reminded one of a draft through a window. We were still a half mile from the inlet when the wind left us altogether, and it was now oars or anchor, with the sandy bottom visible all around us, and about 4 ft. of water. The sky was assuming a terrific aspect, and long, crooked clouds were reaching down out of the blackness, as though to grasp any unfortunate thing in their path. We pulled as hard as possible, and as the storm bore down on us it brought a breeze in advance; so we still kept the mainsail and jib up. We had only reached the first turn of the channel when it burst upon us. Down came the jib and the peak of the mainsail, and amid the flashing of lightning, roaring thunder, howling wind and flying

to concern as we proceeded, and the waves increased in height and became topped with foam; while the wind increased to almost a gale, and the Monatipee began to get one of the liveliest shakings she ever met.

The tides seemed to run in every direction, crossing and recrossing, causing an uncertain and trying sea; and the yacht was constantly plunging and taking heavy waves on deck, while the tender cut all sorts of capers astern, and jerked and pulled at her painter until we expected to see her break away again. We put in another sea and stuck at it. The sea was now becoming really heavy, and the spray flew from every wave crest, while every few minutes a comb would sweep her fore and aft, washing lines overboard and often flooding the cockpit. We found we were making scarcely any headway at all against the current which seemed always to be running out. Suddenly a tremendous wave came down on us, broke against her weather bow, and seemed to go completely over the yacht. That was enough, the cockpit was full, the tender was half full, and a terrible drag came over her around and put her nose toward the town we had shortly before departed from. Before she gathered way enough to straighten out the painter, a wave swamped the tender completely; and we were compelled to bring the yacht into the wind while we hauled several minutes and in the meantime the Monatipee was being tossed about unmercifully.

Once more we bore away for Stony Brook, and now the fun began. How we flew and how we rolled with the waves coming almost abeam. First the windows on one side would be washed, then the others. At one minute the main boom would be flung high in the air, the next plunged beneath the water, drenching the sail to the height of several feet.

It took less than an hour to reach the approach to the inlet, and here the water became shoal and the sea was white with foam as the waves broke and tumbled on one another. Through the seething mass we rushed, expecting every minute to strike bottom as the yacht fell between the breakers. If such a misfortune had happened we should undoubtedly have swamped entirely, but thanks to our light draft we ran the gamut of shoals, taking in fact scarcely any water over the taffrail. Once clear of the breakers and in the channel we breathed more freely and began to make preparations for drying out, for we were all well soaked, but the cabin had very little water in it, owing to the tight bulk-head between it and the cockpit.

It continued to blow all day, and our passenger, whose time was limited, and who saw that we must be delayed for some time, concluded to leave the ship and return home by rail. We accompanied him to the depot, about a mile from the wharf, and parted reluctantly. "That was a jolly sail this morning," said he, and he was rolling about the platform as though the cockpit floor was his heavy bench beneath his feet, "and I was just beginning to like it, although I must admit that it did not altogether agree with my interior, still, if I was not compelled to go to Brooklyn to-morrow I would be delighted to finish the trip with you." As he stepped aboard the train I thought I noticed, although I may have imagined it, that a convulsive shudder shook his frame, while a sad smile broadened his face as he waved his hand from the window when the cars sped away.

That night it blew a howling gale. I remember awakening during the early hours and asking who was sailing the yacht, thinking in my sleepy state that she was under way, in consequence of her disturbed condition, with a strong list to starboard from the force of the wind and the incessant rushing and slapping water against her, plainly heard within. On account of this storm, which lasted nearly all next day, we remained in port. We varied the monotony of things by walking over to Port Jefferson via Setauket, admiring the town and harbor, and especially the harbor, especially, around which the building and repairing industry seem to thrive. There was one thing in the repairing line which struck us as rather comical. On the east side of the harbor a yacht about 70 or 80 ft. long was being rebuilt. Every portion of her except a part of the keel had been torn away, but they still kept the rest of the vessel standing up from the surroundings with ropes. The idea of building the vessel to be torn away seemed quite novel. There were a number of schooner yachts out on a mission in the harbor, and we noticed the old sloop Vindex hauled out on the west side.

We took the train back to Stony Brook, and that evening before dark we took the tender and rowed out to where the mud was dry at low tide, and with the aid of the oars secured about two hundred hard clams. It is needless to say we feasted freely off the bivalves, having them served in various ways. By sunset the wind had subsided, and we had a beautiful night.

Next morning we scraped out through the inlet just before low tide, and with a fresh westerly wind began a long thrash to windward in Smithtown Bay. As we neared Eaton's Point about 11 o'clock the wind died away to a light breeze, and we made but little progress around the headland on which the windward stands high up on the hill. In Huntington Bay we got the breeze more southerly, and at 1 o'clock we anchored under the bank on the southwest side and cooked dinner, of which we partook in quiet comfort. An hour after we set sail, and with a spanking breeze almost abeam and off the land we began to make time along down shore. Out of the whole trip the weather was the most pleasant and enjoyable sail. A bright, sunny afternoon, not too warm, and a whole sail breeze, sheets free, and humming along with lee deck constantly awash, it was exhilarating in the extreme.

Through Orster and Hempstead bays, with their fleets of sloops engaged in clam and oyster raking, we plowed our way until off Sand's Point, where we encountered a thunder squall, which compelled us to hook up for a half hour in close proximity to the rocks in front of the lighthouse. After we had passed over we got under way again, hoping to get in at Whitestone that night, but fate was against us. The wind kept dying out and it was dark when we were passing City Island and drifting into Pelham Bay. After being nearly run down by several steamers and a large sloop we hitched her up for the night back of Throggs Neck, in Pelham Bay.

In the morning a dirty rain storm from the southeast was in progress, accompanied by vicious squalls of wind. Everything with sails was under reduced canvas. After breakfast we ran up the mainsail and jib and headed across toward Little Neck. We had not gone a hundred yards when we were struck by a sudden gust of wind which laid us on our beam ends. At the same time the lace line on the boom parted and the mainsail would have gone, if we had not let everything go and hauled it down as we did so the yacht righted and we let go the anchor until the damage could be repaired.

The next time we started we reefed both sails, and even then during the squalls we were laid almost flat a number of times. Eventually the wind settled down to a steady breeze and we were enabled to lay our course down the river, arriving at Bay Ridge just in time to escape taking another severe thunder storm which passed over that evening about 6 o'clock.

A. M. LOCKHART.

NEW YACHTS.

SO FAR as new yachts are concerned, New York seems to have dropped into a deep and serene slumber, not a racing keel has been laid this season and only one or two small yachts have been built. There seems now no prospect of a race for the America's Cup; in the 90 ft. schooner class Sea Fox is still on the sale list, Mayflower has been re-sold to Boston, and Grayling will probably not race. Nothing is doing in the 70 ft. class and no new boats are promised for it or the 40 ft. In Boston Mr. Burgess and Lawley are quite busy, and a number of new racers are promised, the largest being Mr. David Sears's 60 ft. composite keel, now partly planked. Best of her there will be two 45-footers, three 40-footers, and four 30-footers. The Adams 40 is a deep thin keel, 22 ft., 2 ft., and about 9 ft. draft, and is intended to beat Minerva. Her two owners, who are both good sailor men, had the advantage of a season's racing in England last year with Dragon and the other new boats, and Mr. Burgess will be able to profit by their experience. The Foster 40 is a comparatively narrow and deep center-board with a wide keel. The experiment made last year by Mr. Burgess in Marquitta and Saracen, of a deep thin keel, was not proved a success, and the new boats are more like Minerva in this respect. The Morgan 40 will be a composite craft with a center-board and will be built by Piegrass. The Fowle 30, to succeed Saracen, will be named Saladin. The 30 for Mr. Phillips, building by W. B. Smith at City Point, will be named Chaos. In New York both Clara and Livia will be aloft in season with the best of new canvas, Capt. Barr being at the stick in Clara as usual.

MASSACHUSETTS Y. C.—A special meeting of the Massachusetts Y. C. was held in the winter quarters on Jan. 14, with Com. Soley in the chair. The commodore and treasurer were authorized to sign the lease for the new club house on Rowe's wharf and to make suitable arrangements for its occupancy. A committee was appointed to revise the by-laws, consisting of the chairman of the standing committee and the secretary; they will report at the next regular meeting of the club. After the adjournment the members joined the class in marlin spider mananship, and for the next two hours instructions were given in knots and other points by Mr. Howe, master rigger. At a meeting of the membership committee 32 members were elected.

the surroundings, but at the condition of the weather. We had only arranged to stop one day, and had even hoped for a clear sky. However, it did clear up about 9 o'clock.

It is not advisable for me to go into details about that day's events; how we traveled up to the village post-office, where we accidentally met one of the party we were looking for, and who in about two minutes had run back and brought all the rest, and how shocked they were over the appearance of the cook, who would insist on wearing his rascals' outside of everything he had on; and how horrified they were at the general appearance of the four of us. They made such sport of the steward that he was compelled to retire to the seclusion of an adjoining woodshed and make the required alterations in his attire. He was also compelled to throw away the new clay pipe he had just purchased. And how we invited them down on board the yacht; and how we had a clam bake; and how they got sick from eating the bivalves; how it came on to rain pitchforks; and how we had to escort them back home costumed in our oilskin suits (only the coats); and how sad we felt when we took stock of our provisions after all was over. No, I do not desire to detail the happenings of that day. We had a jolly time, let that suffice.

It rained all night and it was pouring when we stood out into the Sound next morning homeward bound. There was a good wind from S. W., and sometimes we could lay our course parallel with the shore, but it gradually hauled more westerly, and it was a long and a short leg all the way to Crane's Neck. Whew, didn't it rain. All hands kept in the cabin except the helmsman. Occasionally it would let up for a short time, but soon a dark, ominous-looking cloud would come bearing down on us, carrying a line of white spatters before it, and looking ugly enough to send the yacht to the bottom; and I can say for myself that I did not

feel altogether easy at such times, knowing that I had a cargo of human beings, who most of the time were sleeping like a lot of porkers below.

In consequence of the treacherous looking weather we had two reefs tied in, though one would have sufficed; still the lee rail seldom stayed long out of water, and the yacht was always lying down pretty well. In order for those who were inside to repose with anything like comfort, they had adopted the habit of lying crosswise of the cabin, viz., head on starboard bunk, feet on port, with a mattress on the floor, which is only 8 in. lower. This was all very well as long as we continued on the one tack, but as the wind persisted in heading us, it was necessary to go about occasionally, and right here is where my fun came in. In a good breeze such as we were then having the Monatipee is quick enough in stays, and goes around like a top, never stopping to bob up and down in the wind, uncertain which way to turn. You have just time enough to duck your head to prevent knocking the varnish off the boom when you are jogging along as though there had been no change in the course. The result is that the watch below are in a delightful state of confusion, with their heels in the air and heads jammed together to leeward, while I am the recipient of various not very flattering remarks.

Off Port Jefferson a splendid breeze set in from off the land, enabling us to start sheets and lay our course along the shore, but it only lasted a short time, and before we could round Crane's Neck it died out altogether and the sun came out. The tide was running ebb, and in order to make any headway against the strong current an oar was brought into active service until we got around into Smithtown Bay, where we dropped anchor to await more wind. It had hardly touched mud before we were gratified with a light breeze from the southward, and we tacked in toward Stony Brook, went about near the beach, and headed down toward Eaton's Point, which could dimly be seen about twelve miles to the westward. We had not sailed more than three miles when dark clouds began to spread above the horizon, the sun became obscured, and the low rumbling of distant thunder was faintly heard from across the darkening waters.

All the boats that were out were making for harbor, and a lumbering old sloop which had been lying in under the beach began to crawl off shore for a better anchorage. We observed what was

sable, as we quickly found out. But we overcame the difficulty by easing off the stern line, which allowed her to drop astern until she swung against the wharf. We then secured her firmly with all the spare lines we could command. We were about to retire, when some one discovered that the tender was missing from her accustomed place. Where she had disappeared to or how she had gone was a conundrum. One of the crew remarked distinctly having believed her there but one conclusion to come to; she had either gone adrift or been appropriated by unlawful individuals; and in either case something must be done; so the Captain and our passenger volunteered to go in search of her.

Borrowing a flat-bottomed rowboat from an adjacent slip, without the formality of asking, they came alongside the yacht and then let go, and immediately were swallowed up in the gloom, drifting along with the flood tide. Their plan was to allow the boat to go wherever the current carried them, and if our tender had broken loose, they would be very likely to follow in her track. As the river ran inland several miles, the chase might be a long one, as well as disagreeable, for the stream pursued its course through marshes and flat land, and in all probability swarmed with mosquitoes and gnats.

The Cook and myself, after discussing the occurrence for awhile, turned in, noting as we went below that it was blackening up in the north, and gave prospects of plenty of wind from that quarter before morning. Some time during the night we were awakened by the return of the searchers and were informed that they had brought back the runaway.

It was evident she had gone adrift, as they found her about two miles up the river with the painter caught in a bunch of grass which grew out from the bank. We all returned to rest relieved in mind, and were lulled to sleep by the murmuring of a north-wind through the rigging and the slapping and bubbling water rushing by the sides of our little vessel.

We started out of Stony Brook harbor next morning on the ebb, and although it was piping from northwest, we ran up full mainsail and jib. Once outside where we became exposed to the full force of the wind, we found that it would be comfortable to put in a reef, which was quickly done. We were surprised at the size of the sea that was tumbling in, and our surprise changed

tion was necessary to prevent accident. Soon my decks were wet, then my shoulders; while I

"Strove mightily for the shore, And thought a more attractive land was never seen before."

The waves were truly grand, and the little boat a mere cork on their crests, but the staunch though diminutive craft rode faithfully every succeeding billow, notwithstanding it seemed hardly able to surmount their precipitous sides.

Finally observing the masts of some schooners and fishing smacks at anchor, I made for them and shortly came in sight of a quay. This did not appear to get any nearer for a long time, but I was in full view of the shore, looking back over the heavy waste of waters, and thinking what a speck a man was in such an expanse, a load of anxiety fell from my mind. With the sudden change of ideas came a feeling of fatigue and emptiness, as I had eaten nothing all day since breakfast, though working without intermission. The breakers were moaning on the bar beyond the little harbor, but I was now free from their clutches, and immediately on passing the end of the pier I pulled out some dinner and fell to eating with much relish, singing and shouting meanwhile, partly as an outlet to pent up feelings, partly as a tribute to the great fresh water sea which I had braved, but mostly to keep warm. The storm had fairly begun and a reminder of what I had narrowly escaped in the shape of a huge wave came rushing in and striking the pier nearly capsize me on its return, sending some gallons of water into the boat through the now and then dissolving the remains of the luncheon, as well as soaking me completely. Finding it a mistake of judgment to dine in such lively places, I rowed in, entering a quiet cove where were dozens of fishing sloops and their crews. Many willing hands lent their help, and I was soon comfortably fixed before a roaring fire in a little inn.

This is the hamlet of Bronte, a fishing station consisting of about a dozen houses, I occupied myself during the evening in getting dry and in talking with the captains of the schooners waiting here, having put in out of the gale. When entering the harbor, the sea was making great leaps over the ends of the piers and dashing with violence on the beach beyond, making things very generally. While crossing the lake, I espied on the horizon but two sails and a steamer.

The city of Hamilton lies in Burlington Bay, 7 miles within a natural breakwater which bounds the bay on the east. The city was laid out in 1813. The hilly range extending from Niagara Falls around the lake westward flanks it, and is called there the "Mountain." The population of the place is 27,000. At Bronte they fish for a kind of herring called "ciscos" which are very palatable when dried. Bronte is 1½ miles from the Great Western Railway, and about 30 miles from Toronto. I have rowed about 85 miles to-day, judging from the time occupied, and came very much out of my original course when starting across for the north shore. It stormed very hard in the evening.

Lake Ontario, Sept. 24, Wednesday.—At 7 I had a vile breakfast. Though it was yet raining the wind had died down and the lake was not so rough. Packing up I got off at 8:10, the whole village coming out to see the departure. The direction of the shore line to Toronto is northeasterly. Some heavy swells were yet coming up the lake, the remains of yesterday's storm, but the water remained comparatively smooth until I was off Oakland, four miles from Bronte. This is a small place, the principal building being the lighthouse. On the way thither I saw a number of wild ducks and loons. The wind here was from the south-east, and finally from the south, being decidedly fresh it played mischief with the waves, for whereas at first they were rolling westerly, before long they began to bowl along before the breeze. The resulting chop sea lasted some time, and was difficult to row in, the boat being so tossed about.

When at last the waves yielded unconditionally to the direction of the wind they became formidable indeed, reaching their climax when I was off Port Credit, 2½ miles from shore and 14 miles from Bronte. Here I made ready for emergencies, and "cleared the deck for action," lashing everything fast and strapping my life preserver within easy reach. There were several

magnificent groves of pines on shore near the beach, some without doubt being 150ft. high. Few houses appeared in sight, and no visible places to land save at Oakland and Port Credit. The sea rose higher and higher, the wind becoming a strong gale.

Between several points of land, I had to row quartering on the billows, which necessitated extreme caution, as it was difficult to put the boat about in time to avoid a breaker; though generally I could tell when and where my share was coming by watching them closely. A sudden pause, then a mighty wave would gather itself together and, mounting on high, come rushing on at great speed, its crest beginning to curl over. A fearful roaring sound, then the boat would shoot up the air amid a blinding mass of foam and spray, completely ducking me; after which followed a subsidence into the next valley, and so on. Of course steady rowing was out of the question, and I could pull vigorously between the waves for only a few moments, then, compelled to put the boat about, I waited the onset of the next freshest, vainly endeavoring to avoid destruction by holding the oars straight down in the water.

It was a hard matter to make Toronto, as the wind was now blowing almost straight in shore and the boat could not live a moment in the trough. The only thing that saved us was the fact that being some distance from shore, even though the wind drifted us very fast, I was able to make considerable progress, thereby gaining the last point of land and an entrance into the harbor before being actually blown ashore. On nearing the city the waves almost finished my trip then and there, as they were nearly 10ft. high, momentarily threatening to overwhelm me. Slipping on the life-preserver, I strained every muscle to keep the boat straight, experiencing great trouble in making the bay.

When within 2 miles of Toronto I suddenly heard a terrible roaring, and turning round beheld with dismay a low, narrow sandbar dead ahead, which extended inland from Haulan's Island. Thinking it reached the mainland and knowing that in such a case shipwreck was inevitable, I made ready to jump and take the chances of gaining the beach, when the bank shelved off to my unspeakable relief, and after a terrible tossing around the breakers I shot around into the bay down wind, having narrowly escaped being dashed on the shore. The sandbar was so narrow and low that with the height of the waves I did not see it until within 100 yds. The roaring and thundering of the conbers here was awe-inspiring, and my satisfaction on rounding the tongue of beach into Toronto knew no bounds.

Just over the reef before me the baffled breakers were pounding themselves into white foam, while inside the water was comparatively unruffled. The bay is from 1½ to 2 miles across. I had a very narrow escape indeed, but with no greater inconvenience than a severe ducking. Rowing to the city I cruised along the wharves until coming to where the Montreal steamers lay I found a public boat house.

Here the boat was put up, and in changed and dry garments I walked to a friend's office, where my valise was awaiting me, and thence to the Queen's Hotel, where I found a good dinner, and enjoyed greatly the rest after my experiences of the last few days, and especially this morning's escape. The hotel is a curious old-fashioned structure, though comfortable, and its fare is good. From Bronte to Toronto is 28 miles, and having started at 8:10 I reached the city at 1:30. This ends the second stage of my cruise, with 140 miles rowed in 7 days, though detentions and stoppages caused 3½ days delay. From Albany I have traveled altogether 517½ miles. The summary of the second stage is, rowing, 140 miles; portage, 8 miles; walking without boat, 11 miles; total 159 miles. M. B.

F. S., Brooklyn.—Please send us your address, which you inadvertently omitted to add to your deer hunting paper.

A. C. S., Ithaca, N. Y.—For registry blanks write to the American Kennel Club, 44 Broadway, N. Y. Foxes are not protected by law in New York. The open season generally recognized by fox hunters is from about the first of November until the first of April.

Aztec.—I have seen it stated that Lieut. Schwatka has been exploring in northwestern Mexico. Is it true, and if so is there any way to get at the results of his investigations? Ans. Some reports of the expedition were given by the newspaper syndicates at the time, but we have not the dates. The accounts had the appearance of being a sensational "writing-up" of a very ordinary affair.

H. J. M., Great Barrington, Mass.—Where is there a place that two or three young fellows can go to and spend three or four months and catch enough furs, such as mink, muskrat, otter, etc., to pay expenses? We have had some experience catching those animals. Ans. We cannot refer to any such locality. To trap successfully one must know the country well and to do this requires time. Even then, to make the business profitable would require that skill which is only gained by long experience. Perhaps some of the old trappers who read this column may put our correspondent on the road to a desirable location.

C., Louisiana, Mo.—1. What is the best time to go to Yellowstone Park, is June a good time? 2. Is it allowed to take a gun and allowed to hunt and fish? 3. Which outfit of fishing tackle would be best to take? 4. Could two or three persons tramp it through the Park, carrying their camping outfit, with pleasure and convenience, or should a person hire a pack horse? Ans. 1. July and August are better months than June. Sometimes the flies are bad in June. At the same time there are advantages in going early. 2. Forbidden to hunt or carry firearms into the Park; but fishing is permitted. 3. An 8oz. fly-rod, with detachable handle and brass tube, as described on page 473, issue of Jan. 2, 1890. Hooks, from 5-7 Sproat and 8-10. Flies: Brown hackle, Alexander, black-prince, and one with wings and hackle lead colored, body red, tail white and rather large and full. See article referred to. 4. Perhaps stout men could tramp, carrying blankets, provisions and mess outfit, but a much better way would be to hire one or two pack horses. E. Hofer, of Gardiner, Park county, Montana, could supply these and give you detailed information on all points.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. ABOUT GLOVES.

When you are buying gloves, kid or dogskin, for driving or street wear, remember that there is such a thing as a price that is too cheap. It is best to pay a fair price and get good gloves like Hutchinson's. They are made from selected stock in the best manner and are warranted to be the most serviceable made. If you want to know more about gloves in general and Hutchinson's gloves in particular, enclose stamp for the book "ABOUT GLOVES." No matter where you live or what you do it will interest you. It gives a history of gloves and illustrations of their use, prices of the different styles and qualities, directions for measurement and ordering, and testimonials from those who know the value of Hutchinson's gloves. Established 1862.

YACHTS, BOATS

AND

CANOES.

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOATS, AND WHAT TO DO WITH THEM."

NUMEROUS ILLUSTRATIONS AND DIAGRAMS

AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolda, Bonny Jean, and 10-tonner with sail plan. Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe. Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehanded by C. P. Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxiliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood. Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, \$3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bee's Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, \$1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, FEBRUARY 6, 1890.

VOL. XXXIV.—No. 3.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE FUTURE OF CREEDMOOR.

THE formal transfer of the property at Creedmoor from the National Rifle Association to the Militia Department of this State completes a step which had been determined upon a long time ago, and which was fully discussed at that time. It means not that the National Rifle Association will cease to exist, but that it will go on with its work unhampered by the load which the Long Island grounds had grown to be. It was no small matter to keep up such a big tract of outdoors as the range had grown to be. The most severe use to which the range was put came from the militia of the two cities, and as this includes more than half the uniformed troops of the State, it is plain to be seen that the most active customer of the range was the State. The officers of the Association were in almost every case officers of the State as well, so when the suggestion was made to transfer the control from the Association with its poorly provided treasury to the State with its ample purse, it was little wonder that so much approval met the plan.

Even without the actual control of a range there is plenty of work to occupy the officers of the Association, and enough to justify the continuance of the existence of the Association. The American Shooting Association has no grounds, but from its modest little office in New York it can reach out and organize shoots here and there over the country, can draw up sets of rules which are accepted as standard by shooters everywhere, can classify shooters, can settle disputes, and generally can and is doing more for the art of trap-shooting than any single local club, however large its membership or extensive its club grounds, could possibly do.

This is to be the future of the National Rifle Associa-

tion. It will remain to give its annual fall meeting, where marksmen from all sections may meet on neutral grounds and compare their skill with the records which have for a score of years been added to the list of merit at these gatherings. The rules of the Association have become standard for the sport in this country, and no young or growing shooting club can fail to find assistance by opening a correspondence with the parent association here, and getting points on how to organize and conduct the club business.

Freed from the limitation which the ownership of the Creedmoor range imposed upon it, the Association may now become more truly national than it has ever been, and take up the sport in all its ramifications and in a measure rid itself of the excess of military management which seemed to be about it. Furthermore, it would be something of a crime to allow the National Association to die. Its history has been the history of all there is to rifle shooting in the country. We have oft and again told the story of how deficient our make-believe citizen soldier and our barely better regulars were in the matter of shooting ability, when in 1873 the first shot was fired at Creedmoor. That shot went echoing round the world. It brought the foreign teams here for a friendly visit and honorable defeats. It sent American teams abroad to win victories and to suffer defeat, but best of all, it was the first of a fusillade of millions of shots right here in America, and now regulars and militia each year spend days and days in securing command of their weapons, until now they not only look like soldiers, but they are soldiers. Changes there may be at Creedmoor, and the only danger is that over-zealous militarism may turn the place from one of pleasure-giving sport into a sort of hated penal colony for unwilling militiamen. There is danger that in place of making practice before the butts as easy as possible, it will be made irksome by a plenitude of red tape. What is wanted is a resident shooting master at Creedmoor on every shooting day during the season. Let the men go down when and how they will, get a dose of good advice if they need it, or make their record scores if they are competent so to do and flit away again. But no, there will probably be orders by the yard, drums by the dozen, no end of inconvenience, a wonderful amount of attention to the fit of belts, the hang of the visor, and a mere minimum to instruction to the individual, and this is after all where the real work is done and where the real progress is made. We confess that we feel less trepidation about the future of the N. R. A. than we do about the future of Creedmoor range.

SNAP SHOTS.

SOME of Henry William Herbert's novels are making their appearance among the cheap paper editions on the news stands. It was to these products of his pen and to his historical works that Herbert looked for his fame, rather than to the sporting books he put forth under the name of "Frank Forrester." Yet to-day, probably, a hundred know him as a writer on field sports, where one knows him as a novelist.

The latest instance of a hunter being taken for game happened at Moose Hill, in Maine, last week, when a sixteen-year-old boy was shot for a deer by his cousin, when the two were hunting in the woods. It is curious that so many of these fatalities happen to persons who are engaged in violations of the game laws; the Maine deer season had been closed nearly a month when this boy was killed.

The season is sadly out of gear; pickerel fishing and smelt fishing through the ice have failed because there has been no ice; and now from certain weather sharps in agricultural districts comes the plaint that ground hog day (last Sunday) was a total failure because the ground hog did not wake up and come out of his hole; the winter has been so mild that he has been awake and out all the season.

Eastern railway companies are coming to recognize the importance of fishculture in the development of land values along their lines and as an element in the increase of their passenger traffic. Application has recently been made to President Eugene Blackford, of the New York Commission, by the general passenger agent of the New York, Ontario & Western Railway for a large lot of trout fry. This agent, Mr. Anderson, desires to obtain 350,000 fish for stocking about 350 miles of public trout streams

near the line of his railroad in Delaware and Sullivan counties, New York. These streams are admirably fitted for trout, but have either never had any in them or else have been fished out. It is stated that the residents along the line of the road are willing to unite with the railway officials in planting and caring for the fry, for they realize that the visits to their sections by anglers will benefit them as well as the road. The same company had made application for 25,000 Oswego bass fry to stock Silver Lake, in Sullivan county, and it is proposed to put a similar number in Lake Sheldrake. As already noted by us, the New York & Northern Railroad not long ago made application to the State Commission for spawn and fry for stocking streams and lakes along their line. Such enterprise as this will be highly appreciated by the angling fraternity, and there can be little doubt that it will pay railway companies to have these streams full of fish. There is no reason why similar action might not be taken in regard to game, and it is easy to conceive that railways might find the turning out of some thousands of game birds along their lines a very profitable investment.

"Buffalo" Jones is in Washington seeking to induce Congress to give him the free use for ten years of a tract of twenty-four square miles of the public strip. He wishes to use this as a grazing ground for his buffalo during the experiments that he intends to carry on in cross-breeding these animals with domestic cattle. The Hon. Samuel R. Peters, of Kansas, has introduced a bill in Congress intended to confer the privilege sought for, in consideration of the probable value of the results to the cattle growers of the West. A number of Western Senators and members of the House are heartily interested in the success of this bill, and the Secretary of the Interior has expressed his willingness to further the undertaking by every means in his power. From the knowledge which we already have of the great value of the buffalo cross on the domestic cattle, it seems very desirable that the free use of a part of the public strip should be given to Mr. Jones for uses above specified. It is probable that in ten years' time it can be conclusively shown that this new breed of cattle can be established.

New Jersey is considering a bill recently introduced in the Senate, to require that any person, whether citizen or stranger, who wishes to go shooting or to fish for trout, must first go to the county clerk's office and pay for a license before he can shoot his gun off. Furthermore, county societies are to be organized, to which will be intrusted the duty of seeing that this law is enforced, and of punishing violations. New Jersey already requires non-residents to take out a license for shooting or fishing; the promoters of the new measure reason that if it benefits the game and fish supply to tax the stranger, added benefit will follow the taxing of home sportsmen. Everybody is hoping that one of these days an efficient mode of game and fish conservation will be evolved; and this New Jersey experiment will be watched with much interest if the bill ever passes the Legislature.

The English sparrow question bobs up serenely in one Legislature after another. The Massachusetts Commissioners have just recommended that the agricultural interests of that State demand an abatement of the sparrow plague, and we notice that a petition has been sent to the Boston State House praying for action looking to this end. The cycle of law-making with respect to the sparrow in this country has been, first, protection as a friend to man; second, removal of protection and passive endurance; third, active warfare against the bird as a pest. As things stand now, the sparrow question is quite likely to bob up in State Houses for many years to come.

We print to-day the text of a bill introduced into the New York Legislature providing for a commission to codify the complex and obscure statutes relating to fish and game. The bill is most admirable in purpose, for it is of first importance to have a law which can be understood. We hope to see this bill pass. Individuals and clubs interested in game and fish protection can do no better service this year than by using their influence with their representatives at Albany to enact the codification law.

The report that wolves have made their appearance on the borders of Maine is said to be well founded; and it is feared that they may menace the deer supply.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

III.—CHARITY.

THE manners of the Canadian are milder than those of the earnest Yankee. Even the mining camps of early times had not those scenes of daily murder that enlivened the diggings across the line.

A single inefficient constable graced the Caribou district, but his occupation was gone or never came. If there had been anything for him to do he could not have done it, but as things were he rose to the occasion. The sole recorded appeal to arms in those washings was settled with nature's weapons, and the vanquished combatant poulticed his eye and resigned his claim without a murmur.

Some cause of this may come from a gentler and more law-abiding ancestry, but we must ascribe something also to climate or soft water or emollient blue berries or the like; for how could the thousands of gamblers, drinkers, ruffians, borderers, whose tacit motto was borrowed from the old moss-trooper's, "Thou shalt want ere I want;" how, I ask, could this *congeries hominum* mix into so inexplorable a compound without some pervading blandness native to the soil?

It was in such a region and by such men that the town of Charity was founded. Even its name breathes peace.

Its fortune swelled on the rising wave of early enterprise. Eight thousand souls strove for wealth or lived in contented comfort there in its prime. The ciphers are gone now. Eight, let us hope just, persons comprise the people of the town which has settled down without an unseemly struggle to do away its remaining life. The second growth of pine and fir towers tall in the clearings that once marked the city's extent. The streets, rich with grass and fragrant shrubs, show only the trails of the few pack trains that cross the range. The wagon road remains to show that wheels were once known, but the flood-broken bridges, the caving banks, the fallen trees would make a wagon useless indeed now. Two long rows of red-withered pines fringe the avenue that leads to the cabin which serves the priest for a chapel, remnants of the Christmas decorations of the Indians a year ago, and the squat forms with contented faces of the converts waddle along the river bank and watch the dead and dying salmon float by.

This season happens to bring around the four-year cycle when the salmon are said to run in fabulous numbers. You can see the "humpbacks" jumping all over the river, while the shallows of the tributary streams are full of fish writhing up the riffles or caught among the stones. Almost all of these are of near the same size, say about 5 lbs. weight, and the chief part are of a white-fleshed variety, the male of which is a flat-sided, hump-backed creature, looking like a split codfish and smelling even worse, for nearly the whole of them perish in the streams, and every beach and eddy is dotted with the dead. The female has a handsomer form, though her fate seems the same. So says local wisdom, and the numbers of the fish are such, according to the same authority, that men had to stand at the mill-slucice and toss out the salmon with pitchforks in order to get water enough to run the mill.

But before you visit Charity you must get there, and even the approaches to the holy place are in keeping with its sleepy nature. The railroad runs on the other side of the Fraser River, a stream deep, wide, rapid, turbulent. There on the lofty bank is a station labeled "Charity." When I got off the rear car the train started. By the time I reached the platform I found that my baggage had gone on to the next stopping place, because the station master was absent on private but strictly necessary business. He, too, was gone. From the character of the country I felt sure that no one would say "peradventure he pursueth," or possibly he had married a wife or was taking steps preliminary to that end.

As I entered the station the doubt was solved, for there lay the rough draft of a letter written on the back of a circus poster. "*Je teeri pour l'apprende que je changer de place*."—"I write to inform you that I am changing my place." The gentle "habitant" is a new arrival. He will soon get up and come to see what is worrying the restless stranger. And as I pace the platform I hear his fiddle. With livelier march I step to the time of Malbrook and almost sing as I mark time to the "Irish washerwoman's jig." He leans toward the telegraph instrument, still playing his catching airs, and communes with the electric rattle with one ear. Soon he sends my message and refuses my money.

Gentle "habitant," may your civil, if ineffectual, service continue long! May your musical march through life never be disturbed by the harsh clatter of the commercial drummer, or the vulgar stress of vulgar business.

And now I hunt up an Indian, and, as I am unacquainted with Chinook, I converse with him in smiles. I climb into his cedar dugout and we both grasp paddles and shove into the dull green current. Around a point, through an eddy, and then, where the water whirls by like a millrace, the skillful pilot lands me in sight of the houses of Charity. Here, too, the boatman displays an unexpected knowledge of the English tongue and demands twice his usual fare. I hail the sign of progress and meet the demand. Then I climb the bank and go where I see a sign board "Sutherland Hotel—G. Sutherland," a house kept by an old, old man, whose quavering tales led me through lands and cities I had never known, or known only of late, while his memory seemed almost to go back to the dawn of time.

Does this seem exaggerated? Then know that he had been apprenticed to a saddler who kept his shop at the corner of Broadway and Ann street, in New York, where the *Herald* building now stands, and that he could tell about the Rutgers and the sad experiences of old Rutgers in the War of the Revolution.

His American sympathies were bravely displayed, too, in more ways than one. There was a map of the great republic on the wall, with portraits of all the Presidents down to Mr. Arthur, arranged around the margin. You could tell the Presidents apart by the names printed on each medallion, but you grieved to see that Zachary Taylor, with true military greed, had taken up a "monstrous cantile" of the State of Maine.

And besides, when Behring Sea had the carpet or came

on the floor (you may choose between those metaphors), my entertainer spoke out honestly in behalf of the helpless seals.

These were modern instances, but in the main he was, nay he is, the living past in person, and may he keep so long. He had followed the sea.

"The mariner's chart he knew by heart,
And every current, cliff and shore
From the shifting sand of Newfoundland
To the sun-split rocks of Singapore."

He had seen New Zealand when the island had contained but seven whites. He had been cured of blindness by an Irishman, and could tell you the intimate history of a dozen mining camps. That cure I will now relate that the desperate may hope, then I will tell one story of Caribou which is shot enough to be forgiven, and then I will let you rest.

One summer, one August in fact, my host, who then was following the profession of a foremast hand, worked hard in lading a ship for Liverpool, went on board in the evening and woke up at sea, blind. He could faintly distinguish daylight from dark, but could not see his hand much less count his fingers. This state of misery kept on unchanged. He landed, and from August to November passed from physician to physician, from surgeon to surgeon, seeking help and finding none. At last he felt his way on to a packet, homeward bound, and there came deliverance.

He met an emigrant who saw his piteous plight and persuaded him to take brisk treatment. Early in the November morning the blind man stripped and stood in the channels while the unlicensed doctor, from the top of the bulwarks, poured buckets of sea water on his head.

The first day the sight improved. The second day the patient could read the headlines of a newspaper. The third day's treatment restored the vision to more than pristine excellence, though one can notice a well marked *arcus senilis* and a powerful convergent squint.

And the Irishman! He rose to be a porter in a warehouse, a sachem in Tammany, and for years gave us beneficent laws. Perhaps the only recorded instance of deserved political success in the Irish race.

And now for Caribou.

Caribou is a district in the Gold range. Among the great names of Alder Gulch, Potato Creek and Dutch Flat, Caribou can safely rank, and better than all the other waters of Caribou is Williams's Creek.

The stream was taken up, crowded, pressed down and running over; that is, the running claims were all worked and possessed along its entire course from mountain spring head to muddy mouth; but a poor man named Davis, who knew that claims were limited to 100 ft. each and who needed money, relying upon the peaceful disposition of the Canadian, took a tape-line and started at the source of the stream, measuring down. And lo! there was a remnant 12 ft. wide left over; and Davis, instead of getting shot full of holes, got \$13,000 from his 12-foot claim. And is he not known to-day in the newspapers as "Twelve-foot" Davis?

Stranger or friend, if you would not have two days at Charity seem like two years and a half, stop at the Sutherland Hotel—G. Sutherland.

H. G. DULOG.

OUT-OF-DOOR PAPERS.

XI.—A FIRE OF POPLAR.

A CHAQUE saint sa chandelle! Let every man worship at the shrine of his choosing! One believes in hickory and one in oak, and one in rock-maple, but who ever sung the praises of a poplar fire? If God made them to see the excellencies of these particular trees—for fire-building comes by instinct rather than by education, and no amount of science and rhetoric can induce a man to alter his preference or to change his style—if God made them thus, why may not some special power have been given me to see the virtues of the poplar? It is true that there is little in its outward appearance to recommend it; its wide-angled, open boughs offer no concealment nor convenient crotches, and the birds will not nest in its branches; its sap has no sweetness; its wood has no beauty; there may be a prejudice against it too, because it is a cold tree and shivers even in the summer; but not many, certainly, would burn poplar from preference. There are those, not a few, who will tell you to take anything else sooner, even sheet iron and asbestos roofing; who will praise water-soaked ash and balm-of-gilead and basswood in comparison, and who will declare to you by the sacred relics of their own bitter experience, that one's cup of misery is not full until he has been forced to make camp in a rain storm and to build a poplar fire.

And a camp-fire it must be—if one is determined to disregard all good advice and to try the experiment—both from reasons of propinquity, because such poplar as is wanted does not effect the neighborhood of houses; and out of respect to the fire. That is but half a fire which is not an object of solicitude and careful attention; whose wants are not noticed by watchful eyes and supplied by willing hands; whose pleasant warmth is received without gratitude, as "merely a mode of motion" with a mechanical equivalent in foot-pounds. A fire should have an aesthetic as well as an economic value. "For the beauty of the honey and the good of the bees," said the wise old monk, who was also a successful apiarist, but no Benthamite, and the man does not deserve a fire who will not consider its beauty as well as his own comfort. Strict utilitarianism is a poor inducement to lay golden eggs; as well be killed out of curiosity as forced to lay one's self to death out of cupidity, says the goose. And has no one ever noticed how the fire goes down when the kettle goes on? It is a lesson on the value of idealism—popular, not philosophic idealism, as opposed to materialism, which denies the unseen, and to utilitarianism (falsely so called) which sees not the thing, but the dollars in it. The fire means thoughts and aspirations, the interchange of noble sentiments and the growth of nobler parts; wherefore, though all should end in smoke and ashes at last, let us treat the fire as something more than a convenience for cooking. Being of poplar, which most count worthless, there can be no gratification in its costliness or its rarity (which otherwise have reconciled many to discomfort and bitter food); and since it already bears an ill name, so that its faults are likely to outweigh its virtues—impressing us first—

any pleasure which it affords should not be deemed subjective, but be attributed to an inherent worthiness in the wood, which by its own virtue renders us responsive.

And in the first place, green poplar will not burn; there your informant was right. It has its uses; it may be peeled and "driven" and converted into pulp at last, or it may be wrought into an ox yoke or a pitchfork handle or a canoe paddle, which, when seasoned, will compare with the birch, ash and rock maple articles in strength and elasticity; but if any one wishes to see verdancy, viridity, greenness beyond compare, let him try to make a fire of the next greenest thing he can find, which will be the round limbs of a sapling poplar. Nor is the "down wood," as hunters call that which has fallen naturally, much better, being slimy beneath the rotting bark, heavy from moisture, and, as we say down East, "soggy." As the camper out cannot wait for wood to season, he seems likely to forego the pleasure of a poplar fire unless there is some *via media* provided. It is an embarrassing question, but—do you know a poplar when you see it? Of course not the gnarly, starveling pasture shrub which answers to that name, and the small-sized, jaundiced, angular sapling which spindles up among second-growth birches, but a first-class poplar in its prime, do you know that? It is rarely to be seen, if at all, outside the wilderness, and even there an apprentice at woodcraft would probably pass it by; for it grows large and tall, two feet, sometimes nearly three feet, in diameter, and so rough-barked that it might easily be mistaken for maple. Having reached a certain size it grows more slowly than pine, and the largest—among which may be counted some of the fine trees on the Passadumkeag—probably date back as far as the Mirimichi fire of 1825, which with the great Chase fire of the same year, swept across the State, planting birch and poplar where pine and hemlock had been. A water-loving tree, it reaches its greatest perfection on the intervals by brook and riverside, either in clumps by itself or mingled with trees of almost ever other kind. Having attained a good size and its maturity, it dies; and standing on year after year, growing drier and at the same time softer, it seasons itself and becomes the best camp-wood that the woods afford. To make a fire of poplar, use wood that has died on the stump.

The hunter or tourist who beaches his canoe near a grove of large poplars may say to himself that he has his firewood already cut, split and collected for him; for this task which usually begins as soon as the tent has been raised and continues until the labor grows wearisome, or the night shades close about, is wonderfully lightened by the obliging poplar. He has only to pick out the dead trees or the tall stubs which remain standing, and if of small size and dry, he can push them from the stump with his hands; if larger and sound at the butt, there may be some hard chopping, for seasoned poplar is like horn; but when the long trunk comes down with a mellow thrash—its own deadness muffling the echoes—and measures its length on solid earth at last, in most cases the shock proves too much for its decrepit age, and when it falls prostrate, there it lies broken into pieces convenient for camp use. Then what a sight is revealed! what a page in the history of once happy homes! Old nests come tumbling out of the chickadees' vacant apartments, chip-must sifs out of the woodpeckers' open doorways, and where the shattered trunk is cleft adown the center, all the arcana of their housekeeping stand revealed. There are holes in all stages of construction—some unfinished, others wrought out to completion, with evident signs of occupancy, from which we can in fancy see the family of big-mouthed nestlings who grew up in dark and narrow quarters, but now are working in open air under the four winds. Some are small—the downy woodpecker's little domicile; and others, more capacious, belonged to the hairy; this great one which seems like a bird's boarding house, was the home of the golden-wing; and here on the outside the log cock has left his blaze. Sometimes one finds in these dead trees the remains of a nest more interesting than any woodpecker's—that of the red-bellied nuthatch, perhaps the most abundant of our woods' birds. The woods resound with their harsh, metallic, drawing *tee-eeet, tee-eeet*, and they may be seen everywhere industriously running up and down the tree trunks, too busy to turn about, or else because nature shaped both ends alike, as indifferent to "end-for-ending" as a steam ferryboat. Their nest is a deep hole excavated by themselves, externally so much like a chickadee's or a downy woodpecker's that it might be passed unnoticed but for one peculiarity, the two nests which I have seen were both distinguishable and even noticeable on account of a considerable quantity of pitch which was smeared about the opening both above and below*. As one was in a white birch and the other in a poplar—trees which yield no gum nor resinous exudations—the busy little home makers must have made many a journey back and forth before they collected all the pitch which ornamented their lintel and doorposts, for it ran down like the ointment upon Aaron's beard.

This dry poplar is a very light wood, lighter than dry cedar even, so that it is astonishing to see how large a piece a man can shoulder and carry into camp. Having arrived there, each must construct his fire after his own fancy; it is a craft in which no man ever learns anything or will consent to be taught of his neighbor. Ancient as the art is, going back to the shadowy, prehistoric ages when man was separated from the brutes and a brand given him as the sign of his superiority, it is as primitive as at first; a naked savage knows more about making a fire than the inhabitant of St. James', and the one who could not live on raw meat by a grim turn of fate is the one who would not know how to cook it. But every one has his own theories of fire architecture; and you may name a man from the fire he builds, just as from the style of the nest you can determine the kind of bird that made it. One lays all his sticks across both andirons, and another will place a certain number with one end only resting on the dogs—each with convincing arguments in favor of the reasonableness of his own method; and I knew a man once, of kingly intellect, with a firm grasp on half the sciences and the power to make all the metals obey him, who to the day of his death placed his kind-

*One of these nests was empty, the other contained five eggs. They were described in the *Auk* at the time of their discovery, and are now in the collection of Mr. William Brewster, of Cambridge, Mass. The only other instance I have seen of a bird pitching its nest was a redstart, which built a wonderful little nest, but was too vain to hide it, so that the boys tore it down. But the note properly belongs to Miss Florence A. Merriam and, I believe, is mentioned in her delightful little volume "Birds With an Opera Glass."

lings on the top of his pile in order to make the fire draw.

Nevertheless, though the details differ, there are prevailing fashions in camp-fires. A woodsman of the old school stands agape, seeing for the first time one of the double fires which have become the mode of late. Intended to stand between two tents, pitched to face each other, these fires are long, narrow and made without back-logs. The hand-junks, which in the woods take the place of andirons, stand at a freezing distance apart, and wood of more than cord-wood length is piled upon them; two forked sticks, one at each end of the fire, support a long green pole, which takes the place of the old-fashioned crane and gives attachment to pot-hooks of various lengths and rude contrivance. These are generally made of a small green tree, cut below a fork and hung inverted over the fire, one prong being trimmed short, the other cut at a convenient length and furnished with a reverse hook for hanging the kettle, by driving in a nail near the end; for lack of a name they might be called *spunk-hungans*, after the now obsolete "lug-stick" or "spunk-hungans" of the lumbermen, which served the same purpose in the days when every camp was heated by an open fire. When deserted, camp-fires of this sort have a gallow's-air which is not reassuring; and encountered on a carry with their blackened stakes and half-burned brands, they are hideously suggestive of Indian tortures and pictures of martyrdoms.

The regular hunter's fire is of quite another order. Its hand-junks approach each other socially, and a couple of back-logs of some wet or slow-wasting wood, staked up behind to reflect the heat, increase the air of coziness. The cooking arrangements which accompany are aboriginally simple. Of course a "hook-stick" for lifting kettles on and off—which is only a miniature spunk-hungan without the nail—is always a necessity, but in addition, one or more straight green poles are all that is wanted. These, stuck into the ground or under a stone or tree root at such an angle as to bring the other end above the fire, support the kettle and may be adjusted at pleasure by placing a stone beneath the further end to raise, upon it to depress the pole. It is the sign of a careful hunter always to remove his stew-pole from the fire when his cooking is finished. "Stew-pole" is the common name, but sometimes it is called a "spygelia"—yet never that I knew by any one who had not first heard the word on the Passadumkeag. How such terms arise and whether they vanish is a problem for the wise; but some are Indian, some few Scotch, some come from the Provinces, and some, with all the savor of their original saltiness, are sea terms, completely naturalized in the forest. The woods have not so much an idiom as a vocabulary of their own, whose peculiarities are shibboleth to the ignorant, whether they talk or write. And yet for us who speak by nature of "drives," "jans," "peavies" and "wangans," because we know them by no other names and could not express the idea in other terms, there are not wanting those who accuse us of using too technical language.

This wood is the nonpareil for camp-fires. Although so light and so soft that it may be broken with fingers, it spends well and gives out a heat which makes it, for summer use at least, not inferior to maple. Its cracks and crevices expose a large surface to the fire, making the blaze strong and steady; and if a decorative style of fire-building is wished, the woodpeckers' holes can be used with effect. For cooking poplar has this advantage, that it can be broken into as small pieces as desired and fed to the fire slowly. And there is just at present a frizzling and a sizzling about the fire, which if not contradicting the assertion that it is not the whole duty of the fire to perform the cooking, demonstrates that this is its chief end. The coffee is boiling in its pail on one stew-pole and the potatoes on the other, while trout broiled and trout fried are making hot work for the cook.

We may call ourselves philosophers and affect to despise anything lower than mind, but it usually happens that when the call to supper comes the phenomenon of fried trout will outweigh all the noumena in existence; in other words, we ate, asking no metaphysical questions. It is not until we have eaten that we are really in condition to speculate on illimitable themes. The Omphalopsychites, if they did not hit the truth they were after, may have travestied human nature more acutely than they knew, when they undertook to see God through the medium of their own stomachs; but this, at least, of the theory is true, that when the eyes are fixed the mind is freest to swim in space. The fire is always a worthy object for such contemplation; its unity in diversity, its constant change without transmutation hold the attention without distracting it. When supper is over and the camp work finished, one can lie back in perfect contentment, oblivious of the rest of creation. A bed of boughs from which the strong heat draws the aroma of the fir, a head-rest of interlocking hands or a blanket for a pillow, the tent above to keep off the dews and a fire in front, which for the night is the mathematical center of the universe—these are luxuries for which the soul may well be thankful.

The fire draws upward with a steady flame, brightening as the night grows darker and the stars come out one by one. It shines on the tree leaves overhead and moves them to a gentle fluttering by the current of hot air which it sends up; it lifts the shadows of the surrounding woods and sometimes lights the wings of a bat circling near. At times an Acadian owl may pass softly through the lighted space, or sit in the gloom just outside, making known its presence by one of its several noises. The best known note is the saw-whetting, from which it gets its name of saw-whet owl; this closely resembles the sound of filing an "up-and-down" mill saw, set in a frame. It also makes a whining noise, and the soft conversational *co-co-co*, *co-co-co* already mentioned. Besides these, I am told of a note resembling the tinkling of small bells and of a harsh, nasal *ah-ah*. Indeed, I have myself heard at night in the woods a sharp, harsh noise—which I was told was made by the saw-whet—that resembled this as much as anything, but the heaviness of sleep interfered with scientific accuracy, and in my journal I find merely the comment: "Not knowing the other noises I did not remember this." This bird undoubtedly breeds in the woods north of Katahdin, but in the latitude of Bangor I have never seen one earlier than Oct. 19 nor later than March 21. Between these dates they are not rare, being most frequently found in barns and out-houses, where they go for warmth and mice. What they eat when in the woods I do not know, never having seen

one which did not appear half starved, nor having found the feathers of any small bird or any sign of their catching bird, mouse or shrew; but I have known four of them to be picked up dead, apparently from starvation.

The fire burns low. Pile on the wood and let us see it burn! 'Tis joy to watch such a fire. There is no uncertainty nor feeble flickering in its work, no bluster of roaring and lashing out of forked blue flames, which impart neither light nor heat. It rises clear, broad and yellow, steady as a candle and strong as if it fed on wax. This poplar gives itself without grudging—wood and fire are one—not as if it meant destruction to the wood, but a realization of good which otherwise would be truly lost. Is it better to rot or to burn? Oh, the caloric which lies locked up in wood and men, it might warm a world! There is little smoke to this fire; that comes of half-combustion—a wood which will not yield and a fire which is not strong enough to do its work. This is the true waste of a fire—not what is consumed, nor yet what remains, but what through inefficiency is lost. Smoke is discord, lack of adjustment; it is failure—to speak transcendently. But the most plainly practical, to-the-millimeter exact man who ever scoffed at esoteric meanings, would not deny that smoke can produce discord even in well regulated families. It is not least among the merits of the poplar, then, that it does not smoke. Sparks and smoke are of one nature; but the first have an ardency which excuses the waste because it is the sign of strength; just as to the man of invention, driven by his yet untried ideas to leave the piece of work on which he labors and begin another and another, the failure to finish the work in hand is forgiven because there is ability to accomplish greater. Yet sparks are the airiest nothings, more unsubstantial than the smoke; restless and unsteady, they aspire only to die. It is their nature—as fixed as fate. The poet saw it long ago when he said that man was born unto trouble as the sparks fly upward—or better in marginal reading, "as the sons of the burning coal lift up to fly." The sparks fly up, but the coals fall down. "My words fly up," said the Danish King, "my thoughts remain below." Why is it that words can be so divorced from what they represent? Why is it that the coals fall, but the sons of the burning coal rise up to fly? Are words, the children of thoughts, so light? And do thoughts gather ashes with age? And why—

Pile on more wood! These are but vain questions of the fire's breeding. Pile on more wood! If answers must be given, let them come in sleep. Draw in the tent, spread down the blankets on the boughs, and while the fire still glows outside lie down to sleep—

To sleep, perchance to dream.

FANNIE PEARSON HARDY.

THE NORTH WOODS.

Editor Forest and Stream:

I trust it may not seem a meddlesome interference by an outsider if I express my interest in the affairs of the woods and waters of the State of New York and the out-of-doors side of life for your people. As you are aware, I have long been a lover of the beautiful Adirondack region, with its forests, lakes and streams, the exquisite home of game animals, birds and fishes, and I have from time to time written of the importance of so using and caring for this region that its attractions may be permanent. Your State Forest Commission kindly sends me copies of several bills, which it wishes the Legislature to pass at this session. There is one to provide for a change of venue in cases of trespass on State lands, and one to increase the efficiency of fire wardens. These seem to be good and necessary measures. Another bill is intended to prevent the extension of railroads across State lands. But the one which has the most interest for me provides for the purchase of land by the State in the Adirondack region, at a price not to exceed a dollar and a half per acre, and always within the limit of previous appropriations for that specific object. There are many small private holdings lying between the blocks of State land, and to acquire these would make it easier to protect the property of the State from injuries of all kinds, especially from forest fires. I hope the amount asked for in this bill will be small, that it may be less likely to excite opposition. (The sum is not named in the copy sent to me.) I think the State should gradually acquire title to the land of least value in the Adirondack region, especially to that which has been rendered nearly worthless by repeated burnings. Nobody takes care of such tracts, and the land will never be restored to any degree of fertility or value unless the State owns and guards it. The entire area of this mountain forest region has a vital relation to the water supply of the State and to the value of this great sanitarium and summer resort for hunting and fishing.

There is great need of cooperation among all the people who, in different ways and for different reasons, value and love the North Woods. This conviction is the result of many years of observation of popular feeling and action—or inaction—and of effort to develop sound and practical ideas regarding the true functions and worth of this region. Only think what classes and multitudes of people have a practical interest in this mountain country! The lumberman should care a great deal about it, for it will be a mine of wealth to him and to his children's children to the latest generation if it is properly handled. Timber should be cut when it is ripe. That is what it is for. But it should not be butchered and exterminated, and the soil burned out and swept away, so as to leave great areas as barren as the central desolation of Sahara, as is the case in some parts of the region now. The lumbermen should be among the foremost in the effort to provide for the proper maintenance of forest conditions all over this region. The State has more than 50,000 acres of land which has been rendered entirely worthless by mismanagement; and yet all the wealth that has been drawn from these woods, and more, might have been obtained by methods that would have left every acre clothed with prosperous forests, with a harvest ready for the axe every year.

Then there are all the people who come up to the Wilderness from the cities, whose life indoors has brought on "nervous prostration" and all the mysterious and infernal maladies which are waiting along the road ahead of men and women who breathe the same exhausted and poisonous air over again, till they feel like the seakick woman who said that for a while she was afraid she would die, and afterward she was afraid she wouldn't. The

pure air of this forest region has prolonged thousands of lives. Where will such people go for summer rest and recreation if we change all the region into shadeless tracts, where the summer wind will come in hot puffs, as from the mouth of a furnace, over miles of rain-sodden and sun-baked ashes.

And the hunters. No forests, no game! The fishermen—gentle, solitude-loving disciples of good old Izaak Walton. Do you like to see these beautiful streams dammed and blasted out of all likeness and memory of their original loveliness, the natural fringe of shrubbery destroyed, and in its stead a ghastly and horrible forest of decaying tree trunks, which drop at last into the foul and poisonous water below? And the hotel people—but what I wish to come to is the inquiry, why cannot all these persons, of so many different classes cooperate—work together for the preservation of these woods and waters, and the proper care of the game and fish which inhabit them? It is easy to show that the real interest of all these classes of visitors is precisely the same. Why should we not, all of us, support the principal measures brought forward by the Forest Commission, and by the officers for the protection of fish and game? It seems to me we should be ready to unite in sustaining any practical measures which lead us on toward the ultimate object of securing this whole mountain region to the people of the State as a permanent possession, as a vast summer resort for out-of-door life and enjoyment. None of it is fit for cultivation. It is wicked to try to farm this land.

The preservation of fish and game is very important. I hope that civilized and decent hunters and fishermen will confer with each other, and devise the best practicable laws and regulations, and that these will be adopted and then enforced. The tendency of civilization is undoubtedly in the direction of giving all game animals more chance for their lives, and as they become scarcer everywhere this becomes more imperatively necessary. The best game of all kinds ought henceforth to increase in the Adirondack region. The uncivilized butchers who slaughter game out of season, who murder does when the fawns must perish, should be repressed, and their trespasses punished. The time for hounding deer should be shortened, and before many years the practice should be abolished. Laws will not enforce themselves. Individuals cannot do much alone, but associations have means and power.

I see in your columns constantly discussions of the differences between civilized and savage men, and I have just read George Bird Grinnell's delightful collection of "Pawnee Hero Stories." I should like to write of some of these differences, for I have seen many savage men and some who are partly civilized, but I have not time now. I think we are hardly civilized enough yet to work together to take care of our best things. A few years ago I visited nearly every town in the State of New York, calling on the principal citizens everywhere. I saw so many fine-looking, public-spirited men, who evidently ate good food and behaved well, that I thought the State might safely take the job of redeeming the world from all crookedness and disorder, and so I still believe. But we should have to work together. If a man will help what I am trying to do, I am glad to have his assistance, whether he is a saint or a sinner.

Of course there are little discouragements whenever we really try to do anything that is worth doing. One man says, "Have you seen Smith? Unless he helps I will have nothing to do with it." And the next man says, "If Smith is in it I will not touch it." All this is natural, and must be expected and allowed for. A few men, working together, can do a great deal in the way of propagating ideas, always provided that they have any ideas to propagate, and the diffusion of information regarding existing conditions, and the propagation of ideas, are the first steps toward any improvement in this country. When I get rich I am going to endow a chair in a college to teach this one thing, namely, that when people form an association for the advancement of civilization by playing baseball, or bicycling, or fly-fishing, or trout-hatching, or game protection, or forest preservation or destruction, and they have their annual meeting and dinner at some city hotel, the young man who reports the proceedings for publication should give the post office address of one of the officers. I may wish to write to him; I may desire to cooperate with these sons of morning; but how can I, unless some one of them has a local habitation, as well as a name? Meantime I must content myself with writing to FOREST AND STREAM, and my post office address is Franklin Falls, New Hampshire.

J. B. HARRISON.

MR. EDWARD WAKEFIELD, the traveler and author, who is now in New York, is the son of Colonel Felix Wakefield, of Crimean fame, who made the railway from Balaklava to Sebastopol under fire of the Russian guns. This family are noted for what is called the "Wakefield System of Colonization," by which the most prosperous of Great Britain's dependencies have been founded, the great mass of the population owning the freehold of the land on which they live. Mr. Edward Wakefield went with his father among the pioneer settlers to New Zealand, served in the Maori wars, was three times elected to the parliament and for some time held the offices of colonial secretary and minister for native affairs. He is the author of the notable review in the *Nineteenth Century* on James Anthony Froude's "Oceana," which led to a hot controversy on the historian's veracity. Since he has been in America he has published "New Zealand After Fifty Years" (Cassell & Co.), which is now considered the standard book on that colony. The FOREST AND STREAM is now publishing a series of twelve articles from his pen on natural history and sport in various parts of the world. He has also been a prolific translator of the best French fiction, his latest work in this field being François Coppée's "Henrietta," published in this country by Worthington & Co. It is understood that Mr. Wakefield is collecting material for a book, to be published in London, on the artistic and social side of life in New York.—*Home Journal*.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloam," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

Natural History.

WINGLESS BIRDS OF NEW ZEALAND.

WE have been told as long as we can remember anything that

The heart is a free and a fetterless thing,
A wave of the ocean, a bird on the wing;

and all our ordinary notions about birds are connected with them as flying creatures, possessing the air as their special domain and enjoying a liberty of motion which is denied to all other branches of animated nature, for even insects never venture very far above the surface of the earth. Yet there are birds, and very fine birds, too, which cannot fly, for the excellent reason that they have no wings to fly with; and in former times there were a great many more than there are now. The biggest bird that ever existed in the world, as far as is known, was a wingless bird, namely, the dinornis (*deinos-ornis*, terrific or monstrous bird), so called from its preternatural size; and the two largest birds now existing—unless we give the condor a place on account of its supreme breadth of wing—have no wings worth speaking of, namely, the ostrich and the emu. Both the ostrich and the emu, however, have rudimentary wings, and, though they cannot make the smallest attempt to fly, in the sense of rising from the ground, they undoubtedly seem to use their plumage to some extent to assist them when running. The ostrich's wings are quite visible, and it always gives one the impression that it would like to fly if it could. The wingless birds of New Zealand, both extinct and extant, on the contrary, do not suggest the idea of winged creatures at all, but are perfectly independent of the use of plumage for any purpose but to keep themselves warm.

The dinornis, more commonly known by its Maori name of moa, is now believed to be totally extinct, although there is no positive reason in the nature of things why it should be. There are parts of New Zealand which are totally unexplored, and are not likely to be explored for many a long day. The southern part of the west coast of the Middle Island is still almost a *terra incognita*, except so far as the mere shore of the stupendous sounds or fiords is concerned. These marvelous inlets of the sea, where mountains 5,000ft. high rise sheer from fathomless depths of still water, are a favorite resort of multitudes of tourists and sportsmen. But what lies between the forest-clad shore and the Alpine peaks that seem to hang in mid-air away to the eastward, no one knows. The tangled forest and the mountain torrents are enough to make travel almost impossible; but a still greater obstacle is found in the appalling chasms or ravines, left by ice rivers in past ages, which no one yet has ever found a means of crossing. It is in one of these ravines that the second highest waterfall in the world was discovered last year by a solitary explorer. It consists of a large river flowing out of some unknown glacier, and tumbling 2,000ft. over a precipice in three grand leaps into a cavernous mystery below. It may well be contended that in a country where the very existence of such a wonder remained unsuspected for half a century after it became civilized, all kinds of animal life would at least be totally undisturbed, and might, therefore, survive after similar forms elsewhere had totally disappeared. One bird, at all events, which was supposed to be extinct, has been discovered alive and been killed in those remote parts. This is *Notornis mantelli*, a gigantic and superbly plumaged coot, of which no other instance occurs in the known world. It is quite open to belief, therefore, that flocks of moas still roam the plains which lie between those mighty precipices or haunt the gloomy swamps where the ice rivers lose themselves in the rank vegetation of the lower levels.

However that may be, the remains of dead moas are found in abundance all over New Zealand, and in such a state of preservation that it is easy to gain from them a perfectly accurate idea of the bird. There were many kinds of dinornis, varying considerably in size and shape, some of them being tall and stately with all the "points" for extraordinary speed, while others were squat, clumsy creatures with such enormously thick, straddling legs that it is puzzling to know how they dragged so much lumber about. The tallest stood 14 or 15ft. high and were of a shape unlike that of any other bird that I know of. If a giraffe had its forelegs cut off at the shoulders and balanced itself so as to walk on its hindlegs, it would have something of the build of the great dinornis. In order to carry this vast weight of neck and back, however, the pelvic bones have to be of enormous width. The legs of the moa, in fact, stood up like two great columns with the body resting between them.

The plumage, though it conveys but little idea of feathers, is singularly beautiful. I have seen a moa's feather 11in. long and nowhere more than a quarter of an inch broad, so soft and light that it could be waved in the air like a piece of floss silk, or twisted round the finger. The whole covering of plumage like this must have resembled long fur or hair, not unlike that of some of the llamas. It was a delicate gray in color, with stripes or speckles of a darker tint. The legs of the bird were entirely bare of plumage and were covered with a peculiar creased skin of a bluish color, a tough hide, in short, well adapted for protecting it from the stiff and thorny plants it waded among in the swamps. It only had three toes, but they were toes not to be trodden upon with impunity, regular kickers, and no mistake. I once reconstructed a moa to the best of my ability, and a correct representation of it is to be found on the cover of my book, "New Zealand After Fifty Years." It is an ungainly fowl, but I have no doubt it was well suited to its surrounding circumstances. It was considered prime eating by the folks who inhabited New Zealand in those days, whoever they may have been; for huge stone ovens are found, still in a good state of repair, filled with moa bones, cooking utensils and rude table implements. Whether these were restaurants, or are the remains of Thanksgiving dinners, history recordeth not. Probably they indicate where the moa hunters held high revelry after a big battue; just as the Maoris do to this day after a great catch of sharks.

I never tasted moa meat myself, because it had gone out of fashion eight or nine hundred years, so they say, before my time. But there are still wingless birds in New Zealand, uncommonly lively ones, too, which have provided me with many an excellent meal. They are

three in number—the black or North Island kiwi (pronounced *keewee*), the brown or South Island kiwi, and the weka. The two kiwis are perfectly distinct, not only in color, but in shape and general appearance. The black kiwi is a plump-looking creature, about 18in. high, covered with dark gray or blackish fur. It has rather a long neck, and a very long, slender bill, sensitive to the point, with which it probes about in the mud for the worms and animalcules that form its food. It stands on very stout black legs, feathered or furred a good way down, giving it the appearance of wearing an old-fashioned Dutchman's breeches. The brown kiwi is taller and slimmer, and, if possible, even odder and more outlandish. They both frequent swamps and secluded shallows, and are very shy in their habits. They are also wonderfully smart in their movements, considering their heavy build, and their colors harmonize so well with their surroundings that they are not easily seen. It requires a snap shot to kill a kiwi with a gun, but they are often caught by dogs. The skin of the kiwi is highly valued by the Maoris for making mats or robes. The highest chiefs are proud of wearing on grand occasions mats made entirely of one kind of kiwi, black or brown, extending from the neck to the feet, and requiring perhaps the skins of a hundred birds for each mat. If such a costume were at all common the poor kiwis would soon be as extinct as the moas; but these beautiful mats are merely heirlooms in the great native families, and the present and future generations of kiwis are protected, as far as possible, by stringent laws. The kiwi is a very oily bird, and the skin is not only perfectly waterproof, but seemingly everlasting. The furlike plumage, too, is delightfully soft and warm, and there can be no nicer traveling rug or bed cover than a full-sized and well-made kiwi mat. Its value is about \$500.

Though very far from being extinct, the kiwi must certainly be considered a rare bird, except in parts of the country where very few travelers go. The weka, on the other hand, is exceedingly common and so very sociable as to be almost embarrassing. It is about as large as a hen pheasant, and not unlike it in appearance at the first glance, though much browner in color, its plumage being a true brown, a bright sienna tint. Then, though it has a tail, which the kiwis have not, it is a much shorter tail than a pheasant's. Its eyes, too, are bright red, most peculiar, but very beautiful. It has no wings at all, but its feathers being longer and stiffer than the kiwi's, the absence of wings is not so apparent. In looking at a kiwi you never think of its flying, but in looking at a weka you wonder why it does not fly.

The weka is ubiquitous. It is found in the depths of the thickest bush. It pops out from behind grass-tussocks on the dry, stony plains. It glides mysteriously among the raupo stems in the wet swamps. It even turns up occasionally on salt shallows, disputing with web-footed birds for the sea-food left there by the tide. It is omnivorous, and when it gets the chance is even a bird of prey. It boldly enters the fowl yard and kills young chickens, and it is the friend of the sheep farmer on account of its penchant for little rabbits. So voracious is it, indeed, and so thoroughly does it search out the recesses of the burrows, that in many parts where rabbits would otherwise be a serious nuisance, the weka effectually keeps them down and preserves the pastures for the sheep. It ruthlessly invades the rabbit home, and seizing a baby bunny with its strong beak, shakes the life out of it and tears it to pieces, leaving nothing but scraps of dragged skin and bone. It has no talons like those of a true bird of prey, but its strong toes, with horny claws, answer the purpose very well. The weka is also a formidable egg poacher. It does not break the eggs, but pecks a hole in them and extracts the contents in some way so skillfully that the fraud is not readily detected even by the birds that laid them.

The weka is the most inquisitive of all fowls; and it is easily killed or captured by taking advantage of this weak side of its character. When shooting in the stubble fields in the Middle Island, I have often amused myself, while taking a rest under a gorse hedge, by playing on the curiosity of these quaint birds. The thing is to remain as still as possible, but to keep up a regular tapping, or any monotonous sound. A low, musical whistle, repeating a bar or two over and over again, will do as well as anything else. Soon there are seen emerging from holes in the bank, or from tussocks of grass on the edge of the stubble, two, three, four, perhaps half a dozen queer, brown birds. They cock up their heads, look all round with their red eyes, stand on one foot in a listening attitude, run along the ground a little way, then stop and listen again, exactly as if to say, "Why, the ideal! What in the world is that noise? Well, I am surprised." So entirely absorbed are they by their curiosity that sometimes they will come close up to you before they notice you. Then they vanish in an instant as if by magic. They move so quickly, it is impossible for the eyes to follow them. They seem to melt into the ground. I have often seen half a dozen shots fired at one weka at not more than 30yds., and two minutes afterward, the same bird perked up again and came running along, looking really annoyed, as if inquiring indignantly what on earth all that noise was about. The moment a gun was raised again it was no more seen. But if you keep quite still and don't shoot, the wekas will soon gain confidence and become so entirely lost to every other consideration save that of gratifying their curiosity, that they will come right up to your feet to investigate the causes of that strange tapping or whistling. They must and will find out where it comes from, how you do it and what it means. Yet they are so smart that when they seem actually under your hand, the chances are ten to one against your touching them if you try to.

A hungry man in the bush, nevertheless, seldom fails to get a weka in the last extremity. An empty stomach sharpens the wits and quickens the movements. When you find yourself in that predicament, you hide yourself completely in a dense thicket of wood ferns, supplejacks and wild vines, just leaving your right arm free and a hole to peep through. In your right hand you hold a stout stick with a bundle of paper or leaves, or the wing of a robin, dangling from the end by a thread of flax. With your left you knock regularly on the trunk of a tree. Before long a weka slips out into the open and commences an inquiry concerning that stick and the depraved-looking object dangling from it. You gently swing the thing backward and forward. By this time there are probably two wekas standing on tiptoe, craning their necks and staring hard at it with all the staring

powers of their round, red eyes. One suddenly turns to the other and says, as plainly as looks can say: "Well, I never! Don't you think it's a duty we owe to society to probe this matter to the bottom?" "Why, certainly," the other replies. "I should feel mean for the rest of my days if I remained in ignorance upon the subject another minute."

Upon that they both advance three little steps forward, three little steps to one side, three little steps forward again. Then they crouch down and cock their heads to one side and listen attentively for a few seconds. You hold your breath, for your dinner depends on your silence; but by a deft movement of the wrist you waggle the dangling object more quickly than before. The two wekas rear themselves to their full height and look at one another indignantly. "The cause of science demands that we should instantly solve this problem," says one, "and I am going to do it or bust." "And I'm not going to get left," says the other. So they both march slowly and deliberately, with long and cautious strides, up to the spot over which the stick is hanging like the sword of Damocles. They reach up in the air and peck at the swinging bundle. Whack! Down comes the stick and one of the wekas lies fluttering among the lacelike mosses and ferns that cover the ground. Possibly both come to grief at once, but if one escapes it vanishes like a shadow, and pops up a moment afterward, 20yds. off, strutting about with a self-righteous swagger, remarking for the benefit of whom it may concern: "There, I told you so. I always knew that absurd bird's childish curiosity would bring it trouble. So young and yet so rash! Why cannot people mind their own business?"

The experienced bushman divests the weka of its oily skin the moment he gets hold of it, for if it is allowed to get cold with the skin on, not only is it very hard to skin or to pluck, but its flesh becomes so rank that it is almost uneatable. The skin makes an excellent cap, for it is very light, but yet very warm and strong and quite waterproof; or it serves for a pouch for tobacco or matches or any other little treasures that need to be kept dry. The flesh is brown and glutinous, the best of meat, very digestible and nutritious, and there is a good deal of it, for the weka is a well conditioned bird. A stew which I can recommend is made of the joints and giblets of a weka, with doughboys—little flour and water dumplings—onions, wild cabbage, pepper and salt, slowly simmered for three quarters of an hour. By the time the stew is done there will be half an inch of yellow oil on the top. This should be poured off clear into a cup or pannikin, where it cools solid, and kept as a sovereign salve for wounds or bruises and an unequalled dressing for boots. The weka stew, helped out by a flapjack or a scone or a "floating devil," which every bushman knows how to make in his frying pan, furnishes an abundant dinner for one or a fair meal for two. It is distinctly gamy, and every little bone can be picked and cracked and sucked with a relish.

I think it is only when you come to eat a weka or a kiwi with a bushman's appetite over a camp-fire in the ranges that you fully realize how defective it is in being a wingless bird.

EDWARD WAKEFIELD.

EVENING GROSBEEK IN NEW ENGLAND.

Editor Forest and Stream:

The evening grosbeak (*Coccothraustes vespertina*) has at length won a place in the fauna of New England by appearing during January, 1890, at several different localities in eastern Massachusetts and southern New Hampshire. As far as I am able to learn it was seen first at Milford, New Hampshire, where Mr. James P. Melzer shot a female on January 6. This specimen, Mr. Melzer writes me, was apparently a solitary bird. It alighted on a tree in the village and attracted his attention by its peculiar notes. It seemed alert and restless, but he succeeded in shooting it before it could again take wing. Three days later a young man brought in another which he said was one of a flock of eight or ten that he had seen near the town. Mr. Melzer was too busy at the time to go in pursuit of them, but the young man went back and secured three more. Of the four taken this day one was an adult male and one a female. The sex of the other two could not be determined by dissection, but they are apparently females. These birds were feeding in maples and the "crops" of those killed were "filled with the soft inner portions of the maple buds." Milford is in Hillsborough county, eleven miles northwest of Nashua.

On Jan. 9—the very day, it will be observed, when these grosbeaks were last seen at Milford—a male was shot at Seabrook, Rockingham county, N. H. I heard of this specimen through Dr. A. K. Fisher, who wrote me that it was in the possession of Mr. Alvah A. Eaton, of Seabrook. The latter, in reply to a letter from me asking about his bird, at once sent me the skin, very generously insisting that I accept it as a gift for my collection. In addition, he was kind enough to furnish the following account of its capture: It was shot by a Mr. Brooks, who found it alone in an apple orchard about half a mile from a large salt marsh, but only a few hundred yards from an arm or cove of this marsh. The locality is within a mile of the Massachusetts line, and hence in the extreme southeastern corner of Seabrook. Mr. Eaton skinned and dissected the bird. Its stomach contained nothing but cherry stones, all of which were broken into fragments. As there were no wild cherries in the region about Seabrook last summer, Mr. Eaton thinks that these stones may have been those of cherries from trees cultivated in a garden near the apple orchard where the grosbeak was killed. The bird was badly torn by the shot, "which must have been of large size," and as the skin was very tender also, the specimen is not so good as could be wished; but it is in remarkably fine, richly-colored plumage. I cannot see that it differs in any important respect from several of the western males in my collection. Mr. Eaton tells me that it measured "a trifle over 8in. in length."

The next point at which our interesting bird has been reported to me is Wellesley, Norfolk county, Massachusetts, where, on the well-known Hunnewell place, near the outskirts of the village, a specimen was shot Jan. 15 by Mr. Thomas Smith, a gardener in Mr. Hunnewell's service. Having a bent for natural history, Mr. Smith has made a small but interesting collection of such mammals, birds and insects as he has found time to capture and preserve. He shot the grosbeak in a maple, where it was sitting, apparently alone, uttering at intervals a call which resembles that of the pine grosbeak. By the aid

of a copy of "Wilson's Ornithology" he identified it correctly and mounted it. I am indebted to Mr. S. W. Denton for these facts, as well as for the specimen itself, which he obtained for me from Mr. Smith. Although the sex was not determined, the bird is evidently a female. It differs from all the western females in my collection in having the top and sides of the head deep, nearly pure ash, instead of olivaceous brown. It is further peculiar in almost wholly lacking the usual blackish stripes on the sides of the throat.

The last capture of which I have any present knowledge is that of a female, taken Jan. 25, at Lynn, Essex county, Massachusetts. It was killed by a young man who shoots for Mr. N. Vickary, the well known taxidermist, who says it was accompanied by another bird of apparently the same species and sex, which, at the report of the gun, rose high in air and made off, uttering as it flew a loud whistling call and occasionally a chattering cry also. When first seen they were sitting close together in the top of a red cedar, feeding on the berries. The gullet of the one killed proved to be full of the berries of this cedar. Mr. Vickary mounted the specimen, which will probably go to the Peabody Academy at Salem for the Essex county collection. I have examined this bird and find that it differs from my Wellesley specimen only in having the head of a slightly browner shade and the dark spots on the sides of the throat a little more distinct.

The evening grosbeak has occurred in New York, in Onondaga county (Cous, Bull. Nutt. Orn. Club, VII., 1882, 250), near New York city (Lawrence, Ann. Lyc. Nat. Hist., N. Y., VIII., 1866, 289) and at Elizabethtown, Essex county (Brewer, Proc. Bos. Soc. Nat. Hist., XVII., 1875, 451), only ten miles west of Lake Champlain. Although several writers have confidently predicted its appearance in New England, the birds just mentioned are the first that have ever been reported. The fact that so many have been seen within less than three weeks and at places some distance apart makes it highly probable that they have crossed our borders in considerable numbers, and it will be surprising if more are not found before the winter is over. It would be interesting to know if the recent heavy snowfalls in the Northwest have had anything to do with their coming. WM. BREWSTER.

CAMBRIDGE, Mass.

EVENING GROSBEEK IN CENTRAL ONTARIO.—The unlooked for appearance of the evening grosbeak in considerable numbers in the vicinity of Kingston, Ontario, has created quite an excitement among the local lovers of bird life. It was some time before they could be identified, as they have never been seen so far east as this before. It is supposed they were driven here by some of the heavy gales we have had this winter. They are met with feeding on the berries of the red cedar and seeds of the black ash. We have also with us this winter the pine grosbeak, white-winged crossbill and pine finch, all of which are irregular winter visitors in this locality. The great gray owl and snowy owl are also more common than have been known for a number of years. The winter so far has been very mild.—JOHN EWART (Yarker, Ont., Jan. 17). [The occurrence of this species in Ontario, though unusual, is not without precedent.]

A MIDWINTER TRAVELER.—Albion, Wis., Jan. 18.—*Editor Forest and Stream:* While ice boating on Lake Koshkonong (which is about four miles wide by eight long) a day or so ago, and when near the center of the lake, I noticed a small black object moving along on the ice, which on closer examination turned out to be a large woods mouse, traveling toward the western shore. Have since learned of a dead one being seen further up the lake on the same day. The question is, do such small fry migrate at times, like the squirrels, or had they been carried over on the ice by some bird of the hawk species?—A. A. B. [Mice and shrews of many kinds are about all winter, and may often be seen traveling over the snow and ice.]

WHAT ARE THEY?—Hartford City, Ind., Jan. 18.—I have in my possession one of the white quail from the Godfrey Reserve, this county. A covey of twenty-six were discovered by Sam Twibell, of Montpelier, on Dec. 15, and he shot two, which were mounted. The plumage of the bird is white, but is speckled with small black spots; the spots glisten as if varnished. No quail of the kind was ever before seen in this section. Except as to plumage, the bird is exactly like the common brown quail.—E. D. MOFFETT. [So far as can be judged from the description, these white quail would seem to be partial albinos. But who ever heard of a whole flock of albinos?]

THE SNOWY OWL.—In your columns I saw that Mr. Foster wished all notes possible on the southern limit of the snowy owl. On Nov. 20 one was caught in a trap near Princeton, N. J., a large medium dark female. I shot a male on Dec. 16, 1882, and a bird was taken some three years before. This made three specimens of this owl in my collection, all from this locality. It seems strange that during such a mild winter so many northern birds should migrate so far south. Red crossbills are common here all this winter and red-breasted nuthatches have been common since the last of September, both of these birds I never saw in this locality until last winter.—A. H. P. (Lawrenceville, N. J.).

FOREIGN BIRDS FOR BRITISH COLUMBIA.—Vancouver, B. C., Jan. 21.—*Editor Forest and Stream:* A meeting was held at the Leland Hotel, Vancouver, British Columbia, last evening, to form an association for the purpose of introducing and protecting game birds on the mainland of the Province. Mr. Sidney Williams was appointed secretary *pro tem*. Messrs. P. Thompson, H. Abbot, D. Simpson, E. Mohun, C. Johnson and S. Williams were appointed a provisional committee to draft the constitution of the association. A considerable sum was voted to be expended by the committee in Chinese and Japanese pheasants, to be brought over from China and Japan by the Parthia next April.—CHARLES C. TISDALL.

A LONG-TUSHED WOODCHUCK.—Last week W. C. Stimpson and sons, of Denmark, killed a woodchuck which had tushes of extraordinary length. One of these had curled under and grew into the animal's mouth, then up through its head, destroying one eye and curled across its snout and again entered its head. The tush was fully six inches long, and how the poor creature managed to live is strange. It was very thin in flesh.—*Ashtabula (O.) Sentinel.*

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FORESMAN 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

UNCLE NATHAN'S BIRTHDAY.

WORCESTER, Mass., Jan. 30.—One of the pleasantest social events ever experienced by the Worcester sportsmen occurred last evening, when a party of about forty were gathered at the rendezvous (Lisha's back room).

The purpose of the gathering was to demonstrate to the veteran sportsman, "Uncle Nathan" Harrington, that the love, esteem and good wishes of the "boys" were with him as he turned the three-quarter post in the century of usefulness and started on the last quarter, with a firm step, a steady hand and clear eye, in fact, with a good prospect of holding out to the wire.

To but few is it given to enjoy for over half a century an active participation in the sports of the field. Although "Uncle Nathan" has a go at the birds every opening day, the last few years he has acknowledged a perceptible falling off of his accustomed sprightliness, so necessary to the successful hunting of birds, and has insisted on laying himself on the shelf during the rest of September.

With the opening of the fox season, however, on Oct. 1, the old gentleman always comes to the front with all the vigor and enthusiasm of a fox hunter in his prime, and no day is long enough or cold enough to drive him in as long as the dogs can follow.

An instance which brought out the qualities that are supposed to show, in popular parlance, the amount of "sand" in the old gentleman's "gizzard," occurred a few years ago, and I think will bear relating here. Uncle Nathan had been out since daylight, and though the dogs had driven their fox all day he had managed to keep out of reach of Uncle Nathan's gun. The latter part of the afternoon found him tired, cold and hungry. A milkman drove along on his way to the city and kindly offered to bring him right into his door almost. The dogs were driving up on the Randall Rocks, in easy hearing but out of sight. Uncle Nathan listened to the dogs, then looked up at the sun. Twenty minutes, or a short half hour at best, and it would be dark. Four miles from home with no team, and here was a chance to ride right in. It took him but a second to decide. "No," said Uncle Nathan, "I guess I'll stay with the old dog and see it out." He stayed, and when the sun was just setting down behind the edges and it was so dark he could scarcely see him, that fox made up his mind to cross the runaway Uncle Nathan had guarded so long and faithfully. Well, he never got across, and as the gritty old hunter trudged home those four weary miles, he could feel the brush "swish" against his left knee at every step, and he was well paid for staying. But where will you find another man, young or old, who would have taken that chance under like circumstances?

And he is still in the swim. Has been at them all winter, but with the worst possible kind of luck, and it did seem for a time that the fates were against him. Week before last, however, he connected with his first fox for this season. Every good day finds him out, and now that he has broken the ice, he is determined to add another to his string before March 1. His immense popularity was attested to by the number who turned out last evening.

Everybody who laid any claim to the proud distinction of being a sportsman and was aware of the affair was there. It had only been talked up for a few days previous, and was kept as quiet as possible, for "Uncle Nathan's birthday party" was to be surprise, and it was, a genuine surprise, too.

To Billy Dean, his fox hunting chum, was intrusted the matter of getting him up to Lisha's, and no one knew better than Billy that all that was needed to lead him into the trap surely and unsuspectingly was to tell him that he wanted to see him at Lisha's that night to fix up a hunt. It brought him. There was no possibility of his failing to answer to such a summons.

The testimonial from the boys took the form of an elegant gold-headed cane, which bore the inscriptions, "N. S. Harrington, from his sportsmen friends," and "Uncle Nathan." The presentation was made through John R. Thayer, one of the brightest lawyers and most enthusiastic fox hunters in the country. His presentation speech, although entirely impromptu, was a marvel of brilliancy and touching reference to the esteem in which Uncle Nathan is held by his brother sportsmen.

The old gentleman listened to him with bared head, and at the close arose and tried to thank the boys; but he was so completely surprised and so visibly affected that he spoke but a few words. He was cheered to the echo, however, and the congratulations of the boys poured in upon him from all sides.

"If Loud had lived and tarried with us until now," said John R., "this day he should have had a golden collar."

Loud was Uncle Nathan's famous pup, so partial to cats, swill buckets and dead horses, which, when Uncle Nathan came to part with him, he gave away with the thoughtful proviso, "If he don't suit you, and you want to get rid of him, work him off down the other way. Don't give him to any one near Worcester."

Loud's new owner on his next visit to Lisha's was asked how the pup was running. "Run? Yes, he'll run a cat," he replied in his peculiar South o' Shrewsbury drawl. "Do you s'pose Nathan Harrington is giving away dogs that are good for anything?"

Poor old Loud! The butt of so many jokes is no more; but if there are cats in dog heaven he is happy.

Caterer Rebboli had also been summoned to appear and answer to the charge of having in his possession contrary to the law (of hungry sportsmen) sundry refreshments for the inner man, consisting of chicken and turkey sandwiches, coffee, assorted cakes, fruit and no end of

such stuff, headed by an enormous birthday cake, which bore frosted across its simlax-wreathed crest, the familiar greeting "Uncle Nathan." Upon his appearance the curtains were drawn in front of the store and the house resolved itself into a committee of the whole and took up the refreshment case without delay. Reb. did not offer a plea, but threw himself upon the mercies of the court, which in this instance were anything but tender.

His entire stock was confiscated, and then Lisha produced "the finest box of '44 Londres' in Shattuck's store. A perfect beauty!" And we settled down for a good old "talk" of hunts enjoyed, and foxes run and killed. About 10 P. M. the party broke up, and shaking Uncle Nathan by the hand we separated for our homes, all agreeing that it had been one of the pleasantest evenings we had ever passed at the rendezvous. HAL.

VERMONT GAME.

WATERBURY, Vt.—*Editor Forest and Stream:* Among other good things in a recent number of FOREST AND STREAM was pleased to notice the letter from "Antoine Bassette," and though it seems he has made little or no progress in learning to "spik dat Anglesh—or write it—I presume his old friends all made his letter out. Any word of praise from me for Mr. Robinson's delightful volumes would be superfluous after all that has been said and written of them. But on seeing "Antoine's" letter I could not resist expressing a desire I have often felt, and which I am sure is shared by very many others—that Mr. Robinson would bring Uncle Lisha back from the "Hio" and thus give us more of his inimitable sketches. I have had many a hearty laugh over Antoine's queer sayings, and hope to renew acquaintance with him.

The past season has hardly been an average one for shooting. We never have an abundance of game, but the partridges seemed to be more numerous than usual early in the season. Unfortunately the results did not bear us out in that conclusion, for while the birds were present in fair numbers, they seemed to be unusually wild and hard to get. There was a great deal of rain through the season also, so light bags and poor luck have been the rule. Plenty were "left for seed," and as everything indicates a good breeding season, we hope for better luck next fall.

We have several new shooters, and have hopes of being able to organize a gun club the coming spring.

Foxes are reported plenty, and as we have no bounds they are seldom molested, except they are taken by trappers, or some one gets a chance shot at them. One trapper secured eighteen this season.

O. King, of this place, recently killed a snowy owl, which is a fine specimen, its wings spreading over four feet from tip to tip, and the plumage being very thick and in splendid condition. The bird has been mounted and is greatly admired. This species is occasionally found in this section, though they are somewhat rare, this being the first one I have heard of for some two or three years. The barred owl is more numerous, and I have been fortunate in securing a fairly good specimen.

Ducks are sometimes seen on the river, but they seem to have given us the go-by this fall, as not one has been seen so far as I can learn. F. E. A.

NOTES FROM MICHIGAN.

Editor Forest and Stream:

The flight of ducks seem so have given western Michigan the go by lately for some reason or other, and when ten or even five years ago we could kill fifty, we perforce must now be content with half a dozen. Each sportsman advances a theory of his own to account for the non-appearance of the plump mallard and the toothsome teal. There seems to be as much diversity of opinion in our ranks as among the doctors treating for la grippe. Mallard, teal and woodcock have been protected in the spring for years; and while the laws have not been rigidly enforced, very few of these ducks have been killed out of season, for the simple reason that most of our shooters use decoys in open waters, and bluebills, widgeons, butterbills and whistlers are the main sufferers. We stopped spring shooting of all kinds for one year, but when we came to look the thing over carefully, we found that our neighbors in Indiana and Illinois, and our Canadian cousins, were having great sport duck shooting. Perhaps it looks a little selfish, but we couldn't stand it to hear the guns cracking on both sides of us, so we began the slaughter again. I think I am safe in saying that the minute we see ducks protected in the spring in the States immediately south of us, spring shooting will come to a sudden end here.

It's queer how fashion affects the sportsman. A year ago there were only one or two men in town who hunted rabbits, but now each man who pretends to shoot at all owns one or more hounds, and every day some party goes after the cottontail or the big swamp rabbit.

Quail are more plentiful this winter than for years before. Owing to the fact that we have had several open winters, they are protected for five years. It will be rather exasperating if one of our old-fashioned hard winters comes along and kills them off before the five years are up.

We had fairly good snipe and woodcock shooting this fall, and may expect plenty of them in the year to come. Their habits are so exclusive they are not likely to be exterminated. MAC.

GRAND HAVEN, Mich., Jan. 27.

SOUTH CAROLINA GEESSE.—Denver, S. C., Jan. 29.—Reed Garrison reports seeing several flights of wild geese passing over this place the 26th inst. They were going south in the direction of Seneca River. It is rarely of late years geese are seen here.—BLUE RIDGE.

PORTLAND, Me., Feb. 1.—In the paper for this week, on page 24, relative to cheap venison in Portland, I find that I should have stated, "all winter, during the open season," none has appeared since Jan. 1.—C. D. S.

THE QUEBEC LAW.—Montreal, Jan. 30.—The game bill was discussed in the Legislative Council, and on Mr. Brisson's motion black ducks were excepted from the provisions.—E. D. W.

PATTERN AND PENETRATION.

REMINGTON 12-GAUGE GUN.

It was on Dec. 11 that the third of the series of Remington guns was put to the test. It will be recalled that three weapons were sent down from the Ilion works, representing the new output of the old Remington works under the present management. There was a heavy 12-gauge gun tested Nov. 15, and of which report was made in our issue of Dec. 5. There was a 10-gauge arm and another a lighter 12-gauge now under consideration. It is entered as a \$55 arm against the \$40 trade-list price for the other smaller gauge. It was given a very thorough test on a very fair day for such work. It is difficult to say why there should be such a difference between the two arms. Surely the variation in weight ought not to explain it, and the only inference is that enough care had not been taken in fitting the charge to the weapon. As it came from the factory it was provided with the same set of black powder shells which were tried in the other 12-gauge Remington, having 34drs. of Hazard FG. powder with 14oz. of No. 8 Tatham chilled shot. These were put in the arm, as was also a set of the same charge, but in U. M. C. shells, and loaded here instead of at Ilion. How much they differ the figures will show. The same wood powder and Schultze powder charges as were tried in the fellow 12-gauge Remington, were used in this, and besides at 40 and 60yds. three shots respectively from each barrel were fired with the No. 4 shot shells left over from the Francotte gun test of Nov. 20.

Considering the last-named comparative test first, the showing made by the Francotte featherweight gun was a very good one, but the Remington seemed to take kindly to the charge, and made a very good second, even a neck and neck race. The charge had 24drs. of Schultze powder in a Von Lengerke & Detmold metal-lined shell, with 14oz. of No. 4 chilled LeRoy shot. The analysis showed that the charges averaged 39grs. of powder behind 535grs. of shot, counting out 153 pellets. With this charge the record of the two guns stood:

FRANCOTTE GUN, 40YDS. AVERAGE 5 SHOTS.			Left Barrel.		
Aimed Circle. Pellets.	Selected Circle. Pellets.	Penetration. Sheets.	Aimed Circle. Pellets.	Selected Circle. Pellets.	Penetration. Sheets.
115	125	28	107	115	27
REMINGTON GUN, 40YDS.					
116	117	24	84	117	25
112	123	26	92	106	20
108	118	25	101	123	26
112	119	25	92	116	24
FRANCOTTE GUN, 60YDS. AVERAGE.					
53	63	19	51	58	19
REMINGTON GUN, 60YDS.					
58	67	22	63	85	22
46	57	19	43	60	20
53	60	19	31	37	17
52	61	20	45	60	18

The factory charges may be similarly compared with their work in the preceding Remington. The composition of the cartridges filling has already been alluded to; on analysis the charge turned out 89grs. of powder with 575grs. of lead, counting up 529 pellets. How this operated in these two guns may be shown in tabulated form, as follows:

REMINGTON 12-GAUGE, 8 ¹ / ₂ LBS., TEST NOV. 15, 40YDS.			Left Barrel.		
Aimed Circle. Pellets.	Selected Circle. Pellets.	Penetration. Sheets.	Aimed Circle. Pellets.	Selected Circle. Pellets.	Penetration. Sheets.
283	351	12	285	343	11
REMINGTON 12-GAUGE, 7 ¹ / ₂ LBS., TEST DEC. 11, 40YDS.					
106	12	141	13	13	13
252	339	10	258	330	11
322	339	12	240	351	11
302	288	12	300	351	11
308	307	10	295	337	16
259	311	11	253	339	12
REMINGTON 12-GAUGE, 8 ¹ / ₂ LBS., TEST NOV. 15, 60YDS.					
99	154	5	110	132	6
REMINGTON 12-GAUGE, 7 ¹ / ₂ LBS., TEST DEC. 11, 60YDS.					
155	167	5	110	153	5
163	193	6	110	153	6
164	161	6	86	153	6
127	161	4	106	153	6
148	161	5	125	151	5
151	173	5	109	152	6

The tests with the other charges need no special mention. Their performances are fully detailed in the regular schedule report, and in the diagrams of targets. These last as in every case, are taken from the best showing made by each barrel. The point A is the point aimed at and the point C is the center of the selected circle struck. The difference between these two show the variation of the gun, the shot, the shooter, the wind, etc., or all combined. At any rate, it is only fair to the weapon that its best showing for quantity and distribution of shot be given in *fac simile* allowing for the reduction from a 30in. as made, to a 3in. circle as printed.

The formal reports follow for the three varieties of powder used in the gun, the black powder leading, then the wood, then the Schultze, all being used without any cleaning out of the arm:

CLAREMONT, N. J., Dec. 11, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Remington, new model, Damascus barrels. Cost, \$55. No. of gun, 31,167. Weight, 79-16lbs. Length of barrels, 30in. Gauge, 12. Right barrel, full choke. Left barrel, full choke.

Weather—Clear. Direction of wind, 3 o'clock. Force of wind, 14 miles per hour. Thermometer, dry, 48°. Do., wet, 47°. Humidity, 85°. Barometer, 29.8in.

Charge, as given by holder of gun:

BOTH BARRELS.

Shell—U. M. C.

Powder, Brand—Hazard FG.

Powder, Quantity—3¹/₂ drs.

Make—Tatham.

Shot—Quantity—1¹/₂ oz.

Size—No. 8 Chilled.

WESTERN BIG GAME.—The Columbus (Ohio) *Evening Dispatch* says: "Regulations concerning the immediate cessation of the wanton slaughter of game by Indians off their reservations and by white men, whether they are native born, or naturalized citizens of the United States, or whether they are foreigners bent on a hunting expedition, should be made and enforced to the very letter and in the spirit of the law. Every one who reads on the subject will see how acceptable such legislation would be. The present condition of the national game laws, applying to the Rocky Mountain region, is a disgrace to the country. But recently a report was sent out that some Austrian army officers on a hunting trip corralled forty elk in the mountain snow drifts and killed them all. If that was not slaughter from pure wantonness what could it be called? The United States Government should say to such foreigners that they shall hereafter hunt at home or go to Africa to become animal butchers."

BRASS SHELL CLEANING.—New York.—My experience has been not to clean the inside any more than to brush them out once or twice during a season. I find wad over shot holds better without much cleaning. For outside of shell I use very fine emery paper when it is actually necessary to clean them, and that is very seldom. Am I right?—H. C. W.

AMONG THE SQUIRREL BARKERS.
SQUIRREL hunting with the rifle in this part of the country (Ohio and West Va.) seems to be more appreciated than it is in the North, where the shotgun takes precedence. "Barking" a squirrel is directing the aim so that the ball will just clear the animal's belly and lift the bark on which he lies with force enough to kill him. A negro in Ohio was engaged in this sport one day, and in his attempt to shoot a squirrel he killed a boy that was getting water at a spring. The negro was arraigned for murder, and the prospect of his acquittal was very slight. He confessed that he made a shot near the spring, but his gun was pointed upward toward a limb on which the squirrel sat. He was then taken to the spot where he said he had made the shot, and pointed out the limb he had mentioned. Some one suggested that a man take a position by a spring and rifle shots be fired at the limb from the point where the negro said he stood when firing at the squirrel. The suggestion was acted upon, and one of the balls was so deflected as to come so near the man at the spring as to convince them that the negro was innocent. He was therefore acquitted.

A strange case was that in which a hunter, whose gun had failed to discharge while he attempted to shoot a squirrel, was resting his gun on his arm to recap it, when the piece accidentally discharged and killed the squirrel. While Louis Begar, one of Huntington's crack shots, was shooting glass balls at a match, a martin came in range of the ball at the moment he pulled trigger. The ball was shattered and the bird killed.

With a single B. L. gun N. D. Elting shot three quail as follows: The birds had been driven into the cover. As he stood near the edge of the thicket a bird rose before him. As soon as he had fired he put in another cartridge. No sooner was this done than another bird rose at his right which fell near the first bird. He reloaded with haste, when lo! a third bird rose directly behind him. Right about face! Crack! Three birds were killed in at least half a minute without the gunner moving out of his tracks. N. D. E.

WEST VIRGINIA.
[On Friday of last week, at Wellsburg, W. Va., some college students 'went out target shooting back of the college grounds. They used revolvers. Miss Phillips and Mr. Will were the last to shoot, and to frighten her, when Miss Phillips raised her revolver to fire, Will pointed his also, but fired skyward. Both revolvers went off at the same time. Immediately after the reports Miss Phillips turned and said that the ball had struck her. There was a slight wound in her right hand. The hand was bandaged, and then Miss Phillips remarked that she had a pain in the right hip. Sunday morning she expired. The doctors were mystified. Their theory is that when Will fired his pistol into the branches of the tree under which the party were standing the ball struck a branch and glancing off toward the ground, struck Miss Phillips. The bullet, it is supposed, first hit her in the fleshy part of the right hand, which was raised at the time, and passing downward struck her on the hip bone and glanced inward, lodging in the abdomen."]

THE MEGANTIC CLUB DINNER.
A LARGE gathering was present to enjoy the second annual dinner of the Megantic Fish and Game Club, at Young's Hotel, Boston, Tuesday evening, Jan. 28. The invited guests were ex-Gov. John D. Long, Prof. Putnam, Hon. E. R. Lathrop, Hon. E. A. Brackett, Hon. E. M. Saltonstall, Hon. H. O. Stanley, Hon. E. B. Hodge, Hon. Herbert Brainerd, Capt. F. C. Barker, John Nelson, Jr., Montreal Fish and Game Club; E. A. Samuels, Hon. George Duhamel, J. N. Proulx, Parker Nagle and many others.

In his address President Wemyss spoke of the solid basis on which the club had been established and congratulated the members on their grand possessions. D. Heber Bishop, the secretary, read a report, as follows:

"The preserve now comprises 77,000 acres under exclusive lease, which, added to the Kibby and Moose River valleys adjacent—where the club owns camps—makes 132,000 acres, or 192 square miles. Upon the exclusive preserve are 22 lakes and ponds, and five rivers, giving 91 miles of stream fishing. Only two members have as yet visited the whole of the Megantic preserve. The total number of camps upon the preserve, exclusive of the club house headquarters, is 16, six at Chain of Ponds, two in the Kibby and Moose River valleys, one at Arnold Pond, three at Big Northwest Pond and two at Big Island Pond, and these camps are connected by 64 miles of trail.

"During the past season a large cook room has been built at Chain of Ponds and a new camp at Northwest Pond, and 18 miles of trail have been constructed, connecting the club house with the Chain of Ponds and the Seven Ponds via Snow Mountains.

"During the season 30,000 landlocked salmon have been planted. Added to this number the 10,000 planted in Chain of Ponds the year before, makes in all 40,000 already planted. The following record of trout caught last season is compiled from the various fish and game registers in the club house and camps:

	Caught.	Largest.
At club house, taken in Spider Lake and Spider River.....	2,475	6 1/4 lbs.
Chain of Ponds.....	772	2 1/4 lbs.
Seven Ponds.....	234	1 3/4 lbs.
Hatchan Bay and Crosby Pond.....	1,024	1 3/4 lbs.
Arnold Pond.....	67	2 1/2 lbs.
Arnold Bog.....	91	1 3/4 lbs.
Big Northwest.....	3,456	1 3/4 lbs.
Total.....	8,139	

"There were 58 black bass caught in Spider Lake, the largest weighing 4 lbs. Of the trout 4,785 were returned to the lakes.

"There were 145 partridges, 21 ducks, 3 caribou, 3 moose, 7 deer and 2 bears shot and registered on the preserve."

Mr. Samuels, of the Fish and Game Protective Association, said the record of the club spoke for itself, and he was doubly overjoyed to see the number of young men that were interested in sport with rod and gun. The great principle of true sport was not the obtaining of the biggest bag, but killing the game under difficulties. He gave many hints on fishing, which, coming from an old fly-fisherman, were valuable. He wound up with the usual fish story.

E. A. Brackett spoke of the incalculable good done by

the Megantic and its sister organizations in preserving game. The lack of enforcement of the laws in times gone by had depleted the stock of game in the United States. He claimed that 90 per cent. of the violations of the law were committed on Sunday, and by a set of men unworthy of the name of sportsmen.

Stephen O'Meara described the analogy between the sportsman and the newspaper man, in the fact that both pursued game, and referred to the preserve of defaulters in Canada enjoying a close season.

Col. E. B. Hodge, Fish and Game Commissioner of New Hampshire, congratulated the club on the work it was doing, and spoke of his early experience with fish and game. He told of the marvelous quantity of game in the Megantic district in the early days, and the appearance of that section as he remembered it.

Thomas Hall, on behalf of the club, presented the popular game warden of the club, Robert Phillips, with a handsome breechloading gun, with the apt remark: "I hope it will never leave you, though may you often discharge it."

Mr. Phillips returned thanks, at the same time complaining of the "buck fever."

The secretary then read a letter received from the warden a short time since, commenting on the good the club had done the Megantic section. In the missive Mr. Phillips, among other things, said: "My desire and my effort will be to minister to your comfort and enjoyment as best I can with the means you place at my disposal. I, with you all, enjoy the solemn solitude of the forests, the gurgle and ripple of the stream, and the lap and dash of the waves of the lakes on their pebbly shores and beaches. Now, let us all listen to the note of enjoyment as it rings out from the throat of forest songsters, and cast our lines on the bosoms of the lakes, not only for our own pleasure but for the comfort and pleasure of all, that the declaration of all at the close of this year may be, 'Long live the Megantic Club!'"

AFTER-DINNER TOPICS.
THE annual dinner of the Massachusetts Fish and Game Protective Association at Young's Hotel, Boston, last Thursday, was a most enjoyable affair. The members present and their guests numbered 135. President E. A. Samuels presided with customary grace, and after the birch-bark menu had been discussed, in a felicitous address he congratulated the Association on its prosperity and constant growth in membership.

Hon. Henry M. Sprague, president of the Massachusetts Senate, spoke with warm appreciation of the rejuvenating influences of the hills and forests, and lakes and trout streams of New England, and commended the work of the Association which tended to the preservation of the fish and the game as attractions to draw men out into the fields and the forests. President Sprague is a type of a very large class of men who find in a gun or a rod only an excuse for indulging in outdoor wild life, and in the recuperation of body and mind a richer reward than the mere capture of game and fish.

Speaker Wm. E. Barrett, of the House of Representatives, humorously expressed his satisfaction at meeting the Association face to face and studying the high character of its membership. Some years ago, he explained, he had spoken in behalf of a certain game bill before a committee of the Legislature, and had submitted, as a convincing argument in favor of its adoption, that the Association was in favor of it. Whereupon another member, a farmer, rose and said to the committee that he hoped they would give no weight whatever to the fact that the Association favored the bill, because the Association members were only a lot of blanked dudes.

Fish and Game Commissioner Herbert Brainerd, of Vermont, reported well-defined progress in his State, where under his direction special attention is given to enlisting the support and cooperation of farmers and land-owners, by generous distribution of fish fry for their streams. The old brooks are there, he said, the conditions for fish are still favorable, and before he lays down the work the Commissioner hopes to see the waters so well stocked that posterity may find some fish awaiting its rods and flies.

Commissioner E. A. Brackett, of Massachusetts, reported the enforcement of the fishing laws, under the new system of a special State police detail; and urged that the statute regarding Sunday shooting should be so amended as to forbid having a gun in possession in the field on that day. The law now forbids killing game on Sunday, but it is impossible to enforce such a law, for the actual killing cannot be detected.

ST. LOUIS, Mo., Feb. 4.—A higher temperature in this locality has had the effect of thawing the ice on the lakes and sloughs, and the ducks have again made their appearance hereabouts in fair numbers. A gentleman from here bagged thirty-eight, mostly sprigtails, a few days ago at Comstock, Ill., which is about twenty miles north of this city, on the Bee line. The Dardenne and King's Lake clubs report a good flight in at their lakes, and several members are now on the grounds, no doubt having fair shooting. From reports the sprig seems to be in the majority. There are some mallards, but they are not near so plentiful as the sportsmen would wish them to be.—UNSER FRITZ.

ODD SHOTS.—Edgar, Neb., Jan. 29.—In the FOREST AND STREAM of Jan. 23, "T. J. S." tell of shooting three large sandhill cranes at one shot. Though I did not kill birds so large, yet I made a shot last fall while hunting in the mountains which I think equals it. With a .45-90 Winchester rifle I killed three grouse at one shot, shooting the heads off all three of them.—H.

ADIRONDACK DEER.—Holland Patent, Jan. 27.—*Editor Forest and Stream:* In the last issue of your paper (Jan. 23), fifth line from the top of page 7, in my article on "Adirondack Deer," "pot-hunter" should read "still-hunter;" and the thirtieth line of same page "bounding" in November should read "hunting."—A VETERAN.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A MAINE DEER CASE.

ISAAC H. JAMES vs. THOMAS P. WOOD.

Franklin. Opinion December 11, 1889.

Game. Property. Possession. Illegal capture. Game Warden. Damages. R. S., c. 30, § 2.

The releasing of live game, illegally taken, does not interfere with the legal right or title of the person so holding it. Accordingly, it was held, that the defendant, a game warden without process from a proper court, was not liable to the plaintiff for releasing a moose from his possession, it having been captured by the plaintiff, at a time of the year, when it was unlawful to hunt and take moose.

There is no property in wild animals until they have been reduced to possession. Such possession when it does not arise from illegal capture, is a sufficient custody against all persons, except such as are clothed with lawful authority or process to take them.

The defendant, a game warden without legal process having seized a deer in the rightful possession of the plaintiff, claimed to justify his act upon the ground that the animal being in possession in close time was proof of its having been unlawfully taken, and that, by virtue of his office, he was authorized to take and turn the deer loose. The defendant failed to show that it had been captured in violation of law; the plaintiff was, therefore, entitled to recover the value of the deer.

ON MOTION AND EXCEPTIONS.

This was an action of trespass, containing two counts; the first for breaking and entering the plaintiff's close on the sixth day of June, A. D. 1888, and liberating one moose and one deer; and the second for taking and carrying away, on the same day, such moose and deer.

The plea was the general issue, with a brief statement justifying the taking and liberation of such moose and deer as a game warden.

It appeared that the plaintiff had captured the moose in the forest, in March of the same year, and carried it to his home and there retained it in his proper custody for sale. It also appeared that in the same month the plaintiff purchased from some person a deer and likewise retained him, at his home in confinement, until liberated in the following June.

The defendant contended that both animals were voluntarily turned loose by the plaintiff himself.

The presiding justice, among other appropriate instructions not excepted to, charged the jury as follows:

"The defendant says that he went up there and told them that he had come to liberate the animals and commanded them to do it. After the defendant had told the plaintiff that, if the plaintiff himself went and turned the animals loose, it would be his own voluntary act and it would not charge the defendant with being a trespasser. If, on the other hand, the defendant commanded the moose and deer to be set free, then, if the plaintiff himself liberated them, without the consent of the plaintiff, that would be an unlawful act and it would be a trespass. So, after all, you are to say whether or not, when the animals were taken from the animals by the defendant, it was by the plaintiff's consent and wish, or was against his consent and against his wish and was done forcibly. That is, was it done because the plaintiff saw fit to liberate them, or was it done because the defendant saw fit to liberate them? If it was the defendant's act, it was a trespass. If, on the other hand, the plaintiff consented to do it because he was commanded to do it by the defendant, then he has no remedy against the defendant because he was not bound to do it.

So, after all, are you satisfied by a preponderance of the evidence that the defendant took from the plaintiff's possession these animals? If he did so, then the defendant is guilty, under the plaintiff's writ, of forcibly and unlawfully taking these two animals from the plaintiff's possession."

II. "But the defendant says that those animals were wild animals; that they were captured by the plaintiff, or that the moose was captured by the plaintiff at a time of the year when it was unlawful to hunt and take moose. He says, 'The deer being in possession of the plaintiff, he is not liable to the plaintiff for releasing it, and consequently I have a right in the State's behalf to take those animals and turn them loose myself.' He says in his plea that if he did do it he did it by virtue of his authority as game warden. There is no property in wild animals until they have been reduced to possession. If they are unlawfully reduced to possession in violation of the statute, the man who does it is liable for the trespass. If he has no remedy against the defendant, he is entitled to retain them in his custody against every man except such as are clothed with lawful authority to take them from him. Now, the defendant does not pretend that he had any precept from any court to seize, to attach, or to take the animals from the plaintiff's possession, and I instruct you, as matter of law, that he had no such authority. He is not a game warden, and he cannot go and forcibly take those animals from the plaintiff's possession. If the plaintiff be guilty of violating the game law, the courts will punish him for it. If these animals were unlawfully in his possession and subject to seizure, defendant might by process from a proper court take them, but he had no more authority to go there and take the animals from the plaintiff's possession and turn them loose than he would have if he had taken your horses and cows or sheep and doing the same thing with them. The verdict was for the plaintiff for \$125; \$100 for the moose and \$25 for the deer. The defendant excepted to the instructions of the court.

It seems that the bond which the plaintiff claimed to have given, noticed in the opinion, to obtain possession of the moose under the statute, was not provided by the plaintiff and was in the form of a bond for goods released from attachment.

P. A. Sawyer for defendant.

P. H. Stubbs, W. Fred P. Fogg, J. J. Parlin, with them for plaintiff.

The plaintiff had lawful possession of the moose and deer, not having killed or destroyed them in violation of law. R. S., c. 30, § 2.

About April 30, 1888, the moose and deer were seized by one Charles M. Hackett, a game warden, and immediately restored to plaintiff's possession upon his giving bond satisfactory to Hackett.

Whether plaintiff's possession was lawful or not, it was sufficient to enable him to maintain an action of trespass against a mere wrong-doer. Craig v. Gilbreth, 47 Maine, 416; Brown v. Ware, 25 Id. 47.

The last day of May or first of June, 1888, defendant seized and liberated the moose and deer under pretense of authority as a game warden—caused them to be led out and himself removed the halters which confined them and turned them loose.

The defendant did not have any precept, and did not claim to have any.

It is only a precept that appears upon its face, to have been issued by competent authority, for goods just claimed to the officers who execute it. Cullitt v. Richardson, 62 Maine 257.

HASKELL, J. Trespass, c. and d. b. for entering upon the plaintiff's land and liberating a moose and deer there confined. The plaintiff had captured the moose and purchased the deer during close time. The defendant justifies as game warden.

I. The defendant cannot be considered as having seized the game under any provision of statute, inasmuch as he held no precept, either to arrest the defendant, or to seize the game; nor does he pretend that he ever had any intention of procuring one. His testimony, that he acted by the consent of the plaintiff was not believed by the jury; and as the evidence is conflicting upon that point, the court cannot say that the finding of the jury was wrong.

II. No property exists in wild animals so long as they remain in a state of nature; but, when killed or reclaimed, they become property; absolutely, when killed, and qualifiedly, when reclaimed; for, when restored to their natural, wild and ferocious state, the dominion of man over them is at an end, and all property in them is extinguished. 7 Co. 16 Finch 170; Kent Com. part V. c. 35, § 2; Blades v. Higgs, 11 H. L. 621.

Since they are the property, their possession must be prima facie title, as with all other chattels, and sufficient to support an action concerning them against any wrong-doer. Union State Co. v. Tilton, 69 Maine, 244; Adams v. McGlinchey, 69 Maine, 474; Craig v. Gilbreth, 47 Maine, 416; Brown v. Ware, 25 Maine, 41; Burke v. Savage, 13 Allen, 408; Magee v. Scott, 9 Cush. 148; Armory v. Delamirie, 1 Stra. 514.

The burden of proof upon the defendant to justify his act, if he would defeat the action, is upon the plaintiff for its value. He has not justified the taking of the deer; for the plaintiff's possession of it is sufficient evidence of title until impeached. Moreover, the evidence shows that the plaintiff purchased the deer, and fails to show that it has been captured in violation of law. He, therefore, is entitled to recover the value of the deer. The instructions of the presiding justice relating to the deer were correct; and the evidence sustains the verdict for its value.

III. One cannot justify the taking of a chattel to which he has no title by showing that the person, from whom he took it, is not the owner. Fiske v. Small, 25 Maine, 453. But, if the subject of the appropriation had not become property at all, then the loss of it occasioned no damage. A poacher who has killed game and thereby made it absolutely property, takes no title to it as against

the owner of the soil whose property it would have been, had he killed it. Blades v. Higgs, supra.

The court has said in substance that the law protects the title or claim of no one that arises from a violation of law. It is held that no action can be maintained upon a contract executed on Sunday; that the price of chattels sold in violation of law can not be recovered, and that no action can be maintained on a note given for goods bought to be peddled contrary to law; that no action for a tort arising from transactions done by the plaintiff in violation of the Sunday laws can be maintained. The court says: "The law distinguishes between rights acquired in conformity with and arising under its provisions, and claims originating in their clear and palpable violation; that it will not enforce claims made in contravention of its mandates, nor protect property held against and being used for the deliberate purpose of disobeying its enactments. A different course would be suicidal. The law cannot lend aid to the destruction of its own authority and to the disobedience of its own commands." Lord v. Chadbourne, 42 Maine, 429, 430.

Damages were claimed for preventing the plaintiffs from doing an illegal act, which, if done, would have been criminally punishable, and the court says: "It is difficult to perceive how the prevention of an offense constitutes a valid cause of action on the part of the offender, who is interferred with in the commission of his intended crime. It is still more difficult to understand how many damages can have been sustained by reason of such interference." Railroad Co. v. Smith, 49 Maine, 9.

Suppose a hunter has his rifle leveled at game in close time, and some one shoves it aside that the game is missed, shall the hunter have damages? He has only been prevented from continuing a criminal act.

Suppose lobsters illegally taken are thrown overboard alive, is he who does it a trespasser? Shall the taker of them have damages for his illegal catch? Or suppose one lands a salmon in violation of law, and a by-stander, while it is yet alive, throws it back in the water, shall the fisherman have the value of the salmon that the law forbids his having at all?

When game is killed, it absolutely becomes property, but when taken alive, only conditionally so far, when released, property in it is gone. So long, then, as the possession of live game is illegal, qualified property in it is illegal also; and the releasing of such game interferes with no legal right or title of the person illegally holding it captive.

The plaintiff's possession of the moose was *prima facie* title; but, when it appears that his possession was gained in violation of law, it cannot be that the same law will say that his illegal act gave him a legal title. And if he had no legal title to the moose, he suffered no damages from its being set loose.

The plaintiff's illegal act prevented the moose from becoming property at all. Not so with the illegal act of a thief, who may have stolen a coat, for the coat was already property, and had an owner, who alone could lawfully take it from the thief. The public, whose service the defendant was, stands in the place of the owner of the coat; care should be taken, therefore, not to confound the doctrine of this case with the well settled rule of law, that the possession of property is a good title against everybody but the true owner.

IV. R. S., c. 30, § 9, provides: "No person shall (during close time) in any manner hunt, kill or destroy any moose under * * * of \$100. The plaintiff followed the moose in the forest until it became snow-bound, and then, by the use of a rope, tied it to a tree, and finally bound it upon a sled and hauled it some fifteen miles to his home, where he confined it until it was released by defendant. Without doubt this conduct resulting in capture was in violation of the statute. The plaintiff did not destroy or kill the animal, but he did hunt and thereby capture it.

The purpose and scope of the statute is to give moose absolute immunity from the vexations of men during a portion of each year, deemed by the Legislature necessary for their preservation and protection, and to prevent their decimation and extinction. The defendant's act, therefore was meritorious and in aid of the purpose of the statute; and while his authority gave him no especial protection, still duty as an officer called him to interfere and prevent a continued violation of the statute.

The contention that the game had been bonded by the plaintiff is not sustained. No bond, signed and conditioned as provided by statute was ever given. It was so irregular that it is absolutely void.

Motion and exceptions sustained, unless plaintiff remits \$100.

Peters, C. J., Walton, Virgin, Emery and Foster, J. J., concurred.

THE NEW YORK CODIFICATION BILL.

AN Act to provide for the revision and codification of the laws for the protection and preservation of fish and shellfish and of birds and quadrupeds.

SECTION 1. A commission to revise and codify the laws of this State for the protection and preservation of fish and shellfish and of birds and quadrupeds is hereby established, as follows: The Attorney-General shall select from among his deputy attorneys-general one member, the Commissioners of Fisheries shall select from among their number one, and the New York Society for the Protection of Game shall select from their membership one; and the three persons so selected shall constitute the said commission. Certificates of their appointment shall be filed in the office of the Secretary of State and of the Comptroller. The members of the said commission shall meet at the Capitol in the city of Albany, at such time as shall be appointed by the Attorney-General, and shall organize by the appointment of one of their number as chairman and another as secretary, and shall proceed to revise and codify the laws of this State for the protection and preservation of fish and shellfish and of birds and quadrupeds, and report such codification to the Legislature on or before the 15th day of January, 1891.

SEC. 2. The said commission may grant hearings and take testimony at such times and places as they shall appoint, with reference to the subject committed to them, and shall have authority to administer oaths to witnesses and to employ such clerical and stenographic assistance as they actually need in the prosecution and completion of their work.

SEC. 3. Each member of the said commission shall be entitled to compensation at the rate of \$3 for each day's actual and necessary services, and all the members of the commission shall be allowed their actual expenses of travel and subsistence while engaged in such service. The commission shall be allowed its actual expenses, and the salaries of the clerical and stenographic assistants, by the commission or its individual members shall be subject to the audit of the Comptroller.

SEC. 4. The sum of \$5,000, or so much thereof as shall be necessary, is hereby appropriated out of any money in the treasury not otherwise appropriated, for the purpose of this act.

SEC. 5. This act shall take effect immediately.

Camp-Fire Flickerings.

"That reminds me,"

298.

ALL good anglers live to be old—barring accidents. Most of those who have reached a good old age have felt called upon to visit that very useful individual who generally has a nicely appointed apartment, one of the principal articles of furniture being a lean-back high chair. When you visit him you take a seat, with fear and trembling, in the aforesaid chair, shut your eyes, swear inwardly, if not outwardly, and await the inevitable pull. Well, General Bragg, of the "Iron Brigade," had been in the hands of one of the profession and was consequently sans teeth, but not—as the sequel will show—sans sand. He was away up the Little Sioux River, in Bayfield county, Wis., trouting. The undergrowth near the water and the limbs of trees overhanging the stream made fly-casting impossible, and the General had been using fins as bait. Unfortunately he lost his knife just as he lost the last fin from his hook. There he was, eighty miles from a house in one direction, and four in another, with nothing to cut bait and not a tooth in his head. But he had not gone through the war without a good deal of nerve, and some of it was left; he set too and with his gums gnawed the dorsal fin off a trout and went on down the stream. But he took excellent care of that fin.

JAP.

Sea and River Fishing.

ANGLING NOTES.

IF the pleasure of angling consisted only in taking fish, the majority of fishermen would soon tire of it, even if all the fish were salmon; but fortunately there is a great deal more in angling than the mere fact of killing so many pounds of the finny tribe, otherwise it would be far cheaper and easier to go to the nearest market and buy them.

So much has been said and written from the time of Walton to the present day in praise of the charms of angling that it seems superfluous to dwell on that subject, yet true lovers of the "gentle art" never tire of it. Such of our readers who have enjoyed reading Dawson's "Pleasures of Angling," Prime's "I Go a Fishing," or Dean Sage's noble book on the salmon, can understand the underlying current of sentiment that stirs the angler's soul when there is any talk of trout brooks or salmon rivers.

There is a Free Masonry about angling that will make the greatest strangers feel like brothers within fifteen minutes after the subject has been introduced, and even the possession of a bundle of rods when traveling seems to cause railroad and steamboat men to thaw out toward the owner and raise him above the common herd in their estimation.

One of the greatest charms of angling is the pleasure we take in looking forward to our trips. As the season advances and the first signs of spring appear, we begin our preparations for excursions that have been planned and talked over for weeks and months. Our tackle is all overhauled, rods varnished, reels oiled and fly-books refilled; and when the apple blossoms are out we feel we must go and wet a line, though our good sense tells us it is yet two weeks too early. But the fever is upon us and nothing but wading a cold trout brook will bring relief. And what a pleasure it is after the weary months of waiting to stand at last on the banks of a favorite trout stream, threading the line eagerly through the rings of our trusty little rod, while overhead the woodrobin is singing the same charming song he sang last spring, and the sunbeams filter through the delicate green foliage, flecking the rushing water with gold.

And then again, when the season is over and our rods laid away, what stories we have to tell when kindred spirits meet to smoke and chat over the past. How every little incident is dwelled upon and every big fish retaken. These pleasures are not for the fish killer, plague take them. Not for the man who brags about catching one hundred and so and so many fingerlings in two hours and ten minutes, and has not time to stop and enjoy the purple mountains or the deep blue sky, nor even take time for lunch. And speaking of lunch, the angler who has not tried Uncle Thad Norris's trout roast on the stream has missed one of the greatest charms of angling.

ON THE NORTH SHORE.—II.

A THREE WEEKS' TROUTING TRIP ON THE NORTH SHORE OF LAKE SUPERIOR.

WE had breakfast quite early in the morning and were soon aboard and plying the oars, with the wind still dead ahead. It took us till noon to reach Gros Cap, and by this time the wind was so strong that we were compelled to land at a pier at the foot of a towering hill just one mile from Gros Cap Island. Our boatmen were somewhat fatigued by the long pull, and were wishing deep down in their hearts that a favorable wind might come to their relief. We soon had the pot boiling and the pans steaming with our choicest meats and vegetables, and in less than half an hour sat down to a meal that we relished better than any *menu* Delmonico might have prepared. The cooking was really excellent, but the appetite was what made everything so very relishable. Under such a favorable condition, criticism of the *cuisine* was out of the question. It is only when the palate fails that you are in a grumbling humor with the daintily prepared viands. Joe was as valuable to us as would have been Vanderbilt's ten thousand dollar imported chef. At this place the lake enlarges rather suddenly, so that Gros Cap and Point Iroquois—the pillars of Hercules, as some one calls them—are six or seven miles apart. This is really the true entrance to the Great Lake, though some geographer has thought proper to call all the water from here to Coppermine Point on the Canadian side and White Fish Point on the American, White Fish Bay. The rocky point, which here rises some hundreds of feet in height, is covered near the shore line with vegetation, while as it ascends forests of white pine, birch and aspen prevail, until the top of the highland is reached, and then the evergreen is visible. Almost the entire shore of the north side of this great reservoir of pure water is of a bold and rocky nature, but occasionally a line of the smoothest beach intervenes, as if for the very purpose of affording protection to the dusky voyager in his birchen canoe. The bluffs are generally of a green sandstone, and frequently tower to the height of 500ft., like massive bulwarks, which seem to have battled with the elements for ages. Seen in the soft silvery light of a serene sky, those broad highland regions, dark with aspiring pines and firs, present a picture of rare and impressive beauty. "Hills peep o'er hills, and Alps on Alps arise."

It was simply impossible to do any angling from the boat at this locality with such a strong wind as was now prevailing, nor could rock fishing be indulged in with any degree of comfort or safety, as the rocks were entirely too sharp an angle for a secure foothold. Our boatmen, however, thought they were sure-footed enough to stand and fish from the declivities of the rocks, so we let them have our rods, and away they went over the steep hill in search of some rocks they thought they could safely cast from. Ned and I got down to our usual amusement of crib after they had departed, but the unruly winds tossed our cards so frequently from the table that we were obliged to discontinue the game.

We then ascended the high and rugged hill and took in the beautiful panorama presented of lake, shore and island. The sun was shining brightly, bathing Gros Cap Island, which lay almost at our very feet, in a robe of

purple, gold and crimson, while the fierce waves, which were beating against its rocky shore, were sending columns of silver spray up and over the stunted and foliaged trees that seemed to spring from the flint rocks that inclosed them. Along the main line of the shore the tumultuous waters could plainly be seen battling with spiteful fury the jutting rocks, deep depressions and debris of shattered stone, while in the distance a vessel with reefed sail was scudding before the wind, and anon, a steamer headed for the deep water beyond came in sight perfectly indifferent to the angry waves. The scene was truly picturesque, reminding one of the well known lines of the poet—

"Oh, who that has an eye to see,
A heart to feel, a tongue to bless,
Can ever undelighted be
With Nature's magic loveliness?"

In a couple of hours our boatmen arrived with a string of three trout, one of which weighed about a pound and a half. A discussion now ensued relative to making Gros Cap Island at once. Our men contended that it was entirely too rough for the trip, but on our insisting on going they reluctantly got the boat ready and we started. As soon as we had gone beyond the lee in which we had been sheltered we realized that it was quite "lumpy," and if we could with safety have turned the boat around would have returned. The half-breeds stuck nobly to the oars and in about an hour we arrived safely at our destination, glad that we had got through without taking much water. It was a hard pull against a dead ahead wind and a very rough sea, and so slow at times was our progress that it seemed we made no headway. Ned didn't sing much on this little trip, as he was too interested in watching the big waves that threatened to give us a good soaking. He was jolly though after he had reached *terra firma* and made the welkin ring with his musical notes. Here was a lovely camping ground, in fact, one of the very best on the lake. It is frequently resorted to by the officers of the fort at the "Soo." It was formerly excellent trouting waters, but its close proximity to civilization has resulted in its being fished to death. We, however, determined to give it a trial in the morning, weather permitting. We were gratified in this respect, for the day opened auspiciously, a bright sun and a very gentle breeze prevailing when we got aboard the boat. Ned affixed a brown hackle for his point fly and a silver-fairy as his dropper, or rather hand fly. I was tempted to try a silver-doctor for my point and a scarlet-bis for a hand fly.

We did some careful casting around a small cluster of rocks just ahead of the island, and after a few casts Ned had a splendid rise and I think had the "buck fever," so to speak, when it came to striking. He was evidently too slow, and the agile trout, which was a good sized one, slapped its tail in his face with an impertinence that confused the angler.

"Did you see that?" he queried.

"Of course."

"He was a beauty, you bet."

"Why didn't you strike?"

"I did."

"Too slow," says Joe.

This was an unkind reflection and Ned tried hard to convince us that he was on time with Mr. Trout, but we were credulous and therefore he obtained no converts to his striking ideas.

He tried a long time to lure him to the top again, but the wary trout had the anatomy of that fly down to a fine point. He saw its counterfeit presentment and shook his golden sides with laughter, as he observed from his fissured lair the constant drop and quiver of the artifice. It was useless and so we started for the rock-bound shore which had everything to recommend it as the haunt of this lovely fish. A short pull brought us to capital-looking grounds, where was constantly developing darkened water, indicative of deep fissures, and where the glittering trout, if any there be, were sure to abide. I whipped faithfully for a long time and finally got a rise and hung the inquisitive trout. He started like the lightning's flash when he felt the prick of the hook, with a quivering bound for the shattered rocks near the shore, but I soon guided him from that dangerous locality and made him fight in deeper water:

"Mark the gleam of his side
As he shoots through the tide—
Are the dyes of the dolphin more fair?
Fatigue now begins
For his quivering fins
On the shallows are spread in despair."

The battle was soon over and his enameled form enshrouded in the net and then deftly boated. He was only a two-pounder, but he made a tiger-like fight while his strength lasted.

Ned had grown tired of casting by this time and handed his rod to Joe, who soon hung a goodly trout. He immediately returned the rod to Ned and let him do the artistic work in bringing him to the net. It was a beautiful play for ten minutes or less and then the stricken fish gave up in despair, a willing captive to the duplicity of man. His weight was over three pounds. The gentle wind as well as the gentle ripple was fast dying out and we concluded as the sun was coming down quite fiercely and a rise hard to obtain, to return and enjoy the pleasures of the camp.

We had established a rule not to catch any more fish than we desired and endeavored to live up to it, though there are times when the sport is so fast and furious that a sense of forgetfulness ensues. Ned was a great stickler for flies in season, and like Sir Izaak, believed that every change of weather necessitated a change of flies. He spoke very learnedly of all kinds of feathery lures, much of which information he brought from the "ould country." His talk to me was like pouring water on a duck's back, for it was not long before I made him a convert through practice to many of my ideas on the subject. The success in taking trout is evidently not due so much to the seasonableness of color and perfection of the imitation fly as to a subtle manipulation of the rod, the delivery of the fly, and peculiar delicacy of drawing across the surface of the waters. This cannot be learned but is a gift, and its possessor can emancipate himself from the fetich which hangs to many of the marvelous compositions which are pronounced to be the most killing. We remained in camp till about four o'clock and then took another turn for the golden beauties over the same grounds we had fished in the morning. We caught three more, running in weight

from 2½ to 3½ lbs., and were fully satisfied with the day's sport. When returning to camp I noticed that the boat leaked badly and that it was getting too full for comfort, and as I was near the bailing place I went into active service with the tin can that we had brought along for this purpose. I found the water rapidly gaining, and soon it came into the boat in a large stream. I mentioned the circumstance, when Joe at once declared the plug must be out. It so proved, but the plug could not be found, as I had doubtless bailed it out. A few handkerchiefs were rammed into the hole and the leak partially stopped. It was a trifling incident, but it was exciting while it lasted, and created much merriment. Gros Cap Island was indeed such a lovely camping place that we concluded to remain there another day.

Our tents were embowered in a forest of balsam, fir, poplar, birch and pine, with clustering gorseberry bushes and an abundance of the beautiful dark spur flowers which seem to dominate in this region. Here we idled the spare hours away in viewing the endless lines of receding shore until they were lost in bright sunlight; in listening to the rhythm of the glittering waves; in watching the gulls "all white in the sun," indolently wheel through the sky; in observing the soft clouds as they quietly floated across the arched dome; in drinking the soothing air that came laden with the perfume of the invigorating balsam and fir, until we are thinking of what mariners tell of the far away spice islands in the resplendent tropics. It was indeed an ideal spot, and all that a lover of nature and solitude could require. Ned would occasionally break in on the reverie with his cheery songs, and one which he gave with the air of a professional was so odd and amusing in its measured rhyme that I reproduce it. He calls it "The Loves of the Shell Fishes," and it runs thus:

"A crab there was, a dashing young blade,
And he was in love with a lobster maid;
But the lobster maid was a terrible prude,
And she told her mamma that the crab was rude.

"Said her dear mamma, 'Pray, what did he do?
Did he give you a kiss or a billet-doux?'
'Oh, no,' says she, with a toss of her head,
'But he joggles me so; 'tis so shocking ill bred.

"I vow if he still persists in his suit,
I'll box the ears of the impudent brute;
But an oyster dandy saw the maid,
'Oh, split me!' says he, 'if I'm afraid."

So tight he braced his corset shell,
And strutted away with a Broadway swell,
And he told the maid as he twirled his seal,
He'd die at her feet if a dandy could kneel.

"Oh, sir," said she, "since that can't be,
You know you can hang yourself on a tree;'
And the oyster raved, 'But no,' said she,
'You never shall die of scorn for me.'

"So she gave him her ruby red hand to kiss,
And he felt like a fish in a sea of bliss;
But the crab he cocked his hat in their faces,
And challenged the oyster to fight at two paces.

"The ground was mark'd and they took their stand,
And a barnacle gave the word of command;
They took their aim and the oyster fell,
But alas! the worst of the tale's to tell.

"A giddy young muscle just passed that way,
And saw the end of the fatal fray;
He declared the lobster's love was sham,
For he'd just seen her married that night to a clam."

Our few hours fishing in the morning and afternoon resulted in the capture of five trout ranging from one to three pounds. We had not yet arrived at good fishing grounds, as I have heretofore stated that this place was spoiled for the angler by its being too close to the "Soo" and too frequently visited.

The next morning we were greeted with a sky of the most delicate blue, with little crumpled clouds of pale-colored satin, a scene bright and warm, and a lake almost as smooth as a mirror. We broke camp immediately after breakfast, and the heat was such as to induce our boatmen to strip to the waist that they might make the pleasing music with the dipping oar. It was a rough and rugged wood-crowned shore we passed. Nature's stern agony has assuredly written itself on the furrowed brows of these gloomy stones, while the rift and splintered cliffs which frown down upon you and which are covered with snow and ice the greater part of the year, stand the dreamy images of patient sorrow. The delicate mosses creep o'er their grim faces as if to hide their aged deformity, while a tiny wild flower at rare intervals creeps through a rugged crevice glittering in the most delicate hues.

Our boatmen wondered at our admiration of this grand coast, for to them it was only a reminder of the many dangers they had here passed when closely driven by stormy weather in their frail boats. It was now a practical demonstration of hard work, and so the grandeur and solemn beauty which so enraptured us was a thing unknown to them. We were fast getting into nature's haunts and solitude. Here and for hundreds of miles the woods are silent and as if deserted, and one may walk for hours without hearing a sound, and when he does it is of a wild and lonely character. You are sometimes greeted with the plaintive cry of a loon, or the Canada jay, the startling rattle of the Arctic woodpecker, or the sweet, solemn note of the white-throated sparrow. Occasionally you come upon a silent, solitary pigeon sitting upon a dead bow, or a little troop of gold crests and chickadees with their cousins of Hudson's Bay, who come duffing through the treetops. It is like being transported to the early ages of the earth, when the mosses and ferns had just begun to cover the primeval rock, and the animals as yet ventured timidly forth into the new world.

About 11 o'clock we reached Goulais Bay Point. It was, I believe, nine miles across, and had then to be made with the oars, as there was not a breath of air stirring. We concluded to cross over and make camp on the opposite side, having been deceitfully persuaded to this arrangement by the crafty Joe, which, as the sequel shows, was a bad one for us. As the bay was great for lake trout, Ned suggested that a troll, as we went along, might afford some sport. I put one over, and had not gone far before I found it a drag on the boat, and asked Joe if it would not aid him if I took it out. He insolently replied

that I could do as I d—d pleased. This insulting answer made me exceedingly indignant, and before I had time to reply to it Ned suggested that if that was a sample of his good faith to us, it would be best to return, as he didn't feel like tolerating such conduct. On explanation being made, the churlish savage stated that I had called him a liar, because I differed from him as to the distance across the bay. Exceedingly sensitive, indeed, was this copper-colored boatman. This from one who did all he could to deceive us in regard to the trouting in Goulais Bay, and simply because he desired to visit his family, who resided there at the Catholic Mission, and probably to take advantage of the location in order to make a foray upon our provisions. This is too common a practice, as others to their sorrow can attest. After the affront had been condoned, the oars were again taken up and we once more started to cross the bay.

Precisely at meridian Joe felt a gnawing at his vitals, as he always did at that time, and asked for some lunch. Pete, who was his helper, never had anything to say on these occasions, leaving everything for his insolent tawny boss to arrange. What designs he conveyed in the Indian dialect, which was the language they always conversed in with one another, we never knew, as our education had been somewhat neglected in this respect. The lunch, which was simply composed of boiled eggs, crackers and sardines, was hastily devoured and we again started, arriving at our camping place for the night about two hours after lunch. Here we were met on the beach by a few half-breeds and Indians who lived here, and a lot of half-starved mangy curs, ever ready to make a stealthy raid when chances offered upon our provisions.

Ned was completely discouraged on landing, and declared that that insolent half-breed had badly fooled us, and that some of our provisions would assuredly be spirited away in the night. I endeavored to console him with the idea that we were here for only one night, and would be off early in the morning. This did not satisfy him, for he was fearful of a high wind arising during the night that might keep us weather-bound for several days. He was completely demoralized and would not be consoled, and stated that it was always bad policy to camp near Indians.

Our tents were pitched amid a bower of wild snowball bushes, which were profusely loaded with the simple and lovely flower. It was a splendid place, and the bay with its gravelly beach exceedingly beautiful, but there were no speckled beauties here to delight the angler. I soon got Ned down to our favorite game, and we merrily rattled off the fifteen two's and runs with unexampled facility. He was still depressed, and finally declared in one of his agonizing moods that the only good Indian was a dead one. I said amen to that with vigorous emphasis. There were so many mangy curs here that looked more like half-starved wolves than aught else, that we thought it prudent to keep our boat with the provisions anchored in the bay. This was accordingly done. After supper we strayed a short distance from camp, and on returning found that the sneaking curs had really bitten off the tin lid of the lard bucket, and were lapping up the greasy substance in a rapid manner. They were furiously routed and the pail hung on a birchen limb well out of their reach.

CINCINNATI.

PENNSYLVANIA BLACK BASS FISHING

WE have been most successful in catching black bass a few days after a heavy rain, when the water is falling and far from being clear from the muddiness of showers. The wind must be from the south or southwest, the sky very clear and the sun very hot. With such a state of the weather bass can be taken all day long. They are then found feeding along grass patches or around rocks where there is a strong current, or a good fall of water over a lot of rocks. When we wish to catch a large number we use a 9oz. rod, a very light line with a 3ft. gut leader and a No. 20 Sproat hook. Then, putting on a 2½ in. shiner or minnow, we make a cast just over the current and let our minnow swing around below and gently and slowly draw the line backward, generally finding our efforts rewarded with a tug.

Such fishing brings us bass running from 10 to 14 in. all day long unless the weather should change. When larger bass are wanted we use a larger minnow, and put a split buckshot on the leader about 2ft. from the hook. The same cast is made, but in deeper water. The minnow is allowed to sink to the bottom from the weight of the sinker. Here it is kept a few seconds, when the line is drawn backward about a yard and left to sink again; and so on until another cast is made in the same or some other direction. By this method bass from 12 to 20 in. are taken.

Our largest strings of black bass are caught in Swatara Creek, which empties into the Susquehanna River at Middletown, and at such favorite places as Fisher's Bridge, Fry's Dam, Big Spring and the Saddle Rock on this stream. These points can be reached by a railroad which runs along the creek for at least seven miles.

For great numbers of small bass, better known as "flyers," we generally fish at Bainbridge, in the riffles below the town, or opposite the island in the grass patches. At Collins's Station, up the Susquehanna, below, in or at the head of Conewago Falls, when the water is still a little high and not yet free from muddiness, we have been successful in catching them with the helgramite, fished in the same style as the minnow. On cloudy days flies are generally used. They must be gaudy and not of a large pattern. By skimming or whipping them over the top of the water goodly numbers of bass are taken.

When the fish cannot be captured any other way and it is desirable to take a few of the larger ones, it is customary to use larger flies, enter a boat and troll over their favorite feeding grounds. If the water is deep, and not too cloudy, we troll deeper down and more slowly, and are usually rewarded for our trouble.

When the water is very low and very clear, so clear that you can see the bottom of the stream, it is very difficult to take bass; they seem to move out into the middle of the stream and lie under grass or logs or rocks, and are really hard to catch. Outlining is a favorite way of taking bass in the river, and it secures them in large numbers; but I have never approved of catching them in any way except with the rod and line.

TROUT IN MEXICO.

Editor Forest and Stream:

After several years' absence in Mexico it will now be permitted me to again receive my favorite paper regularly, and I wish to ask of you or your readers if genuine trout are found in any part of our sister republic.

I may as well state where my investigations have extended and in what streams of the Sierra Madre failure attended my efforts.

First in order was the headwaters of the San Pedro, a tributary of the Gila, and rising on Mexican territory and passing into Arizona, some thirty miles south of Tombstone. This was prior to the present occupancy of the country with cattle, and the stream was then clear and bright and well stocked with beaver, and I caught trout of course, "Gila trout," a white-fleshed bony mongrel, neither sucker nor shad.

Some forty miles south rises the Sonora River, and in the Ajos Mountains to the east was found a beautiful mountain stream, a highwater tributary of the San Pedro, and while they both contain fish, none of them could with propriety be called trout.

Near the corner of New Mexico and Arizona the San Bernardino rises on American territory, receiving several tributaries of clear cold water before joining the Bavispe, one of the main tributaries of the Yaqui. Repeated trials of these waters, as well as other head streams of the Yaqui, in western Chihuahua, never resulted in anything more satisfactory than the Gila trout of doubtful pedigree, which, while rising well to the fly or grasshoppers, was not in reality as palatable as catfish caught in this same San Bernardino in its upper waters, where the banks appear to be a variety of moss and rushes, the evaporation from which is so great that the water of the stream appears as cold as ice-water.

In western Chihuahua I have tested the mountain streams forming the headwaters of the rivers flowing into the lagunas Guzman and Sta. Maria and also of the rivers Coucho and Mayo, the latter a stream of the western slope.

In Durango I passed several months on the Santiago and Sta. Catarina, head streams of the river Nazos, finding fish of any kind very scarce, none of them to be classed as trout.

Passing the continental divide the heads of the Rio de las Vueltas are found; bright, rapid mountain streams, with deep, dark pools, shaded by forests of pine and fabled with stories of trout; but the fish are not there, and disappointment again awaited me.

In this practically unknown country, where a white man is such a curiosity as to draw a crowd at every ranch or hacienda, and abounding in never-failing streams of pure cold water, a fish diet is nearly unknown on account of scarcity; yet nearly every stream on the gravelly shallows will be found to have, at short distances apart, small dams of rock and boulders, between which the impounded fish are chased down and caught by hand after slight rises in the streams. These dams occur at places many leagues distant from habitations, but generally near some trail, and cannot with propriety be considered the work of Lieut. Schwatka's Zunis or cliff-dwellers, although not out of the district he describes as their place of residence.

In a word, for grand scenery of mountain and forest, for hunting deer, bear and turkey, for delightful climate and temperature cool and bracing, no place will compare with the Sierra Madre of Chihuahua and Durango; but the fishing rod can properly be omitted from the outfit.

J. V. B.

[Prof. E. D. Cope, of the University of Pennsylvania, Philadelphia, Pa., is authority for the record of the occurrence of a black spotted trout in streams of the Sierra Madre, Mexico, at an elevation between 8,000 and 9,000 ft., in the southern part of Chihuahua, near the boundaries of Durango and Cinaboa. The species, he says, resembles the red-throated trout (*Salmo purpuratus*). Young specimens were obtained by Professor Lupton. It is a pity if this trout cannot be readily found, for it is the most southerly of all the species of the world, and has been very briefly described.]

THE TARPUM ON THE TABLE.

A WEST VIRGINIA correspondent inquires about the edible qualities of the tarpum. There is great diversity of opinion. Silas Stearns, who formerly lived at Pensacola, was informed that it is palatable and well-flavored. Other persons have pronounced it about equal to sole leather. Not having eaten it, we do not know its qualities, but have no doubt that the statement of Mr. Stearns can be fully established. Perhaps the chief reason for the absence of the tarpum from the average market is to be found in the dread which the fishermen have of the frantic rushes of this fish when surrounded by a net. But whether good to eat or not, the tarpum will always be one of the magnificent trophies of the angler's skill: its beauty and wild love of liberty will sustain its place in the front rank of game fishes.

Editor Forest and Stream:

In reference to the edible qualities of the tarpon I may say that it is thought by some to be first-rate and by others worthless, showing how taste may be a mere matter of opinion. Personally, I do not admire the tarpon for food, though it is a fair table fish. Its flesh is pinkish, and resembles the color of young veal. To me it lacks flavor, and while "filling" is not particularly desirable. Perhaps this is owing to the fact that there are scores of better-flavored fishes in the same waters. If I had no other fish, tarpon would "fill the bill" pretty well.

The natives of Florida prefer the mullet, sheephead, redfish, salt water trout, groupers and snappers to the tarpon as a food-fish, and so do I. On the whole, it may be said to be "fair to middling" in edible qualities.

CINCINNATI, Ohio.

J. A. HENSHALL.

Editor Forest and Stream:

It seems odd to myself that I cannot answer with precision "whether the tarpon is a good edible fish or not." He is certainly an edible fish, but I have difficulty in assigning him his proper place and grade of excellence.

One reason is that the fish is a prize, and nearly every specimen captured finds its way to the taxidermist to be shipped North, and very few are spared for the table. My recollection is that John Smith told me that last season he prepared for mounting and expressed forty-two fish, which would account for nearly the whole catch at St. James.

I remember eating tarpon steaks twice. The first time was by invitation of Mr. W. H. Wood, at Punta Rassa, in 1887, and the collops were cut from a full-grown fish of 186 lbs., taken (in my presence) the day before. My recollection is that, notwithstanding inferior cookery, the flesh was rich and savory, dark colored, and more like venison than fish. It was not flaky, as most fish tissue is, but solid, like flesh. It would take precedence where drum or sturgeon are liked, but would be passed by where jewfish or grouper could be obtained—not to mention shad, pompano or Spanish mackerel. It was on the bill of fare at St. James at least once last winter, and I tried it, but don't recall my impressions.

Dr. Kenworthy says the flesh of tarpon reminds him of spring chicken. Beyond the impression that it is more like flesh than fish, my recollection does not support him. I am certain, however, that it is more agreeable to the palate than many of the staple fish of our Northern waters.

F. S. J. C.

A NORTH CAROLINA BLACK BASS POND

TO master the mysteries of fly-fishing has long been one of my ambitions, but after elaborate preparation and no little experimental trial in casting I am almost disposed to confess, as Mr. Webster did of dancing, that I have not the capacity to acquire it. One consolation, however, is that my breed of black bass have such a partiality for the roach and other small fry that they hardly deign to notice the most killing fly. That Nestor of the rod, General Hampton, after giving them an honest trial with the last, fell back on the old-fashioned pre-Adamite live bait with better success, declaring that the bass of my pond need educating in that line no less than I do myself. Still I manage to kill occasionally a four or five-pounder with the illusive lure. With the inelegant antique minnow, however, my luck is usually all that could be desired, the catch sometimes amounting to 20 or 30 lbs. in two or three hours of an afternoon. And, ye gods and little fishes, what sport it is, even the old style!

I do not yet, however, despair entirely of the higher branches of this most captivating of all sports. All who have seen it say that I have the finest pond for its size, about sixty acres, that they ever dropped a line in. It is fed by thousands of little springlets, all within a mile of the dam, is always clear and has a flow of about 2,000 gallons a minute. It ranges in depth from 4 to 10 ft. The chief difficulty is with aquatic plants, which are conducive to the development of the young fish, but interfere materially with the pleasure of the angler. "No rose without its thorn."

When I put in 365 bass, large and small-mouthed, some eight or nine years ago, the pond contained quantities of perch, pike and cat; but all except the last seem to have mysteriously disappeared since the coming of age of that fish, which, according to Genio Scott, I believe, is for his inches and ounces the king of fish. In fact they have been taken here with good-sized mud turtles in their stomachs. Even the pike or jack, which I have known to reach about 2 ft. in length, rarely show themselves now, leaving one in doubt as to what has become of them.

Of all the finny tribe give me the small-mouth black bass, not only for the fun of catching, but the satisfaction also of eating.

W. J. GREEN.

FAYETTEVILLE, N. C.

HEAVY BASS CASTING.

Editor Forest and Stream:

Would not the following proposition relating to the "Heavy Bass Casting" class at the fly-casting tournament be one that the National Rod and Reel Association should be asked to consider? By printing it, however, the views of others could soon be ascertained, and in this manner the needed reform would possibly be more quickly inaugurated.

Bass fishing in the surf is now so much more general than in the days when Cuttyhunk and the neighboring islands were at their height, that the National Rod and Reel Association should recognize the change that has taken place and act a little more in accordance when making the rules for the heavy casting class at the next tournament. I would suggest that by increasing the limit of weight of sinker to 3 oz. (the one mostly in use in the vicinity of New York) the entries would be increased and an opportunity thus be given to those who heretofore have stayed out. Now, any one who from circumstances is obliged to use a heavier weight in casting than 2 oz. is placed at a great disadvantage—he must procure special tackle and then become well used to the handling of it before he can hope to compete with those to whom the lighter sinker is not a novelty. And how few there are who would care to go to the trouble of training just for the sake of casting at a tournament.

If this does not find favor in the eyes of the gentlemen of the N. R. & R. A., then let them call the present class "Cuttyhunk style," or whatever else they please, but don't call it a bass-casting class when the greater number of would-be participants are debarred by the rules from participating upon an equitable basis.

Perhaps some of your many readers will give their views also, and thus help along a much-needed reform.

BIG REEL.

EAST ORANGE, New Jersey.

FISHES OF CORTEZ BANKS.

WE are indebted to Professor and Mrs. C. H. Eigenmann, of San Diego, California, for a copy of their report on the fishes of Cortez Banks, in which they describe eight new species of fishes, two of them representing new genera. The additions to the known fauna of the region were numerous and interesting, among them our own hammer-head shark and the common remora, or shark's pilot. Other well known Eastern fishes included in this report are the spined dogfish, the blue shark, the swordfish, the chub or thimble-eye mackerel, the Spanish mackerel, the long-finned albicore or tunny and the scad (*Trachurus picturatus*), called "horse mackerel" in California. Thus nearly 18 per cent. of the fishes collected exist on Cortez Banks in common with Atlantic waters and will serve to make the Eastern collector feel that he is among old acquaintances.

Two examples of the gigantic jewfish, each weighing about 300 lbs., were in the catch, and they were feeding on "whitefish," which is entirely different from the fa-

miliar food fish of the Great Lakes and nearly related to the "mysteriously disappeared" tile-fish.

Nearly one-third of the 51 species collected are beautifully colored fishes of the genus *Sebastes*, which is very near to our rose-fish or Norway haddock, of New England waters.

The remora was always found attached to the hammer-head shark.

The Cortez Banks are situated about 100 miles from San Diego, and public interest in the locality has been greatly stimulated by the recent investigations.

WELL-STOCKED MICHIGAN STREAMS.

THE other day genial Charlie Morgan of Fremont, Mich., who is a natural sportsman and knows trout from A to Z, called me into his back room to show me a canvas boat he was building. It is 11 ft. long, 3 ft. beam, and so light that it may be carried anywhere by one man. He says he thinks of putting a handle in the center and using it for an umbrella while fishing on a hot day. It is to be used on a fishing trip next May. His plan is to cruise down the White River, leaving the boat at the mouth of each tributary, while he fishes it. He invited me to go with him; it is needless to say that I then and there accepted. The White River trout are noted for their size and game qualities, and it will certainly be a most enjoyable trip. When the time comes, I shall be happy to make known the results to readers of FOREST AND STREAM. Whatever may be the future fate of game in our part of Michigan, fish are steadily increasing, and owing to the State fish hatchery at Paris, nearly every stream in Muskegon, Oceana, Newaygo, Mecosta and Montcalm counties are well-stocked with speckled beauties. No matter what the sentiment of the people in general is, there is always some one man in the community who believes in protecting fish and game, and is willing to provoke a little enmity by enforcing the law. I notice everywhere an increasing desire to give the trout a chance. On the Cedar Creek near Muskegon, a stream that is fished to death in season, I caught 18 trout that weighed 12 lbs. in half a day's fishing last June—of many fingerlings in that basket.

GRAND HAVEN, Michigan.

LARGE CARP.—Herr von Behr, president of the Deutsche Fischerei-Verein, calls our attention to the fact that the large carp noticed in FOREST AND STREAM Nov. 7, 1889, page 312, is a pigmy compared with some others described in one of the circulars of the Verein relating to giant carp. This circular gives the particulars concerning the capture of a female carp weighing 55 lbs. and measuring about 3 ft. in length and nearly 3 ft. in greatest circumference. The age of this fish was fifteen years. A male of the same age, taken from the same pond, weighed 42 lbs. This was nearly 3 ft. 7 in. long and 28 in. in circumference. These giants were found in the domain of the Grand Duke of Oldenburg, in Northern Germany. Mr. Hessel mentions them in his pamphlet on the carp, page 874, and refers, also, to some examples of much larger size, for example, the individuals with Germany in the size of our carp, but the probability is that before we have been as long in the business as our German associates we shall carry off the palm for giants in this species as we have in many other directions; at all events we shall try to do so.

SCHROON LAKE TROUT.—Glens Falls, N. Y., Jan. 31.—I notice that a correspondent in FOREST AND STREAM asks for the record of the largest lake trout taken from Salmon Lake, N. Y. Seven or eight years ago a trout, *namaycush*, was taken from Schroon Lake and sent to a merchant in this village who hung it in front of his store. An item in a local paper called attention to it as being the largest lake trout ever caught in Schroon Lake, and the weight was given as 28 lbs. I went to the store to see the fish (at the time it was illegal to have trout in possession), but some one had notified the merchant of the law and I was not permitted to see the trout. I advised Game Protector Burnett to arrest the merchant and prove "possession" by those who had seen the trout at the store. The merchant pleaded guilty and was fined \$10. In the court room the merchant, now dead, informed me that the weight published was correct, and I never have had reason to doubt it. The trout was sent by a customer of the merchant's and was exhibited in entire ignorance of the law providing a close season for trout.—A. N. CHENEY.

FURLOUGH LAKE.—Kingston, N. Y., Jan. 26.—George Gould has purchased Furlough Lake, in the Catskills, from ex-Congressman Cornell, for \$6,000. The grounds and lake consist of 600 acres, 35 of which are under water. It is considered one of the best trout-fishing places in the mountains.

THE WAY OF NATURE.—Some papers die a natural death and others are harassed to death.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—Ad.

THE COSMIC ROD, advertised in another column by A. G. Spalding & Bros., combines several important points in its structure which makes it a valuable addition to an angler's kit. The very best bamboo only is used, and the ferrules are made absolutely waterproof and are fitted without cutting the bamboo. Anglers should see this rod before completing their outfit.—Ad.

A Man with a Shotgun said to a Bird: "It is all nonsense, you know, about shooting being a cruel sport. I put my skill against your cunning—that is all there is of it. It is a fair game." "True," said the Bird, but I don't want to play." "Why not?" inquired the Man with a Shotgun. "The game," the Bird replied, "is fair as you say; the chances are about even; but consider the stake. I am in it for you, but what is there in it for me?" Not being prepared with an answer to the question the Man with a Shotgun sagaciously removed the propounder.—San Francisco Examiner.

Smith—You look all tired out, old man. What's the matter? Brown—Matter enough! I've been trying to lose a dog I don't want for a week. Confound it, here he comes, now.—Lawrence American.

Fishculture.

THE NATIONAL MARINE AQUARIA.

AMONG the attractions at the national capital none is of more importance than the permanent aquaria exhibit of the United States Fish Commission. It is under the immediate supervision of Mr. William P. Seal, the industrious and devoted official whose "Aquaria Notes" in FOREST AND STREAM are of so much interest.

This exhibit, as relates to salt-water animals, is a recent acquisition. In the opportunity it affords for observing the habits of the marine forms there collected it is especially valuable, and presents a most interesting series of animate object-lessons. The observer unacquainted with these forms finds in their contemplation a prolific source of amusement and wonder. He who recognizes them as old friends has at hand the most favorable conditions for closer intimacy and study.

One would hardly believe that within two cables length of the busiest portion of Washington the sea bass could be seen in his natural element, or the familiar tautog cuddling among the rocks on the bottom of the aquarium that contains a few hundred gallons of its native sea water. Such is true, however, and here in close proximity to that great thoroughfare, Pennsylvania avenue, which is wholly unsuggestive of anything pertaining to the sea or to marine animals, may also be seen striped bass, squeteague, scup, flounders, tom cods, sea robins, horse shoes, blue crabs, fiddler crabs and sea anemones.

The aquaria confining these and many other species and forms are arranged around the four sides of an inclosed space, the inside of which is finished to resemble a grotto, and which is pervaded by a slightly obscured light. Their disposition is such that their occupants are seen to the best advantage by reason of the unobstructed daylight beyond. They may not inaptly be considered as so many sections of the ocean transplanted bodily with their indigenous forms of life to the place they now occupy. They are placed at a convenient elevation, and the observer may note every movement of the objects within from points of observation not possible under natural conditions.

This exhibit forms the most practical and economical method that can be devised for imparting a knowledge of marine life in an extremely popular way. It is extensively patronized by the public, and the Government would not go astray in providing liberally for the enlargement and more permanent establishment of this pleasing collection. It is susceptible of being wisely developed till it shall attain proportions in keeping with the advanced position the Government holds in the investigation and development of the fisheries.

The study of the distribution, movements and abodes of these marine forms, as they occur in nature, must of necessity be studied elsewhere. The study of their habits by both the ichthyologist and layman can in no way be so thoroughly pursued as at these aquaria, which really constitute a mine of piscatory information.

ARTHUR MARTIN.

FOREIGN EXCHANGES OF THE U. S. F. C.

THE United States Fish Commission has sent to foreign countries during the present season eggs of whitefish, brook trout, rainbow trout and California salmon, and has received or will receive eggs in return of Von Behr trout (*Salmo fario*), Loch Leven trout, lake trout of Swiss lakes (*Salmo lacustris*) and saibling.

Two hundred thousand whitefish eggs from Northville, Michigan, were sent to W. A. Carter, secretary Midland Counties Fish Cultural Association, Malvern Wells, England. Twenty thousand eggs of brook trout were forwarded to the Deutsche Fischerei Verein.

Of the California salmon eggs 100,000 were sent to M. Berthoulet, of the Société d'Acclimatation, Paris, arriving in splendid condition, and 25,000 to W. E. Archer, Stavanger, Norway.

The Swiss Government received 30,000 rainbow trout eggs from Wytheville; 25,000 were sent to Major Turner, Chateau d'Orval, Florenville, Belgium; 15,000 to W. A. Carter, Malvern Wells, England, and 10,000 to Carl Schuster, Freiburg, Germany.

From Belgium will come in exchange 25,000 eggs of Von Behr trout (*Salmo fario*), which will be sent to Gordon Land, Fish Commissioner of Colorado, at Denver.

The stock of Loch Leven eggs at Northville will be replenished by 15,000 eggs from Seeviese, Bavaria.

Fifty thousand eggs of the lake trout of Swiss lakes (*Salmo lacustris*) have been promised by Max von dem Borne, and one half of them have already been received. The allotment of these eggs is as follows: U. S. F. C. station at Bucksport, Me., 10,000; Michigan Fish Commission, 20,000; New York Fish Commission, 10,000; New Hampshire Fish Commission, 10,000. Eighteen thousand saibling eggs from Starnberg, Bavaria, are among the Exchanges with the German Government. These are to be equally divided among the commissions of New York, New Hampshire and the United States.

JAMES H. MARKS, Superintendent of the Adirondack Fish Hatchery at Lake Brantford, Franklin county, died there Thursday from pneumonia. Mr. Marks was one of the three brothers employed for a number of years at the State Fish Hatchery, at Caledonia, under direction of Seth Green. One of the brothers is superintendent of the principal fish hatchery in Michigan, and the other is superintendent of the Fulton Chain Hatchery in this State. Mr. Marks has been in charge of the Lake Brantford Hatchery about four years, and had done very successful work.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

March 4 to 7, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. 3 to 28, 1890.—Meet of the Brunswick Fur Club, Great Island, Me.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

THE PACIFIC COAST FIELD TRIALS.

[Special Report.]

THE seventh annual field trials of the Pacific Coast Field Trial Club commenced at Bakersfield, Cal., Jan. 20. The attendance upon opening day was very good, sportsmen from all parts of the State being present. The first event on the card was the Derby, for which there were 21 entries, six of which started. They were drawn to run as follows:

LISSOME (R. H. Auerbach, Oakland, Cal.), black and white English setter bitch, Feb. 4 (Loadstone—Janet),

SANKEY B. (G. W. Bassford, Vallejo, Cal.), white and lemon pointer dog, May 11 (Point—Blossom).

STEPHANIE (California Kennels, Sacramento, Cal.), orange belton English setter bitch, Feb. 9 (Harold—Sweetheart),

BEN HARRISON (C. Studard, Roulter's Station, Cal.), red and white setter dog, Feb. — (Sport—Fanny).

SALINA (California Kennels, Sacramento, Cal.), orange belton English setter bitch, Feb. 9 (Harold—Sweetheart),

ROSE (G. W. Bassford, Vallejo, Cal.), lemon and white pointer bitch, May 11 (Point—Blossom).

The judges were Mr. L. N. Aldrich, Marysville, Cal., who judged here last year; Hon. D. M. Pyle, Mountain View, Cal., and Mr. W. C. Nelson, San Francisco, Cal. The weather on Monday was all that could be desired, and every one appeared to enjoy the day.

First Series.

LISSOME AND SANKEY B.

The first brace was started some four miles south of the town in a level country with no bad cover, making the ground nearly perfect for running the trials. Lissome is not a very speedy animal and she was inclined to pitter at times. She makes a splendid point and will undoubtedly make a nice shooting dog. Sankey is a fast, easy-going, wide-ranging dog, a bit headless in some of his work, but upon the whole a very good dog. He was awarded the heat, to which he was entitled by his superior speed and range.

STEPHANIE AND BEN HARRISON.

Stephanie started rather slow and appeared to be a little timid, probably on account of the crowd. She soon got over it and went quite fast and did some very good work, beating Ben rather easily. Ben pointed and backed well, but was no match for the bitch as a finder.

SALINA AND ROSE.

Salina is Allender's brag puppy, but owing to the death of his father he was not present, and she was handled by one of the members of the kennel that own her. Although not well acquainted with her handler she did some very good work, running at a good rate of speed and making stylish points, showing a good nose. She was also quite steady, and is undoubtedly a grand one. She beat the pointer very easily, the latter not doing very good work. This finished the first series as follows:

Sankey B. beat Lissome.
Stephanie beat Ben Harrison.
Salina beat Rose.

Second Series.

SANKEY B. AND STEPHANIE.

On Tuesday it was expected to finish the Derby in good time, but after the heat for second was decided it commenced to rain, and the running was postponed until the next day. Sankey was awarded the heat, but in my way of thinking the bitch was the best. She did not start well, and appeared to be afraid of her handler, who gave her too many orders, but when she did get to work she did much the best work and showed the most intelligence in looking for birds. Sankey showed the most speed and style and hunted over the most ground, but he did not quarter so well as the bitch and did not show nearly so good a nose, he was also unsteady occasionally when near birds. I should have decided in favor of Stephanie, as she showed the better natural hunting qualities, and I have no doubt that if she is properly worked she will be able next year to give him big odds and a beating. This finished the second series, Salina having a bye.

Sankey B. beat Stephanie.
Salina a bye.

Final for First Place.

SALINA AND SANKEY B.

After waiting nearly two hours for Sankey to get rested he and Salina were started to run for first. Sankey had no show with the wonderful little bitch, and she won the first prize very easily. They were very nearly equal in speed and range, but in hunting qualities and steadiness Salina was far ahead; she also has much the best nose, and her breaking is greatly superior to that of the pointer. I heard it mentioned that there was some talk of sending her next fall to run at the trials in the East. If she goes there I shall expect to hear a good account of her, as it will take a wonder to beat her.

SANKEY B. AND ROSE.

These dogs are both owned by Mr. Bassford. They were nearly equal in speed and style and there is not much difference in their hunting qualities. Neither of them is well broken enough to show to good advantage at a field trial, both are somewhat wiry, but if given plenty of work I think that they will make good ones. Sankey made the first point and won second.

ROSE AND STEPHANIE.

The last heat in the Derby was run on Wednesday morning, commencing at half-past nine and ending at ten in favor of Stephanie. She did much better than she had before done, as her handler let her go without any restriction, and her behavior confirmed my opinion as to her being a much better dog than any in the stake except her sister, Salina. Rose did nothing commendable in this heat and did not make a single point. This finished the Derby, which was pronounced by all to be the best one yet run in these trials. Following is the summary:

DERBY.

First Series.

Sankey B. beat Lissome.
Stephanie beat Ben Harrison.
Salina beat Rose.

Second Series.

Sankey B. beat Stephanie.
Salina a bye.

Final for First Place.

Salina beat Sankey B. and won first prize.

Final for Second Place.

Sankey B. beat Rose and won second prize.

Final for Third Place.

Stephanie beat Rose and won third prize.
First, Salina; second, Sankey B.; third, Stephanie.

ALL-AGE STAKE.

The All-Age Stake was commenced after the end of the Derby. There were six starters which were run as follows: SIRIUS (Thomas Bennett), orange and white English setter dog (Sportsman—Sweetheart),

against NESTOR (W. Schrieber), lemon and white pointer dog (Gladstone—Forest Queen).

SUNLIT (California Kennel), orange and white English setter bitch (Sportsman—Sweetheart),

against PATTI CROXTETH (A. B. Truman), liver and white pointer bitch (Croxteth—Patti M.).

DICK (W. W. Foote), black, white and tan setter dog (Royal Duke II.—Bess),

against COUNT DICK (A. Sperry), liver and white pointer dog.

First Series.

SIRIUS AND NESTOR.

Sirius won second here last year and as he was said to have greatly improved since then, he was looked upon by many as a sure winner. He ran a splendid heat, beating the pointer in speed and working qualities. Nestor did his work well, but was no match for the setter.

SUNLIT AND PATTI CROXTETH.

Sunlit was also a winner here last year and was placed second to Sirius. She has been doing very good work recently and her friends were confident that she would be found at the front at the finish. Patti was also thought well of and a great race was anticipated. Both dogs appeared to realize that they must do their best and they gave us an exhibition such as has never before been seen at a field trial here. They are very fast and stylish going dogs and were about equal in this respect; both showed good nose, Sunlit I thought a trifle the best. Both are very stylish in pointing and both retrieved well. Sunlit backed perfectly, while Patti would only back when cautioned by handler. The heat lasted more than two hours and was won by Sunlit.

DICK AND COUNT DICK.

The heat between Dick and Count Dick was a very tame affair in comparison with the splendid one we had just witnessed. Count won easily. He is a pretty fair dog, and would be quite a good one if he had a good nose. Dick is not half broken, and is of too jealous disposition to work with another dog. This ended the work for the day.

This finished the first series with the following result:

Sirius beat Nestor.
Sunlit beat Patti Croxteth.
Count Dick beat Dick.

Second Series.

SIRIUS AND SUNLIT.

On Thursday it was clear and quite cool, just the right weather for dogs and men. Sirius had lost his nose, and this probably broke him up, as, instead of his usual steadiness, he was more than once quite unsteady. Sunlit ran as well as she did the previous day, and gave us a beautiful exhibition of field work, winning the heat very easily. This ended the second series, Count Dick having a bye. Following is the summary:

Sunlit beat Sirius.
Count Dick a bye.

Final for First Place.

SUNLIT AND COUNT DICK.

Sunlit had a very soft snap in the heat with Count Dick for first place, winning it with the greatest ease. She ran even better than she had done before, and did some most excellent work, greatly to the delight of the large crowd of spectators, among whom were a number of ladies who were very enthusiastic in praise of the excellent performance. Count did not succeed in getting a single point.

Final for Second Place.

COUNT DICK AND PATTI CROXTETH.

The heat for second between Count Dick and Patti Croxteth was not a brilliant one, as from some cause birds were not found for a long time. Patti won it easily.

Final for Third Place.

COUNT DICK AND SIRIUS.

The heat between Count Dick and Sirius was declared a tie and third was divided between them. There is no question that Sirius is the best dog when he is fit, but in the condition in which his nose appeared to be the decision was probably correct. This heat finished the trials, which were pronounced to be the best yet held by the club so far as the work of the dogs is concerned. The entries were small, but a large number are already promised for next year, and it is hoped that we shall see an entry that will approach if not equal the trials held East. Following is the summary:

ALL-AGED STAKE.

First Series.

Sirius beat Nestor.
Sunlit beat Patti Croxteth.
Count Dick beat Dick.

Second Series.

Sunlit beat Sirius.
Count Dick a bye.

Final for First Place.

Sunlit beat Count Dick and won first prize.

Final for Second Place.

Patti Croxteth beat Count Dick and won second prize.

Final for Third Place.

Count Dick and Sirius placed third.
First, Sunlit; second, Patti Croxteth; equal third, Count Dick and Sirius.

KERN.

BELGIAN HARES.—Mt. Vernon, Jan. 26.—*Editor Forest and Stream:* In answer to "G. W. G." for information as to acclimatizing the Belgian hare, I have tried "turning down" this and other breeds, and found that the hares which were turned down gave no sport, being caught by the dogs; but their progeny bred in a wild state gave pretty fair sport. I will tell you what did give me good sport, and something nice for the table, and that was a cross between the Belgian hare and wild rabbit. Remember the so-called Belgian hare is a rabbit, and not a true hare, and that the cross is a crossbred, and not hybrid. I think it would take about three years for them to become thoroughly wild. My great and fond idea was acclimatizing bantams to a wild state (and I think I could succeed with time and money), and which would afford the greatest sport.—HY-BIRD.

DEATH OF BALDUR.—Ottawa, Can., Jan. 29.—*Editor Forest and Stream:* I regret to inform you that the mastiff dog Baldur (Beaufort—Gytha II), first puppy class, Crystal Palace, first Troy, etc., that my valued friend Mr. Wade had presented to me, reached here last night dead. I had a veterinary examine him and he pronounced the cause of death to be inflammation of the intestines, probably caused by a too generous meal previously to his being crated and subsequent confinement. I not only regret his loss for the donor's sake, but because I am sure he would have been of immense benefit to Canadian mastiff breeders. His grand head would have been hard to equal, short enough to please any reasonable man, yet with nothing of the "pug" about it.—F. H. F. MERCER.

BALTIMORE DOG SHOW.

BALTIMORE, Feb. 3.—*Editor Forest and Stream:* I am in receipt of the following, which please mention in your next:

"General Baggage Agent's Office, Baltimore & Ohio R. R.—I beg to advise you that dogs intended for exhibition at the bench show, to be held in Baltimore, March 18 to 21, will be transported in baggage cars free of charge, both going and returning, when accompanied by owner or attendant holding passage ticket. If one party desires to take more than two dogs they must be crated.—R. E. PEDDICORD, G. P. A."

We momentarily expect to be able to report a similar service on the part of the Pennsylvania Railroad.

Please state also that the Adams and United States Express companies will return dogs free to original shippers to Baltimore show, charging only the regular rate one way (prepaid).

Please note that Class 42½ in supplement to premium list should read smooth Chesapeake Bay dogs.

W. STEWART DIFFENDERFER, Sec'y.

The premium list of the Maryland Kennel Club dog show, to be held at Baltimore, March 18 to 21, is now ready for distribution. In the classes for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, English setters, Irish setters, Gordon setters, collies and fox-terriers, the prize in the challenge class is \$10, with \$5, \$3 and diploma in each of the open classes, with \$5, \$3 and diploma for puppies. Pointers have four challenge classes, two large and two small, with the prizes the same. In cocker spaniels the prize in the challenge class is \$10, with \$5, \$3 and diploma in the open and puppy classes. In beagles and puns the prize in the challenge class is \$5, with \$5, \$3 and diploma in the open classes. Great Danes have one class and foxhounds two, with \$10, \$5 and diploma. Newfoundland, deerhounds, greyhounds and Chesapeake Bay dogs (two classes) \$8, \$5 and diploma. Field spaniels, Clumber spaniels, bulldogs, bull-terriers (two classes), dachshunde (two classes), Skye terriers, Yorkshire terriers and miscellaneous, \$5, \$3 and diploma. Irish terriers, Dandie Dimont terriers, black and tan terriers, toy terriers and Mexican hairless, \$5 and diploma. King Charles spaniels, Blenheim spaniels, Prince Charles and ruby spaniels, Japanese spaniels and Italian greyhounds, \$3, \$2 and diploma. Poodles, wire-haired fox-terriers, Clydesdale terriers and smooth Chesapeakes, diploma in each class. In addition to the regular prizes the club offers kennel prizes of \$10 each for best four of mastiffs, St. Bernards, pointers, English setters, Irish setters, Gordon setters, collies, foxhounds and fox-terriers, and a special of \$5 for the best of each of the more important breeds. A large number of valuable specials are also offered by friends of the club. The American Gordon Setter Club offer \$15 for the best brace of Gordon setters, and \$15 for the best Gordon dog or bitch owned by members of the club. The Collie Club trophy and the President's Cup will be competed for by members of the Collie Club.

The judges announced are Hon. John S. Wise, New York, pointers; Mr. H. Malcolm, Baltimore, Gordon setters; Mr. Chas. D. Cagle, Baltimore, bulldogs; Mr. Jas. F. Pearson, Baltimore, Chesapeake Bay dogs; Mr. James Mortimer, New York, the remaining classes. A class for great Dane puppies and one for smooth Chesapeake Bay dogs has been added, with diplomas as prizes in each class. Spratts will bench and feed. Entries close March 4. The address of the secretary is W. Stewart Diffenderfer, 22 North Charles street, Baltimore, Md.

A. K. C. TREASURER'S REPORT.

NEW YORK, Jan. 10, 1890.

To the Members of the American Kennel Club:

GENTLEMEN—The proper time having arrived to publish the financial condition of the American Kennel Club, it affords me much pleasure to present to you a statement in detail showing just what has been done by the club for the entire year, ending Dec. 31, 1889. It is with pride that I can congratulate you upon the splendid success the Kennel Club has achieved during the past twelve months. The receipts and disbursements are credited and charged to but three general accounts, to wit: the club, the Stud Book, and the *Gazette*, and I beg to submit my annual statement, showing a credit balance in favor of each of said accounts. The club has been self-sustaining since Jan. 1, 1889, without any aid other than its legitimate income, and has enough cash on hand to publish its Stud Book. We have paid our current expenses as they became due, and have done still more: we have paid the editor's arrears of salary for 1888, amounting to \$27.50; purchased the *American Kennel Register* at a cost of \$500, and also all existing copies of Vol. I. of the Stud Book, from the late National American Kennel Club, at a cost of \$107.50. These are extraordinary expenses that will not have to be met during the coming year. In the "American Kennel Club Account" we commenced the year with a credit balance of \$285.39, and after paying all expenses, including our rent, for a better and more commodious office, to Feb. 1, 1890, the ledger shows a balance to its credit of \$641.57. From this, however, you must deduct the sum of \$105 for dues from associates for 1890, which were included in the year's work on account of being paid during December, 1889, and before actually becoming due. This leaves this account with an actual balance of \$536.57, with bills receivable amounting to \$180.

The "Stud Book Account" carried over from 1888 a credit balance of \$942.89, but from this we had to pay for the printing of Vol. V., Part IV. (that is, the book containing the registrations received during October, November and December, 1888), amounting to \$498.12; also the editor's arrears of salary, \$287.50, which left an actual balance of \$157.27. While we close the year with \$1,077.15 to the credit of the Stud Book, yet owing to the large number of registrations to be published in the volume for 1889, we will be compelled to draw on the club account, not exceeding, however, about \$200, to meet our obligation in the publication of the book. We have in bills receivable due this account the sum of \$83, but this is uncollectible and should be charged to profit and loss.

The "Gazette Account" commenced with nothing to its credit, and although the ledger shows an apparent deficit of \$434.12, yet such is not the case, as we have in bills receivable the sum of \$597.67, and so far as can be determined, every dollar of this is good and collectible. The sum of \$153.13 of bills receivable is unearned, and belongs to the income of 1890, which leaves \$439.54 to be credited to the business of 1889, and therefore gives the *Gazette* an actual credit balance of \$5.42. The *Gazette* was published in January, 1889, without any ringing of bells, or proper advertising, and has gained steadily month by month, its sales reaching in December 317 copies, exclusive of associate members or subscribers.

In addition to the balance of \$5.42 should be counted the value of the large number of periodicals the American Kennel Club receives as exchanges for the *Gazette*, and which it keeps on file at the club's office, affording to members a reading-room and material for reference on all kennel subjects of the day, at home and abroad.

To subscribe to and to maintain such a list of periodicals would be a matter of over a hundred dollars annually against the American Kennel Club.

I submit the results of the past year, and leave the coming year and its prospects to be judged of by them.

In conclusion, I beg to say that Mr. F. Blackwood Fay, appointed as one of the auditing committee, finding it impossible to meet with the others of said committee for the

examination of my accounts, resigned, and President Belmont, at my request, appointed Mr. George La Rue to take his place. Respectfully submitted,

A. P. VREDENBURGH, Sec.-Treas. A. K. C.

A. P. VREDENBURGH, SECRETARY-TREASURER, IN ACCOUNT WITH THE AMERICAN KENNEL CLUB.

1889. Dr. To balance on hand.....\$1,228.28
Jan. 11. To receipts from all sources for the year ending Jan. 1, 1890.....7,033.98
Dec. 31. Cr. \$8,312.26

To the President and Members of the American Kennel Club:

GENTLEMEN—We, the undersigned, your committee appointed for the purpose of auditing the accounts of the American Kennel Club, do hereby beg to make the subjoined report, to wit:

That we have carefully examined said accounts in their several departments, and find them correct in every particular, the income of each account being derived only from the sources indicated in the accounts. Respectfully,

A. CLINTON WILMERDING.

J. M. TAYLOR.

GEORGE W. LA RUE.

NEW YORK, Jan. 17, 1890.

EASTERN FIELD TRIALS CLUB MEETING.—The adjourned annual meeting of the Eastern Field Trials Club will be held at the American Institute Fair building the first day of the New York dog show, Tuesday, Feb. 11, at 3 o'clock P. M. A full attendance is requested, as in addition to the election of officers, business of importance is to be transacted. All who cannot attend will please send proxy to W. A. Coster, American Institute, New York, care of Westminster Kennel Club.—J. OTTO DONNER, President; W. A. COSTER, Secretary.

ST. BERNARD CLUB MEETING.—The February meeting of the Board of Governors of the St. Bernard Club is called for Monday, Feb. 10, at 7:30 P. M., at the American Institute Building, New York. A full attendance is requested.—LORENZO DANIELS, Sec'y.

DANDIE DINMONT LOST.—The well-known Dandie Dimont terrier bitch Meg, owned by Mr. G. G. Cleather, of Spratts, strayed or was stolen on Friday last. Any information that will lead to her recovery will be thankfully received by her owner.

POINTER CLUB MEETING.—The regular annual meeting of the Pointer Club of America will be held at the New York dog show, on Feb. 11, at 4 P. M. By order of the president, GEORGE W. LA RUE, Sec'y and Treas.

DOGS OF THE DAY.

CONSIDERING the liberality of the Mascoutah Kennel Club it is surprising that the spaniels are so strangely treated. The best classes of this breed are the cockers, but here are only five classes, with three for field spaniels and three for Clumbers. New York, on the other hand, has three for Clumbers, six for field spaniels and eight for cockers. It is to be regretted that Chicago has not done better for these popular dogs, for with limited classification limited entries follow as a matter of course, and when asked next year to do better the Chicago people may say, "What is the use, spaniel men don't support us."

Class 132 at Chicago is somewhat of a puzzler. It is for "rough-haired terriers under 12lbs., not otherwise classified." The rough-haired terriers provided for are wire-haired fox-terriers, Irish, Scotch, Dandie Dimont, Skye, Clydesdale and Yorkshire. I do not know where an under 12lbs. rough terrier of any recognized breed is to be got, for in addition to the breeds named there are Bedlington and Airedales, and a 12lbs. dog of either would not go down with Mr. Mortimer. Perhaps Mr. Lincoln will kindly enlighten us as to the reason for this class and what it is to cover.

Mr. Chas. T. Thompson has purchased a young Irish setter by his Desmond II. out of Luray III. This would indicate that the information given me that Mr. Thompson intended giving up the reds for the English was not perfectly accurate. It is intended to show the new dog at New York, but he can hardly be conditioned by that time.

Mr. Pesball says I am wrong about the constitution of the A. K. C. in force on Dec. 6, 1888. As Mr. Pesball seemingly has all this information at his finger ends, will he kindly say on what date the present article of the constitution governing amendments was adopted. With that information as a starter we can write understandingly. Mr. Pesball winds up his letter with a sentence suggesting a law suit with the A. K. C. as defendants. Who is going to be benefited by such a course? I fail to see any good reason for its being taken, or see what advantage is to be gained by any one, and I say this with knowledge of what is going to be done in the way of bringing suit.

Somehow less visionary is the idea of forming a grand dog show and dogs' home club for the neighborhood of New York. Though not an accomplished fact as yet, a few gentlemen have for some time been moving in the matter. One object is to do away with the present method of dog catching in New York, Brooklyn and Jersey City. As a starter for a dogs' home, to which all strays and captured animals can be taken, a gentleman is prepared to give four acres of land and \$2,000 to pay for the erection of the necessary buildings. This certainly sounds like business and is a worthy object to support either from a humanitarian or a fancier's point of view. I do not see, however, what the home has to do with the dog show end of the scheme. Perhaps the show is expected to pay the expenses of the home, or is it that the receipts from the sale of dogs at the home will go to make up deficits at the shows. When a story like this gets started it is like a rolling snowball, and I don't know what to expect to hear next. Not content with a home and shows, I have been told that a monthly publication is also in contemplation, with a grand pedigree registration annex, and another of dogs at the home and for sale. I am fully prepared to hear before the week is out that FOREST AND STREAM and the stud book is to be bought and issued daily. Seriously, however, there is a club in process of formation which will find an ample field for work without going into any visionary projects.

Some months ago an English correspondent of an American journal stated that the *Stock-Keeper* was financially hampered, or words to that effect. Of course, to a newspaper man such a statement was foolish, but it was calculated to do harm—undoubtedly the object of the remark. As the *Stock-Keeper* has many friends in America, I take the liberty of quoting from a letter received to-day (Monday) from Mr. George R. Krehl: "You will be glad to know that the *Stock-Keeper* is doing so well that we find it necessary to make a change, and are on the point of moving into larger premises on Fleet street. They will be really handsome offices."

What is the matter with the Elmira show of last fall? It does not appear in the list of recognized shows, though the Elmira club was elected to membership while the show was in progress. I came across the omission while making my New York entries, and I notice the show is not in the *Kennel Gazette* list either.

The Meadowbrook club will not have a walk over this year for the foxhound kennel prize at New York. Four couples of English hounds from the Radnor hunt are going over, and it will take a clinking good lot to beat them. These Radnor hounds are not a lot of castoffs or bought at the London swill yards, but they are all young hounds personally selected in England last year from such kennels as the Quorn, Belvoir and others of equal prominence. There are about twenty couples of these hounds, and a well matched selection has been made to send to New York. When one looks at these hounds it is easy for an expert to distinguish those of the different packs, and to note what were the special attributes aimed at by those who did the mating and selection for each pack. In one lot you will note that head has had a good deal to do with their selection, while in another the body has had pre-eminence. By the side of the best American hounds the English seem altogether too heavy for work and speed. So far I understand the importations have given perfect satisfaction, but it must be said that the season has been so thoroughly English that they have not been tested fully up to the standard of requirements of foxhounds in this country.

The prosecution of two servants of the Radnor Hunt a few weeks ago by the S. P. C. A. for alleged cruelty has had the effect of making quite a jump in the membership. It is an ill wind that blows nobody good, and the Radnor Hunt may yet be under great obligations to the alphabetical society.

La Grippe has been particularly severe at London, Ont., I should think. Dr. Niven writes me that he has been doing eighteen hours' work a day until he is quite used up, and Mr. Robert McEwen, in telling me of what he is bringing to New York, has to use pencil instead of pen as he says, "the grip has me hors du combat." I am thinking some of his collies will put his opponents out of the fight, as he is going to bring a dog pup by Maney Trefoil out of Holly, a dog and bitch pup by Charleroi II. out of Bonnie Doon, and the two Clippers, Mermaid and Maxwell.

The statement of treasurer Vredenburg for the year 1889 appears in the *Kennel Gazette* just issued, and will be scanned with interest. The report is, I think, most satisfactory in every way, although it shows a loss of about \$1,000 to \$1,500. The account is divided into three sections, the Kennel Club, the Stud Book and the *Gazette*, and there is a summary of cash received and paid. The latter began with a balance on hand of \$1,228.28 and the balance now is \$1,284.60, of which \$105 is associate member dues for 1890 paid prior to Jan. 1. Out of this \$1,284.60 is to be paid for the printing and binding of the Stud Books for 1889, and I

gather from Mr. Vredenburg's remarks in the *Gazette* that the balance on hand and an additional \$200 will be required to meet these charges. I do not altogether agree with the way in which Mr. Vredenburg has made out his accounts. For instance, associate members pay \$5, for which they get the Stud Book and *Gazette* and two free Stud Book entries. Now Mr. Vredenburg credits the Kennel Club account with the entire \$1,787.50 received from associate members. Not a penny piece is credited to Stud Book or to *Gazette* account. That would make a material difference. For instance, the *Gazette* shows a deficit of \$434.12, against which is an offset of \$489.54 for advertisements not yet collected or collectible. In the *Gazette* account should appear a debit of its share for the 357 associate members' subscriptions, say \$1.50 each—\$535.50. Per contra, I think some of Mr. Vredenburg's salary should be charged against the *Gazette*, but that would fall short of the \$535.50 a long way, \$25 or \$30 a month would be quite enough to charge for putting the *Gazette* matter in shape for the printer. We have therefore the unexpected information that the *Gazette* has more than paid its way, while, of course, the Stud Book, notwithstanding the doleful plaints when it was decided to advance the registration fee to \$1, has been more than self-supporting. Mr. Vredenburg only shows a balance of \$1,077.15, but this account should have had its share of the associate members' contributions, I should say at least \$2 each; that would be \$714 more. Then we have as "extraordinary expenses" during 1889, purchase of A. K. R., \$500; ditto of Vol. I, N. A. K. C. S. B., \$107.50, and balance of editor's salary for 1888, \$287.50, making \$895, or within \$47.89 of the balance brought forward, so we will let these items be a stand-off. Taking, therefore, the \$1,077.15 balance now on hand, and add thereto the Stud Book's share of the associate members' cash, as estimated by me, and we find the result is in round numbers \$1,800 profit for the year, so that has paid well. Accepting this way of looking at the accounts, that of the Kennel Club will of course show a deficit in place of its present given balance of \$441.57. It is only natural it should, for the only source of income is the annual club members' dues, last year \$470, and the prefix fees, \$66; to this, under my way of figuring there will be \$338.50 left of the associate members' dues, making total receipts clearly belonging to the Kennel Club fund \$1,074.50. Against this the expenses foot up \$1,970.30, showing a loss of say \$900, from which there is to be deducted, by my way of figuring, something like \$300 or \$360, portion of the secretary's salary for time devoted to the *Gazette*. These suggestions as to the division of the accounts make no change in the grand result of the club having more than paid its way. Two months ago it seemed to me certain that the deficit would be \$1,500 in place of the \$200 suggested by Mr. Vredenburg, by the time the Stud Book is in the hands of the subscribers.

I notice that the Elmira show of 1889 is still omitted from the list of "recognized shows," as is also the South Carolina Association of 1890. J. W.

CHARLESTON DOG SHOW.

CHARLESTON, S. C., Jan. 27.—*Editor Forest and Stream*. The second annual bench show of the South Carolina Poultry and Pet Stock Association was held here last week. In many respects it was an improvement over the first show, the quality of the dogs in many classes being better. The hall is a very nice place to hold a show, and the arrangements appeared to be of the best. The attendance was very good indeed, and the hall was crowded nearly all the time. Mr. J. O. Fellows judged all classes, and his decisions showed him to be a capital all-around judge. Some were disposed to find fault with him for withholding the prizes in some of the classes, but an inspection of the animal in question in every case showed that the judge was more just than generous. The show created quite an interest in dogs among the visitors, and there was considerable of an inquiry for spaniels, beagles and terriers of all kinds, and all that were for sale were quickly disposed of. I was informed that the club intends to offer prizes next year that will induce the owners of first-class specimens of the different breeds to exhibit them. Below you will find a list of the

AWARDS.

MASTIFFS—CHALLENGE—E. B. Sears's Monarch.—OPEN—Dogs: 1st, withheld; 2d, B. F. Perry's Ben. Bitches: 1st and 2d, withheld. High com. and com. B. F. Perry's Nelly and Ethel. Puppies: 1st, withheld; 2d, B. F. Perry's Luther. High com., G. E. Davis's Sumter.

ST. BERNARDS.—Dogs: 1st, H. Holmes's Baron of Holme. NEWFOUNDLANDS.—Dogs: 1st, J. O. Cameron's Rover; 2d, withheld; 3d, J. Amerum's Lion. Bitches: Withheld.

GREYHOUNDS—CHALLENGE—W. F. Thomas's Purity.—OPEN—Dogs: 1st, withheld; 2d, T. D. Waldie's Shaving Cream. Bitches: 1st and 2d, withheld; 3d, Dr. J. M. Amerum's Jennie. Puppies: 1st, withheld; 2d, Dr. J. May's Monarch.

FOXHOUNDS—1st and 2d, C. F. Jenkin's Sport and Ring; equal 3d, Dr. Dunnerman's Rambler and F. Chaplain's Florence.

POINTERS—CHALLENGE—Dogs: J. T. Cartwright's Spot Sting. Bitch: J. T. Cartwright's Rosa.—OPEN—Dogs: 1st, A. P. Ryan's Bob R.; 2d, J. T. Cartwright's Button Hoard. Very high com., J. C. Claussen's Don. Bitches: 1st, J. T. Cartwright's Rosa May; 2d, B. F. Perry's Nannie; 3d, P. G. McInnes's Spy. High com., C. J. Neville's Juno and Dr. J. L. Amerum's Katie. Puppies: 1st, withheld; 2d, H. Hemme's Bob; 3d, W. Hardy's Jordan.

ENGLISH SETTERS.—Dogs: 1st, J. H. O'Brien's Prince Gladstone. Bitches: 1st, withheld; 2d, F. V. Taylor's Blanche. Puppies: 1st, Dr. Kinlock's Dark.

IRISE SETTERS.—Dogs: 1st, G. H. Covert's Dick Swiveller; 2d, N. Lee's Pickens; 3d, B. McInnes, Jr.'s Brown. Reserve, H. Hemme, Jr.'s Jerry. High com., G. W. Koester's Heigh Ho, T. Wagner's Bruno and L. W. Bicas's Brag. Bitches: 1st, H. Hemme, Jr.'s Carrie.

BEAGLES.—1st, withheld; 2d and very high com., B. F. Perry's Ben and Drive. Puppies: 1st and 2d, withheld; 3d, B. F. Perry's Bennie.

COLLIES.—Dogs: 1st and 2d, B. F. Perry's Ben Laddie and Ben Rutland. Bitches: 1st and 3d, A. P. Hazzard's Rowena and Jennie; 2d, I. H. Wilson's Kelpie Ripon. Puppies: 1st and 2d, B. F. Perry's Ben Laddie and Ben Rutland. Bitches: 1st, R. A. Smith's Woodbine; 2d, U. M. Hale's Zoe.

PUGS.—1st, withheld; 2d and 3d, L. W. Bicas's Lassie and Scott, Very high com., L. Brown's Tortoise.

ROUGH-HAired TERRIERS.—1st and 2d, Judge G. T. Graham's Toney and Kaiser; 3d, L. Brown's Prince. Puppies: 1st and 2d, Judge G. T. Graham's Lady Teazle and Robin Rough.

BLACK AND TAN TERRIERS.—1st and 2d, H. Madden's Barney and Pansey.

TOY TERRIERS.—1st and 2d, H. Madden's Easter and Nan.

ITALIAN GREYHOUNDS.—1st, Mrs. Bertha Woodruff's Flossie; 2d, A. P. Hazzard's Fedora.

MISCELLANEOUS.—Dogs: 1st and 2d, H. Madden's Duke and Toby. Bitches: 1st and 2d, Queen and Gypsy.

SPECIALS.—Best kennel, Fountain City Kennel; 2d, B. F. Perry. MOULTRE.

CENTRAL FIELD TRIALS CLUB.—New York, Jan. 31.—*Editor Forest and Stream*: At a meeting of the Central Field Trials Club, held at Philadelphia, Jan. 30, the following gentlemen were elected members of the club: Hon. John Sanford, of Amsterdam, N. Y.; Mr. Geo. J. Gould and Mr. Edward Gould, of New York City; Mr. L. Gardner, of Mt. Vernon, N. Y.; and Mr. Geo. L. Danforth, of Louisville, Ky. All applications for membership that were received too late to be acted on at this meeting, were referred to the committee on membership, who will bring their report at the next regular meeting of the club.—C. H. OPEL, Secretary, Central Field Trials Club.

HIS FIRST TIME ON THE TRACK.

MUMFORD, N. Y., Jan. 19.—*Editor Forest and Stream*: Friday I took my puppy Victor and the old dog Drive and went north of Churchville, where I came across two other hunters with their two dogs. We drove to the Pines and there found a track. We put three dogs on, keeping Victor with us till the fox was started, which was in about 15m. They started the fox out of a swamp, which was completely filled with water with a coat of ice strong enough to bear the fox but not the dogs, so it was hard work for the dogs to get through.

The chase was due west for three miles, then it crossed the road, where we put Victor on with the other dogs (it being his first run after Reynard) and went south for a mile, and then back east. We all saw the fox for a good mile this time, running his best, with the four dogs about ¼ mile behind. One rig drove to the runway where we waited to see the race, which was in about two minutes. As the dogs came out of a piece of woods, Victor the puppy was leading the others by 20 rods, with Drive second, 5 rods ahead of the Churchville dog. It was music for a while; and it did me good to see my puppy take hold so well.

Reynard was shot at seven times by a fellow with a Winchester, but only served to send him on faster and to turn him to the south. Fox and dogs were south out of hearing for an hour; then returning they went into the swamp where he was started. In there he fooled the dogs a good deal on account of the ice, but at last they went south again and were gone for another hour. They circled here two or three times more before night; but all the men were unable to get a shot at him. The dogs were always very close to him and sending him on a keen jump all the time. They were finally taken off after dark by one of the party (which was quite numerous in the afternoon) and locked up in a barn.

In the morning I started to find my pup. He was at the house of Mr. Bangs, who said he had to carry him in his arms from the track to the house, to keep him from chasing the fox. Good grit for the first time, you see. The next chase will bring his brush. J. M.

A FOX HUNT OF THE OLD SCHOOL.

Editor Forest and Stream: The following stirring lines, which I copy from an August, 1889, copy of a Western paper, are from an article by James Norris, who is apparently of Virginia:

"Those noble steeds, once the pride
Of Harry Gilmore's famous band,
Many a raid and midnight ride
They have made with his command.

At the bugle's call to mount and form,
They would neigh and paw the earth,
Eager to meet the battle's storm
As schoolboys meet in festive mirth.

No more his ringing neigh will sound
In echoes o'er the tented field;
No more his hoofs will cleave the ground—
By death's command his fate is sealed.

No more this steed will hear the sounds
Of huntsmen, meeting for the chase;
No more the music of the hounds
Will rouse him from his resting place.

The huntsman's horn and rolling drum
Fall silent on his ear;
The bugle's call and battle's hum
He never never more will hear."

This hunt took place Nov. 24, 1833, from the home of Samuel Taylor, where the huntsmen had assembled, after the custom of those days, the night before, with their fine blooded steeds and several packs of musical hounds, and now swelling the number to about fifty in all.

This was in Westmoreland county, in those early days of rural sports, when the first families of the Old Dominion (F. F. Vs.) were wont to meet here and there by turns, to enjoy their annual hunts and festivities. And if we go back but a little to the earlier meets we shall find foremost among the members our beloved Washington, together with many other illustrious men of his time, all well mounted, booted and spurred, and ready for the dashing chase at the sound of the horn. Then let no one say, that such outdoor and health-giving sports are ignoble.

Then up with the morn,
And away at the sound,
There's music in the horn,
And music in the hound.

Norris historically refers to the best blooded horses of his day and says, "The imported Diomed and his offspring, Sir Archy, and Duroc were of this blood, and that they, the Virginians, were exceedingly careful in breeding to preserve the line of pure blood." And as represented by him, "this line of fine blooded horses mostly went under the green turf or decayed sod, during the sad late civil war, but I rejoice to see them so pathetically remembered in tender verse, by him—one of the most daring and dashing riders of the chase in 1833. MAJ. H. W. MERRILL.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

Notes must be sent on the Prepared Blanks.

Corra Singer—Whiteley's Don. Van Heyde & Whiteley's (Urbana, O.) pointer bitch Corra Singer to J. A. Linn's Whiteley's Don (Vandevort's Don—Luck), Jan. 12.

Norrine—Bradford Ruby II. Jos. Warburton's (Cincinnati, O.) pug bitch Norrine (champion Treasure—Jesse S.) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.) Jan. 28.

Lorraine—Marquis of Stafford. Mrs. F. Smith's (Germantown, Pa.) St. Bernard bitch Lorraine to Jas. F. Hall's Marquis of Stafford (Save—Miss Philimon), Dec. 27.

Becky Sharp—Beaumont. J. L. Campbell's (Simcoe, Ont.) Gordon setter bitch Becky Sharp (champion Royal Duke—champion Norm) to Beaumont Kennels' Beaumont (Ronald III.—champion Floss), Jan. 21.

Fan—Beaumont. L. I. Martin's (Toledo, O.) Gordon setter bitch Fan (champion Rupert II.—Bell) to Beaumont Kennels' Beaumont (Ronald III.—champion Floss), Jan. 25.

Bess—Beaumont. Dr. Lordley's (New York) Gordon setter bitch Bess (Don—Nellie) to Beaumont Kennels' Beaumont (Ronald III.—champion Floss), Jan. 28.

Rochelle Lass—Dick. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Lass (Punch—Young Luce) to their Dick (Prince)—, Nov. 30.

My Queen—Jubilee. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch My Queen (Grand Duke—Maggie May) to his champion Jubilee (Bendigo—Queen), Dec. 18.

WHEELPS.

Notes must be sent on the Prepared Blanks.

Rochelle Lass. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Rochelle Lass (Punch—Young Luce), Jan. 23, six (three dogs), by their Dick (Prince)—.

Miss Norah. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Miss Norah (Dutch—Norah), Jan. 9, eight (three

dogs), by his Young Royal Diamond (Royal Diamond—Mercedes Royal).

Nell. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Nell (champion Count—Bertha), Jan. 25, five (two dogs), by his champion Jubilee (Bendigo—Queen).

Stanley Nell. H. A. Harris's (North Wilmington, Mass.) fox-terrier bitch Stanley Nell (What's His Name—Ruby), Dec. 21, four bitches, by his Blenheim Match (champion Lucifer—Marguerite).

SALES.

Notes must be sent on the Prepared Blanks.

Cleopatra. Black greyhound bitch, whelped May 24, 1889, by champion Memnon out of Fanny M., by H. W. Huntington, Brooklyn, N. Y., to Robt. F. Little, Jr., New York.

Carl Belton. Black, white and ticked English setter dog, whelped Feb. 14, 1889, by Leigh Belton out of Rural May, by A. S. Aborn, Wakefield, Mass., to Frank L. Harwood, Warren, Mass.

Morse's Berkley. Red Irish setter dog, whelped Oct. 29, 1889, by champion Chief out of Bizreena, by Onota Kennels, Pittsfield, Mass., to A. S. Morse, same place.

Janet. Red Irish setter dog, whelped Oct. 29, 1889, by champion Chief out of Bizreena, by Onota Kennels, Pittsfield, Mass., to C. H. Willis, Stockbridge, Mass.

Napoleon. White bull-terrier dog, whelped Jan. 5, 1889, by Young Royal Diamond out of Miss Norah, by H. A. Harris, North Wilmington, Mass., to A. E. Clemons, Andover, Mass.

Yamp. White bull-terrier dog, whelped Oct. 31, 1889, by Young Royal Diamond, N. Y., to J. E. Campbell, H. Harris, North Wilmington, Mass., to Chas. Meres, Ballard Vale, Mass.

Rector. White bull-terrier dog, whelped Aug. 3, 1889, by champion Jubilee out of Nell, by H. A. Harris, North Wilmington, Mass., to Ellery Capen, Portland, Ore.

Meersbrook Girl. Black and tan terrier bitch, whelped Dec. 14, 1887, by Punch out of Meersbrook Jessy, by Rochelle Kennels, New Rochelle, N. Y., to J. E. Campbell, H. Harris, North Wilmington, Mass., to Chas. Meres, Ballard Vale, Mass.

Buffalo General. Meersbrook Girl whelped Black and tan terrier dog, whelped May 24, 1889, by Rochelle Kennels, New Rochelle, N. Y., to J. E. Campbell, Montreal, Can.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

SETTER, Baltimore.—A friend of mine has a fine young setter. Some 8 or 10 mos. ago an engine struck him in the head, and after careful nursing he seemed to get well. He has been worked on game for some time. Now, after getting through with hunting he has fits. They are coming closer and closer together, and we fear lockjaw. If you will answer in next week's paper what to do I will be greatly obliged. Ans. The fits are probably due to some cerebral lesion, the result of the accident. If so, the disease is progressive and will lead to a fatal termination. Other causes are worms, distemper, constipation and over-exertion, sunstroke, etc., which should be treated accordingly.

E. B. W., Boston.—I have a belton setter which I bought, warranted thoroughly broken, and when I took him to the field he would flush his birds and chase them. Do you think he can be broken of it? He is a bright, intelligent dog. He is also troubled with the following: Dry, scaly nose and scratches and bites himself a great deal. I have used carbolic soap and Glover's mange cure, but still he digs and bites himself. He is lively and appetite good. I think his hair comes out more than it ought to this time of the year. Any information through your valuable paper will be gratefully received. Ans. 1. If he has a good nose and will point, he can be broken with the help of the check cord. 2. Give 5 drops of Fowler's solution of arsenic in the food morning and evening for three or four weeks.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Feb. 1.—The Massachusetts Rifle Association held its regular weekly shoot to-day at Walnut Hill. The shoot was well attended, and some good scores were made. Mr. Barstow's score of 10 off-hand was very fine under the weather conditions, as there was a strong changeable wind from 7 to 12 o'clock.

BOSTON, Feb. 1.—It lacked just one minute of midnight to-night when the revolver, pistol and rifle shooting ceased in the Boston Athletic Club building. It was the closing day of the shooting tournament that had been in progress there for two months past, and the marksmen kept working up to the last minute in an endeavor to improve their scores. There were a few who had to hold the ranges during a greater part of the evening to bring themselves up to the scores they are credited with. Several times during the day and evening the complexion of things changed. First one contest would lead and then another would be in front, so that things were really exciting throughout. The scores in the several matches at the close were as follows:

Rest match with rifle, 10 shots to count:

Appleton.....1000 Parker.....1000 Underwood.....978
Hubbard.....1000 Gould.....986 Rice.....974

King.....1000 Phaneuf.....982 Holden.....970

Kingley.....1000 Rand.....981 Briggs.....962

Off-hand, with rifle, 10 shots to count:

Hubbard.....964 Kingley.....955 Stuart.....887
Underwood.....961 Rand.....917 Tyson.....876

Denny.....959

Pistol match, 10 shots to count:

Kingley.....936 Brown.....902 Bradford.....800
Crownshield.....824 Paine.....899 Rice.....780

Hubbard.....935

Revolver match, 10 shots to count:

Kingley.....890 Fellows.....854 Hubbard.....789

Championship match, 10 shots each, at rest with rifle, off-hand with rifle, and with revolver and pistol:

Kingley.....978 Hubbard.....2658

Ties in the above will be shot off this week. The conditions stipulate that each man shall shoot 100 consecutive shots, five shots on a target. The scores will not be declared until all the competitors have finished. The tournament has been the most successful of the kind ever held in Boston, and much credit is due Manager Russell of the shooting gallery for the manner in which he handled it. The marksmen who participated in the tournament have undoubtedly proven themselves the best in New England at indoor work.

VILLISCA, Ia., Jan. 28.—Co. B rifle team had a strong 4 o'clock wind, which made very poor off-hand shooting:

200yds. 300yds. 500yds.

Capt West.....3240 33043 3044—39

Lieut Harris.....4334 34943 03243—45

Sergt Overman.....45345 44445 4444—61

Pvt Moore.....3004 45370 4444—41

Pvt Bevens.....34445 22440 4444—45

R A Dunn.....4443 50043 20024—56

NEWARK, N. J., Feb. 1.—The standing of the clubs in the association tournament to date is as follows:

	Won.	Lost.	Average.
Howard	12	3	1.055
Excelsior	12	3	1.055
Lakeside	10	5	1.037
Oakland	10	5	1.037
Monroe	9	5	1.033
Puritan	8	5	1.019
North Ward	8	6	.955
Annie Oakley	4	12	.925
Essex	3	12	.893
Sheppard	3	12	.843
Newark	2	12	.778
Electric	0	13	.721

The contest for the individual medal has narrowed down to two men, although by some unforeseen accident these men may lose a match each, and thus sacrifice their chances. Otto Krauss is at the top of the list with an average of 111½, his nearest competitor being Gus Widman who has 109½.

The Columbia Rifle Club elected the following officers last week: Wm. A. Coe, Pres.; H. C. Koegel, Vice-Pres.; J. Hanrahan, Rec'd. Sec'y; A. Ginter, Fin. Sec'y; Ph. Scheib, Treas.; M. Kreyling, Sergt.-at-Arms; Wm. Walzing, Team Captain.

SAN FRANCISCO, Jan. 26.—The inviting weather of to-day brought the marksmen out by the score, and the merry crack of the rifles rang through Shell Mound Park all day. The boys were on their mettle, and though a new lot of rifles, the sights of which have not yet become set, handicapped a few, the majority made good scores. Company B was out in force and a team shoot took place, the scores of which were as follows:

Pvt. Brown's Team		Oestrich, Oestrich's Team	
Brown	44	Oestrich	36
Maginnis	42	Kelch	38
Carroll	45	Adams	38
Cooper	35	Sheehan	37
Sergt. Kennedy	25	Brusher	37
Capt. Kennedy	20	Stettin	34
Fisch	31	Richards	44
Rash	31		

Smith Carr and Edward Hovey, the veteran shots, gave an exhibition of pistol shooting which has seldom been excelled. The match was 50 shots at 50 yds., with regulation Smith & Wesson revolvers, possible 250. The scores were as follows:

Carr.....49 48 48 48 45-238 Hovey.....45 49 48 49 48-239

ST. LOUIS, Mo., Feb. 1.—There was a good attendance at the last shoot of the St. Louis Pistol Club last Wednesday. Mohrstadt made the top score, and will hold the medal until the next shoot. The shooting as a whole was good. The following scores were made at a 15m. bullseye, distance 12 yds., possible in 10 shots 120:

E. Mohrstadt	12 11 11 11 11 11 11 11 11 11	118
M. Summerfield	12 11 11 11 11 11 11 11 11 11	116
G. Bauer	12 11 11 11 11 11 11 11 11 11	114
G. Alexander	12 11 11 11 11 11 11 11 11 11	113
J. J. Lard	12 11 11 11 11 11 11 11 11 11	112
W. J. Schaefer	11 11 11 11 11 11 11 11 11 11	112
F. A. Roid	12 11 11 11 11 11 11 11 11 11	112
W. C. Billmeyer	11 11 11 11 11 11 11 11 11 11	111
D. Barker	11 11 11 11 11 11 11 11 11 11	110
W. C. Mackwitz	11 11 11 11 11 11 11 11 11 11	110
H. Stuessel	11 11 11 11 11 11 11 11 11 11	110
W. Hottel	11 11 11 11 11 11 11 11 11 11	109
A. E. Bengel	10 12 12 9 11 11 11 11 11 11	106

OWENSVILLE, IND., Jan. 7.—The Owensville Ballard Rifle Team made following scores, 200 yds., off-hand:

J. Montgomery	7 10 10 9 4 8 7 10 8 8-80
	9 9 10 9 10 6 7 8 9 8-83
	8 10 6 8 10 10 0 7 6-84-247
W. T. Roberts	7 7 4 7 9 10 5 7 8 9-75
	1 8 8 10 7 10 9 7 8 4-75
	10 7 5 10 5 8 6 9 6 10-74-222
C. Summers	4 0 7 8 8 6 8 9 8 10-75
	8 10 3 8 6 7 6 7 7 7-74
	9 4 10 6 8 6 6 8 5 10-72-222

CREDMOOR.—At the meeting of the Board of Directors of the National Rifle Association on Tuesday, Feb. 4, the formal transfer of Credmoor was made, and the title to the grounds is now in the name of the State. Gen. Robbins is reported as having great schemes for the rehabilitation of shooting there.

THE TRAP.

As this journal is the only one having a representative with the East and West team tourists, our readers will be given the best, brightest, fullest, most accurate and most satisfactory reports of the progress of the enterprise.

AMERICAN SHOOTING ASSOCIATION DATES

Feb. 12, 13, 14.—Birmingham, Ala.
Feb. 19, 20, 21.—New Orleans, La.
April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May 29.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.
The Kansas City dates have not yet been determined, but they will probably be May 25, 26 and 27.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

ON BOARD THE IOLANthe, Ohio, Jan. 27.—This has been a red-letter day in the shooting annals of Dayton, and indeed, it is probable that in the shooting history of the State there has been no day more noteworthy. Those who have lamented the apparent decadence of trap-shooting as manifested in the light attendances of the past year need lament no more. There was not only a crowd of the best of the championship shoot at Dayton fair grounds this afternoon, but the crowd was a large crowd, a popular crowd and an enthusiastic crowd. There were four special excursions run into the city to-day, and among the Cincinnati visitors were many familiar faces, including those of Al Bandle, Ed. Taylor, Chas. Kauffman, "Wick" and others known in trap circles of that city. From what can be learned from the gate receipts and from a fair estimate of those who stole their way in, it is very probable that the attendance was about 700 and 800, and a more eagerly interested and appreciative audience never gathered behind the scores. Mr. Dimick has expressed himself as highly satisfied with this, the inaugural shoot of the tour, and if other cities average so well as Dayton, he may certainly feel flattered by the result. There has been a genuine excitement in Dayton to-day, in which non-shooters as well as shooters have generously joined.

After a morning spent in hasty preparations, more or less confused by reason of the still chaotic state in which the newly arrived and more or less exuberant crew had left the car, the boys ate lunch with genuine shooters' appetite, and packed their traps for the journey to the grounds. This was made in a gorgeous taily-coach, driven six-in-hand by a good whip, and melodiously announced by the driver, who blew a horn as he blew a horn so long and shiny as might have excited Gabriel's attention, not his envy. This drew a curious crowd upon the streets, and quite a mob gathered on Main street when the coach paused in order to allow a photographer to make some views. Thence to the grounds the taily-coach was followed or preceded by a long line of vehicles. The two teams, seated high on the great vehicle, and dressed in their showy uniforms, made a unique display, and attracted many admiring glances from feminine eyes, which certainly might have chosen over for seeking for good-looking and manly fellows.

The reputation of the men for grace and beauty was made before they reached the gates. The noble dignity of Mr. Stice and Mr. Ruble, the lissome grace of Harvey McMurchy, the simple, childlike innocence of Chippie Budd, the gravity of Messrs. Tucker and the Perry, the stately calm of Messrs. Quimby and Wolstencroft, the sweet smile of Mr. Heikes, the regal indifference of Mr. Cahoon, and the eagle eye of Paul North, who as a temporary guest sat on the front seat with Mr. Dimick—all these things could not fail to have the effect usually created by those who have the fatal gift of beauty. It remained to be seen what reputation the team would create or sustain as shooters pure and simple. A glance at the scores will show that this is a shooting crowd. None but non-shooters of the first water would shoot such a race. And the boys did this after a night more or less sleepless, owing to their new and rather noisy quarters on a depot side

track, and in spite of the fact that the traps were unfortunately set directly facing the sun.

Messrs. McDonald and Pratchett acted as judges, Mr. Dimick and Mr. S. A. Tucker dividing time as referee. Paul North presided at the trap. FOREST AND STREAM scored. FOREST AND STREAM is the only paper represented on the car. It will thus be represented on the entire trip, and therefore all other papers will fall to get a place in the running with it. Still, that is nothing unusual.

It was about 2 P. M. when Capt. McMurchy and Budd tossed for choice. The Western team went to the score first, and Mr. Budd cracked three straight without apparent effort, and the first gun of the greatest trap-shooting circuit the world has ever known had been fired. Score:

Match at 30 singles and 5 pairs bluebirds, 18 yds. rise, new American rules:

The Western team went so easily, but the Eastern made a showing which makes a repetition of that feat extremely doubtful. Wolstencroft, of Philadelphia, made the only straight, which, under the circumstances of light, etc., was a really remarkable score; for in the doubles some of the birds were thrown square in the face of the sun. His sensational snap shot, smashing a bird which slipped in the trap and darted sharp to right, was the feature of the day. Mr. Ruble, who is better known in the party as the Amateur, crowded hard for a straight, but fell just short, as did also Mr. Budd. Repeated applause greeted the more successful shooters. Mr. Quimby's score was one of the unaccountables for him, and he is not likely to repeat it. Mr. Quimby shot as substitute for Mr. Whitney, who was threatened with the prevailing epidemic of cold and sore throat, and, therefore, was advised to remain at the car.

The grounds were now hurriedly cleared for the live-bird traps, it being announced that Mr. Heikes of the Western team, and Mr. McMurchy of the Eastern team, would shoot a race of 25 singles. Score:

Heikes-McMurchy, 25 single birds, new American rules:	11 11 11 11 11 11 11 11 11 11
McMurchy	01120002111121111100011-18
Heikes	01120002111121111100011-18

Heikes won. The birds were a mixed lot, but strong, prompt flyers. They often flew directly toward the sun, and it was nearly impossible to see them. This accounts for the low scores.

The guns used by the different teams are as follows:

Eastern Team.—McMurchy, L. C. Smith, 12-gauge; Wolstencroft, Greener, 12-gauge; W. E. Perry, Parker, 10-gauge; W. S. Perry, Parker, 10-gauge; Whitney alternates with 10-gauge Smith and 10-gauge Leaver; Quimby, L. C. Smith, 10-gauge.

Western Team.—Budd, L. C. Smith, 12-gauge; Stice, Parker, 12-gauge; Heikes, 12-gauge; Cahoon, Parker, 12-gauge; Ruble, Levee, 12-gauge; Tucker, Parker, 12-gauge.

It was growing dusk as the live bird match ended. The boys hastily collected their belongings and again took themselves to the wheeled domicile, which is to be home for them for nearly three months. Rolla Heikes, who lives at Dayton, bade adieu to his wife, who was a proud, but rather fearful witness of his winning and then there was a sharp driving to catch the 520 train to Cincinnati. The two hours en route have been whiled away with a hearty dinner and with post-prandial song and music, in which Rolla Heikes's baritone figures largely, and now we are rolling into Cincinnati, Union depot. To-night the two teams will go in uniform to the theater, in this, as in all else, the guests of Mr. Dimick and his company.

And now word about the car Iolanthe. This car is one of the only two of the kind in the country. The other is chartered by Joe Jefferson, the noted actor. The car is a masterpiece of interior is fairly a hotel for perfectness and convenience. One of the middle compartments is used as a property room, and another is furnished into a snug domicile for Mr. Dimick. There is a smoking-room at one end of the car, and at the other end is the kitchen. There is an elegant drawing-room which betimes holds the long table, and the boys are now and then indulging in a meal time in the fashion of the regular buffet cars. There are numbers of pictures tastily decorating the drawing-room, and take it all in all, the whole car is simply elegant. For the purpose in hand, it has only one equal in all this land so noted for its luxurious railway travel. There are in the service Robt. Jackson, Porter, Fred Alexander, waiter, and Chas. Lyons, cook, and these all seem to enjoy the busy fun of the car as much as the boys, so many being thus thrown all at once into quarters necessarily so large as all out doors, there is still an occasional lost hat or missing wiping stick, but as the boys get straightened around, and as the established system begins to prevail, there will be order, sweetness and light in this novel trap-shooters' home. Among the boys are two who are trouble about their baggage. There is a property man, Mitchell, along, and he is as much as any of the thing of that sort. The boys hand him their trunk cheerfully, and makes a record of each in his book, and that is the last of it, until the owner may want some article in his trunk, when the latter is soon ready at call. Every care has been taken for the comfort and ease of the party.

The Iolanthe has been visited to-day by throngs of the interested and the curious. She will doubtless be visited to-morrow here, where the teams shoot at the baseball park. To-night the boys are the abode of a happy, cheerful and contented little party of shooters who all know each other and dwell harmoniously together. Mr. Dimick is to-night pretty well convinced that he has got a crowd of shooters together under his roof, and the shooters and all others are convinced that the trip in all its purposes is a success already.

Cincinnati, O., Jan. 28.—The quiet morning air of Cincinnati freight yards was broken this morning early by the voice of Chippie Budd. "Mr. Dimick," said he, "I ain't much of a kicker, but I want to say right now that if I can't have a pair of suspenders long enough for me, I'm going to quit and go home."

Mr. Dimick appeased the captain by the gift of a new pair of suspenders, remarking that that was customary when one gets a new suit of clothes. Mr. Ruble came next.

"You will have to stop your car," said Mr. Dimick, "I'm sorry, but I can't shoot no longer if I don't get the armbolies in my coat cut bigger."

"You shall have it done," said Mr. Dimick.

"Now, I'll tell you what I'm going to do," said Mr. Tucker, as he crawled out of his berth; "I'm going to spoil this trip right here, if I don't have my shoes blacked all over and brought right here, and the next day I'll be back with a new pair of shoes."

"Rob," get him his shoes," said Mr. Dimick, "and next time black 'em all over if it takes two boxes."

"Say, Mr. Dimick," began Jim Stice, "if you can't keep Henry McMurchy from sitting on my new bat, I ain't go to play no more."

"Henry, get off Jimmie's bat, my boy," said Mr. Dimick, "and come to breakfast, all you."

So they all came, and great shades of Pullman, how they did eat!

It was early apparent that the second shoot of the series was not to be in any way behind the first. The Cincinnati boys were out in force at the general meeting place of the only Al. Bandle's store and at other gun stores of the city. Al was on hand himself, and the boys were as quick as ever, and welcomed the boys with a warmth, tinged only by his regret that he could not accompany them on the trip. "Wick," of the Wigwag, was also visible, omnipotent as ever, and so was Ed. Taylor, and so were dozens of other shooters who knew and were known by the members of the two teams. Hearty greetings of old friends were common and the stream of sportsmen at Bandle's only grew less when the boys were out for the grounds.

The shooting was at the Cincinnati Base Ball Park, which grounds are fairly in the middle of the city and very much more accessible than the old Independent grounds, where last summer's shoots were held. These grounds are nicely fenced, and have a fine grand stand, which provided warm and comfortable quarters for the spectators who assembled to witness the sport. The day was bright, with little or no wind, and if any fact could be found with the conditions it was that along toward evening the black painted fence made a rather bad background for the doubles.

From what estimates are possible at this time it is very probable that there were between 700 and 800 spectators. The crowd was about equal to that at Dayton, but owing to the arrangement of the seats, and the fact that the boys had just back of the shooters' score it was more easily controlled, and there was less of the usual good natured crowding up to the dead line during the shooting. A word should be said about these people. They had many shooters

among them, but it was not solely a crowd of men and boys. There were many ladies, and on the whole the assembly was orderly in the extreme and sufficient commentary upon the success of this trip in all its best purposes. Cincinnati may be proud of the people she sent out to see the boys and proud of the reception she has given them in every point and particular. All of the Iolanthe's crew are pleased and satisfied in the extreme and go on their way rejoicing.

It was about 2 P. M. when the teams, in full uniform, filed up to the firing table and began the actual work of the second contest. It will be seen that at this writing the honors are easy, for to-day the Eastern team administered a drubbing to the Western, after a fight which no one on earth could call anything like a hippo-crow. If some of these men are not careful, they will get into the A class next year. Score, 30 singles and 5 pairs bluebirds:

Eastern Team.									
H. McMurphy	11	11	11	11	11	11	11	11	11

Western Team.													186
C W Budd	1111110111												

When the Western team beat the Eastern at Dayton, the Heikes and Protector Co. presented them with \$25 each as a special prize. A similar pleasant experience awaited the Eastern team here. The Bandle Arms Co. and the Laffin & Rand Powder Co. offered the winners five elegant silver cups as trophies, and at the announcement of the result these were presented to the victors with a suitable speech by Judge Ermston, to which Captain McMurchy responded eloquently. The cups made a fine display, and hereafter will be on exhibition as part of its most prized furniture. Cincinnati will have to drink out of tin cups, according to to-day's boast of their victors.

The crowd was back in town at 4 P. M., and more visiting with Al Bandle and the other boys followed. At 7 o'clock the Iolanthe was pulled into the Union Depot, and for a few moments was thronged with visitors. At 7:30 she rolled out for Louisville.

En route to P. M.—Fred Quimby bought a new concertina to-day, and himself is going to play very well indeed. It seems that Mr. Dimick and Mr. McMurchy got wind of Mr. Quimby's purchase, and in turn they bought a good healthy tin horn. In the duet which has just transpired the latter instrument may fairly be said to have had the better of it. We have had banjo music by Prof. Heikes and violin music by Prof. Stice, and now the colored train servants are singing for the boys. It seems only human to stop and listen to that for a while.

Louisville, Ky., Jan. 29.—The musical concert of last night kept the boys up late and they lingered long after this morning. They awoke to find themselves in the O. & M. depot, directly on the banks of the Ohio River, which is at present a very boisterous and muddy stream. The smoke stacks of the big stern-wheelers are almost always blowing out the windows, and a large majority of the two teams spent a half hour before breakfast looking out over a marine view whose main components were fog and mud. A heavy rain was falling and the prospect seemed uninviting for the day. This is the first rain of the trip. We had strawberries and cream for breakfast this morning. We are the people! Last night Wolstencroft went to bed threatened with a bad cold, but this morning he got up feeling pretty well, and not at all. Harvey McMurchy had an ugly attack of neuritis, and was barely able to shoot through his score this afternoon. Whitney has an inflamed eye that bothers him a little. Budd has a headache and Ruble a pain in the back, while W. S. Perry is troubled with that tired feeling. A few days more of travel are needed before the boys get thoroughly broken in, but their friends need have no alarm, but they are being so well treated that they can't help putting on a few airs by affecting languor and indisposition. They are not sick. Mr. Dimick ordered half a ton of fresh beef put on the car here.

The morning hours were spent in business or strolling upon the muddy streets. A number of guests visited the car, among others Capt. C. G. Berry, the secretary of the Kentucky Fish and Game Commission, who is a trap shot of prominence here; Capt. Berry was the originator of the protective association, and material is forwarded which will permit a more detailed account of its work and purposes. This is apparently a good shooting community, although the attendance at the shoot this afternoon was the lightest yet met with.

Doubtless the threatening weather had most to do with the slowness of the crowd. The day was very raw and damp. Mr. Dimick took his twelve exotics down town and sold each of them for a mackintosh to-day. But many of the Louisville people are entirely had no mackintoshes and so had to stay at home. The shooting was at the baseball park, a very nicely kept and well-arranged inclosure, provided with a good grand stand. This made a very comfortable shooting place for the boys, and no fault could be found with the surroundings, except that noticeable at Cincinnati—a black fence which made a bad background late in the evening.

Mr. John B. Williamson and Mr. Chas. Mills, local sportsmen of note, acted as judges, and Mr. C. W. Dimick as referee. Following are the scores:

Western Team.

Thus it will be seen that the Western team once more got away with their opponents. In the pool rooms the Eastern team had favorite for to-day's race, and odds were laid in favor of one or two Eastern shooters who to-day were beaten by their running mates. Had McMurchy been in form to-day it is very probable that the East would have won, in which case, by the terms of the morning's agreement, the Western team would have had to go jump a big river.

I read in some paper or other not long ago that Mr. Dimick was a very hard-hearted and cruel man, as well as unfair, because he would not let Mr. Wolstencroft appear in any live bird matches, all along of his shooting of a Greener gun! I don't know just how that sage critic figured it out; but you do see some funny things, in some papers. Well, to-day Mr. Wolstencroft was matched to shoot 25 singles, and he won, and this race began at once upon the close of the target match. Score:

Ruble-Wolstencroft, 25 live birds, American rules:

Ruble	221211212121222201201212-23
Wolstencroft	111102111210112121112-23

Ties: Ruble 6, Wolstencroft 1. Wolstencroft won. Judges, Messrs. Williamson and Mills. Mr. C. W. Dimick referee. Mr. Wolstencroft has so far carried away most of the glory on the trip. He has broken 119 out of

100 live pigeons, 30yds. rise, 50yds. boundary. Second event, at 200 live pigeons, 30yds. rise, 50yds. boundary. Third event, at 200 live birds, 30yds. rise, boundary 30yds. from the trap pole. The match is to be shot at the grounds of the Westminster Kennel Club, Babylon, L. I., on Feb. 6, 8 and 10.

Sworn to before me this 29th)
day of Nov., 1889. (

NEW YACHTS.—Mr. H. J. Gielow has lately completed a design for a steam yacht for Dr. R. V. Pierce, to be used for coast and canal work. The length over all, limited by the length of the docks on the Erie Canal, is 99ft., l.w.l. 82ft. 6in., beam 15ft. 9in., draft 6ft. The engine will be of the usual compound type, 11 and 22 by 15in., built by Riley & Conley, of South Brooklyn, from Mr. Gielow's designs. A Roberts watertube boiler will furnish the steam. The yacht will be built of wood by H. C. Winteringham, at Sag Harbor. The owner's quarters will be situated on a separate circular stairway to the main saloon, just abaft the boiler room bulkhead. The after deck is broken by a low house, which gives room in the run for a couple of staterooms. The engines are placed forward of the boiler. The pilot house floor is sunk about 18in. below the deck. The yacht will be rigged as a schooner. No other yachts are building about New York except two or three small ones. It is reported that the Pennsylvania Navy Yard will build the 40 tor Mr. Morgan. In Boston the builders are busy with craft of all sizes, from 60 to 16ft., including a number of racers. In England an unusual number of yachts is being built.

Now, therefore, know ye that we, the said James W. Stairs, James Fraser, Franklin S. West, W. H. Troop and Alfred E. Jones, as such owners, as aforesaid, do and each of us doth hereby give, grant and convey the aforesaid silver trophy or cup unto the said Royal Nova Scotia Yacht Squadron, as trustees, J. W. Lyde, of Halifax, N. S., hereinafter called the trustees, to have and to hold the same unto the said trust trustees the survivor of them, their and each of their successors or successor, and their and each of their heirs and assigns forever, in trust however for the uses and purposes and upon the terms, conditions and agreements following, to wit: That the said trophy or cup be held for the benefit of the said Royal Nova Scotia Yacht Squadron, as trustees, and shall be known as the "Wenona perpetual challenge trophy," to be raced and competed for annually, according to the following regulations and conditions: The cup shall be sailed and competed for once in each and every year on the harbor of Halifax and on the adjacent waters thereof, and the said trophy shall be said trustees to the winners of the said race in each year, to be held within the space of six months after the said trophy shall be won, and the said trophy shall be said trustees to the winners of the said race the next ensuing after said race. Provided that the said trustees shall always, before presenting said cup to said winner, exact a bond of no less amount than \$1,000 from the said winner, in each year, for its safe return into the custody and possession of the said trustees within eleven months of the date of said race, upon which race the said trophy shall be presented to the winner of said race. The said trophy shall be open to all yachts duly enrolled in and recognized yacht club, and shall be sailed on any day appointed by the said Royal Nova Scotia Yacht Squadron between the 1st day of July and the 1st day of October in each and every year, and the day and place to be fixed and agreed upon annually by the said trustees, but of which the said trophy shall be presented to the winner of said race. The time limit of said race shall also be fixed by the squadron. The said trophy shall be no race unless two yachts owned by different owners shall make *bona fide* entry and start, and the said race shall be governed by the sailing rules and regulations of said Royal Nova Scotia Yacht Squadron as yearly existing, except as herein provided for. Should the said trustees, or any of them, die, desire to be discharged from, refuse or become incapable of acting as the said trust, then and so often as the same shall happen, it shall and may be lawful for the surviving or continuing trustee or, and he must appoint a new trustee in the place of the trustee so dying or desiring to be discharged, or refusing or becoming incapable to act, and the said trustee or trustees so appointed or appointed must be a *bona fide* member of the said Royal Nova Scotia Yacht Squadron. Should the said Royal Nova Scotia Yacht Squadron cease to exist from any cause or become bankrupt, or should there be no race for said trophy for two consecutive years, then in either of these cases the trustees shall reconvey the said trophy to the said owners, or to the survivor of them at that time surviving, but if there be none of us living at that time then and in that case to the representatives of each and every of us.

SEAWANHAKA C. Y. C.—The annual dinner was held at Delmonico's on Feb. 1, Com. Center presiding. On Tuesday Mr. Smith delivered the fourth lecture on construction. On Saturday next Lieut. R. M. G. Brown, U.S.N., the navigating officer of the U. S. flagship Trenton, will deliver a lecture on the hurricane at Samoa.

THETIS, sloop, owned by Mr. O. C. Ferris, has been sold to Mr. Paul E. Steverson, owner of Isenlt.

A few miles further, the shore line extending due N. E., came some palisades or bluffs, whence I took the last glimpse of Toronto. These rock formations continue for ten miles, rising abruptly from the water and crowned with cedars, birch and pine. They are about 200ft. high, consisting of soft rock, which is gradually being worn away by the action of the water. I rowed close to the shore, and the waves could toss a stone on to the beach. Hundreds of ducks of various kinds were seen, and a few were swimming along shore in flocks of 20 to 100, and a single one could have had good sport, as they were quite tame. The only people seen during the forenoon were the crews of three

ÊTRE LES ÉTUDES DE MAÎTRE PIERRE

SUR L'AGRICULTURE ET LES FORÊTS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in pre-paring public sentiment for which the Studies of asier Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France ten years ago.

THE KOSMIC ROD

The Most Perfect SPLIT BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY WATERPROOF. This most desirable result is obtained by a new and ingenious device NEVER BEFORE USED IN THE CONSTRUCTION OF A ROD. The Ferrules also are PRACTICALLY DOUBLE, and fitted OVER the bamboo is a WATERPROOF cushion of ZYLONITE, while over that are set the ferrules, thus adding MATERIAL STRENGTH AT THE JOINTS. The mountings are of GERMAN SILVER and HAND-MADE IN EVERY PARTICULAR. In short this is the rod anglers have long wished for. Examine it at any of our stores and satisfy yourself.

PRICE:

IN WOOD FORM.....\$20 00

IN ZYLONITE CASE.....\$25 00

EVERY ROD WARRANTED.

CALIFORNIA EXCURSIONS

In Pullman Tourist Sleeping Cars, via IRON MOUNTAIN ROUTE, Texas and Pacific and Southern Pacific Rys., leave Chicago and St. Louis Jan. 15th and 29th, Feb. 12th and 26th, March 12th and 26th, and Apr. 9th, 1891. One way rate from Chicago, \$17 50. St. Louis, \$13 50. These sleepers are provided with complete berth outfits and separate wash rooms for ladies and gentlemen at very small extra cost. Porter in charge of each car and a special agent of the company with each excursion. Tickets on sale at all principal points in U. S. and Canada. For full particulars address any of the company's agents, or J. E. ENNIS, Exc. Mgr., 199 S. Clark St., Chicago, Ill.

GENUINE

YANKEE SOAP,

Manufactured at

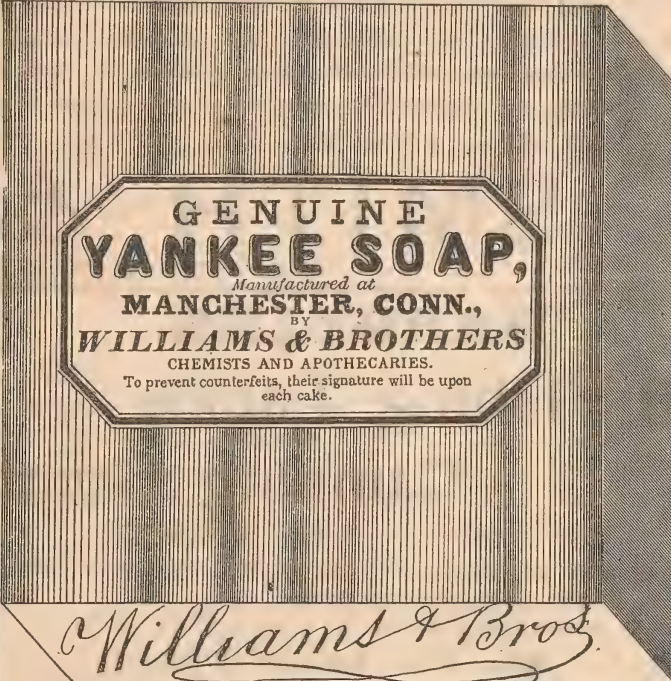

MANCHESTER, CONN.,

BY

WILLIAMS & BROTHERS

CHEMISTS AND APOTHECARIES.

To prevent counterfeits, their signature will be upon each cake.

Williams & Bros.

Exaggerated in SIZE to command your attention.

To exaggerate the delightful QUALITIES of this famous Shaving Soap would be impossible.

Rich as the richest cream—the lather softens every hair of the most harsh beard, making it cut smoothly and easily.

Shaving is not a nuisance when this Soap is used.

It becomes a positive luxury.

Soothing to the skin—it imparts a feeling of cleanliness and coolness to the face after shaving that is delightful.

It has stood the test for Half a Hundred Years.

It is not costly—a single cake will suffice for 300 shaves.

Twenty Shaves for a Cent—delightful, refreshing shaves too.

15c.

For 15 Cents in Stamps we will mail a Full-size Cake for trial to any part of the world. If you shave—try it. Your druggist probably has it. Ask him for it. He can get it for you if he hasn't. Get a cake in some way—before you shave again. Mailed, postpaid, for 15 Cents, by

THE J. B. WILLIAMS CO., GLASTONBURY, CONN.

(Established as Williams & Bros., Manchester, 1840.)

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms
EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements—Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel**, carefully inspected for workmanship and stock, and **GUARANTEED**. Do not be deceived by **IMITATIONS** largely manufactured of **malleable cast iron**, and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.

BARGAINS.

All Fishing Tackle AND Gunning Goods IN STOCK

Will be sold regardless of cost during the month of January to make room for new goods.

Now is the time to lay in your spring stock.

SYRACUSE BAMBOO FURNITURE CO.

(Successors to SYRACUSE FISH ROD CO.)
—MANUFACTURERS OF—

Fine Split Bamboo Fish Rods, Patent Paper Fish Rod Cases, Patent Weedless Trolling Bait and Patent Gang Trolling Bait.

We are offering the following prizes for fish caught on our patent gang trolling baits:
1st Prize for the largest Brook Trout, Salmon Trout, Muscalonge or Pickerel, each (cash).....\$10.00
2d Prize, next largest Brook Trout, Salmon Trout, Muscalonge, Pickerel, each a fine split bamboo rod, value, \$10.00
We do this as a special inducement for you to give our bait a trial. All fish are to be caught only on our patent gang trolling baits, purchased direct from us or from any dealer.
When fish are entered for prizes, the weight must be sworn to, and at least one witness sign the affidavit.
Our goods are superior to any in the market costing as much again as we charge for ours.
We guarantee our gang spoon to catch three fish to one by any other spoon bait or we will refund the money.
To Dealers, to introduce our patent Gang Trolling Baits.—If you buy three dozen of our Baits we present you with a fine Split Bamboo Fishing Rod, put up in patent paper case, value \$6, to be presented to your customer catching the largest black bass during the season on our Gang Trolling Baits. Send for Catalogue and Prices.

BROTHERS OF THE ANGLE.

OUR NEW EIGHT-STRIP SPLIT BAMBOO is the "King" of all Fishing Rods. Chubb's New Catalogue for 1890 is now ready. In addition to a complete list of angler's supplies it contains articles from the pens of Dr. James A. Henshall, Petronella, W. H. H. Murray, Geo. P. Goff, Norman, Brother Gardner and others. These papers are by the best writers on angling subjects and are very interesting.

Send 25 cents and receive catalogue, post-paid. This amount will be deducted from first order (if accompanied with *Coupon* in book) for one dollar's worth or more of our goods. Address

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. {
SIX MONTHS, \$2. }

NEW YORK, FEBRUARY 13, 1890.

{ VOL. XXXIV.—No. 4.
No. 318 BROADWAY, NEW YORK. }

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$18. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications

THE BUFFALO BILL.

THE bill alluded to last week as having been introduced by Mr. Peters, of Kansas, in the House of Representatives, sets aside for a term of twenty years, four townships in the neutral strip, and four islands in Great Salt Lake, for the purpose of propagating the American bison and other domesticated wild animals, provides that these tracts of land shall be leased to C. J. Jones for the purpose of conducting experiments in domesticating these wild animals and crossing them with domestic cattle, and that for ten years no female buffalo or cross-breed shall be sold or disposed of in any way. The bill also appropriates the sum of \$30,000 for the purpose of fencing, building, digging wells and other incidental expenses of preparing the proposed ranch for occupancy and use.

The probable benefit to the farmers and cattle growers of this country of a buffalo cross on our domestic cattle justifies the Government in taking steps to preserve and propagate the tame bison and in assisting those who are endeavoring to establish a breed of buffalo cattle.

The Agricultural Department annually distributes gratuitously many thousand dollars' worth of seeds among the farmers of the United States, and experiments in tea growing, silk growing and sugar growing have in the past been carried on under its direction at very large cost.

The Department has furnished plants and information as to conditions and methods favorable to the growth of tea. Attempts at silk culture are encouraged by furnishing eggs of the moth, and by purchasing cocoons from which silk is reeled at the Department by expensive machinery.

When Dr. Loring was Commissioner of Agriculture he offered prizes aggregating, it is understood, over \$10,000, for the best results in producing sugar from sorghum; but it is understood that this account was disallowed. However, the Government has committed itself in this direction by liberal appropriations for experiments con-

nected with the production of sorghum sugar. In 1885 \$50,000 was appropriated for this purpose, in 1886 \$94,000, and subsequently \$50,000.

It is thus seen that the Government has established a policy of encouraging experiments in agriculture, which seem likely to inure to the benefit of the farmer, although up to the present time its efforts have had to do mainly with plants and their products. There is, however, nothing radically opposed to precedents already established in the attempt to preserve and to engraft on our domestic cattle the hardy blood of their wild congeners.

The fifth section of Mr. Peters's bill provides for the payment to Mr. Jones of \$30,000 for expenses. It may be very seriously questioned whether a bill containing such a provision, *i. e.*, appropriating money to assist one man in his experiments, to the exclusion of all others who are working in the same line, will meet with general favor or ought to be passed. Although Mr. Jones has most of the domesticated buffalo in this country, he does not own them all, and no privileges should be conferred on him in which other owners of buffalo may not share.

We believe that it may be well to set aside a tract of the public land as a buffalo farm, for it seems clear that the Government should foster buffalo breeding by all means which are legitimate, and it is of the utmost importance, for the success of these experiments, that the Jones herd should be kept together. We believe, further, that Mr. Jones alone can manage this breed successfully; but we do not believe that a money appropriation should be made by Congress for the benefit of any single one of the considerable number of men who own buffalo, even when that single one has shown so much enterprise and done so much good as Mr. Jones has.

The breeding of buffalo can be encouraged in some other way.

THE NEW JERSEY LICENSE LAW.

WE referred last week to a proposed new shooting license law now under consideration by the New Jersey Legislature, but we were in error in respect to the scope of the measure. The text of the bill is before us, and it appears that the scheme is not to impose any tax on residents of New Jersey, but to require a license fee from outsiders visiting the State. The bill provides that any non-resident hunting game or catching trout, without first having taken out a license (cost \$5), shall be guilty of a misdemeanor and punished by fine of \$100 for each offense, or shall go to jail. The licenses will be good for one year in the county where issued. It is further provided that county game protective societies may be formed, one in each county, each member of which shall be empowered to arrest those who violate this license law or other game laws. The license fees and one-half of all fines are to be turned over to the treasurer of the county association, to be expended in carrying out the objects of the society in restocking game grounds and otherwise.

The bill then is in the line of making legal the imposition of a tax on non-resident gunners. This tax is no new thing. For years visiting sportsmen have been made to pay a license fee, but as the FOREST AND STREAM has always contended, without warrant of law. The present statute has been used as giving game protective societies power to exact such fees; if it really did that there would be no necessity of the new bill.

SNAP SHOTS.

THE first lot of live quail procured by the committee of the Massachusetts Fish and Game Association has been received. The birds came from Alabama and Tennessee, and have been put out in the towns of Falmouth, Sandwich, Bourne, Taunton and Hingham. Other lots are on the way from other parts of the State. The committee in charge of the work are Messrs. John Fottler, Sr., Henry J. Thayer, Edward E. Hardy, James Russell Reed and Outram Bangs. The quail have been put out in localities where the people of the vicinity have promised to protect them. For success in this undertaking the coöperation of land owners and local sportsmen is essential. Unless the public-spirited enterprise of the Association is backed up by the people, all the money expended in introducing game will be squandered. As the sportsmen of the towns and counties where game is put out will be directly benefited, they should see to it that the birds are protected and given a chance to multiply. There used to be, and perhaps is now, some mis-

taken prejudice on the part of country dwellers against any sportsmen's organization having its home in a city. Any such feeling must surely be overcome when a society like that of Boston sets about a work like this of stocking the country for the good of all. The results of an undertaking to restock depleted covers, even if only partially successful, will be beneficial because thus bringing close together the sportsman of the city and his fellow sportsman of the country.

The heaven is working. Every year marks an advance of common sense as applied to the resources of the water. In commenting on a recent case, where one Nat Shields, having been arrested for unlawful fishing on Lake Champlain, and having brought suit for false imprisonment against fish warden Atherton, was defeated in one court after another, the Montpelier, Vt., *Argus and Patriot* declares: "This suit against Mr. Atherton may not have been a conspiracy or a put up job, but it looks very much like it, and the findings of the courts to whom the matter has been submitted for adjudication indicate that they also thought so. But those responsible for bringing this suit against Mr. Atherton builded better than they knew. Doubtless their intention was to obstruct the enforcement of the laws protecting fish in Lake Champlain by what would virtually be intimidation of those enforcing them, but the result has been directly the reverse. Every legal step taken by the opponents of these laws from the time of the first enactment upon the subject until to-day has strengthened instead of weakening the statutes upon the subject, and it would seem that the policy of Vermont in this regard has become so well settled, both by legislation and by the decisions of the courts, that there can no longer be any misunderstanding as to what the intent of the people is in this regard."

To the same effect is the report which comes from Oneida Lake, New York, notorious for the persistency of its net fishermen who have defied the laws. Heretofore these men have been encouraged and comforted by a local sentiment strongly in their favor. A change has come. Residents of Cleveland and other towns are waking up to the fact that the fish laws are for the public good and that the unlawful netting is opposed to the public good; and the natural result is that local sentiment demands the enforcement of the law. It is an old truth that political issues are not always settled by the results of a single campaign. It is equally true that the issue between common sense and foolishness respecting the right use of nature's bounties of field and stream will not be settled by any temporary defeat of protection. The average of intelligence, take the country over, is high; in that rest the hope and the confidence that the reasonableness of adequate fish and game protection will in time be recognized and approved; and then the laws will be enforced by an overwhelming sentiment sustaining them.

There are men who would send you seven miles beyond perdition, because you don't think it your duty to do what they think it their duty to do; and it makes no difference how important or unimportant the thing may be, nor whether it has to do with religion, politics or the mode of hunting and killing a fox.

We have in type to be published next week an interesting letter relative to the shooting on Lake Koshkonong, Wis., the laws regulating it, their enforcement and non-enforcement by the warden, and the disputes raging between certain club men and local sportsmen.

The Rocky Mountain Sportsmen's Association will meet at Denver, Col., June 17; on which occasion it is proposed to have in addition to the trap-shooting a series of discussions of topics relating to game and fish.

A recent newspaper letter from Newfoundland is headed "The Home of the Big Dog." As a matter of fact Newfoundland is no longer the home of the big dog, unless the correspondent means Leonbergs.

Mr. A. C. Collins, the indefatigable foe of the grouse snarers and market-hunters of the Nutmeg State, has turned his attention to promoting a Connecticut Trap-Shooters' League.

The Sportsman Tourist.

UP IN A BALLOON.

BALLOONING should be encouraged as a recreation. As there is little ballooning done in this country, very few know anything of this charming experience, and nearly all have an exaggerated idea of its danger. In Europe, and especially in Paris, free balloon ascents are quite often made, and as a natural result the Frenchmen make good balloons. Ballooning is not more expensive than yachting, and to my mind it is much more interesting. A good silk balloon with a capacity for two people—say one holding 24,000 cubic feet of gas—costs in France five or six hundred dollars. Here it would cost rather more. The gas is cheaper there also, but if one has a good balloon and does his own work, the whole expense of ballooning here ought not to average over \$100 for each ascent. With a little previous study and the practical experience of a few trips, one can manage his own balloon. Under ordinary circumstances two persons make the best number for an ascent. A balloon club, having a fleet of well-constructed balloons, could have excursions and races on the same plan as that of yachting and canoeing. It is an art or recreation that has been neglected. At all events it has been left mostly to professionals, who indulge in its most risky features and give it the name of being a very dangerous sport, which it need not have. My experience, as here related, has shown me that there is more fun to be had "up in a balloon, boys," than can be discovered "down in a coal mine, underneath the ground."

While visiting Paris and the exposition last fall, I made several balloon voyages accompanied by a good aeronaut, Dr. Rufus Wells. I had wished for some time to make several experiments of a scientific nature from a balloon. This I was able to do, and at the same time I was well repaid by the pleasure of the trips themselves. A brief account of them may interest some. The first ascent was a short one, but was remarkable on account of the very warm weather we found above the clouds; also for the clouds themselves, which lay like a snow-covered prairie below us.

Oct. 25 I ascended in what would appear quite unfavorable conditions. The weather was cold and the sky quite shut out by low clouds. Rising from near the Exposition grounds, we were greeted by the shouts of the people in the streets. Soon we entered the clouds and lost sight of the earth. Rapidly rising through very damp clouds we emerged into bright sunlight. At this point the balloon cast a distinct shadow on the clouds below, and around the shadow of the car a beautiful rainbow halo appeared. As the balloon ascended this image grew smaller, and soon disappeared. We were in a summer climate, and at one time the thermometer registered 80° F., while on the earth it was cold and damp. This is quite unusual, but is partly accounted for by the very thick clouds below. Phonetically the atmosphere was good, for at the elevation of a mile every sound came up distinctly. Even the chickens and ducks could be heard as we passed over the country. The barometer soon indicated that we were nearly two miles above the earth. The feeling of isolation was then almost complete, for very few sounds could be heard except when passing over some town. Having no view of the earth, there was nothing to show in what direction we were traveling or at what speed. Soon after when the balloon was at a lower altitude, the approaching and receding sounds such as musketry and military music (which we three times passed over), with the aid of the compass enabled us to guess our direction and gave some idea of our speed. We had left Paris at 1:30 o'clock, and although there was plenty of ballast left we allowed the balloon to descend at 3:45. Our first view of the earth since we left Paris was gained at this time, when the small town of Essarts le Roi seemed to come up to us. To avoid meeting it too suddenly, we threw over enough ballast to drift beyond it into open fields. Our anchor took some branches out of a treetop before striking the ground; but it soon took good hold of the earth; and after opening the valve of the balloon we descended gracefully to *terra firma*. We then found that we had passed over Versailles and a half dozen small towns in a southwesterly direction from Paris, and had covered a distance of twenty-four miles. The people of the town were much interested in the balloon and our American flag, which was a new sight to most of them. Among this provincial crowd was one face that was quite attractive. It was that of a young woman with a little child in her arms. Although of rather a heavy type of beauty, she would have done justice to a Murillo as a subject for a picture. After packing our balloon we took it to the railroad station, which was close at hand. Two hours later we were in Paris.

On Oct. 30 I made another balloon ascent from Paris, which was truly delightful in every way. I took Dr. Wells with me as before. There was more wind this time and there were few clouds in the sky. Rising from Boulevard de Grinelle at twenty minutes past twelve we floated over the Exposition, looked down on the Eiffel tower and had a splendid view of the gay city at this gayest of times. Gradually ascending and rapidly drifting northward, we left Paris behind us, or to speak more properly, the city seemed to go away from us. Unlike any other means of locomotion, in a balloon one seems to be stationary, for there is no apparent motion of the balloon even when drifting with a strong wind; so that instead of feeling that you are floating off and up, the apparent feeling is that the earth is moving away from you.

We soon struck higher and stronger currents of air and went on quite rapidly, having a delightful panorama of the country below us. Very soon we were traveling at a lower level, and my bugle woke up quite a number of sleepy-looking towns to great demonstrations as we passed over them. Just before reaching the Forest of the Compiègne the balloon was descending quite rapidly, and to avoid the trees we threw over a good deal of our sand ballast. We rose at the rate of 1,000ft. a minute, and at a height of two miles passed through some clouds into a colder region. Then we took our lunch, which tasted all the better for having been postponed.

Our highest altitude was about three miles, and the fastest speed about thirty miles an hour; while near the ground the speed was much less. For the benefit of the towns we passed over we let down messages attached to

paper parachutes; and to my friends in Paris I sent off three carrier pigeons, two of which arrived all right. The third, which was sent off at a high altitude above some clouds, did not return.

One peculiar thing in ballooning is that at any considerable height no hills are to be seen, and unless there are mountains about, the country is like a great many colored maps, seeming to be quite flat. At great altitudes the earth seems to be concave, not convex, as would naturally be supposed. This is because directly below there is great depth, but the horizon seems about as near as from the ground.

At half-past three we descended in a green field, and the people for two miles around assembled to look at what they had never seen before, a real balloon inhabited by two handsome Americans.

After packing our balloon in the basket, doing up our instruments and other paraphernalia, we put all our traps on a wagon, and accompanied by a plebeian retinue we walked a mile and a half to the nearest village, which proved to be Morsain, seventy-one miles from Paris. There we spent the night at the Hotel du Lion Rouge. That evening all the people in the place gathered at this inn and inspected the two Americans who had come from the clouds. My electric lamp and scientific instruments seemed to give them an appreciation of our greatness, and they made the most of the occasion by shaking hands with us. This part of the show I did not enjoy, but knowing that as a future President of the United States I should have to go through this process many times I submitted to it with good grace. The next morning we looked over this primitive village. There was a funeral in the old church, and from curiosity we attended. This proved to be a relief to the mourners, for they all seemed to forget their grief in their interest in observing us. At noon we took the diligence to the nearest railroad station and the train to Paris, where we arrived in the evening in time for dinner. WILLIAM LYMAN.

Natural History.

RANGE OF THE WHITE GOAT.

BY JOHN FANNIN AND GEORGE BIRD GRINNELL.

UP to the present time, little has been definitely known as to the range of the white antelope. In the notes of the old Spanish writers on California occur allusions to two species of wool-bearing quadrupeds, one of which may possibly be this species, but their statements are too vague to positively identify the animals alluded to. The earliest positive statement that we have found which refers to the range of this animal is made by Lewis and Clarke (Edition 1814, Vol. II., p. 169): "The sheep is found in many places, but mostly in the timbered parts of the Rocky Mountains. They live in greater numbers on the chain of mountains forming the commencement of the woody country on the coast and passing the Columbia between the falls and the rapids. * * * From the Indian account these animals have erect pointed horns; one of our engages informed us that he had seen them in the Black Hills and that the horns were lunated like those of the common sheep. We have nevertheless too many proofs to admit of a doubt of their existing, and in considerable numbers, on the mountains near the coast."

Hamilton Smith, in his excellent paper on this species, published in the "Linnean Transactions" (1822), says that he is "assured" that this species is found as far to the southeast as "the Lake of the Woods near Lake Superior, and from thence on the west of Hudson's Bay to the shores of the Northern Pacific Ocean." This statement has been accepted for years and copied by many European writers, but there can be little doubt that it is erroneous. A few instances have been recorded of the capture of the white antelope in the plain country, but it is quite certain that the animal is distinctly an inhabitant of high rough mountains. Even within the range where it is most abundant it is usually found only on rugged peaks at considerable elevation, and very rarely occurs in the low lands or the flat country. It is true that there are one or two hints in certain directions which suggest that at some time in the past this species may have ventured out on the plains more commonly than it does now, but there is nothing that can really be called evidence which points to the conclusion that it was ever other than the alpine antelope which we find it to-day.

Setting aside as of no especial importance except for their historical value the earliest references to the range of this animal, we find that Harlan, in his *Fauna Americana* (Philadelphia, 1825), quotes a letter addressed by Major S. H. Long to the Philadelphia Agricultural Society, which gives some definite though general information on this subject. The statements in this letter are based chiefly on information received from Donald Mackenzie, Esq., who, as chief factor of the Hudson's Bay Company, was long stationed at the junction of the Assiniboine and Red rivers in what is now the Province of Manitoba. Major Long says: "The Rocky Mountain sheep [white antelope] inhabit the elevated region comprised in that portion of the mountain range from which its name is derived, situated between the forty-eighth and sixtieth parallel of north latitude. They are found in great numbers near the headwaters of the North Fork of the Columbia River, where their flesh constitutes the principal food of the natives. The country at the sources of the Muddy (Marais River of Lewis and Clarke), Saskatchewan and Athabaska rivers are also inhabited by them; but they are said to be less numerous on the eastern slope of the Rocky Mountains than upon the western; they are seldom or never seen at a distance from the mountains, the climate and productions of which appear best adapted to their nature and mode of life." A few years later Richardson (*Fauna Boreali-Americana*) speaks of it as inhabiting the loftiest peaks of the Rocky Mountains, and conjectures that its range "probably extends from the 40th to the 64th or 65th degree of latitude. It is common on the elevated part of the Rocky Mountain range that gives origin to four great tributaries to as many different seas, viz., the Mackenzie, the Columbia, the Nelson and the Missouri Rivers."

The statements made by these authors are fairly exact—the latter remarkably near the truth—yet they give us after all only a general idea of the white antelope's range. To say that it inhabits the mountains of Northwestern

America is vague, and we search the books in vain for any definite information which will give us approximately the limits beyond which this animal does not pass. On the northwest coast the white antelope is found on the mainland as far to the west as the very shores of the Pacific Ocean. While seated in a canoe which floated on the salt water, we have seen them on the glacier-scored mountains which rise so sharply from the shores of Bute, and Jervis Inlets, Howe Sound and Burrard Inlet, and abundant testimony from Indians and white hunters assures us that they occur in great numbers all through the coast range of British Columbia, being perhaps more abundant there than anywhere else on the continent.

In the State of Washington they are found in considerable numbers on the high mountains to the west of Puget Sound, and on Mount Rainier. Mr. L. L. Bales writes us that they are common on Mt. Baker, in Whatcom county, and thence northward. They are also abundant on the Olympian Range mountains through which flow the Quinault, Quillinto, Duckeybush, Dungeness and Skokomish rivers, on the Smilkameen and its tributaries, on Mt. Shupaka, and generally throughout the State, wherever there are mountains adapted to them.

About its occurrence in Oregon less is known, yet it is certain that on the higher mountains, such as Hood, Adams, St. Helens, this species finds a congenial home. Hon. W. A. Massie, of McAllister, Oregon, kindly writes us as follows: "I have been told by hunters named William Asher and Henry Bowan that they have killed 'white goats' in the Cascades about the headwaters of the Deschutes and McKenzie rivers. These rivers head in the high rough mountains from Mt. Jefferson fifty miles south; Mt. Jefferson and the Sisters being the culminating peaks. It is not found in the region of Klamath Lake." On the other hand, Hon. John B. Waldo, of Oregon, asserts with great positiveness that this species does not occur on the Cascade range from Mt. Jefferson south to the State line.

About the occurrence of *Mazama* in California, it appears that little is known; yet as they occur in that State on the Sierra Nevada Mountains, a long way south of its northern boundary, there is no doubt that in past times they were found throughout the whole length of that range in northern California. There is a tradition that they were once abundant on Mt. Shasta, but at the present day, according to Mr. Livingston Stone, they are unknown there. Hon. W. A. Massie, in the letter already mentioned, does much to connect the Oregon records with those of California when he writes, "I have what is to my mind positive evidence of its [*Mazama*] presence in at least one locality in the State of California. Within the last six months I have been told by two men (strangers to each other) that they had seen the white goat in the Granite Creek Mountains in Lassen county, Cal. These Granite Creek Mountains are very near the line between California and Nevada." The men mentioned by Mr. Massie are Morton Black and Charles Walker. Lassen county lies southeast of the Klamath Lake country. It is from California that we have the southernmost record at present known for this species: a record which we owe to that indefatigable naturalist, Capt. Chas. E. Bendire. In a letter to *FOREST AND STREAM*, published Feb. 26, 1885, Capt. Bendire says:

"This post [Camp Independence, California (now abandoned)] is situated on Oak Creek, in Owens River Valley, on the eastern slope of the Sierra Nevada, three miles west of Owens River, in Inyo county, California, latitude 36° 55' north, longitude 41° 7' west, at an altitude of 4,958ft. And right here is where I saw more or less of the Rocky Mountain goats during the winters of 1866, '67 and '68. One of the local names by which this animal was known throughout this region of country was 'ibex.' At that time Owens River Valley was but sparsely settled, and game of all kinds was plenty. The Sierra Nevada Mountains in this vicinity reach a higher altitude than at any other point of this extensive range, and Mount Whitney, some thirty miles south of Independence, is, I believe, considered now the highest peak in the United States. On the western slope the mountains are densely timbered to an altitude of about 10,000ft., while the eastern slope is more or less barren, and timber is met with only in patches here and there. The mountain sides are also much steeper and rougher. Here on the bare, rocky crags, the Rocky Mountain goat finds a secure and congenial summer home, where it can rear its young almost undisturbed, and where the crack of the hunter's rifle is seldom heard. The mountain sheep or bighorn (*Ovis montana* Cuv.) is also found here, as well as on the Inyo or Monache range, on the eastern side of the valley; but this latter is, as far as I know, not frequented by the goats. It is only some 8,000ft. high, while the Sierra Nevada Mountains opposite tower to a height of 14,000 to 15,000ft.

"The snow lies the year around on all the higher points of these mountains, and in winter the goats, which at that time were by no means rare, are unquestionably compelled, by want of food, to visit the lower foothills, and here at an altitude of some 6,000ft. I killed my first goat, where I have several times known others to be killed. I remember one very successful hunt in particular, and a very one-sided one it was, too, in which a friend of mine, one of the best hunters and surest shots I have seen, killed not less than five of these goats in less than that many minutes with a Winchester rifle, before the flock, consisting of some twenty, were able to get out of range. We carried the game out on pack mules next day, and the leader of the herd, which was among the slain, gave us considerable trouble to get him aboard of a mule. If my memory serves me right, he weighed over 250lbs. dressed. I think, however, that the average weight is little, if any, over 125lbs. * * *

No doubt this species occurs on other high peaks in this region, and Dr. Merriam advises us that it has been found on Mt. Kearsage, near Mt. Whitney.

In the country directly east of the point mentioned by Captain Bendire we have no authentic information of the occurrence of *Mazama montana* until we come to Colorado. While it may possibly occur at isolated points in Nevada, Utah and even in Arizona, we have no record of its having been taken within these limits. That it is found in Colorado admits of no doubt. Mr. W. T. Hornaday, of the Smithsonian Institution, tells us that he knew of a lot of about 200 skins of this species in Denver, which the Denver Fur Company purchased for fifty cents each. Whether all or any part of these were killed in that State is not known. Many years ago Mr. Grinnell saw the

Limits outside of which the White Goat does not exist.

scalp, with horns attached, of one of these animals nailed up over the door of a butcher's shop in Denver, but could obtain no details as to where the fragment came from. In Vol. V. of the "Geographical Survey West of the 100th Meridian," which is the Report on Zoology by Drs. Elliott Coues and H. C. Yarrow, it is stated that one individual of this species was seen in Colorado by Lieut. Marshall's party, but unfortunately no details are given as to either the time or place of the occurrence.

Much more direct and satisfactory evidence than the foregoing is found in the testimony of an old hunter, Mr. John Willis, now of Thompson Falls, Montana, who has actually killed an individual of this species near Cañon City, Colorado, as detailed in the following letter addressed to Mr. Grinnell:

"It was in the winter of 1879, in February some time, that Chas. Snow, Reece Gephaert and myself were hunting about twenty miles from Cañon City, Colo., when we saw something white going up the mountains. Snow and I went after them, not knowing that there was such a thing as a white goat in the mountains. They seemed to be traveling, and were going south toward some very high peaks. Snow went around to head them off and left me to follow them. They soon saw we were after them, and got up in some cliffs and looked down on me. I shot and made a scratch shot, and killed what I thought was a small one, but it was about three years old, a nanny goat which would have had a kid in the spring. When I shot it was standing out on a point of rocks. The bullet struck it behind the shoulder, and it fell three hundred feet down the cliff. I dressed it and took the meat back to camp, but left the hide where I dressed it. These were the only goats I ever saw in Colorado, and everybody told us that there was no such thing in the mountain, so I never told of it till I saw Mr. Roosevelt.

"Snow was from Illinois somewhere and Gephaert from Toledo, O. They both saw the band. There must have been fifteen or twenty of them from the amount of sign they made.

"I do not know the name of the range of mountains where we found them, but it was on the west or south side of the Arkansas River. I have been in all the Territories south, and never saw or heard of goats, except in this case, till I came to Montana. They are very plenty in some of the mountains here."

The locality above referred to seems to be on or near the parallel of 35° 30', and perhaps in or near the Sangre de Christo range of mountains, but it seems not unlikely that the white antelope may occasionally be found in the high mountains down to or beyond the northern boundary of New Mexico.

Another authentic record of the capture of this species in Colorado was first brought to our notice by Mr. W. N. Byers, of Denver. This individual was killed in October, 1884, by Mr. Egbert Johnson, now of that city. Mr. Johnson has kindly given us the following account of this capture:

"The location was on the southeast side of Mt. Evans, about fifty miles west of Denver and about one-half mile below timber line. I had just finished skinning a bear and was starting for camp, when I saw a band of mountain sheep coming down the side of the mountain toward a spring where I had just skinned the bear. In this bunch I saw what I at first thought was a white Mexican goat, but when they got within 150 or 200 yds. I saw that it was much larger, and the horns were smaller and different. I decided to shoot it to see what it was, as I had no idea of mountain goats in this section. I killed it, and my first thought was to skin it for the taxidermist, but I soon decided that I would not have time, as I was fully one hour's walk from camp with no trail and night coming on. I knew that if I left it till morning either bears, wildcats or some other animals were liable to destroy it, so I took the hide for a rug, leaving my bear skin in a little tree till the next day. The goat was larger than any sheep in the bunch; would weigh undressed, I should judge, about 175 lbs. The hoofs and horns were black; horns about 8 in. long, hair from 4 to 6 in. long and extending to within some 7 or 8 in. of the feet; from there down not more than 1/2 or 3/4 in. long. His teeth were nearly all gone, and he was very poor. The ends of the horns were worn off, and the hide along the back and on the hip joints showed a good deal of cream color, giving every appearance of being very old. I decided that he was a long way from home, as it was the first of the kind that I had ever seen or heard of in this country, after hunting here for over thirty years. When I went back for the bear pelt, I hung the head up in a tree, intending to return and get it, but have never been on that side of the mountain since."

Passing northward along the eastern flanks of the Rocky Mountains to Wyoming Territory we find no sat-

isfactory evidence of the white antelope's existence there. We have been told that one was killed nearly twenty years ago on Elk Mountain, a peak rising to a height of about 11,000ft., which lies twenty miles southeast of the town of Carbon on the Union Pacific Railroad in that Territory, but this is mere tradition. It is true that Mr. S. Garman, of Cambridge, in 1885, reported the capture of one of these animals in the Freeze Out Hills, near the Shirley Basin, but it seems probable that the animal was wrongly identified. We have for many years hunted in the Freeze Out region, and have never heard of the existence of white antelope there. They are entirely unknown to the hunters of the region. Besides this we have the testimony of an old hunter (FOREST AND STREAM, Vol. XXV., p. 44) unacquainted with this antelope, but perfectly familiar with *Ovis canadensis*, who states that he saw the specimen referred to by Garman, and who avers that it was a female mountain sheep. We should naturally look for this species in the western mountains of Wyoming, near the Idaho line, and they are said to occur rarely in the mountains to the south and west of Fremont's Peak. Mr. Chas. M. Donnelly has informed us that he has in his possession two skins of this animal, said to have been taken in the Salt River Mountains, on the heads of streams flowing into the South Fork of Snake River.

We cannot learn that *Mazama montana* has been found in the Yellowstone Park, and hunters who have resided long in the country, Messrs. Ed. Wilson, E. Hofer and the Rea brothers of Henry's Fork of Snake River, state that it is unknown to them. In the country to the east of the National Park, on the heads of Stinking Water, this animal is occasionally seen. The mountains are well adapted to it, but we do not know that it has ever been seen there.

In Montana, along the main range of the Rocky Mountains, the white antelope, as we pass northward, becomes abundant. We do not know of its occurrence in any of the outlying ranges or spurs of the range, such as the Snowies, the Crazy Woman's Mountains, the Big or Little Belt ranges, or the Judith Mountains, though it is possible that stragglers may now and then be found there. We have, however, talked with many men who have hunted in these mountains, none of whom had ever met with them there. There is, however, some evidence that individuals have been killed still further to the eastward, namely, in the Bull Mountains, a range of hills which lie on the southeast side of the Musselshell River in Yellowstone county, Montana, nearly due north of the point at which the Bighorn joins the Yellowstone River. This evidence consists of the following statement from the pen of Mr. J. W. Schultz, who says: "In 1881, while trading with the Indians at Carroll, on the Missouri River, some Crees brought in two goat skins which they said they killed in the Bull Mountains. These are a low range of hills between the Missouri and Yellowstone rivers, and just east of the Musselshell. They are, I think, about fifty miles from the Moccasin Mountains, a spur of the Rockies, and the Crees might have killed them there; but they repeatedly said they got them in the Bull Mountains. I could tell from the appearance of the skins that they had been recently killed." More recently (Feb. 15, 1889) Mr. Schultz writes again, "Henry Norris told me the other day that an acquaintance of his, a buffalo hunter, killed three goats in the Bull Mountains in 1882. We were talking about goats generally, and Norris told me this voluntarily and before I had told him that the Crees had also killed some there. These Bull Mountains, you know, are miserable little rolling buttes, with some pine on them. Norris saw the skins of these goats. I have questioned the Indians repeatedly, and cannot learn that any goats were ever seen in the Snowy, Judith, Moccasin or Belt mountains, which are the nearest to the Bull Buttes."

A few years ago this species was abundant near Deerlodge, Mont., where it is said that about the year 1876 a number were captured alive by the aid of dogs. Reference has already been made to another capture of these animals by David Dobson, in 1879. They were also common in the mountains along the Missouri valley, in the main range along the Continental Divide, north of Deer Lodge. They are probably abundant wherever there are mountains suited to their mode of life. In 1881 Major P. Ronan, the agent of the Kalispel or Flathead Indians, informed Mr. Grinnell that this antelope was abundant in the mountains east of St. Ignatius Mission. On the heads of the Marias River, on Birch, Badger, Dupuyer, Two Medicine Lodge and Cut Bank creeks we have seen it in considerable numbers, and from here north into the British Possessions it is abundant.

Before leaving Montana, however, another eastern record must be given. This rests on the testimony of an Indian whom we know personally and in the truth of whose statement we have confidence. Our attention was first called to this occurrence by Mr. J. W. Schultz, who wrote us as follows:

"Heavy Runner tells me that when he was a boy, he one day saw a goat on top of the Medicine Rock Hill, on the Marias River near Fort Conrad, and that he chased it on horseback and killed it with bow and arrow. He never heard of any having been seen there before or since. This place is about 80 miles from the Sweet Grass Hills and 70 from the main range." Heavy Runner, or Tail Feathers-Coming-in-Sight-over-the-Hill, known to the whites as "Brocky," is a Piegan Indian, and has the reputation of being one of the best and most trustworthy Indians in the tribe. He is also one of their most successful hunters. We have talked with him of this occurrence and he repeated to us what is written above. He further said that many years ago, when he was a young man, he saw a "goat" on the "cut bank" on Two Medicine Lodge Creek, where they used to "jump the buffalo," and that he chased it on horseback and killed it. When he first saw it, the animal was on the face of the bluff, standing on a ledge of rock, that when it saw him approaching, it climbed to the top of the bluff and ran off over the prairie, but that he, on horseback, easily overtook and killed it. This place is about 5 miles north of the Blackfeet agency and perhaps 25 or 30 from the mountains. We asked "Brocky" if the goat ran fast. He said "No, perhaps a little faster than a man, but a horse could easily overtake it." We entirely credit all his statements about these captures.

Following the eastern flanks of the Rocky Mountains to the northwest into the British Possessions, the white antelope is found in considerable numbers, all along the main chain of the Rockies on both the eastern and west-

ern slopes, as far north as where Peace River breaks through the range. North of this point we were for some time at a loss for anything definite as to the northern and eastern limits of this animal's range, but the desired information was at length kindly supplied by Mr. Robert McFarlane, one of the chief factors of the Hudson's Bay Company, to whose courtesy we owe the following note:

"While stationed at Forts Simpson, Norman and Good Hope, on the Mackenzie, I often partook of the flesh of this species, killed by Indians at a distance, amid the Rocky Mountain spurs. The eastern limits are the mountains which extend on the west of the Liard, or Turnagain, the Peel and the Mackenzie rivers. They are also to be met with in the Rockies on the Upper Peace River; but I have never heard of any being found to the eastward of the Mackenzie, but they come close to the latter river."

Further than what is conveyed in Mr. McFarlane's note just given, we have but little definite information as to the northern limits of the white antelope's range. Our own opinion, which, however, is only an opinion, and sustained by no evidence, is that they are found as far north in British America and Alaska as the rough mountains extend. When these disappear, as they do before the shores of the Arctic Sea are reached, there is the limit of the white goat's northern range.

We know that this animal is abundant in Alaska, and Mr. McFarlane's note would indicate that the species is found nearly or quite to 65° N. lat. Lieut. Henry T. Allen, in his report of an expedition to the Copper, Tanana and Koyukuk rivers in 1885, states that this animal "is found on the Copper River and the Upper Yukon." Mr. Chas. C. Bartlett, of Port Townsend, State of Washington, to whom we applied for information as to the northern range of the white antelope in Alaska, after conferring with Mr. Edward H. Brown, who for several years was special deputy collector at Sitka, courteously wrote us that he believes these animals are "not found [there] except on the range of mountains running south of the Yukon, and on other isolated peaks in the same section of country. I have never," he says, "heard of their being taken north of that river." The chain of mountains here referred to is no doubt that range laid down on the U. S. Coast Survey map of 1884 as Alaskan Mountains, which run from Bristol Bay in a northeasterly direction to the point where the White River empties into the Yukon, not far from latitude 64° north, and which are thus in fact a continuation of the Rocky Mountains. Hon. H. W. Seton Karr, F. R. G. S., is given by Mr. Chas. Hallock as authority for the statement that the range of the white antelope in these same mountains extends as far to a point directly north of Cook's Inlet as latitude 62° north, longitude 152° west, nearly. That it occurs in southern Alaska is well known, the skins being brought into the markets of Sitka, Juneau and Killisnoo in considerable numbers, where they are sold at from 75 cents to \$1 each. Blankets woven from the fleece are common among most of the coast tribes, and the so-called Chilcat blankets are somewhat famous for their beauty and the skill displayed in their manufacture.

In British Columbia, at the mouths of the Nasse and Skeena rivers, the abundance of this species is testified to by Mr. W. B. Anderson, of the Provincial constabulary force, who has had great experience with them, and all hunters and Indians agree as to their occurrence in large numbers throughout western British Columbia on the mainland, though, on account of their habits, they do not often come under the eye of the casual observer. They do not appear to be found on Van Couver Island, nor on any of the smaller islands of this coast.

Having thus outlined as exactly as possible with our present knowledge the limits of the white antelope's range on the west, south, east and to the north, we may now look within the borders beyond which this animal is not known to pass, and may mention some localities within his chosen territory where he is to be found in abundance.

Although occurring in considerable numbers in the main chain of the Rocky Mountains in Montana, the center of abundance of the white antelope in the United States appears to be in western Montana, northern Idaho and northern Washington. It is common in the Bitter-root Mountains, and from there to the westward in the very rough mountains of central Idaho. Mr. Theodore Roosevelt has killed them in the Coeur d'Alene Mountains of Montana, and Mr. John Claffin on the Big Hole in Montana, but neither of these gentlemen report them as common in these localities. Mr. John Willis speaks of them as "very plenty in some of the mountains here," i. e., in western Montana. In Idaho Capt. Chas. Bendire reported them as abundant in the Sawtooth range, and generally in the Salmon River country among the high mountains. Mr. W. T. Hornaday, referring also to the Sawtooth range, says that they are abundant 40 miles north of the town of Mountain Home, where he saw skins, and the country of the Seven Devils, so named from the roughness of seven of its peaks, is said to be a great range for them. In Oregon they are reported as occurring about Crater Lake, and are no doubt found on many of the higher peaks. In the new State of Washington they are numerous on Mounts Baker, Rainier and no doubt on all the elevated snow cones for which that State and Oregon are so renowned; they are reported as abundant on the north shore of Lake Chelan by Mr. Orin Belknap. North of the United States boundary line they are common in the mountains in all suitable localities, from the eastern flanks of the Rocky Mountains to the Pacific coast. Through Central British Columbia they are numerous, and we have reports of their abundance from many sources, of which the following are examples: Many hunters and miners well-known to us report them abundant about Dease Lake; Messrs. W. H. Smith and Wm. Humphries, who mined for several years on McDame's Creek north of Dease Lake, report them abundant there; Mr. J. C. McKinnon, in July, 1877, saw a band of 175 to 200 on a tributary of the Liard River, in latitude 61° north, longitude 124° west. In fact they are abundant in suitable localities all through the Omineca, Caribou and Cassiar districts to and into Alaska, and wherever there are high rough peaks, with perpetual snow and ice, there one may feel sure of finding this Alpine antelope.

All that has been said about this species indicates that it is an animal of northern distribution. Except in a few isolated localities it scarcely occurs south of the parallel

of 41° N. lat. When found to the south of this it is confined so far as known to the most elevated peaks, while, where it becomes abundant to the north, it often, even in early autumn, descends to valleys not more than 5,500 or 6,000ft. above the sea level, and in winter it is found in British Columbia down to the very borders of the salt water. It is truly an Arctic animal, and is well equipped to endure the rigorous climate of its chosen home.

In closing these remarks upon the range of *Mazama montana* we wish to acknowledge our indebtedness to a number of correspondents who have most kindly answered our inquiries as to the occurrence of this species in the locality where they reside. Besides those whose courtesy has been acknowledged in the foregoing paragraphs, we are indebted to the following gentlemen: Mr. Howard Rogers, Mr. J. C. McKinnon, Mr. Jas. R. Morrison, Mr. J. Y. Collins, Messrs. J. G. McCain & Co., and Mr. Orin Belknap, of Washington; to Mr. H. M. Tilestone and Mr. W. G. Smith, of Colorado; to Mr. J. B. Monroe, of Montana; to Mr. C. L. Page, of Nevada; to Messrs. E. A. Bulkley, Jesse D. Vance, J. C. Calhoun and Frank E. Glover, of Oregon, and to Mr. Donald Ross, of Edmonton, N. W. T.

NOTES ON PENNSYLVANIA BIRDS.

IT may be interesting to some of the readers of FOREST AND STREAM to learn that pine grosbeaks (*Pinicola enucleator*) have been quite numerous in Susquehanna county, in the neighborhood of Montrose, Pa., during the past two months. These birds are found in flocks of from six to twenty each, frequenting mostly hemlock, hickory and maple trees in the forests. The crops of three which I examined contained buds and small seeds which I have not yet had time to identify. Boys and some of the hunters at Montrose call the grosbeaks "red English sparrows."

Mr. George Russell, of Erie city, shot on Oct. 12, 1889, a snowflake (*Plectrophenax nivalis*) on the shore of Erie Bay, near the town of the same name.

Early in October, 1889, Mr. George B. Sennett, of Erie, shot five or six specimens of the Lapland longspur (*Calcarius lapponicus*) near Erie city. Late in October last, and again about the 28th of November, I visited Mr. Sennett, and we shot about twenty snowflakes. In November I saw a flock at Erie, near the Soldiers' and Sailors' Home, of not less than 250 or 300 of these birds. I suppose the species is still at Erie Bay. I have this winter visited nearly every county in Pennsylvania, but have not seen or heard of the snowflakes in any locality except at Erie.

WEST CHESTER, Pa.

B. H. WARREN.

EVENING GROSBEAKS IN NEW YORK.

IN the last issue of the FOREST AND STREAM Mr. William Brewster has an interesting account of the occurrence of the evening grosbeak (*Coccothraustes vespertina*) in eastern New Hampshire and Massachusetts, in which he records the capture of a number of specimens at various places throughout that section of the country. Thus the first introduction of the species to the fauna of New England is on positive record, and not on unsatisfactory or questionable data. In this particular New York is not so fortunate, for not until very recently has the evening grosbeak an undeniable claim to a position among the birds of the State, although it has been enrolled as one of them for nearly twenty-five years. The writer has no knowledge of the existence of any New York State specimens which were captured prior to December, 1889, so it will be well before dwelling on these late captures to review briefly the status of the earlier ones.

In 1866 Mr. Lawrence (Ann. Lyc. Nat. Hist., VIII., 1866, 289) mentions the evening grosbeak, but as no locality is given the citation may refer to New Jersey, as the birds of a portion of that State are included in the list.

The next record is by Dr. Brewer (Proc. Bost. Soc. Nat. Hist., XVII., 1873, 451) of a specimen seen at Elizabethtown, Essex county, by Rev. Dr. Cutting, in the winter of 1875. This record is very unsatisfactory, for the gentleman who observed the bird was presumably not an ornithologist, and hence mistaken in his identification.

In 1882 Dr. Coues (Bull. Nutt. Ornith. Club, VII., 1882, 250) records a specimen which was seen near Marcellus, Onondaga county, on July 8 of that year, by a gentleman while fly-fishing. It is safe to consider that this was a case of misidentification, as the time of year renders the bird's occurrence as highly improbable. The late Chas. Lenden (FOREST AND STREAM, XXVIII., 1887, 367) mentions the capture of two specimens by a boy at Brant, Erie county, on April 15, 1887. He identified the birds from portions of one of the specimens, so there can be no doubt as to the accuracy of this record.

Mr. Edward Swift (FOREST AND STREAM, XXIX., 1887, 383) records the capture of a specimen at Elmira, Chemung county, on Nov. 25, 1887. The specimen was mounted, but destroyed by a cat the following day.

This completes the published records for the State as far as known to the writer, and taken as a whole they are very unsatisfactory. It is pleasure, therefore, that the writer is enabled to record the occurrence or capture of evening grosbeaks in various parts of the State during the present winter. On Jan. 8 the writer was surprised by receiving six specimens of evening grosbeaks from Lake George, Warren county, the gift of his friends, Messrs. Foster and Roy Lockhart. A letter from the former gentleman gave an account of their capture. Quite early on the morning of Jan. 6 nine individuals were seen on some maple trees in company with pine grosbeaks. Unfortunately, at the first discharge of the gun no specimens were secured, but they were decoyed back by imitating their shrill call and three secured. After this they would not allow themselves to be approached, and finally disappeared. About noon of the same day four individuals were seen high in air flying south, but a few well-applied calls stopped their course and brought them down to the treetops, from where they were soon secured. One, a fine male, having its wing only slightly injured, was placed in a cage, where he soon recovered, making an attractive and interesting pet. Although the young men kept a sharp lookout no more specimens were seen until Jan. 23, when one female was secured, and on the 25th another captured. On Jan. 30 a flock of about a dozen was seen, but departed before any could be secured. The following day the caged specimen, acting as a call bird, brought a flock about the house, from which three females and one male was secured. By the actions of their pet the young men can tell in a moment when other birds are around.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 18, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5.
FRANCOTE 12, Dec. 12.	REMINGTON 10, Dec. 20.

A PUMA HUNT IN NEW MEXICO.

A FEW days ago we had a lively trot after a mountain lion or puma. These animals can scarcely be called uncommon here, although seldom killed. The reasons are numerous, and possibly well known to any who have hunted them in a rough country, but for the benefit of those who have not, I will mention a few. Firstly, they leave less scent than most animals, and the track must therefore be tolerably fresh; secondly, they are too sly and cunning to be still-hunted with any success; for among all the Indians, Mexicans and cowboys I have met in this country, there are but few who have ever seen one; thirdly, their power and agility often aids them in eluding the hounds. For instance, last winter we followed a full-grown pair at racing pace for several miles, up the Cañon de Chama, across the river on the ice, and up the opposite side, where from the most incredible position they took a perpendicular leap of some 12 ft., thereby gaining the top of the mesa. There was no possible way for either dogs or man to follow, so we had to return home, tired and disgusted. There are many other artifices by which they will escape their pursuers, but I have given you enough to account for the satisfaction of a successful pursuit.

About eight A. M. we started out with five dogs in search of tracks, not expecting to find more than a cat. The road was very rough and the snow deep, but we stayed with it. At first we passed nothing but old signs of deer, turkey, etc. After traveling about two miles my friend E., who was in front, called me to examine a print in the snow. It appeared to be that of a steer, and indeed, so it was, but on the inside of it was a mountain lion track. This phenomenon was by no means a new experience for me, and I was not the least surprised, well knowing their peculiarity of following the footsteps of other and larger animals, and even of human beings. I think it is done to conceal their own retreat, for they seldom attack full-grown stock, unless forced to it by starvation. The track seemed fresh, and accordingly Spot was turned loose to see what he could make of it. I concluded he was somewhat puzzled by the combination of scent, as he sniffed about for some minutes before going off. When he took in the situation there was a deep bay and the dog was gone. The remainder of the pack were now uncoupled and we were left alone, but not for long; the snow being deep, we overtook them. I had an idea that it would be a short run and a speedy kill, but this was a mistake, although the scent was good. He did not intend to be caught in a hurry. The puma does not travel fast, but keeps steadily on the move, thereby covering a considerable space during the night and early morning. At this juncture the depth of snow was no slight impediment, every now and again one or the other of us would wholly or partially disappear in a drift, and the scrambling out caused much laughter and some delay. It is not remarkable, therefore, that we were soon reduced to a walk, and a slow one at that; nevertheless, we were consoled by the thought that our game was as good as killed. The dogs could be heard in the distance, so we toiled away until we came to a cañon with very steep sides. Our descent was slow and tedious, for a fall here would have been attended with considerable risk to life and limb.

On reaching the foot of the hill another check awaited us. The dogs were out of hearing, and the tracks had to be found; this done we gained the mesa, and made up for lost time by trotting about half a mile, which brought us to another cañon, somewhat similar to the one we had so recently left. The baying of the dogs became plainer as we descended, and there was now no room for a doubt that the lion had taken to a tree somewhere near the bottom. I put my best leg foremost and succeeded in arriving somewhat ahead of the others. When about sixty or seventy yards from the dogs I pulled up to look about me. The hounds were all running round in great excitement, but no lion could I see, for he was carefully hid behind a limb. However, he saw me, and jumped out, causing a brief stampede among the younger dogs. He was soon gone out of sight, but so closely attended by the pack that after jogging along for a quarter of a mile he was again persuaded to take refuge from his tormentors. This time he was in full view, lying full length along the limb of a cedar and smiling sweetly at the infuriated hounds. When about thirty yards off I took advantage of the broadside offered and fired; E. and C., who were on either side, fired about the same time, and he rolled off his perch, a few convulsive struggles and all was over, the three bullets having taken effect.

He was a large male, measuring nine feet from the tip of the nose to the tip of the tail. On the following day I sent a burro to pack him back to camp, a duty which our faithful servant was extremely loath to perform, in fact it became necessary to blind and tie master Ned before he would consent to the burden.

A. P. F. COAPE.

NEW MEXICO.

THE FIRST WILD GEESSE OF THE SEASON.—On Friday, Jan. 31, a flock of twelve wild geese passed over this city going north. Yesterday Mr. Norman Pomroy, of Lockport, who has a flock of domesticated *Branta canadensis*, of which I have made mention in FOREST AND STREAM, saw a large flock flying about his place, probably attracted by the answering honkings of his flock. This is by far much the earliest occurrence of wild geese on record in this vicinity. The weather is very mild; yesterday was more of an last of April day than the first of February. There is no ice in the Erie Canal nor on any of the streams, and very little frost in the ground, and the geese can feed in the stubble fields as well as any time last fall.—J. L. DAVISON (Lockport, N. Y., Feb. 5).

SOUTH CAROLINA GAME.

BAMBERG, S. C., Jan. 31.—Quail in this section of Barnwell county are very scarce, the coveys few and far between; and when a sportsman is fortunate enough to locate a covey in a bottom or in the woods—for owing to the extreme dryness they are never found in the fields hereabouts—on flushing they take to the swamps or to the thick briers, where they are safe. I have just returned from a week's camp hunt down in the southeastern part of the Santee River, on land formerly owned by Gen. Marion ("The Swamp Fox"). Deer, bear and turkey signs were plenty, but the swamps were dry and the river very low. We had a fine pack of hounds, and succeeded in jumping five or six deer, but only one, a fine doe, came to a stand, and she was killed by Mr. Andrew Meyers, of Orangeburg, S. C. Small game throughout that section, ducks, quail, squirrels and woodcock are plenty; but camping must be resorted to, and it is useless to hunt anywhere around here until we have heavy frosts and rain.

The negro and his \$3 gun and cur dog are everywhere and get most all the game in the South. The negroes never shoot a bird flying, but resort to any means to "fill the pot." As a specimen of the progress made by the average sportsman of this section, my hammerless gun is probably the first ever brought into this town, and at first the natives were inclined to take to a tree when shooting in my company and while I was in the act of shooting. As a rule, the shooters here use cheap common guns. Few of them are wing shots; they have fine dogs, but they are not properly trained, with a few exceptions. Right here in town there are a few excellent dogs and some fine shots. The people are hospitable and warm-hearted and make the Northerner feel that he is welcome. Few or none of the plantations are posted, and the sportsman is free to come and go without fear of molestation. The shooting lasts until April 15, when I expect to return North, and until that time I fully expect that neither man, dog nor gun will be idle.

BLUEROCK.

MINNESOTA'S DEER LAW.

Editor Forest and Stream:

All true sportsmen and law-abiding citizens in Minnesota are greatly irritated over the wholesale killing and shipping of deer in the northern part of the State, both before and since the season closed.

This is not done on the sly, but openly, and when remonstrated with and threatened with prosecution, the offending parties claim that under the existing law they can handle and ship game at any time, by simply claiming that they had it in transit before the close of the season.

As an illustration, last week—the last week in January—at least forty saddles were brought into Detroit City and openly shipped to St. Paul; the station agent receiving orders from the general manager in St. Paul to ship all deer received. An attempt was made to stop the shipment, but it was found that nothing could be done; as the law now in existence was interpreted to allow shipment at any time. This remarkable deliverance was made by a leading law firm in Detroit City who told the man "to go ahead and ship all the deer he wanted to and whenever he wanted to," and said to those who complained, "You can not prevent a man from shipping all the game he wants to at any time." These saddles had been procured from Indians and others since the season closed.

Is it true that the game laws of this State are thus loose and inoperative? The claim is made by the lawyers that it all lies with the shipper, and if he will swear that the game was in his possession before the season closed no one can touch him, as the law gives him fifteen days after the season closes to ship his game, and he can take in addition to these fifteen days the balance of the year, on slight pretext or no pretext at all, and handle and ship game as he pleases. Thus any unprincipled fellow can by simple perjury, for which he cares nothing, evade and defy the law.

This killing and shipping has been going on all over the northern part of this State before and since the season closed; but Detroit City is the only place where an attempt has been made to stop it, with the result as given above. Can anything be done? Are we helpless under the existing law? At this rate our game will soon be gone. All sportsmen view with dismay the outlook for the extermination of deer and moose in a brief time.

DETROIT CITY, Minn., Feb. 1. P. O. S. AND M. C.

THE BISBY CLUB.—The annual meeting of the Bisby Club was held last week at Bagg's Hotel, Utica, N. Y. There were present Gen. R. U. Sherman, New Hartford; Hon. Samuel J. Bryant, Waterford, Conn.; Hon. R. F. Wilkinson, Poughkeepsie; W. H. H. Wooster, Seymour, Conn.; W. H. Boardman, New York; Samuel R. Campbell, New York Mills; T. R. Proctor, Hon. H. J. Cookinham, O. J. Childs, Utica; H. Lee Babcock, New Hartford. The following were elected trustees: R. U. Sherman, H. J. Cookinham, O. J. Childs, H. Lee Babcock, T. R. Proctor and W. H. Boardman. Officers were elected as follows: President, Gen. R. U. Sherman; Vice-Presidents, Christopher Roby, W. W. Snow, T. R. Proctor; Secretary, W. H. Boardman; Treasurer, S. F. Sherman; Legal Counselor, H. J. Cookinham. A resolution was unanimously adopted on the subject of amendments to the game laws respecting the killing of deer. The club asks that the open season for killing deer should not be extended, but shortened; that the floating season should not open before Aug. 15; that the time for hunting with dogs be limited between Sept. 10 and Oct. 15, and that it be made unlawful to have venison in possession after Nov. 15.

ENFORCING THE DEER LAW.—Lowville, N. Y., Feb. 3.—Editor Forest and Stream: Game Protector George Mayer informs me that he has secured the conviction of Henry Hurlburt, of Griffith's Corners, for violation of the deer law. Sentence is a fine of \$27.12, and the offender is committed to the county jail until fine is paid or he has served one day for every dollar of fine. Mark Smith, of Number Four, is also under arrest for having venison in possession out of season. William Stevens, of Diana, another offender against the deer law, is under arrest and will have his examination Saturday, Feb. 8. Mr. Mayer is doing very effective work, and it is to be hoped that convictions will follow all of his arrests.—OSCEOLA.

In a recent letter Mr. Lockhart mentions the occurrence of a flock of grosbeaks at Bolton Landing, Warren county, on Jan. 24.

Lake George is the most eastern locality in the State from which records have been received. From the western and southern portions of the State come a considerable number.

Mr. J. L. Davison, of Lockport, Niagara county, informs me that a flock of seven evening grosbeaks were seen in the city Dec. 14 and 15, 1889, but none were secured.

Mr. Geo. F. Guelf, of Brockport, Monroe county, secured a pair Dec. 30, 1889, and reports as seen another pair in company with five grosbeaks on the following day. On Jan. 29, 1890, another specimen, a female, was brought to him.

Dr. W. H. Bergtold, of Buffalo, reports that nine were seen on Jan. 10, 1890, and on the following day a male and two females were captured.

Mr. Louis A. Fuertes, of Ithaca, Tompkins county, secured a male and two females on Jan. 21, 1890, the only ones seen.

Mr. A. H. Wood, of Painted Post, Steuben county, writes that he secured three evening grosbeaks, the first on Jan. 23, and the other two on Feb. 1, 1890.

Mr. G. S. Miller, Jr., writes that he received from Oswego, Oswego county, four fine specimens shot from a flock of about ten birds, on Jan. 28.

Mr. J. Alden Loring, of Owego, Tioga county, writes that a specimen was shot from a flock of about twenty, which were feeding among the maple trees. On Feb. 1 he saw three others, males.

The above records are all that have come to the notice of the writer, but doubtless many others will soon appear from various parts of the State.

A. K. FISHER.

WASHINGTON, D. C., Feb. 8.

DURING this winter I have had brought to me five fine grosbeaks (*Pinicola enucleator*), one evening grosbeak (*Hesperiphona vespertina*) and two red crossbills (*Loxia curvirostra americana*). The first pine grosbeak was shot and presented to me on Nov. 25 by Mr. H. C. Ripley; it was an adult male and in fine plumage, and was with a flock of about five females; the birds were in a low swampy piece of woods and were feeding on the cones of pine trees. The bird in question measures as follows: Length 9 in., extent 11 in., length of wing 4 in., length of tail 3 in.

The other four grosbeaks were killed with two more (which were too badly torn to be of any use) from a flock of sixteen, on Jan. 20. They were presented to me by Mr. Lovless, who says that they have been in the vicinity all winter. They were all females and seemed to be in good condition, being plump and fat. Mr. Lovless also brought two crossbills, an adult male and a young female. They were shot from a flock of about six. I also secured two young males of this species on Jan. 3, which were feeding on cones of evergreens; they were with a flock of about five.

The evening grosbeak was shot Jan. 30 and given me by a Mr. Foot, who lives three miles from this place. He says it was feeding in some maple trees in front of his house and was with a flock of about twenty. They had been around all winter. The bird now in my collection is an adult male and measures as follows: Length 7 in., extent 12 in., length of wing 4 in., length of tail 2 in.

On Feb. 1 I went in search of this flock, and after hunting for some time succeeded in finding three old males. When first seen they were in an apple tree, but flew before I was within gunshot. Following them up I next found them in a maple tree in front of a house. In tried to change my position so as to get a shot, but they took wing before I succeeded.

Feb. 3 found me again on the spot, but this time I did not even see the birds. I am of the opinion that Mr. Foot is mistaken as to the number of the flock, as both times I saw them they were accompanied by a flock of sparrows, and it may be that he has mistaken them for the females of this species, for he told me "that the females were brown and somewhat smaller."

J. ALDEN LORING.

OWEGO, N. Y.

EVENING GROSBK IN WESTERN NEW YORK.—On Dec. 14 and 15 a flock of seven evening grosbeaks were seen in this city, and on Jan. 1 Dr. W. H. Bergtold, of Buffalo, secured a pair of this species in the park at Buffalo. I have also heard of other specimens being taken in western New York, and others as far east as Lake George. On Jan. 29 I secured a fine male red-tailed hawk (*Buteo borealis*). I have never before seen this species earlier than the last of March.—J. L. DAVISON (Lockport, N. Y., Feb. 5).

BUFFALO HAIR FABRIC.—It will be remembered that many years ago a cloth factory was started on the old Red River settlement for the purpose of utilizing the fleece of the buffalo which were then so abundant. Acting on this hint, Hon. C. J. Jones took measures recently to collect a quantity of buffalo wool, to be turned over to a weaver. Last spring, therefore, when the buffalo were shedding their coats, he drove some of them through a chute and peeled off the fleece, which was then sacked like wool. Mr. Jones brought East part of the wool shed from seven buffalo, about the equivalent, as he estimates, of the total fleece of five animals. From this he had five robes made, the wool being woven into cloth as a foundation by the Beach Mfg. Co. of Hartford, Conn. These artificial robes, while lighter than the real article, have much the same appearance and are warm and durable; and no one but an expert could tell the difference between the two. Owing to the time at which the fleece was collected, that is in the late spring, the hair is somewhat pale in color, being bleached and sunburned, but in the process of weaving the long hairs are evenly distributed, and the heavy masses of yellow wool on the hump and shoulders do not appear. This pale color, however, can no doubt be overcome by dyeing. At all events, Mr. Jones has a warm, light and flexible robe, which it would seem must be very valuable. The same company which wove these robes made also a warm jacket lined with buffalo wool; such as might be worn under the coat in very cold weather, a most excellent article for riding or driving in winter. They also wove two suits of underclothing. It thus appears that we are only beginning to appreciate the value of the products of the buffalo.

NEW YORK GAME LEGISLATION.

Editor Forest and Stream:

At a special meeting of the Lewis County Sportsmen's Association, held at Lowville, Jan. 30, several new members were elected and the following officers chosen: President, G. R. Easton; Vice-President, J. D. Hough; Secretary, Dr. O. S. Bamber; Treasurer, C. K. Daig; Executive Committee, R. J. Richardson, W. H. Morrison, F. E. Slocum, H. Gray, George Campbell; Finance Committee, Dr. C. P. Kirley, Wallace Brooks and Dr. O. S. Bamber.

The meeting of the Adirondack hotel keepers, guides and others, mentioned in a late issue of the FOREST AND STREAM by a Holland Patent correspondent, was then discussed, especially their bill on deer hunting, and a letter was read from Assemblyman Crawford to one of our members, stating his views on the subject. After further discussion the secretary was instructed to draft resolutions indorsing Mr. Crawford's views and urging the passage of such a bill. A committee was also appointed to present them to Mr. Crawford. The bill as suggested is as follows: "An act defining the legal time for hunting of deer. Deer may be hunted in this State during the months of August, September and October, and it shall be lawful to hunt with dogs between the 10th day of September and the 15th day of October, and at no other time. All acts or parts of acts in conflict with the foregoing are hereby repealed."

We are well aware that this will not meet with favor among all sportsmen, but as it shortens the hounding season, and believing that deer will be killed from the first of August and earlier any way, so might as well be killed legally, it seems a case of "between two evils choose the lesser," so we indorse the bill.

Your correspondent is also informed on good authority that a member from Franklin county, who is on the game law committee, intends to introduce a bill making the open season during September and October only, with hounding permitted during entire open season.

NORTHERN NEW YORK.

OSCEOLA.

WEIGHT OF GROUSE.

Editor Forest and Stream:

I have been deeply interested in the different articles published in your valuable paper concerning the weight of our beautiful and gamy ruffed grouse. I have heard numerous tales of grouse being shot that weighed 2, 2½ and 2½ lbs. Now, I have killed grouse every season for the past fifteen years, and have handled more than any man in the locality in which I reside. I have weighed hundreds, and never in my life have I seen or had positive proof of a grouse that weighed 2½ lbs. In the summer and fall of 1887 I was in business in sportsmen's supplies and furnishings, and during that fall I made a standing offer of a five dollar bill to any one who would bring me a grouse that would weigh, without deception, 2½ lbs. or over. My money was never taken.

I do not believe there is a single grouse in the State of Pennsylvania that will weigh 2½ lbs. I killed on the 30th of last month (December, 1889) four birds, three of them averaged 26oz., the other a cock bird of the gray variety pulled the scale to 30oz. strong. Should I ever in the future have the luck to kill a ruffed grouse in Pennsylvania that will weigh 2½ lbs., I will have the bird weighed before a justice of peace, make affidavit to the same and ship bird and document to the editor of the FOREST AND STREAM for publication, hoping that some of the 2½ lbs. and up gunners will do likewise. Remember I am speaking exclusively of the ruffed grouse, commonly called pheasant of Pennsylvania and the other Middle States.

LYKENS, Pa.

W. V. B.

CHICAGO AND THE WEST.

CHICAGO, Ill., Feb. 8.—The northern flight of the ducks has already commenced. During the past week telegrams and letters have been pouring in from all the shooting points announcing the arrival of ducks in large numbers. Mr. C. D. Gammon had a telegram Thursday stating that Cumberland Marsh was alive with ducks, and in response thereto he promptly went to the club. He killed a dozen mallards on Friday in less than an hour and quit because he had enough. He said the air was full of birds all the time. The same report came from the Mak-saw-ba and Hennepin clubs, and some good bags were made at each place. From Mak-saw-ba Ben Dicks reported that he never saw so many ducks on the marsh. Walter Hough states that the ice is all gone from Fox Lake, and that the bluebills and ringbills are coming in in large numbers. Fred Allen, of Monmouth, was in town yesterday and reports the arrival of a great many mallards and pintails at New Boston. He leaves for there on his annual spring shoot to-morrow night.

This is certainly a remarkable winter, and the duck season is about six weeks earlier than usual. All the duck shooters will be at the various club houses during the coming week, and sport will be lively.

AIMING THE PISTOL.

Editor Forest and Stream:

Referring to the letter of "Americus" in FOREST AND STREAM of Dec. 25, there is a third method of holding a pistol, quite as good as either of those mentioned by him. Grasp the right arm just above the elbow with the left hand; bring the right hand inside the left arm and hold the pistol with the barrel resting in the angle of the left elbow. It is a splendid way for single-barreled pistols, but is objectionable for revolvers, because the flash in front of the chamber singes the cloth of the left sleeve. This method was shown me twenty-five years ago by a rifle maker named Booth in Ottawa. He used to make long-barreled smooth-bore pistols, with which he was always ready to match himself against any one with the Enfield rifle up to 500yds.

J. J. MEYRICK.

COMB MARTIN.

THE MASSACHUSETTS LEGISLATURE has been asked to provide for more strict trespass laws, extermination of minks and foxes, a change of opening of woodcock and partridge season from Sept. 1 to Oct. 1, a license for market-shooters, an appropriation of at least \$20,000 for the fish and game commissioners, a law that all dogs running at large shall be muzzled or killed, to permit wildfowl shooting between low and high water mark, to forbid carrying firearms for sport or pursuit of game on the Lord's day, and to prevent the further introduction of foxes and raccoons into Martha's Vineyard.

SARATOGA SPRINGS, N. Y., Feb. 4.—A strange thing happened the other day, Jan. 25. Fred Hawkins shot a beautiful specimen of the wood duck, a drake in full plumage, in an air-hole in the outlet of the lake. Everything else is frozen up solid. The duck has been mounted. All our game is doing well. Charley Gilbert shot four red foxes the last week. I wish they would offer a royal bounty on them; they destroy many game birds while nesting. Monday evening at the town hall, Seymour C. Armstrong, the State game warden for our section, has called a meeting of all those interested in the preservation of game and fish and the restocking; also with a view of forming a permanent local organization for the enforcement of the laws and breaking up generally illegal fishing and shooting out of season. I hope something solid will come of it, for there is lots of missionary work to be done here.—W.

A BOY, AN AXE AND A BUCK.—Surrey Court House, Va., Feb. 6.—Editor Forest and Stream: A few days ago a nine-year-old boy was playing in the yard one afternoon when he heard the dogs after a deer. Running to the wood house the boy took an axe and started across the field to intercept the deer, which he did. The dogs had nearly broken it down, so it was not running very fast. The boy knocked it down with the axe and killed it. Running back to the house he told of it, and sent out after it. It was a nice buck with seven prongs.—A. B. G.

JAMES RIVER, Va.—Here are extracts from three letters recently received from friends living along the James River, at and below City Point. "Weather too warm for ducks this season, which has been non-lucrative for the pot-hunters. There has been little sport." "The shooting has been generally poor on the river." "Ducks is very scarce here now. I have not kill over dozen ducks since Christmas it is so warm." Observed a flock of crossbills on Friday. Also a robin and a song sparrow.—J. L. K. (Perth Amboy, N. J., Feb. 10.)

BEEVILLE, Tex., Feb. 6.—Wild geese, brant, cranes, ducks of almost all species, are here in abundance this season, and afford great sport to the hunter. Quail are still found in large flocks, and are yet fat and nice. The old turkey gobbler is making himself heard from the tall treetops in the early morning, though the gobbling season has not fairly set in.—T. J. S.

APPROPOS OF THE DISCUSSION as to whether a woodcock whistles with his wings, the treasurer of the Massachusetts Fish and Game Protective Association submits as conclusive testimony for the wing side of the house the legend on a Dearborn street Chinese laundry sign which declares dogmatically, "Wing Sang."

A GREAT GAME PRESERVE TRACT is advertised in this number. It is a choice location in the Blue Ridge Mountains, and Mr. Tappan tells us is well stocked with game and fish and well adapted to meet the requirements of an ideal game preserve.

A TAME WILD TURKEY trained to call other turkeys and bring them to the hunter's blind has been invented by a Birmingham, Ala., newspaper genius.

Camp-Fire Flickerings.

"That reminds me."

299.

SPEAKING of owls, sometimes serious results arise from being frightened by owls.

We were camped, ten of us, soon after our unpleasantness with the South, in a weird place in the sunk lands in the vicinity of New Madrid, Mo., then on a hunt for turkey and deer. The trees about our camp were ornamented with game. On this evening, while sitting in tent engaged in a lively chat, there came suddenly from the deep still forest about us a wild unearthly scream, frightful enough to make the hair stand erect on the head of the uninitiated, and it would have made it stand on the head of Mat, our colored cook, whom we had taken from Cairo, had it not been for the kinks. As if by concert of thought, every countenance of the ten assumed an anxious look. "Panther!" exclaimed an old hunter. "Yes," responded another. "Smells our game," says the third. Soon, naturally enough, we were engaged in the narration of blood-curdling stories in relation to panthers. Then one of the party thought we needed fresh water in camp and Mat was detailed to bring it from the creek a few rods away. He hesitated, but went, taking the ax with him and making the quickest trip on record. We noticed after that when night set in, we always had abundance of fresh water in camp.

The next year Mat was with us again in the same region, but in a wilder camp, if possible, than the old one. One afternoon I came into camp earlier than usual and found Mat sitting on a log, the whitest darky I ever saw, grasping with both hands one foot, the blood dripping from them. I found a frightful wound; he had put the full edge of the ax deeply and lengthwise into the top of his foot. With the aid of thread and a glover's needle, I closed the wound, and with bandages from a linen coat I had in camp, staunching the flow of blood.

The next year Mat did not accompany us, but procured another darky who was several degrees darker than the ten of spades, but sharp, raised on a plantation in Missouri. One day while chattering with Billy he said, "Mr. L., Mat says there are a great many panthers here, and that I had better keep a good lookout and have the ax handy. Did he tell you how he came to cut his foot? He said, one day he was chopping and when the ax was raised ready to strike, a panther screamed behind him in the timber and he looked around suddenly, and somehow the ax came down on his foot."

A few days after that I came into camp and found Billy preparing food, and a few yards in front of him sitting on a branch of a tree, was a small owl looking wisely at the darky. Billy, with a twinkle in his eye, pointed to the owl and said, "Mr. L., there is Mat's panther."

Moral.—Never frighten poor darkies with owls. H. L. ILLINOIS.

Sea and River Fishing.

ON THE NORTH SHORE.—III.

A THREE WEEKS' TROUTING TRIP ON THE NORTH RIVER OF LAKE SUPERIOR.

ON the third morning of our stay the wind had quieted sufficiently to permit of our departure, and we therefore hurriedly embarked and started for the rocky haunts where the trout are known to lie in concealment. As we passed by Goulais Point, Ned discovered that his bundle of rods had been left behind, and just as we were on the return for them, a distant hello was heard and then the dip of paddle fell upon the ear. Joe said it was some one bringing the rods. It so proved, for soon a canoe was observed rounding the point with the fisherman of a few evenings ago. He held up the rods on seeing us, and on coming alongside gladly returned the bundle and was given some coin for his trouble.

As our craft glided onward and onward along the wild and silent wilderness that skirted the shore, new scenes were constantly unfolding. Sky and cloud, tree and branch, rock and rift, were plainly mirrored in the now quiet waters; the green-embowered islands, the lovely nooks and the far away crags and rugged hills, were ever in pleasing review, while the long lines of color from balsam, fir, pine, maple and nodding grasses that ran along the shore, lit it with a wondrous beauty that was really Arcadian, leading one to exclaim with the poetic Thompson:

Who can paint

Like Nature? Can imagination boast,
Amid its gay creation, hues like hers?
Or can it mix them with that matchless skill,
And lose them in each other, as appears
In every bud that blows?

A few hours' pull brought us to a lovely bay just off Maple Island and which our dusky boatmen assured us were good trout waters, as were both sides of the shore that formed the bay. Being satisfied with the statement, we rounded into the bay and soon found capital grounds for camping. The tents were quickly pitched and everything put in apple-pie order, and as it was near noon we concluded not to cast a fly till the evening shadows were growing, as the waters were entirely too quiet and the scene too bright for the trout to be easily fooled with a few colored feathers drawn o'er the mirrored surface of his rocky haunt.

Time never hung heavy on our hands when in camp, as there was the crib board and cards ever ready for the combatants when the cheery conversation lagged or the songs of Ned grew too familiar. He was always busy, and nothing pleased him more than when engaged in overhauling his tackle, which was of such proportions and such variety that he carried it in a bushel sack—I called it an angler's junk bag, as it evidently contained everything applicable to the gentle art. There were lines, hooks, reels, trolling spoons, ferrules, dowel tips, reel holders, patent bands, artificial baits, tools, etc., *ad infinitum*. His flies and leaders he was very careful of, for these were in an elegant and capacious fly-book. You had only to ask him for what you desired and a dive into that magic sack by Ned was sure to bring it forth. He had been so convinced since we left Gros Cap that red was the taking color with the *fontinalis* that he determined as he had a few idle hours, to build a red fly on an improved system, and on a much larger hook than any he had been using. So out came the wonderful junk shop and on to the table its contents were poured. He secured and screwed his small vise to the table, and then gathering all his materials and tools necessary for the work, took a seat, and adjusting his "specs" commenced the construction of his ideal fly that was to depopulate the waters of many a radiant trout. I watched him with eager interest as he progressed in his creation of the feathery lure and advised him to build it on the principle of the poet Gay's instruction to the angler, which was:

To frame the little animal, provide
All the gay hues that wait on female pride;
Let nature guide thee; sometimes golden wire
The shining bellies of the flies require;
The peacock's plumes thy tackle must not fail,
Nor the dear purchase of the sable's tail.
Each gaudy bird some slender tribute brings,
And lends the growing insect proper wings.
Silks of all colors must their aid impart,
And every fur promote the fisher's art.
So the gay lady, with expensive care,
Borrows the pride of land, of sea, and air;
Furs, pearls, and plumes, the glittering thing displays,
Dazzles our eyes, and easy hearts betrays.

He agreed with me, but said he would make one that Gay himself would approve, but that red must be the dominant color. He soon gave it form and symmetry, but it grew to such immense proportions and with such a long tail that I protested against his red idol, and declared he would frighten all the tenants of the transparent waters when he commenced the bombardment. He was not at all nonplussed by my criticism, but declared I would soon be drawing on his talent for one of the same kind. He took the monster out of the vise perfect as I thought and handed it to me for inspection. I praised his skillful work, but condemned its colossal size, its flaming color, and above all its long tail, so peacock-like. He stated there were but two things to complete it, and they were the eyes and the horns, and these he secured and put on much to my disgust. I laughed particularly at the horns, which stuck out like the waxen ends of a Frenchman's mustache.

I dubbed it the "horny-headed ibis." After he had put away his cherished fly he stated that he would like to give me correct authority for the horns, and would take the author I had quoted a few minutes ago, and then he rattled off the following:

"When if an insect fall (his certain guide),
He gently takes him from the whirling tide,
Examines well his form with curious eyes,
His gaudy vest, his wings, his horns, and size;
Then round his hook the chosen fur he winds,
And on the back a speckled feather binds,
So just the colors shine through every part."

"It's the horns I am trying to prod you with, and now drop on that fly."

I capitulated and for a while let his horns severely alone, and never again reverted to poetry as an instruction to fly-tying. About 4 o'clock in the evening we left camp for the anticipated sport, and had gone but a few rods when we came across a couple of large boulders, which reared their rounded heads above the water, at the base of which we were confident the azure trout were poised for prey. Ned and I both made a cast at the same time, and much to my surprise his horny creation enticed a trout that made the water boil as he pounced up it. The watchful angler struck in good time, and then the sport was on. After some fierce fighting and skillful handling of rod and reel, the *S. fontinalis* struck his colors and came to net. He was a little over two pounds, in perfect form, and very handsomely mottled.

"First blood and first knock down for the horny-headed ibis," yelled out from the highly pleased proprietor of the angler's junk bag. I kept on casting while he was handling the trout, but "nary" rise did I obtain.

"What do you think of my horny fly now?" says Ned, after he was ready for another cast.

"What I always did."

"What's that?"

"A diabolical monstrosity."

"All right. It attracts the trout all the same, and don't you forget it."

I was too eager for a trout to keep up the verbal sharp-shooting, and allowed Ned the last shot, though I had a load or two in reserve to riddle him when the proper time came.

We now proceeded to the point just ahead, and when we arrived Ned sent his flies with unerring accuracy to the center of a dark line of water, indicating a deep fissure below, and woke up a trout that made a terrific splash as he sought the horns of the blood red fly.

"How do you like the horns now?" exclaimed the delighted angler.

"Same as ever. Please pass the flask."

"I mean the horny fly."

"And I mean the liquid fly."

At this sally the boatmen laughed, and Ned again busied himself in killing his trout. It was larger than the last, and when landed and swung from the scales registered just 3lbs.

I was getting a little nettled at my want of success, for so far I had not succeeded in getting a single rise. I had not lost faith in my flies, they being a silver-doctor for the "point" and a brown-hackle for the dropper, and kept on very industriously circling them into every tempting spot that I thought contained the quarry. At last my patience was rewarded, for a jeweled beauty rose and struck at the dropper and was so securely hung to that flashing doctor that it led to his untimely death. Ned opened his eyes at my good fortune and began to think there were other flies that captured, aside from his horny-headed bunch of flaming feathers. It was not long before I had another rise, but missed, and shortly after another tried conclusions with me by taking the dropper again, and he also paid the forfeit of his rashness, for he, too, after about five minutes of delightful play capitulated and entered the net. These two fish weighed respectively 2½ and 3lbs., and were a fair match for Ned's trumps.

"What's the matter with your horns now, Ned?"

"I'm after big trout."

And away went his horns with a savage cast that hit the water like a dead humming bird near the edge of some ragged rocks just off the shore. As I heard the fall of the horns I cried:

"Please don't hit the rock."

"Why?"

"You might fracture it."

Another laugh at Ned's expense, in which the good-humored soul joined. Ned finally pegged out in casting and handed his rod to Joe that he might exercise his skill, while he rested and indulged in a smoke. Joe could make a graceful cast and quiver his fly deftly, but he never seemed to strike sufficiently quick at the break of trout, for he missed many a fine rise. In a few minutes he had a rise and missed, and also the second dash of the greedy trout, but on the third he hung the lovely darling, and after it was secured, it being a 2½-pounder, we concluded we had all the fish we desired or could use for that day, and therefore headed for the camp with the bright evening sunshine mellowing the entire landscape of foliaged wood, rippling water and rocky shore.

We were soon at camp, and in a little while supper was announced, to which we always brought a bushwhacker's appetite. The vesperian meal being finished, we took our camp-stools to some attractive spot and there fought our battles of the day o'er again. Then we would sit in dreamy reverie and watch the creeping cool night close in, and the camp-fire shine out o'er shelving crags and shattered rocks, and the moon as it hung low and golden in the archway studded with glittering stars, while the weird shadows from the leafy sentinels spread o'er the translucent waters. Ned would look, with admiring eyes on such scenes and grow exceedingly eloquent over them. Then again he would wake the silent forests and the breathing waters with his musical echoes, and tiring of that would seek the tent which was redolent with the perfumes of the fir and balsam and court "tired nature's sweet restorer, balmy sleep," and perhaps dream of Tullamore or the capture of speckled beauties.

That night while in slumber deep we were awakened by a terrific storm, which impressively reminded me that

"The winds grow high.

Impending tempests charge the sky.

The lightning flies, the thunder roars.

And big waves lash the frightened shores."

The storm continued its impetuous rage for two hours and then it gently moaned itself away.

On the next morning when we arose, we were greeted with a crimson sky on which floated a few clouds lighter than gauze, and soon the west wind rose and blew the fragrance of the balsam from the forest deep, till our eyes sparkled with healthful exhilaration.

Another outing of course was to take place immediately after breakfast, and so Ned and I at once got ready in order to prevent delay. The repeat over and the dishes washed and put away, we started down the same shore line as on yesterday, with a gentle wind and bright sunshine playing o'er the curling waves. Nearing the huge boulders, where Ned the day before inaugurated his pet creation of horns we began casting. Ned again carried off the first trophy, as a scarlet-lured trout, who thought he knew "every trick that is taught in their school,"

vaulted with open mouth and gobbled the fly of horny headwork and long red tail. He was so suddenly sick of his hasty action, that he leaped and danced with such frantic efforts, that it was really pleasing when the entertainment was ended by the graceful sweep of the landing net, which laid him to earthly rest. Ned was in high feather again with his subtle architecture of the successful fly, and declared it "a thing of beauty and a joy forever." After proceeding a short distance the wind increased and the water began to get quite "lumpy." The trout rise much better in such a sea and a long cast is then not an absolute necessity. That morning and afternoon we caught seven trout, two of which weighed 4lbs. The two latter made the reel produce that harmonious sound which is always a delight, and in addition gave all the excitement of play and intense suspense that any true angler could desire. One of these fell a victim to Ned's rapacity, while the other came to me in a painstaking sort of a way. I hope I am lucid enough in this assertion, though I make it without disguised aspersion as to Ned's method, or his novel lure of elephantine size.

The wind and waves, as the shadows lengthened with the growing hours, increased to such a degree, that of a necessity we sought the bay as a harbor and the camp as a solace. One may be lost to the golden beauties of a butterfly in the noonday sun as he flutters along the shores of these pellucid waters, and at sunset of the same day gaze with admiring awe at the tempest-tossed waters, as they are lashed into seething foam.

Matters were now getting along delightfully in camp. Our boatmen, who were in perfect accord with us, were also enjoying themselves in their idle hours with the excitement of card playing. They kept up these games in their tent till late in the night, and long after we had retired I could hear their hearty laughter, as one or the other scored their points in euchre, that being their only game. They seldom failed to have the inevitable teapot close at hand, as they have as much love for that exhilarating beverage as a Russian.

Joe told me that he always fished along here in the month of June and was eminently successful. He had received twenty dollars for the trout he had caught this season. His market was the "Soo," and the price fifteen cents per pound. Not only he, but others, at Goulais and Bachewaunung bays, carried on that kind of fishing every year. When it was not convenient to go to the "Soo" for a market they would dispose of their trout to the fishing tugs that are plying to and fro the entire season. This is contrary to law, but neither the Indians nor the proprietors of the fishing boats pay the least attention to it. They place the thumb of the right hand on their nose and wag and wag, and say catch me if you can. I heard that Booth, of Chicago, who is the great purveyor in that line, was made to sniffer to the amount of an even hundred dollars for violation of this law, and yet the illegal traffic still continues. Who will stop it, and thus receive the thanks of the genuine sportsman? The fable of the hen that laid the golden egg will soon prove a reality.

Trouting is always better here in June than at any other time, but the flies and mosquitoes are so thick then that you can write your name in the cloudy hosts that surround you. We had figured this way, and as a consequence were not annoyed with either of them. We saw a party that had returned from a trouting trip to the North Shore before we left the "Soo" and they declared that they had been flayed alive by the insect pests that make life here a perfect misery. As a *dernier resort* to escape their needle-like lances they sought refuge in anchored boats, thus placing themselves at the peril of sudden storms. They caught plenty of trout, but said under such circumstances the quarry was far from being an equivalent for their sufferings. They will not try the experiment of early spring fishing on the North Shore again, as they declared they had had enough of it, and will hereafter take the late season, when the "bloody insects" have about disappeared.

The reef nearly opposite our camp, and about midway in the bay, was to be the point of attack next morning, weather permitting, of course.

The morn opened gorgeously, with the heavens swathed in a robe of purple and gold, and "with breath all incense and cheek all bloom." The breakfast, which was highly relished, was quickly dispatched; and just as soon as Joe announced that the kitchen service was over we all hurriedly tumbled into the boat and started for the rocky lair of the trout beautiful. The two bald-headed boulders, where Ned had caught his lusty trout with his great creation of fur, feathers and tinsel, were brightly flashing in the morning sun, and, as they were in the line of our route, determined to see if we could not coax another dotted beauty from his aqueous realm. When within casting distance, I sent my feathery lures to the very edge of the projecting granite, secured a good rise and failed to hang the striking trout. Joe, the prophetic half breed, on my dismal failure, said it was bad luck to miss the first fish. For once he was gratified in having his prediction verified, as you will realize ere the day's sport is over.

Ned, on seeing my flies return without a fin, sent his red-horned lure in the same place; but instead of that proving a choice tidbit for the disappointed trout—presuming it to be the same I had missed—he took the dropper and was conquered in a few minutes, being only a pounder. It was enough, however, to set Ned's jaws going, who at once commenced a dissertation on the art of fly-fishing, all intended, I well knew, for my especial discomfort. He is devilish sly, and plays his sallies of humor with the bland innocence of a child. I was content to await my opportunity for satisfaction. The boulders producing no more of the radiant beauties, we took a straight line for the reef, about a half mile distant. Among these the whipping of the waters commenced in deep earnest. Ned was on his mettle and so was I, and every square inch of the reef was, consequently, carefully fished between us. I finally got a rise, struck and missed, and Joe, the diabolical imp, grinned at my failure as if he were delighted; he wanted no break in his prophecy. Shortly after this failure of mine, Ned aroused one of the crimson-tinted from a line of dark water, and succeeded in sending the hook home, and after some fierce fighting had his finny captive glittering in the sun at the bottom of the boat. At this triumph Ned sang:

"Mark the angler's watchful eye,

Mark the prudent, well-formed fly,

Trembling here and there about,

'Tis to catch the speckled trout."

"That song is not consistent."

"Why not?"

"You say mark 'the prudent, well-formed fly.'"

"Oh! I see, you have reference to my horn—"

"Exactly."

"I'll omit that part hereafter."

"Thanks."

A minute or two after this my fly, from an awkward cast, caught in Joe's pants and away went my tip close to the ferrule. At this accident Joe's grin perceptively broadened; his prophecy still holding good. I was getting somewhat down in the mouth at my repeated misfortunes, but hoped ere sunset to make that grinning half-breed's prophecy a grand failure. I soon had another tip in place and commenced work more industriously than ever. At this juncture a joyous shout came from Ned, who declared he had hung a speckled monster. All eyes were now attracted to the lucky angler and advice without end fell upon his ear. The trout was very carefully handled, the game being nip and tuck between the angler above and the fish below. Ned was a complete master of all the subtle tactics that lead to killing, and met every rush of the desperate trout with skill and perfect imperturbability. One minute the trout would rush with lightning speed for distant waters, and when carefully checked turn and swiftly circle around, and then of a sudden dart down for the deeps and again flash to the surface. He soon tired of this kind of circling and began to flag in his frantic efforts, and, as a consequence, became more wary in his struggles. Like the fox, he here covered his tracks, and then shot under the boat, but with a sweep of the pole around the stern and rapid reel work, the battling angler made his victim pant as the taut line turned him to the foe above his realm. Ned had him now at a disadvantage and about conquered, it only requiring due caution to prevent his striking his broad tail against the leader, a trick that often deceives an o'er sanguine angler and frequently liberates an almost captured fish. We could now plainly see his size, and it was immense indeed, as he had come in a distressed condition to the surface, and flapped every now and then until he was securely netted. He weighed over 6lbs., and was as handsomely mottled and painted in rainbow dyes as any *Salvelinus fontinalis* I ever saw.

After the murmur of excitement over Ned's remarkable capture had subsided, I again tried to coax one of the beautifully spangled trout to spring from his rocky lair for one of my attractive flies, which I thought I succeeded in placing on the water with the lightness of a gently falling snowflake. The lure proved a success, for on the third cast a savage swirl encircled my dropper; I struck in time, and a desperate rush of the impaled fish was made as perpendicular as a plummet falls, and, in an endeavor to keep him from dashing under the boat, the lure suddenly parted and came to the surface minus flies and leader. I was drowned in deep despair at this dire calamity, and the gleeful looks of the prophetic savage which greeted me as I turned to Ned for consolation, made me speechless with fury. A sudden reflection of my folly calmed me, and without perceptible emotion I suggested to Ned that as we had glory and trouting enough for the morning, and as I was in the *consommé*, we had better head for camp, and that I would try ere sunset to see if could not shake off the spell of "the Old Man of the Sea" that was tarnishing my record so badly. Ned, like Barkis, was willing, and, reeling up, placed his rod to one side, and then picking up the heavy weight which he kept in repose at his feet that he might feast his eyes on its graceful outlines and lovely colors, remarked that it was a poem of beauty that ought to be set in a frame of gold, ruby and sapphire, and then clearing his throat warbled to the air "Awa to the Bonnie Tweed Side:"

"There ne'er was aught in nature seen

Whose color could outvie

The glitter o' its side sae green,

Bathed in the rainbow's dye.

The olive back, the golden fin,

The belly's silver hue,

A' spread upon a pinkie skin,

That scarcely blushes through.

"The mottled drops that mantle far

Out o'er his spangled scale,

Aglist'nin' like the gorgeous star

That gem's the peacock's tail,

A fishing day by dam or weir

Could aye my feelings bind,

And muckle in't there is to cheer

A nature-loving mind."

Joe, the tawny wretch, said with a sardonic smile as I stepped out of the boat as she struck the rock-bound shore:

"I tell you that you catch no fish to-day."

I could have choked him for his superstitious prophecy, which seemed to hang over me so fatally, but instead of turning garroter I smiled sweetly and replied that:

"No one but an idiot or an Indian ever believed such nonsense."

"You believe me after while."

"Humbug, Joe, humbug; mere baby talk."

"Well, we see this afternoon."

"If I catch no fish I eat no supper."

"You go to bed without supper, then."

"All right."

And so the conversation between the dark prophet and the pale-faced unbeliever ceased. After putting away our tackle and laving in the cooling waters I challenged Ned for a rubber of crib and lost three straight games—hoodooed evidently. I felt like hedging on the prophetic side, but determined to die game and ascertain if I could not break the run of bad luck, which had so strongly set against me, in the afternoon outing by another raid on the enameled beauties.

After dinner was served, Ned brought out his angler's junk sack and emptied its contents upon the table, and declared his intention of "building" another fly, so well satisfied was he with his first success, the vermilion beauty of the projecting points and glass eyes. He contemplated a slight change in the forthcoming lure, and one he was confident that would materially aid him in transferring the trout to a purer medium. His "old country" ideas, where the purling brooks were the only waters he ever angled or poached in, were still dominant. He always swore by the old masters of the gentle art, and to them was ever faithful, and was, therefore, barked with the superstitions and conventionalities which

prevailed in that school. He was an extremist, but we doubt if in any authority from Walton to the present date he could find one that would indorse such a hermaphrodite as his horny-headed and red-bodied idol which so frequently struck the water with anything but feeble down lightness. I always smiled when I saw it sailing through the air, and as it fell with a vigorous spat upon the silver ripples I am confident it must have given the speckled denizens of the deep who haunt the rocky crevice and around boulders lie some idea of an earthquake. It was an awakener, and just the thing, Ned said, for rough water, in which it was most successful. I advised him to be a little consistent in the present work and turn out something that has correct form and symmetry, and not deal any more in monstrosities. He promised, and completed a very attractive fly patterned after one of his Nepigon favorites, but so fiery red as to almost answer for a luminate. He omitted the horns, and having no more beads for head or eyes, they were also minus. I praised his artistic work, as it really deserved it, and let up for the time being on his first creation. While he was at work I repaired the damage to my broken tip. I charred the wood in the ferrule, and, slightly scraping the broken end, made a perfect fit to the metal tube. The tip was about three inches shorter, but just as good as ever for casting.

Having got through with our work we called the half-breeds to get the boat ready and then once more started for the reef, not omitting to pass the boulders which had always yielded us a trout. This time, however, we caught nothing there, and then went direct to our destination. Ned caught two trout of about 3lbs. each during the afternoon, while I returned without a single fin, much to the delight of the prophet Joe, who joyously declared that his augury relative to "loss of first rise or fish no luck," always held good.

"You get no supper to-night," was the chaffing he gave me on our reaching camp. I concluded to keep faith with him after a somewhat questionable manner, and told him that I would take half of my prospective breakfast that evening.

"White man too tricky; too smart for Indian," was the response, and then he hurried off, muttering some diabolical jargon not at all complimentary to me I assure you.

Early the next morning he came to my tent and handed me the fly-book I had lost at Goulais Bay, stating that an Indian who came over the evening previous had found it at our last camping place. I was exceedingly glad to recover it as it contained a fine assortment of flies. I handed him a dollar to give to the finder and then sought my blanket again for another nap. It was useless, however, for the talk going on at the camp-fire was entirely too animated to permit of further sleeping. I arose at once, dressed, and on stepping from the tent saw a huge fellow with an immense head covered with dishevelled hair, yet not ill-shaped, and having the picturesqueness of a granite boulder. He was the complete *fac simile* of the untutored savage, the lion race, who "sees God on clouds or hears him in the wind."

Joe informed me that he was the one that had found my fly-book, and had come over to spear sturgeon by fire light. He was doubtless waiting for an invitation to break bread with our boatmen, so I told them to give him a good square meal, and that means to the Indian "heap good things." Ned said he put away a good square meal and no mistake, and that many more such meals on the square would soon put us on short rations.

CINCINNATI.

ALEX. STARBUCK.

SHEDDING OF TEETH IN FISHES.

ALBION, Wis., Jan. 26.—*Editor Forest and Stream:* I'm after a little information relative to fish teeth. Will you give us the benefit of your observations regarding the "shedding of teeth?" Do all fish lose their teeth, and is the teething period annual or at shorter intervals? The pickerel in Lake Koshkonong bite well, and on any sort of minnow, until the middle of January, when there is a great falling off in the catch for about a month, and what few are hooked seem to have shunned the hard-scaled bait, like young perch, and to have picked out the softer sorts; and a look into their very open countenances will reveal maybe three or four scattering teeth, and now and then there is one whose toothless gums appear inflamed and swollen, suggesting soothing syrup and rubber rings. Some fishermen claim that the pickerel "change" teeth every month, but I think that a little doubtful. The fishing referred to is through the ice, with the "Koshkonong reel" so aptly described by Mr. Hough a few weeks ago.

A. A. B.

The teeth are shed, or renewed, continually throughout life in all fishes possessing these organs of nutrition. Huxley has classified the different kinds of teeth and their mode of arrangement, and we will modify his classification to suit the case in point:

1. Isolated teeth, more or less pointed, developed from papillae of the mucous membrane, which do not become inclosed in sacs. These teeth are frequently anchored to the bone supporting them, but they are not imbedded in sockets, nor are they replaced from beneath like human teeth. The pickerel has teeth of this kind. Looking into its mouth you will see teeth in various stages of development, some in function and others ready to assume active duties when the shedding process makes it necessary. We have never seen any record of the time and frequency of this renewal of teeth in the pickerel, and the observation of "A. A. B." is interesting and valuable.

2. Isolated teeth, which become imbedded in sockets, and are replaced by new teeth pushing up from below. In the sheephead, the scup and the sailor's choice such teeth are found, those of the sheephead curiously resembling human incisors.

3. Isolated teeth imbedded in the substance of their supporting bone. The teeth and the bone wear off in front and are replaced by new teeth developed behind the others. The parrot fish has in its pharynx an illustration of this kind and arrangement of teeth.

4. Beak-like compound teeth attached to the tooth-bearing bones of the jaws, the beak formed either by the union of many separately developed teeth into one mass, as in the parrot fish (*Scarus*), or by the coalescence of broad lamellae, as in the rough swellfish (*Tetrodon*) and the porcupine fish (*Diodon*).

5. In the carp and other members of the minnow family, as everybody knows, the mouth is toothless, but the lower bones of the pharynx are provided with con-

cal and sometimes molar teeth in one or more series. These teeth are to be looked for behind the gill-arches, and the presence of loose, shed teeth often confuses the student in his investigations.

ANGLING NOTES.

FROM all reports the tarpon fishing in Florida is better this season than ever before. Word comes from Mr. Frank L. Anthony, who, with Mr. Dudley Duyckinck, is at Punta Rassa, that the fish are plentiful. On Jan. 22 they caught two weighing 101 and 134lbs., measuring, respectively, 5ft. 10in. and 6ft 5in. Using a new Vom Hofe snell for an experiment, it required twenty minutes' play to land the first fish, and twenty-five minutes for the second one. The red grouper fishing is the best ever known.

Anent the advice given by our correspondent "Percyval," issue of Jan. 2, respecting choice of flies for Yellowstone Park waters, Messrs. Abbie & Imbrie say that "the flies should be on No. 8 and 4 hooks. Capt. Boutelle, the superintendent, is a customer of ours, and we send him considerable tackle. September is the crack month for fishing there."

The minnow trap recently mentioned by Mr. Hough will be more fully described in a future number.

Dr. Jas. A. Henshall writes from Cincinnati: "At our winter meeting of the executive committee of the W. C. A., on Jan. 13, in addition to some fine canoe sailing on Ross Lake (near Cincinnati) a fine black bass of 2lbs. was caught by one of the gentlemen in attendance with minnow bait. This was owing, of course, to the unusually mild winter."

Mr. J. E. Hulshizer, a popular member of the Produce Exchange of this city and an enthusiastic angler, has a split-bamboo fly-rod in his possession that is quite a curiosity. The butt is of ash, tapered below the reel-seat and ending with a steel spike, like the old English rods. The joint and tips are made of four sections of bamboo and built round. This rod, which Mr. Hulshizer has now owned for over thirty-five years, is still in fairly good order, and is yet used by his son. It was made by Samuel Philippi, of Easton, Pa., who was, as far as known, the first maker of split-bamboo rods. It was from seeing these rods while in that section of the country on a fishing trip that Messrs. Green and Murphy, of Newark, got their first idea of split-bamboo rods. Samuel Philippi was a character in his day, a first-class hand with all kinds of tools, and could make or repair anything that he turned his hand to. An adept with the violin, as well as with the fly-rod, not a dance could be given in that part of the country without Sam Philippi to lead the music. Mr. Hulshizer states that when he was a boy his father owned a mill on the Pohatcong Brook (Indian for trout brook), which stream Sam was in the habit of fishing, and that from him he acquired his great love of fly-fishing. He saw one of these rods in Sam's workshop, which was a perfect museum in its way, and was not happy until he managed to save enough to become the owner of one. Messrs. Abbie & Imbrie also keep a couple of these curious specimens of the first split-bamboo rods, and will be happy to show them to any angler who will take the trouble to call.

A gentleman who has just returned from Florida informs us that the fishing, particularly for channel bass and cavalli, is first-class. The weather is unusually warm—90° in the shade—but the nights are cool and delightful.

Prof. Henry W. Smith, of Princeton, enjoyed good fly-fishing last September in the smaller lakes about Moosehead, but owing to the warm weather there was but little fishing in Moosehead Lake. He says that he had great luck with fluttering flies, using them as small as No. 8 and 10. One evening when there was no air stirring and the water was like a looking glass, he took thirty odd fish of good size with these flies, when a companion could not raise a single trout with the ordinary flies.

THE LITTLE GIANT ROD.

Editor Forest and Stream:

In the article on "Fish of Florida Waters" in the special Florida number of Jan. 9, I referred several times to the "little giant rod," and promised to describe it in a subsequent number of *FOREST AND STREAM*. The rod was designed especially for the black bass fishing about the "Bass Islands" of the western part of Lake Erie.

The small-mouthed bass of this locality hibernate under the numerous ledges and cavernous limestone reefs projecting from and lying between these islands; and when the bass are coming out of their winter quarters in April and May, and just before going into them in September and October, the fishing is very good about these reefs and ledges; but the bass disappear from them during the summer months, being then absent on their spawning and feeding grounds in other portions of the lake, or up the streams. There are a great many anglers who frequent Pelee, Kelly's, and the Bass Islands about Put-in-Bay every spring and fall for this reef-fishing. Some of them are veterans in the sport, having made these semi-annual pilgrimages for twenty-five or thirty years.

As a rule, Lake Erie anglers use a very short, heavy and stiff natural cane rod, and for this reason: The bass lie close to the reefs and under the ledges, in water from six to twenty feet in depth, and in order to get the bait (minnow) down to the reef as soon as possible and to keep it there, it is the custom to use very heavy sinkers, weighing from two to six or seven ounces, at the end of the line, the snelled hook being placed a foot or two above it, after the manner of using the "dipsey" lead on the east coast. One or two artificial flies are often added to the line above the baited hook. The heavy sinker is often made to pound or strike on rocks, ostensibly to attract the attention of the bass.

Of course it is possible to take bass on these reefs in the usual way—with light rods and tackle and smallest size sinkers or swivels, and it is the method I employ—but it is also certain that those who use the heavy sinkers catch the most fish, and for this reason it is fair to presume that this will always be the favorite method with Lake Erie anglers.

I spent the most of last summer and fall in the region referred to, and at the urgent request of a number of my angling friends I promised to design a suitable rod for that peculiar style of fishing, in order to induce them to discard the unsightly and inefficient natural cane rod of large caliber and great weight, as usually employed. Accordingly, I have devised a modification of the standard Henshall rod for this special fishing, which requires a short, stiff and springy rod of medium weight, in order to manipulate so heavy a sinker.

The rod is made in but two pieces (of equal length), with but one joint, the latter being non-dowelled, with cylindrical ferrules. It can be constructed of split-bamboo throughout, or with ash butt and lancewood, greenheart, or bethabara top. The entire length of rod is 7ft., and the weight 8 or 9oz., according to the material of construction.

The specifications for an ash and lancewood rod weighing 8oz. are as follows: Extreme length, 7ft. 6in.; male ferrule of joint, 1/4in. diameter; extreme tip (of wood), 1/4in. diameter; length of grip (below reel) 8in.; length of reel-seat, 4in.

A rod made after the above specifications will prove very handy and effective for Lake Erie bass fishing, being stiff and powerful enough to manipulate the heavy sinker, and springy and pliant enough to kill the fish, without being of greater weight than the standard Henshall rod. It will also be found very effective for light striped bass fishing, or for weakfish, blackfish and other fishes of the east coast, or for most of the game fishes of Florida, or wherever a heavy sinker or bait is required to be cast from a free-running multiplying reel.

CINCINNATI, O.

JAMES A. HENSHALL.

NOTES ON MASSACHUSETTS FISHES.—What a warm winter we are having! The temperature of the water to day is 40°. There were in the harbor some schools of mullet—both the white and the striped species. I caught some of each and put them in the aquaria. There were also some young menhaden—more than we have seen here for two years. They were in schools at the surface. I caught some and fed the codfish with them; they were 4 to 5in. long. Sperling, or young herring, have been plentiful all winter; the harbor has been completely full of them for about two weeks. I have caught quite a number of two-year-old cod in my fyke. I have taken them this winter for the first time. Small tautog have been here during the entire winter. Sea fowl are still absent; but there have been plenty of kittiwake gulls, and they are here yet. In previous years they have left our region about Dec. 1.—VINAL N. EDWARDS (Woods Holl, Mass., Jan. 20.)

FISHERY ECONOMY IN NATURAL INLAND WATERS. (*Fischerei-Wirtschaftslehre der natürlichen Binnengewässer.* Von Eduard August Schroeder, Dresden, 1889).—Dr. Schroeder's hand book of fishery economy will be found extremely valuable because of its great scope and concise statements. Chief among its popular features are the accounts of the fishes of Middle Europe which are the objects of pisciculture and of the plants useful to the fish-culturist. The notes on the fishes refer to their common names, distribution, spawning season and spawning habits, food qualities, etc. As to the aquatic plants, he gives the common and scientific names, shape and color of flowers, time of blooming, method of propagation and nature of habitat.

THAT FLORIDA NUMBER.—Portland, Oregon, Jan. 26.—*Editor Forest and Stream:* I desire to express my full appreciation of "Supplement No. 8," Jan. 14. Your "Fish of Florida Waters" is so truly delightful, and shows such an earnest desire on your part to acquaint your angling readers with things of beauty about which the great majority of them are in ignorance, that all lovers of the gentle art should hasten to manifest their gratitude, so that you may know and feel that such efforts are not wasted.—S. H. G.

SARATOGA LAKE.—Saratoga Springs, Feb. 2.—We have no snow to speak of, but very fine ice. The lake is covered with about 10in. of blue black clear ice, hard and fine—bad for fishing. I am glad of that rest for the fish.—WASH.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this season will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

FOREST AND STREAM, Box 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanct," "Hloan," "Dick Swiveller," "Svillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS. by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by *FOREST AND STREAM*.

MUTUAL LIFE INSURANCE COMPANY.—The annual statement of this company, published on another page, shows the corporation to be in a more flourishing condition than ever. During the past year its assets have increased over ten millions of dollars, and now reach the enormous sum of \$19,401,535.02. In the same period the surplus has increased seventeen hundred and eighty dollars, and the receipts nearly five million dollars. There was paid to policy holders during the year more than fifteen million dollars, an increase of nearly half a million over the payments of the year before. An interesting portion of this statement is a table, which shows the growth of the business during the last six years. In 1884 the risks assumed amounted to \$91,681,420, those outstanding to \$951,789,285, the assets to \$103,876,178.51, and the surplus to \$4,743,771. In 1889 the risks assumed were \$151,602,483, those outstanding \$565,949,984, the assets more than \$136,000,000, and the surplus nearly ten millions. Truly this is a great business.—*Adv.*

BRIEF BUT TRUE.—In view of the fact that the following statement is in harmony with what is appearing in every part of the country respecting Humphreys' Veterinary Specifics, we regard it a pleasing duty to place the same before so many of our readers as have horses and cattle under their care. Huestis & Huestis, lively stable proprietors, Wyandotte, Kan., in a letter write: "We have had great success in treating every case of sickness among our horses with these veterinary specifics, and consider their book of directions invaluable." Albert Hill, livery and boarding stables, St. Paul, Minn., in a letter to the Humphreys' Medicine Co., writes: "Have in my stables from one hundred to one hundred and twenty-five horses, and have found these specifics to be the best ever used." Palmer Bros., city livery, LaCrosse, Wis., in a press letter write: "We have used Humphreys' veterinary specifics for twelve years, and find no cause for regret."—(*Boston American Cultivator*).

Fishculture.

SAN DIEGO FISHES.—We learn from one of our San Diego correspondents, who is thoroughly informed in matters pertaining to fish and fishing, that a change has recently taken place in the method of disposing of the market fishes. Before the summer of 1889 each fisherman acted independently and sold his fish the best way he could. Now all are brought into two markets by a combination of the Portuguese fishermen, and this gives our correspondent opportunity to see everything that comes in. He has, by this new arrangement, been able to describe many new genera and species of San Diego fishes, and every month swells his list. At the present time the fisheries at San Diego Bay are unproductive. A day's catch of two seines about a week ago comprised only three fish. This is ascribed to the wholesale destruction of young fish by the continued use of bag nets of $\frac{3}{16}$ in. mesh. The Fish Commissioners have not yet taken steps to prevent this slaughter of young fish. During the barracuda season the seiners captured and destroyed thousands of the young of this important species. We are satisfied that if the attention of the president of the California Commission, Mr. Jos. Routier, of Sacramento, be directed to this deplorable destruction of fish, he will find means to stop it.

PECULIARITIES OF SALMON IN TASMANIA.—The Atlantic salmon (*Salmo salar*) was introduced into Tasmania from England by Sir Thomas Brady by means of artificially fertilized eggs. Every effort was made to keep the ova separate and prevent hybridization. The young salmon developed from these eggs, however, showed marked differences from the young reared in England, not only in color, but also in form. Nearly half of the salmon, although they were constantly kept in the pond, had the dorsal fin spotted and the adipose dorsal tinged with yellow or orange. These markings are characteristic of the Tasmanian salmon and are usually relied upon to distinguish them from *Salmo salar* in its native waters. "Bull-headed" individuals are common in Tasmania, another point of distinction from the pure Atlantic fish. It is supposed that the waters of Tasmania contain certain elements which develop peculiarities of form and color, and produce these results very quickly in the case of introduced species. Whether or not changes in the essential characters of the species will be accomplished by this subjection to a new and strange environment remains to be determined by comparison of specimens from the regions involved.

MACKEREL AT CAPE OF GOOD HOPE.—The Provincetown schooner Alice is now at Cape Town fishing for mackerel with hook and line. The fish were not found in schools, but in the height of the season they are said to appear in a solid mass. Capt. Chase expects to remain until the season closes in April. He has shipped about 100 barrels to the United States. His boats, with three men, caught 1,200 to 1,500 mackerel each in a day. The captain considers these fish superior to our own shore fish, because their flesh and the lining of the belly cavity are whiter. He does not see much difference in appearance between Cape Town mackerel and those of the United States. We have already expressed the opinion that they will prove to be "thimble eye" or "club" mackerel (*Scomber pneumatophorus*), a species which is common on our coast and also on a part of the California coast. For eating there is very little difference between the two species. The "thimble eye," however, is softer and spoils more readily than the common mackerel.

TROUT PARADISE.—We have already referred to the renown of Colorado as a home for the brook trout (*Salvelinus fontinalis*) introduced from the East. The other day we had a new illustration of the adaptability of this State for trout culture, when Mr. W. P. Sauerhoff, of the U. S. Fish Commission, who had just returned from the new station of the Commission, near Leadville, told us that some of Dr. Law's two-year-old trout measure 14 in. in length and have furnished as many as 800 eggs. Even the six trout yield eggs averaging about 200 in number. Dr. Law has probably 100,000 *fontinalis* in his ponds. At the time Mr. Sauerhoff left Leadville the U. S. Commission had obtained 570,000 eggs from trout belonging to Dr. Law.

WHITEFISH FOR LAKE ONTARIO.—The first shipment of whitefish fry sent out by the U. S. Fish Commission this season left Washington on the night of Feb. 3 for Sacketts Harbor, N. Y. The eggs were received from the Sandusky hatchery about two weeks before the hatching of the fry. This is the earliest shipment ever made and is the result of the unusually warm winter weather. The number of fry was estimated at about 3,000,000.

EARLY SHAD IN NORTH CAROLINA.—The shad season has opened at Wilmington, N. C., a month earlier than usual. It is reported that a few of these fish have appeared also in the Potomac.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 11 to 14.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.
March 4 to 7.—Second Annual Dog Show of the Mascotah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.
March 11 to 14.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.
April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Feb. 11.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.
Feb. 3 to 23.—Meet of the Brunswick Fur Club, Great Island, Me.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CHICAGO DOG SHOW.

THE Mascotah Kennel Club have made additional classes as follows: Foxhound puppies—dogs, 1st \$5, 2d medal; bitches the same. Black and tan terriers over 7 lbs.—dogs \$10, \$5 and medal; bitches the same. Several valuable cash specials are offered for foxhounds, and many others will be offered for the different breeds. Intending exhibitors should not forget that entries close Feb. 17. The address of the superintendent is Geo. H. Hill, 175 Dearborn street, Chicago, Ill.

SETTERS VS. POINTERS.

Editor Forest and Stream:

I wish to offer a word of advice to my dear young kinsman who champions the pointer in your issue of Jan. 30. Wake up from your Rip Van Winkle sleep. Subscribe to FOREST AND STREAM at once and get all the back numbers you can lay your hands on. Throw away your bow and arrows and get a Parker breechloader, 16-bore, 6-pounder, and a dog of the old Sam Scanton strain of Nat and Smut, and see what a revelation awaits. Why, you are way off. If there ever was a dog got up expressly for a rough and tumble shooter's special benefit, that is the setter, first and foremost, all the time. Take my advice and you will not need to call on Mr. Wise.

Briefly I state as the result of nearly forty years' shooting experience, that for all-round work the setter is far and away the best; both dogs require plenty of water, and certain localities may be somewhat advantageous to either dog. Bogardus does not think the pointer a good prairie dog. He might do better in some parts of Virginia, &c., stubble field, if stubble be not too thick. I shot two seasons over an Al Irish setter dog Old Joe, and he was fonder of playing with children than any dog I ever owned. Cast your eye over this list of merits:

Setter.	Pointer.
More style, dash, courage, capacity to get over ground, beauty of form, elegance of clothing, endurance fatigue better day in and out, better temper, more dog sense, more frolicsome, high spirited, unquestionably better water dog, stands heat and cold better.	More docile, easier trained, does not require re-breaking, better for beginners, probably more cautious, fonder of sheep.

Wishing that you may "do works meet for repentance" in the field over good setters, and with kind regards to Ned and Clay, whom I have not seen since we hunted together with McClellan on the Peninsula, I remain, yours hopefully, CAPT. CLAYTON.

ENGLISH NOTES.

THE principal event of the week has been the annual show of bulldogs, held at Bath, under the auspices of Cyril Jackson, Muir Drew, Beresford-Hope and Ford, of Swindon. The Bulldog Club has once or twice held a winter show as well as a summer show, and when three years ago the club in reply to many inquiries stated that it did not see its way to hold a winter show, Cyril Jackson at once took the matter in hand and got up a show which was an unqualified success. Since then the show has been held annually and has grown tremendously in popularity; in fact it is considered to be the "best and jolliest show" in the United Kingdom. Cyril Jackson is the brother of Arthur Jackson, the well-known judge of bulldogs, black and tans and Schipperkes, and like his brother, is an independent gentleman with comfortable means. The show which has just been held provided twelve classes and no less than thirty-seven special prizes of great value were offered, all of them being given by devoted admirers of the British bulldog. W. H. Sprague (who used to own Grabber, Wheel of Fortune, Don Pedro and other champions) was the judge selected, and exhibitors showed that they have implicit confidence in the "Honorable Billy" by supporting the show with an enormous entry. Woodwises won in champion class, with British Monarch, a brindle that has never been beaten except by Grabber and Rustic King. The latter named is now seldom shown, but whether this is due to his being "all to pieces," or to the fact that bulldog men abominate the Rustic King type, I cannot say. Grabber, eight years old and as fit as a fiddle, got second, beating Forceps, a little dark brindle, whose chief fault is that he puts his forefeet too close together. Grabber is now owned by Jack Ellis. Old Grabber has passed through a few hands in his time. He was bred by a Birmingham workman in 1881 and made his first bow at Birmingham show a year later, when the late Jack Gurney claimed him for £37.10. Gurney sold him to Sprague for £140, and when that gentleman broke up his kennels, Pemberton, a builder, bought him for £70. The latter named recently has sold out the few dogs he possessed and Jack Ellis purchased Grabber at a figure which has not yet been divulged.

Champion bitches found Kitty Cole the winner. This bitch is the property of Muir Drew, one of the few gentlemen to be found in the bulldog fancy. She is as "handsome as paint" and Drew is passionately fond of her, because his wife made him a present of Kitty on his birthday. Mrs. Muir Drew is a capital judge of bulldogs and also of horses. Drew is a member of the Kennel Club committee and is recognized by all as a real good fellow.

Queen Rose, the second in the challenge bitch class, is a brindle that stands too much on her legs to be a champion. She is owned by Lady de Clifford, wife of Lord de Clifford, the oldest baron in the English peerage, the date of the creation of the title being A. D. 1299. Queen Rose cost £150 six months ago and she now wears a gold studded collar, value £50. Dryad, third, is a half sister to Kitty Cole, both being by Don Pedro, and is owned by little Logan, son of a wealthy merchant.

Mrs. Ida Roberts, the wife of a parson, won in heavy dogs with her young Monarch, a son of old champion Monarch. Her dog gets his tail up too high in the ring, and in order to make him keep it down she carries a whip and doesn't she just thrash that tail when no one is looking. Jubilee Monarch got second, a dog with a monkey's face, but a clinking back. Smarti, her owner, is a tobaccoist down near the London docks and he is a man who fancies he knows more about the breed than any one in the world. Bill Richardson won third, owned by Tom Symonds.

Rustic Lass, a daughter of Rustic King, won in heavy-weight bitches, a nasty type, but as this class only contained a lot of duffers she properly won. Bedbury Lion won in medium-weight dogs. He is the property of P. Beresford-Hope, the son of the philanthropic Beresford-Hope who represented Cambridge University in the House of Commons for many years as a Tory, and who gave over £250,000 toward endowing churches. This dog was considered to be likely to lick everything ever seen when he first came out, but alas, like many another wonder, this little fellow has gone off very much indeed. His wrinkle is going, and his shoulders are not set on outside his body as a bulldog's should be. I am afraid he will never realize the great things which were anticipated of him, and I should think Beresford-Hope will be sorry he did not take the £300 offered by an American gentleman when the Lion was only nine months old. Hope is, however, a very rich gentleman, so it won't matter very much to him. German Monarch, the second prize winner in this class, is the most promising bulldog in England to-day. He is own brother to Queen Rose and a rare bred one, and if he goes on improving in the same manner as he has this last six months, will soon make the best of the champions "sit up." Fred Stevens, his owner, is not a very rich man, but still he knows enough of bulldogs to refuse £100 for his dog. Romance got third, a dog that is wonderfully well out at shoulders, and with a big head. Dicky Haydon, the owner of Romance, is one of the best sportsmen in England. Falstaff II. got vhc. He belongs to a man named Shaw, of Ashton-under-Lyne.

Ruling Passion is owned by Alfred Smith, of the Bon Marche, Brixton. She won first in her class and also got a special or two; she is a worthy daughter of her sire, cham-

pion Grabber. Snider, second, is a good sort, of the old-fashioned stamp, the property of E. A. Jackson, brother of A. C. and Cyril, of that ilk. The Graven Image, owned by Cyril, got third, a nice little white bitch with any amount of character about her. Cyril Jackson is noted for giving his dogs outrageous names; for instance, he has had such names as Briton's Boast, Whiteden Sepulchre, Precious Ointment, etc. Tomsh, in this class, got reserve; she is owned by John Ross, one of the best men in England, a good fancier and friend, and one whose pocket is always ready to help the breed. Tomsh is celebrated as being the only living offspring of champion Wheel of Fortune. The special prizes took up a deal of time and the judging was not over until very late.

LONDON, Jan. 18.

DOGS OF THE DAY.

IT is fortunate that Mr. Diffenderfer prepared us for something modest in the way of prizes at Baltimore. If it was not a first attempt of the new club we might grumble at the cash offered, but I am sure it is a great deal better to let a club feel its way and see what the citizens of its town will do in the way of gate money before they think of launching out, as some clubs very foolishly do, in an effort to emulate the W. K. C. with but a fraction of their support at the box office. It comes a little hard on the exhibitor in some classes to pay \$3 for a \$3 first prize, but he has this one grand consoling consolation—there is nothing in the Constitution of the United States compelling him to enter. I think when it comes down to such small prize money the class might as well be omitted and let the breed go into the miscellaneous class, with the stipulation that three dogs of any one breed entered in that class be given a class. I don't believe in letting one or two dogs of a breed of which there are no other representatives, being given so many opportunities for adding to a reputation far above their actual merits in most cases.

The committee announces that 350 entries is the limit, and that the books will be closed when that number is reached. There is no doubt but that the entries will exceed that number, and as the rejection of entries is always unpleasant, I would offer this very simple method of relieving themselves from any implication of favoritism. Keep a day book in which to enter the name of each exhibitor and his number of entries in the order in which they are received. There will not likely be over 150 exhibitors, so that the work will be very light. This book to be open for inspection at any time after the entries close. When there is a likelihood of closing the books before the advertised date, there is no absolute necessity for doing anything beyond taking subscriptions, as they would say in horse racing. A person wishing to enter at Baltimore could now send his check for \$15 and cover his right to name five dogs at any time up to the advertised date of closing; or if he even named his entries he would have the right of making correction or substitution up to that date. It is well to understand such matters when anything out of the ordinary arises.

The fact was recorded two weeks ago that the California Kennel Club, of San Francisco, had appointed a committee to confer with the Pacific Kennel Club in regard to amalgamation. The latter club has done likewise and President Wilson named Messrs. William Schreiber, H. H. Briggs, T. J. O'Keefe and Clarence A. Haight. If the committees meet at Mr. Schreiber's and appoint Mr. Briggs master of ceremonies, amalgamation is assured beyond a doubt. It was under such mellow surroundings that on the night before the dog show of 1888 closed Mr. Briggs said to me, "Watson, I want to say something to you. You came here in the face of very strong prejudices. We have heard a good deal about you, we said a good deal about you and [with a smile] some of us wrote a good deal about you. You have been here quite long enough for us to say we were mistaken in a good many things, we want you to return home with the knowledge that—well, that we like you, and we want you always to remember it." That was the pleasantest of the countless pleasant features of my enjoyable visit to San Francisco.

I have no desire to enter into any controversy with Mr. Graydon Johnston on the subject of coursing. I did not read his previous letter and have no knowledge of what he then said. As to his last, I have written many such, but I never send them to the papers. They are useful as safety valves, and when the extra head of steam is blown off I sit down and write a letter for publication. There are but two things I desire to notice. Mr. Johnston says dog fighting is not a sport. If not that what is it? What is prize fighting? What is rat baiting? What is a bull fight? Sports, every one of them, and because we do not consider them reputable it does not alter the case a particle. Then as to betting and gambling. There is as wide a distinction in that as there is between dog fighting and the king of sports, horse racing, every bit as wide. It never occurred to me to find out what a dictionary said on either subject till this moment, and I find in the only one I have at hand, Ward & Lock's Standard Derivative Dictionary, *Bet*, something pledged in contest, wager, stake. *Wager*, bet. *Gamble*, to play for money; gambling, the act or practice of gaming for money. I do not advance that as any argument at all, because probably other dictionaries do mix them up. Mr. Johnston referred to dictionaries, I did not. Accepting that gentleman's theory we are all of us gamblers. I bet \$4 against \$10,000 every six weeks that I will meet with an accident. It is just my luck to lose all the time, of course. We were going to have a hard winter according to all the prophets, and I bet the coal merchant \$1 for five tons of coal that it would be a scorcher. Of course I lost, coal is no dearer than it was last September. There is a good chance for a man to gamble in an overcoat just now if he can keep the moths out of it next summer. This is a "cinch."

I saw Mr. E. W. Clark, Jr.'s new setter Rod Gem in his box at the railway station a few days ago. He is a black, white and tan, by Rodrigo out of Gem, and therefore bred on the lines of those rattling good field dogs, Gath's Mark and Gath's Hope. The opportunity for forming any judgment on Rod Gem was too limited, but he looked like a dog of high intelligence and not at all out of the way as to appearance. The *Hon* field trial challenge cup for members of the Philadelphia Kennel Club, has set them all on the still hunt for something to beat Clipper W. with. That cup, by the way, is to be christened by Col. Ridgway this (Tuesday) evening. The club will also take steps regarding more convenient and accessible club quarters. The little meeting room which has been rented for the past three or four years, hasn't attractive powers enough to draw together a quorum for months at a time. There is nothing said on Secretary Brown's official notice of the business to be done of a show for this year. The club lost heavily last year, notwithstanding the belief at the time that money had been made. The loss according to some was \$1,200, and I have heard it given as high as \$1,800.

J. W.

CHICAGO DOG SHOW.—Entries for the Chicago dog show close Feb. 17. The address of the superintendent is Geo. H. Hill, 175 Dearborn street, Chicago, Ill.

RORY O'MOORE.—The well-known Irish setter Rory O'Moore died Feb. 6, at the ripe age of 15 years and 5 months.

BLACK AND TAN TERRIERS.—(CHALLENGE CLASS)—1st, A. W. Smith's Buffalo General; 2d, Rochelle Kennels' Rochelle Lass. —**OPEN—Dogs:** 1st, J. F. Campbell's Kaiser; 2d, Miss A. L. Baldwin's Rochelle Knickerbocker; 3d, Rochelle Kennels' Dick. Very high com. reserve, Rochelle Kennels' Rochelle Oolah. High com., Miss C. S. Rochelle's Rochelle III. Bitch—1st, Rochelle's

Meersbrook Maiden; 2d, J. F. Campbell's Desdemona; 3d, C. F. Stafford's Rochelle Queen.

WHITE ENGLISH TERRIERS.—1st, H. F. Littlefield's White Prince.

YORKSHIRE TERRIERS.—CHALLENGE.—1st, P. H. Coombs's Bradford Harry; OPEN.—Dogs: 1st, 2d and 3d, C. N. Symonds's Fishpool Glen, Toon's Royal and Prince Al. Very high com. reserve, F. Senn's Little Swell II. Very high com., P. H. Coombs's Lancashire Ben, J. F. Campbell's Peter, C. N. Symonds's Harry and P. Cassidy's Ben II. 2d, P. Cassidy's Major. Bitches: 1st, C. N. Symonds's Little Sister; 2d, Mrs. L. D. Outler's Yum Yum; 3d, C. N. Symonds's Venus. Very high com. reserve, J. McKee's Nelly. Very high com., C. N. Symonds's Ploss. High com., Mrs. L. Outler's Midget and J. F. Campbell's Nacey. Com., J. Bell's Lady.

TOY TERRIERS.—1st and 2d, Morris Rothschild's Jerry and Nellie; 3d, W. Bellchambers's Topsey.

PUGS.—CHALLENGE.—Dogs: Equal 1st, A. E. Pitts's Kash and Dr. M. H. Cryer's Duce. Bitches: 1st, Dr. M. H. Cryer's Bessie, OPEN.—Dogs: 1st, Miss J. A. Yard's Tim; 2d, Dr. M. H. Cryer's Bob Ivy; 3d, Miss M. E. Bannister's Saxon. Very high com. reserve, Dr. M. H. Cryer's Climax. Very high com., Eberhart Pug Kennels' Bradford Ruby II.; J. H. Lyndon's Puck; Dr. C. Wheatleigh's Mikado. High com., J. J. Brown's Bun. Com., Dr. H. R. Surles's Jim Jam; Miss L. Linden's Baby Hunting; K. Schreyer's Poney; Bitches: 1st, Mochel Kennels' Peep II.; 2d, Dr. M. H. Cryer's Myrtle; 3d, Thos. B. Hebblewhite's Midget. Very high com. reserve, Mrs. Chas. Wheatleigh's Yuma Yuma. Very high com., Mrs. S. C. Barnum's Yum Yum, Miss A. Yard's Prim, Mrs. A. M. Cunningham's Peggy. High com., Miss J. A. Yard's Paquette. C. E. Osborne's Lethia. R. Schreyer's Nellie, E. D. Bruce's Dorothy. Com., Miss M. E. Bannister's Nady, H. Schreyer's Roxey. Puppies: 1st, Eberhart Pug Kennels' Eberhart, Cashew 2d, Mrs. J. F. Campbell's Jim; 3d, Roger Harrison's Nelly Bly. Very high com. reserve, Mrs. G. Schumacher's Litter, G. W. Wambach's Rustic Natti. High com., John Moore's McGinty, Dr. H. R. Surles's Baby II. Com., L. A. Headassell's Pitts and Dr. H. R. Surles's Gypsy II.

TOY SPANIELS.—CHALLENGE.—1st, Wm. Phillips's Roscius; 2d, Mrs. F. Senn's King Victor.

KING CHARLES SPANIELS.—1st, Mrs. F. Senn's Romeo; 2d, Mrs. Jas. R. Franklin's Lady Helary; 3d, Mrs. Kistemann's Daisy.

PRINCE CHARLES SPANIELS.—1st, Jas. C. Thomas's Grenoble.

PRINCE CHARLES SPANIELS.—1st, Miss E. R. Catlin's Sweet Violet; 2d, Mrs. F. Senn's Bell; 3d, Mrs. Kistemann's Prince.

JAPANESE SPANIELS.—1st, Frank P. Comstock's Nanki-Poo; 2d, Mrs. F. Senn's Nellie Bly; 3d, Frank P. Comstock's Yum Yum II.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid; 2d and 3d, Dr. H. Surles's Dandelion and Dandelion II.

MEXICAN HAIRLESS.—Mrs. L. D. Hurd's Pippo; 2d, Mrs. H. T. Foote's Me Too; 3d, Mrs. E. C. Moore's Nellie.

SCHIPPERKE.—LARGE.—1st and 2d, W. J. Comstock's Midnight and Darkness; 3d and reserve, E. R. Spaulding's Jack and Prince, Jr.

MISCELLANEOUS.—LARGE.—1st, W. N. King's Russian wolfhound Ivan Romoff; 2d, J. Getz's Zorry; 3d and high com., Meadowhope Kennels' Diamond and Pearl. Reserve, King & Getz's Rival. SMALL.—1st and 2d, Mrs. F. Siegrist's Bob and Frank; 3d, Miss A. C. Doty's Takyra. Very high com., Mrs. B. Madden's Chorio.

BALTIMORE DOG SHOW.

BALTIMORE, Feb. 8.—*Editor Forest and Stream:* Present indications point to very successful show here next March. If things continue as they have been the last few days it is likely that we shall have to shut down on a large number of entries before the day on which they close.

We have made the following extra classes: Chesapeake Bay dogs (otter-coated), dogs or bitches, with diplomas as prizes. A challenge class for bulldogs, 25, and a class for bulldog puppies, dogs or bitches, with diplomas as prize.

We found it necessary to give the Chesapeakes the above extra, owing to the many requests from prominent Maryland duckers. Members of ducking clubs here have donated a \$50 silver cup to the Chesapeake classes. Of these dogs we expect to have the largest entry ever known in this country.

A number of specials have been received since our last. We expect a large number of additional cash specials which we will announce next week.

W. STEWART DIFFENDERFER, Sec.

ST. BERNARD CLUB.

THE annual meeting of the club was held Feb. 11 at the American Institute Fair Building, K. E. Hopf in the chair. Present: Miss A. H. Whitney, Miss Chandler, Miss Goodnow, Messrs. F. Hall of Philadelphia, Coffin of Glens Falls, Moore and Sears of Boston, Lohman, Joekel, Daniels, Johnson, Thurston and Hopf of New York. The report of the treasurer, audited by the Finance Committee, was read and accepted. It shows a balance of nearly \$500 in bank.

The president's written report on the workings of the club during the past year was accepted with thanks. It shows a membership of 61 in good standing up to the time of closing of entries for New York show; the report comments favorably on the improvement in the breed, especially in the smooth-coated classes, and recommends the breeding for type as well as for size.

Mr. Schumacher, of Brooklyn, was elected a member of the club. The question as to whether the cups, which were won by the Alta Kennels and returned by them, should revert to the club, or may be claimed by the owners of dogs which also competed for the said club specials but did not

get the reserve, was referred for final decision to the American Kennel Club. If the decision is against the dogs coming next in rank to the original winners, the cups will be donated by the club to the Alta Kennels as a matter of courtesy.

The following officers were re-elected: K. E. Hopf, President; Miss A. H. Whitney, Mr. E. H. Moore and Mr. R. J. Sawyer, vice-presidents; W. H. Joekel, treasurer. In place of Mr. L. Daniels, Mr. J. O. Thurston was elected secretary. The following were chosen as members of the board of governors: Messrs. John Lohman, B. P. Johnson, L. Daniels, H. R. T. Coffin, Rev. W. H. Walbridge, Jas. W. Dunlop, C. T. Barney, E. B. Sears and John Keegan. Mr. John Lohman was elected delegate to the American Kennel Club.

SPAYING.

FROM time to time we receive inquiries as to the manner in which the operation of spaying a bitch is performed together with a request for information as to the effect produced. As to the operation itself, no possible benefit could be derived from a description of the method, as in no case should the operation be performed except by a skilled veterinarian or surgeon, and of course no instructions are needed by them. As to the effects of the operation, we have often stated that in a very large majority of cases the result is disastrous; not only is the spirit of the bitch broken but her health is ruined as well. Among the many cases that have come under our notice we have yet to see one that has proved even remotely successful for any length of time. We have often been assured that such and such cases have been a perfect success, and such indeed appeared to be the fact, but we have taken pains to follow up all such cases and have invariably found that in the course of a year or two the result was sure to be the same—a dead or practically useless animal. We have often been amused at the manner in which advocates of the practice would try to get around the inevitable by plausible excuses. "The operation was a perfect success. She never came in season and hunted just as well as ever; but some disease got hold of her and she died." That is just it, "she died." Or perhaps one will say: "Nothing could have worked better, but she did not have exercise enough and got too fat to be of any use." Just it again, "she got too fat." Another one will go into ecstasies on the subject and tell you "everything was perfectly satisfactory; nothing could be better; my bitch was all right until she caught cold; that appeared to settle in her head, and she has since lost her intelligence." Just it again, the only attribute that makes a dog valuable, "intelligence destroyed." Aside from the evils which are sure to result, the practice is unnatural and cruel, and the operation should never be performed. If the person owning the bitch is not willing to take proper care of her by keeping her shut up when in season, the best way out of the trouble is to keep only those of the opposite sex.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

N. G. P., Epping, N. H.—Give 2 gts. of quinine three times daily in a pill. Paint the sores with balsam of Peru. Put 4 drops of Fowler's solution of arsenic in the food once daily.

T. S., Brooklyn.—I have tried your last recipe for tapeworm on bound 7 years old. Has done no good. Please state what to use. Ans. Give 15 drops of oil of male fern in a gelatine capsule at night and repeat in the morning. A few hours after the second dose give a full dose of castor oil. The capsule may be concealed in a morsel of meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Feb. 8.—The regular weekly shoot of the M. R. A. was held at its range to-day under such conditions that only cranks and veteran riflemen would have participated. A howling wind and pouring rain continued all day, and under these conditions the scores made were good. Following are the scores made to-day:

W Charles.....	78	W G Hussey.....	71
J Francis.....	104	A H Ballard.....	35
H Severance.....	101	W Thomas.....	93

OTTAWA, Feb. 4.—The third match of the Off-hand Rifle Association was shot to-day. The day was unfavorable for shooting in district No. 1, fog completely hiding the target at the 200 yds. range a great part of the time. This, together with la grippe, was the cause of the low scores:

Orilla	Points.	Wm. List.

THE BERLIN SHOOT.—The following set of rules of the great Bundes shooting festival of this year will show the fashion of running such things abroad: Shooting begins on the first Sunday of the festival, July 6, at 5 o'clock in the evening, on a stand, with the exception of the festival honorary targets, and closes at 8 o'clock. On all other days of the festival shooting will be from 7 o'clock in the morning to 1 o'clock in the afternoon and from 3 o'clock to 7 o'clock. On Tuesday, July 8, at 3 o'clock in the afternoon, there will be a competition shooting at the stand, and field targets for the first ten honorary goblets. 2. The shooting festival only men can participate who are members of the German Schuetzen Bund; or as guests, non-German marksmen or such Germans who are prevented by their position in life to become members of the Schuetzen Bund. Non-German marksmen wishing to compete at the honorary targets must pay 3 marks (75 cents) dues to the treasury of the German Schuetzen Bund. 3. Each marksman must buy a festival coin, costing 6 marks, which amount he must set to the managers of the festival, postage prepaid. There will be at least 12 targets put up, one-half at 300 meters and the other at 175 meters. The best Point-targets, 300 meters, have an oval black 90 centimeters high and 45 centimeters broad. Each shot in the black or which touches the same counts as a hit (Treffer) and counts each hit in the 57-centimeter high and 12 centimeter broad field 2 points, and all hits in the outer field 1 point. For 60 points a marksman receives a festival coin, value 5 marks. For 20 more points a second coin, for 130 more or together 180 points, besides the former

two coins, each marksmen can select either a goblet, a lady's gold watch or a gold festival coin, value 50 marks. Marksmen wishing to gain two more festival coins (besides the first two) can do so by shooting 40 more points, but in order to gain the goblet, etc., they have then to shoot 220 points (instead of 180) altogether. If a marksman has gained the two festival coins and the goblet, he also is permitted to gain two more test coins by shooting 40 more points. Only those competing for the first ten honorary goblets are allowed to gain two goblets, all other marksmen can only gain one. Each shot at the field-point target (300 meters) cost 30 pfennig (about 6 1/2 cents); shots unlimited. By paying 15 cents each point made will be counted double. All rifles are allowed, which weigh at utmost 10 kilo (about twelve pounds), with field trigger, which can be pulled off without setting. Front sight protectors must be open on top about one-third of an inch all the way. Plain glasses can be fastened on the stock of the rifle, but they must not serve as third sight; they must not be ground on the edges or be colored. No handle is allowed to be used on any rifle, or any projections underneath the rifle which can be used as such. The hollow in the butt of the rifle must not be deeper than two and a quarter inches. Three field-targets will be put up. They are called "Deutschland," "Frankfort" and "Berlin." Non-German marksmen, in whose country German marksmen are not allowed to compete on certain targets, are not permitted to compete on the above targets. Note—A centimetre is 39 100 of an inch.

NEWARK, N. J., Feb. 8.—At the annual meeting of the Essex Amateur Rifle Club this evening, the following officers were elected for the year: President, A. C. Neuman; Vice-President, G. D. Wiegman; Recording Secretary, John H. Hugel; Financial Secretary and Treasurer, Chas. Cooper; Sergeant-at-Arms, Frank Heims; Captain, J. K. Walsh; Rifle Inspector, J. A. McCallum; Judge and Scorer, Geo. Freitag; Shooting Committee, Copper Smith, Snellen and Wiegman; Association Judge, Joseph Dainty; Delegates, Walsh, Wiegman and Weller.

GILT EDGE SCORES.—B. Walther, of the Our Own and Zettler Rifle clubs, has been doing some phenomenal shooting with an open sight rifle. In eight strings of 10 shots each on the German 200 yds. target he scored 219, 215, 225, 224, 220, 205, 228, 207, an aggregate of 1,743 points, or an average of 217 3/4 per string out of a possible 250 points. Mr. Walther used a .35cal. rifle, recut by Zettler Brothers, 3lb. trigger pull, 55 grains of Hazard's powder, and a 255 grain lubricated bullet.

THE TRAP.

As this journal is the only one having a representative with the East and West team tourists, our readers will be given the best brightest, fullest, most accurate and most satisfactory reports of the progress of the enterprise.

AMERICAN SHOOTING ASSOCIATION DATES

Feb. 12, 13, 14.—Birmingham, Ala.
Feb. 12, 20, 21.—New Orleans, La.
April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May 28, 29, 30.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

MEMPHIS, Tenn., Feb. 1.—This was the first town of the trip which seemed to be purely Southern, and the conditions of the trip were in characteristics from the cities with which most of the boys were acquainted. It was here that we first struck general evidence of being in the cotton country. There was cotton everywhere, and everywhere it was hauled on the great dry, drawn by a single mule, which seems the usual draught vehicle of this country. Perched on top of the cotton bales was invariably a specimen of the genuine down-South dog, the raggedest, grinnest, happiest creature on the face of the earth. The darky and the mule make the chief population of Memphis, so far as we can see. The climate has changed altogether. There is no hint of winter here. The day mellowed into one of almost summer warmth. This has thawed out the boys, and they are chippier as squirrels.

The advertising here was unquestionably done too far in advance. Not one of the morning papers had a line about the shoot to-day, and there was general surprise when the boys appeared on the streets. Nevertheless, there were about 300 in the crowd that on even this short notice assembled at the Citizens' Baseball Park at 2 o'clock.

This park is pleasant enough as a shooting ground, but it is very small, and it is surrounded by closely packed residence buildings, which are within easy range from the score. On this account it was found necessary to turn down the traps, so that the line of fire would fall below the top of the tight board fence. This threw the birds so low that they made exceedingly hard shooting, especially in the doubles. The birds hardly averaged four feet over the ground, and many of them never got three feet from the ground at any point of the high ground. Under these conditions, the prospect seemed very likely that the shooting might be stopped at any moment by an irate property-holder, or by the outcry of some eye-punctured nigger from the top of the fence, the boys felt nervous all the time, and hardly able to shoot the hard flyers offered them. The scores are low, but no outside shooter need sneeze at them and say they could do better, for that is very unlikely.

Mr. Fred Quimby presided at the traps, and did quite as well as the instructor who "took him raise." Everything went very smoothly, and there was more enthusiasm and applause over the shooting at Memphis than at any place yet. Score, 30 single blue-rocks and 5 pairs:

Babylon, Feb. 8. The second day of the great club match rack a bit of bad weather. It is a difficult matter to shoot guns on a rainy day, especially when the wind travels at the rate of 10 to 15 miles an hour. The great Macalester, of Philadelphia, and Dr. Lee Knapp, of New York, did not set records in the second day's shooting of the great match for \$8,000 side at the Westminster Kennel Club's grounds near Babylon, L., yesterday. The sportsmen were out in large numbers, however, and the performance of the celebrated marksmen, and the Philadelphia sporting hounds, attracted a fine crowd. The result of the day's "race," for Macalester killed 165 points out of a possible 200, beating Dr. Knapp by 19 points.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

AN AUXILIARY NAPHTHA CRUISER.

THE subject of small cruising launches is one that has proved very popular with a number of our readers, and we have already illustrated several of these small craft propelled by steam. The ordinary steam launch is open to several serious objections for cruising purposes; the small amount of space for crew and stores and its bad disposition enforced by the needs of the engineer's department; the bulk and inconvenience of coal as a fuel; and the heat and smoke from the center of the boat. The advantages which the naphtha launch possesses in all of these respects, and which have made it so popular for ordinary day use as an open launch, fit it still more for the purposes of the cruiser, and during the last season in particular the makers of these craft, the Gas Engine & Power Co., have turned out a number of cabin launches more or less completely fitted for living on board and cruising, of all sizes, from 50 ft. downward.

The most interesting of this novel fleet is the auxiliary launch *Etcetera*, whose arrangement is shown in the accompanying drawings. The owner of the *Etcetera* is Mr. L. Q. Jones, of Hartford, Conn., an old and well known canoeist who has cruised about the Sound, the Connecticut, the St. Lawrence and the Hudson in canoes and small craft of all sorts, besides winning renown as a skillful canoe racer. Mr. Jones' first experience with the naphtha launch began some three years since, when the boats were far less perfect than to-day; the craft, an 18 ft. open launch, being used on the Connecticut River, mainly as a tender to the fleet of the Hartford Canoe Club, of which he was then commodore. Though some good canoeists were at first prone to scoff at such a departure from the true faith, they were soon won over after they found how convenient it was to have a line thrown them from the launch when the ever tricky river breeze left them with a strong down current several miles from home. The little craft cruised up and down the river and along the Sound between New York and Watch Hill, until her owner became proficient both in handling her in rough water and in the management of the machinery. Her successful performance led to the conception of the present larger and much superior cruising craft, and last spring an order was placed with the Gas Engine & Power Co. for a launch 30 ft. over all, 27 ft. l.w.l., 7 ft. 6 in. in beam and about 2 ft. 5 in. draft, with complete cabin house.

The hull was built of white oak frame, the ribs bent, oak garboards and white cedar planking, all copper-fastened, and white pine deck. The engine is of 6 H.P., with a 50 gallon tank for naphtha in the bow. The wheel is two-bladed. The yawl rig is used, a small jib on a running bowsprit and mainsail and mizzen with high peaks, the masts being as low as possible to minimize weight and windage. Mastfield's hollow spars are used.

His long experience in canoe cruising has taught Mr. Jones the value of each inch of space in a small craft, and there is little waste room in the *Etcetera*. The forward deck is 7 ft. 6 in. long, the cabin is 9 ft. long, the cockpit 5 ft., the engine and boiler space 4 ft. 9 in. Aft of the bow tank is a closet across the boat; the cabin, which is very neatly and completely furnished, has two good berths with an upright locker at the foot of each for crockery, linen etc. In the wings are other lockers for clothes etc., one being fitted especially for guns and ammunition, as the boat is largely used for hunting trips. In the cockpit are four lockers for ice, stove and cooking utensils etc., and one for tools and supplies for the engine. The head-room in the cabin is 4 ft. 6 in. The cockpit is covered by an awning which protects the engineer in all weathers. The tiller is very ingeniously arranged to save room, the rudder lines are connected to a vertical lever or tiller, the lower end of which is pivoted to the keel, and which works the thwartship just aft of the bulkhead between the engine space and cockpit. It is always within reach of the hand, the motion is strong and simple, and at times, when under sail, the foot is also used for steering.

The little yacht is complete and self-contained for a cruise of indefinite length, depending on the shore only for fresh provisions and an occasional supply of naphtha. The tank holds 50 gallons, good for about 420 miles run under wheel alone or considerably more under canvas and easy steam, without falling back on sail alone, as is sometimes done. In smooth water and with no strong winds she has run 100 miles in 13 hours. The cooking is done under cover in the cockpit, the cabin makes up very comfortable berths for two, and is always comfortable in bad weather. The yacht has cruised a great deal about the Sound during the past summer, being well-known in every port from Larchmont to Shelter Island. Just now she is on her way to Florida for some winter cruising, and we give a brief abstract of her log from Portsmouth, Va., to Savannah, S. C.

Owing to the chances of ice in the canal in November she was shipped by steamer to Portsmouth, where her owner, with Mr. W. B. Davidson, of Hartford, another canoeist, joined her, and after laying in stores and preparing for the voyage, the *Etcetera* started on Nov. 2, first steaming over to the Navy Yard and visiting the famous old receiving ship *Franklin*, where her crew were pleasantly entertained by the captain and officers, had a good look at the vessel, bade adieu to all hands, and then started off in good shape for a long cruise. She made a good run to the first lock of the Albemarle and Chesapeake Canal, stopping about three miles from the lock at the miniature house, owned by Mr. Stewart, a genuine specimen of the hard-working, hospitable "old resident." His quarters are not large, but the welcome given to visitors exceeds the proportions of his domicile. A courtesy that was duly appreciated was the offer of the use of his cooking stove, where, without formality, a sumptuous repast à la Delmonico, with variations, was given us.

An early start was made next morning in a pelting rain storm, and about 4 o'clock in the afternoon the yacht reached the mouth of the North Landing River; a computation of the distance run being hard to make, as the channel, like the Virginia rail fence, has a wit of its own, and stretches where it pleases. The wind suddenly shifted from S.E. to N.W., raining just as hard and blowing half a gale; made a lie for the night at the mouth of the North Landing River, and turned in with an easy conscience and in expectation of an uninterrupted sleep. This programme, however, was disturbed by one of the party, Spot, a fine setter, who had something to say unfamiliar with the characteristics of the Southern gentleman of color, especially during a snooze under an awning on a dark night, the dog endeavored to make a meal off of our steward, and pinched him badly. This made enough excitement on board to enlighten the situation, and both Spot and Scott kept faithful vigil over the ship and each other until daylight.

Next day's run, Nov. 4, took the *Etcetera* as far as Coinjok, a small town situated on a branch of the canal, where we picked up a native, who was acquainted with Currituck Sound. He piloted us to the gun clubs—the Currituck, Palmer Island and Narrows Island. Lying a few rods from the Currituck Club house, on the ocean side, was a fine three-masted schooner stranded high and dry in a recent storm, with a cargo of 80,000 ft. of Southern lumber, which was sold at auction just after the *Etcetera*'s arrival, vessel and cargo bringing \$350—a speculation to be represented by a very large ? when the cost and delay of getting the cargo out and sent to market are considered.

Next day's rapid run was made from the Narrows, which divide Currituck Sound, to Roanoke Sound, touching at Manteo, on Roanoke Island. Manteo is not a city, nor yet a village, but it has some fine specimens of the genuine native. The killing of a cow is an event in Manteo, and this event happened when the *Etcetera* arrived there. The question of laying in supplies was soon disposed of by securing some steaks from the region of the tail of the animal, as the better portions had been secured by the natives. The carving had to be done by the master of the yacht, as the owner of the animal said he was "no butcher." The implement used in the transaction would have answered well for the sword of a Roman gladiator, one side being supplied with teeth to be used as a saw.

Leaving Manteo at 9 P. M., under the guidance of Mr. Robert Westcott, the only run of 150 miles which knew where to find the Harbor Island Gun Club, where it was expected to meet friends; a run across Pamlico Sound in the moonlight and under a sky which would have made the fortune of an artist had he been able to picture it, brought the yacht by morning to Ocracoke Inlet. While entering the narrow channel the *Etcetera* grounded lightly on a two-foot shoal, and was immediately pounced upon by beach combbers. These industrious and piratical gentlemen were received with the dignity proper to the occasion, and their offers of expensive assistance respectfully but firmly declined. On learning from them that Lieutenant Winslow of the Coast Survey was in Washington, a letter of introduction to him was handed to his beach-combing representatives, and the ship's

AUXILIARY NAPHTHA LAUNCH "ETCETERA."

crew went forward, lifting the stern, and by reversing the engine she slipped back into the channel and proceeded to Harbor Island, to the disgust of the would-be rescuers, making the run of 100 miles in thirteen hours.

Harbor Island is the location of the gun club, and is at the mouth of Cove Sound. The club's home, in charge of Mr. Holman, is well appointed, and the sportsman can find plenty of game and amusement that is to be appreciated. The attraction of duck and snipe was strong enough to keep the Excetera at the island for several days, and not until Nov. 10 a start was made for Morehead City, a run of 47 miles, where a supply of naphtha was to be taken.

After getting mail, naphtha, general supplies, and a look at some old places, a start was made for Bogue Sound, about thirty miles long, and with plenty of water on the horizontal, and nothing on the perpendicular. There is an amount of diversion for the yachtsmen in Bogue Sound that must be tried to be appreciated, and linen dusters would be more in order than rubber boots. Arriving at the end of the Sound, the yacht tied up at Swansboro for a day, and then began our ocean work.

She left Swansboro at 1:15 P. M. for New River Inlet, preferring to make this harbor to running all night. New River Inlet is the blindest looking place, from the outside, that one can possibly imagine; had it not been for an inlet pilot, Mr. Riley Lewis, the

passage would not have been attempted; with surf apparently breaking madly across the whole width of the entrance. The passage was made, however, in good form, and although detained for three days at the inlet in a northeaster, game was found to be abundant, and well compensated the delay. Snipe, redheads, butterballs, and broadbills were plentiful; fishing for three-pound weakfish was good; and the larder of the ship was well supplied with delicacies.

On Tuesday, Nov. 19, the sea having abated, the yacht steamed out on the ocean, but in crossing the bar a heavy sea carried away the dory. Owing to an ebb tide and strong wind the little boat joined her consort outside of the breakers and was safely picked up. With a strong southerly wind the launch bucked against a heavy sea for thirty miles, and made Barren Inlet early in the afternoon.

After being detained at Barren Inlet several days by stress of weather, the voyage was resumed; but, after a hard fight of eight miles against wind and wave, it was decided to bout ship and return to the Inlet—the first occasion upon which she had to turn back since leaving Portsmouth.

At last gladly leaving the well-named Barren Inlet behind, a fine run was made to Gold Leaf Inlet, passing in back of Cape Fear and running into Southport, meeting the first off-shore breeze enjoyed since the start. Leaving Southport at 10 P. M.,

taking advantage of still night and prospect of good weather, Sunday morning found the Excetera well off the coast, the weather calm and clear at sunrise with a smooth sea, she made the run to Georgetown Light; and, finding the naphtha still holding out, continued the run to Bull's Bay, a distance of 140 miles; leaving Bull's Bay at 4 A. M. for Charleston and making the dock in five hours. At Charleston, Mr. Davidson left the ship for home and the owner had a lonely run to Beaufort, S. C. the sole companions de voyage being two gentlemen of color, acting in the capacity of steward and pilot, "Spot" having made friends for the trip with Scott, and taking with kindly forbearance to the latest accession to the ship's company.

The run from Beaufort to Savannah was made under steam aided by storm trysail and jib most of the way, leaving Beaufort at 6 A. M. and making Savannah early in the afternoon. As business called the owner North, the yacht was safely laid up for the time until the voyage to Florida could be resumed later in the winter.

THE SECOND CRUISE OF ORINDA.—II.

BY DR W. H. WINSLOW.

WE sailed up the ferry, across to Sorrento, down to Bar Harbor, and over to Winter Harbor, at the base of old Schoodic, the next day; and the boys said it was the finest sail yet. I described this place last year, it is a gem not much appreciated, and has few visitors. A few drops of rain fell during the night, and the next morning there was a light air and a "dungeon fog;" that's what Mr. Macdonald called it. Nevertheless, we started out and had a dull day, getting across by compass, sailing to Cranberry Islands Harbor, where we looked in at two dozen fisheries and then worked over and into Southwest Harbor by sunset. Sailing in a fog is not pleasant.

Up and away before a strong nor'wester at 8 A. M. next day, which carried us rapidly over a turbulent sea; at 9 we were off Bass Head, at 10 in York Narrows, and at 11:30 anchored at Green's Landing in Deer Island Thoroughfare. Granite in chips, paving blocks, sills, tombstones, pillars and boulders everywhere. Ledges of massive granite all around, cheaper than dirt; vegetation starved; bay fever germs absent; people busy plying steel against adamant, wrestling a living by one of the fiercest struggles against nature's fortress.

Away we sailed at 1 P. M., everything set except the spinnaker away out the narrow western entrance past Mark Island and lighthouse, up by Eagle Island and light, on past Cape Rosier and Dyce's Head, and into Belfast at 6 P. M. What a glorious run! How we all enjoyed it! Mt. Desert, 60 miles away, left after breakfast, and, after the roundabout course to the south, to get to Belfast to supper, it was fast sailing.

The next four days were spent in excursions with ladies, visiting Castine and Northport Camp Ground, where an old-fashioned camp meeting had attracted several thousand people, and where much gaiety was mingled with religious observances.

The last day of August we were ready for sea and started down the bay with a light northeast wind. The Jeanette, a rather smart 30ft. keel sloop, had been on the wind waiting for us, and she payed off sheets and shaped a course upon our weather, a fair challenge for a race. She was outreached a quarter of a mile in fifteen minutes, and hauled her wind as we shook a rope over the stern.

The tide was ebb and the wind so light we were barely able to get into Sabbathday Harbor, Islesboro, by 8 P. M. This is a fine harbor except in southeasters, the shores are rocky, partly cultivated, partly covered by spruce, fir and pine trees; a good hotel with extremely moderate prices stands upon an elevation a hundred yards inland, and about a dozen cottages are scattered among the hills and extend to Hughes Head, two miles down the coast, where there is another summer village. This region is patronized by people from Bucksport, Brewer and Bangor.

Sabbath day was calm and misty, and we made it a day of rest though some sauntered along shore and went in swimming.

Next day we sailed and drifted in a light southeast wind down to Eagle Island, where we were obliged to anchor in a cove on the south side of Butter Island. Frank and Jamie went foraging and found bread cake and water at a farmhouse.

They brought aboard some very valuable oil paintings upon scollop shells, which they had purchased at twenty-five cents each from the farmer's wife, aided by the farmer, who said they had been painted by their daughter, who was so famous an artist that Jordan, Marsh & Co., of Boston, had bought many of her works and would take all she could paint at a handsome price. The house was decorated with the union of art and nature. The old man brought in a half bushel of gems. A half hour was spent by the foragers examining the beautiful display in the twilight in hopes the fair painter would appear. They knew she must have brown dimpled cheeks, a wealth of sunny hair and blue eyes that sparkled like the sea about her island home. She did not appear, but they each purchased some of the pictures, expecting to meet the lovely artist on the morrow.

They came off and said they had made a great bargain here in the wilds of Maine, getting for a trifle most unique and valuable pictures to adorn their bachelor quarters in the Far West. After dinner, when the table was cleared we examined the pictures and expatiated upon their merits. They were beautiful, but had a homelike look. I thought I had seen the dogs' heads somewhere—perhaps in a book store window at Pittsburgh. Then one of the prettiest landscapes was wrinkled! What did it mean? "Ahi! hal Decalcomant!" one shouted, as the fact burst upon us, and roars of laughter filled the cabin. The victims turned red, then shouted with the rest, and took the jests and jokes that were made in great good humor.

"Mine will do for mementoes of the island," said Jamie.

"Yes," said Frank, "but hang it! I thought so many; they seemed so cheap. Who would have thought these people were so sharp? One must look out for these Yankee rascals."

I advised Frank to exchange his wrinkled landscape for a perfect one, or a pie, but he did not take kindly to my suggestion. We thought they would not wish to go ashore again upon Butter Island, it was so slippery, but they went for milk and water next morning.

"Did you see the fair artist?" was asked when they returned.

"Yes, she met us at the door."

"What did she and you say?"

"Good morning."

"What did she look like?"

"A Dutch frau, round as a tub, and a face like a lump of dough."

"Did you say anything about the pictures?"

"No, we did not—d—n it!"

Thus were the romantic notions of the young gentlemen most cruelly crushed.

A group of beautiful, wild, rocky islands makes snug channels west of Eagle Island, and we explored passages, shoals and shores. Jamiesie overcame one immense clam shells—then clams—that we got in the shallows; then there were large starfish, radiate dollars, sea urchins, mussels and the omnipresent sculpins, lying thick over the bottom. A bright green plant like a maiden's hair fern was floating near, and we found it was firmly rooted to a stone of about 40z. in weight. The sunshine was uncomfortably warm and we were glad to get aboard and lie around under the awning that Mac had spread.

After lunch, catspaws began to chase each other over the glassy bay and soon a smart southwest breeze was blowing. Then we got under way and, passing south between Eagle and Ball Islands had a lively sail in a rising sea down to Mark Island and into Deer Island Thoroughfare to Green's Landing, where we anchored about sunset. A magnificent schooner yacht passed out as we passed in, and I wondered why pleasure-seekers should go to sea in the falling wind, gathering fog and darkness. I suppose it was in obedience to that spirit of unrest in Americans that has bothered even myself to conquer. Some people never work so hard as when they are playing.

We got away next day at noon and ran along the high, rough, rocky shores of Kimbell's Island and Isle au Haut, till we had given a trial point a good berth and then entered Moore's Harbor, between the ledge and the western shore, and anchored in the middle of it in five fathoms of water. The eastern entrance is too hazardous for any stranger to attempt. The harbor is too open to be quiet, there is always a swell which keeps a small vessel moving, but it is considered safe except in severe southerly and westerly gales, when the sea becomes very heavy. The shores are great masses of tumbled ledges and cliffs, with spruce and hemlock clad heights beyond. There is a little stream of good water at the head, where the only inhabitants live in a small house upon a little slip of meadowland. Beyond a formidable hidden ledge, a scaly lot of nondescript craft were awaiting a chance to go out and lay in their winter's supply of salt fish. Mr. MacDonald said they came from the Penobscot River and mainland. Several smart looking sloop boats were in the harbor behind a point, which were regular fishermen.

We ran along shore the next day, looked at the scenery, the numerous ledges of the fishing grounds and took a turn into and out of Duck and Head Harbors. Both are unworthy of the name of harbor, except in certain winds. The former is too small for anything but fishing boats, and the latter is a treacherous place. The sea heaves in at all times, vessels must moor head and stern

and, even then, the undertow causes them to shoot forward and backward in a most uncomfortable manner. We had turned to run out of the great cove when the wind died away, the yacht became unmanageable, the main boom took possession and we rolled and slatted for an hour.

The southern end of the island is rocky, precipitous and wild; fogs are frequent; the unbroken sea dashes against the long walls and tumbled cliffs of granite, and the evergreens that crown the ragged summits are whitened by glistening salt and the grayish white excrements of the countless sea birds which find here homes safe from man's intrusion.

A smart breeze came from the S.W. none too soon, and we flew out toward Saddleback Light, around the fishing grounds and back to Moore's Harbor before dark. In a short time after dropping anchor the wind increased to a gale, fog set in so thick we could not see the shore, and there we laid for four days, riding safely to two anchors, and waiting away the time by climbing over the ledges, exploring the shores and cliffs, getting remarkable lichens and mosses, roasting mussels and eating them by driftwood fires, shooting a .22-caliber rifle at a target, filling the watertank and fishing for eunners and flounders.

Jamie got out his chemistry to prepare for an examination about fifty times, but fell to whistling and musing and then went upon deck saying, "It's no use; I cannot study here. There is too much to see and enjoy on deck and ashore."

Frank did not try to do anything, but let events shape his conduct, though he was a most persistent packer of tobacco into his briar wood and scratcher of matches. He did not seem to smoke much, but he had to curtail it for a few days after several rounds of mince pie. Mr. MacDonald reached for his pipe and smoked immediately after each meal and much between meals—old sailor fashion—and told some of the toughest yarns of the cruise. The boys liked to get him started upon a story full of sea talk and adventure, and he did much to make the season pleasant. If we were active by day, we did great sleeping at night, and checked the preternatural activity of the skipper by forbidding him to dash water and broom over the deck till the owner called "All starboard watch." This started the steward to rattling the pots and pans and the skipper to wearing out brooms.

We had come to get real codfish, and at last concluded to venture out in the fog with a regular fisherman and his boy in a centerboard sloop about 20ft. over all, 7ft. beam and 2ft. draft. Mr. Gray came up astern of the yacht and took us aboard. We were provided with rubber boots, oilskin trousers and coats, slouch hats and proper cod lines, each furnished with two hooks and a four-pound sinker. The standing room of the craft was about 6ft. wide by 8ft. long; there was a washboard around the leaving a foot-wide space of deck outside to the rail proper; a seat across the after end, and forward a cuddy with stove, locker and two bunks. The flush deck extended over the cuddy to the bow, there was a short bowsprit and small jib, and a medium-sized mainsail upon a pole mast. The centerboard trunk was short and low in the standing room, and a large tub was placed on the starboard side for our fish, containing a bushel of herring for bait.

We had a light breeze and ran out and anchored to leeward of the Outer Lieutenant Ledge, with another ledge just outside of us. Thirty fathoms of small line was fastened to a 10 pound anchor, which was let go in five fathoms; the jib and mainsail were lowered, the hooks baited and the fishing began. Two half hours were hooked through near the backbone, with the point and barb left bare.

Gray said, "It don't make any difference to the fish—they bite anyhow; but if you don't put the hook through near the backbone lengthways, they'll steal your bait much easier. Fish ain't got any sense—least them kind; they don't know the hook is dangerous, and you can't fool them by coverin' the point, 'cause they don't know nothin' 'bout points. They see the bait and will nibble and pull it off the hook, specially haddock and hake, just as they would off sticks; they know the hook ain't good to eat, and fool around the bait till they get hooked; but large fish—haddock and cod—just grab the whole business."

"Got a bite, sir?" Mr. Richardson's got one. That's a big one,

know the way you haul. Take him right in, sir. He's a cod, and a good size, too—will weigh 10lbs."

"Look out, Doctor, these young fellows 'll beat you."

"That's it, you've got one, Doctor."

"No, he's off, and so is the bait."

"Well, try 'em again; your line coils beautiful. Never saw a line come in and go out so clear of kinks."

The boat had an ugly quick roll, and put first one side and then the other down to the water, and the motion told on the less experienced and caused seasickness and cessation of fishing. Several of us kept our feet and breakfast, and were busy hauling in empty hooks or fish. The skipper's boy kept up a sawing motion over the rail with his line, but did not catch so many fish as the novices. We lowered sinker on bottom, then pulled up about three feet, which kept the hooks clear of the rocks about a foot off bottom. We had caught thirty fish by 2 o'clock, and were satisfied. Jamie and I each caught two at one haul.

We started to return to a ledge and found others all around us breaking furiously and looking formidable in the thick fog. Gray tried to name them, but soon became confused and confessed that we had drifted over a mile right among the thickest of them, and were somewhere near the Western Ear. As we tried to get ahead, we had to change our course often to avoid other ledges, which were located by the roar of the breakers and could not see till we were close upon them. Several times we saw tails of the ledges near us, and once I saw bottom and a huge white boulder just alongside. Gray steered and helped row a lee oar; the wind was very light, the tide low and strong, the sea heavy, the fog dense, and all were watchful and anxious. The skipper was nervous, but showed some excitement. I made up my mind that we would head the steam and take to the dory in tow, if we knocked a hole in the larger craft. Happily we saw the Western Head and got our bearings, then ran along shore to Duck Harbor and up to Moore's.

The harbor ledge was before us, like a huge city building. It was magnified by the fog at least tenfold. I could not believe it was what we were seeking and protested against going by it. It seemed to be half a mile long.

"You will see the Orinda in a few minutes," said Gray. True enough, a great, high, beautiful Genesta broke through the fog and in two minutes had shrunk down to the little Orinda with Mr. MacDonald walking the deck in his old salt fashion.

We breathed freely now and were gathered in out of the wet. Gray cleaned a fine cod for us and we gave him the remainder of the fish to salt, as we could not use them. We paid just five dollars for the larger craft. It may comfort 'Podgers' to know there is one place where summer visitors can enjoy fishing and catch fish without being skinned.

NEW YORK Y. C.—The annual meeting of the New York Y. C. was held on Feb. 4, with Com. Gerry in the chair. The following officers were elected, Rear-Com. Rogers declining to serve: Com., Elbridge T. Gerry; Vice-Com., Latham A. Fish; Rear-Com., C. Oliver Iselin; Sec., J. V. S. Oddie; Treas., F. W. J. Hurst; Messrs. John Hyslop; Fleet Surgeon, Morris J. Asch, M.D.; Regatta Committee—S. Nicholson Kane, Chester Griswold and Wm. E. Iselin; House Committee—Robert S. Bowne, John M. Wilson, J. Waldemar Hayward and R. P. Lounsbury; Committee on Admission—Edward M. Brown, Frederic Gallatin, Charles Watrous, Alexander Taylor, Jr., and Frank T. Robinson. The treasurer reported that the receipts for the year were \$22,849, the expenditures were \$19,186, and balance \$3,713, in addition to \$18,431 in bonds and other securities. The secretary reported a membership of 700, including 59 added during the year; the deaths being 22. The fleet numbers 210 yachts. The following new members were elected: W. C. Nash, C. Cooper Clark, Richard A. Peabody, George H. Watson, George H. Ketcham, Edward M. Fulton, Elsie M. Fulton, C. W. Harkness, Dr. R. B. Pierce and J. Berre King.

ALVA.—On Feb. 6 the steam yacht Alva, Mr. Wm. K. Vanderbilt, with owner and family aboard, sailed from New York on a voyage to the Mediterranean, her first port being Lisbon.

A NEW CORINTHIAN CLUB.—An organization under the title of the Corinthian Navy has just been started in New York, to include owners of boats under 26ft. At a meeting on Feb. 6, Mr. C. M. Connolly was elected commodore and G. G. Meinell vice-commodore. It is proposed to divide the organization into four squadrons, each under its local officers, on the plan of the American Canoe Association, the division being as follows: Hudson River—Joseph W. Gilson, Mr. Raubenheimer, G. G. Meinell, H. B. Guest, Mr. Devoc. Long Island Sound—F. B. Jones, Thomas Clapham, F. M. Lawton. East River—A. Dahm-Peterson, T. F. Day, C. L. Weyand, Mr. Avery, W. E. D. Stryker. New York Bay—Messrs. Hicks, Fosdick, Sutton, Scott and Johnson. The commodore appointed the following gentlemen a committee on sailing rules, to report at the next meeting: A. Dahm-Peterson, chairman; T. F. Day, T. T. Tabor, Thomas Clapham, F. W. Lawton. The next meeting will be on March 6.

NEW YORK Y. R. A.—The annual meeting of the New York Y. R. A. was held on Feb. 5, the following officers were elected: Com., A. J. Prime, Yonkers C. Y. C.; Vice-Com., F. W. Pangborn, Jersey City Y. C.; Sec., George Parkhill of the Columbia Y. C.; Treas., R. K. McMurray, Staten Island Athletic Club; Members of the Executive Committee, W. W. Washburn, Sing Sing Y. C., James F. Lalor, Harlem Y. C., David W. Kohn, Payonia Y. C., George E. Gartland New Jersey Y. C. and C. E. Cameron, Newark Y. C. A motion was passed requiring that every yacht in a race shall have two life buoys within easy reach. A motion was made by Mr. Washburn of the Sing Sing Y. C. to the effect that no liquor should be sold on the club steamer, but it was promptly voted down. The annual regatta will be held on Labor Day.

NEW PUBLICATIONS.

W. H. H. (Adirondack) MURRAY is engaged in the preparation of a volume composed of a series of papers on the great pleasure resorts of the country. Among the subjects to be graphically treated will be "Niagara," "The Thousand Islands," "The Adirondacks," "Lake George" and "Lake Champlain and its Shores." We trust that the list will be extended to include certain other noted and notable localities. For a volume thus composed and adequately illustrated from one who knows nature so intimately and describes her so vividly, would be a most charming contribution to American literature. There are thousands of men and women in this country who love nature and outdoor life because of the education and influence which have come to them from Mr. Murray's writings. No other author probably has done so much as he to introduce and establish the healthy fashion of outdoor life among the people. The first section of this work will be in the form of a monograph on Lake Champlain and its shores. To the majority of Americans we fancy the traditions, history and beauties of this lovely bit of water as they will be portrayed in this volume will come as a revelation. The work will be anticipated with great pleasure by the reading and tourist public. De Wolfe, Fiske & Co., Boston, are the publishers.

The Most Perfect SPLIT BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY WATERPROOF. This most desirable result is obtained by a new and ingenious device NEVER BEFORE USED IN THE CONSTRUCTION OF A ROD. The Ferrules also are PRACTICALLY DOUBLE, and fitted OVER the bamboo is a WATERPROOF cushion of ZYLONITE, while over that are set the ferrules, thus adding MATERIAL STRENGTH AT THE JOINTS. The mountings are of GERMAN SILVER and HAND-MADE IN EVERY PARTICULAR. In short this is the rod anglers have long wished for. Examine it at any of our stores and satisfy yourself.

PRICE:
IN WOOD FORM.....\$20.00
IN ZYLONITE CASE.....\$25.00

EVERY ROD WARRANTED.

The Value of Woodlands as Reservoirs.

BEING THE LES ETUDES DE MAITRE PIERRE
SUR L'AGRICULTURE ET LES FORETS.
PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of current tanning in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

A Book Warmly Welcomed.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

In these stories we find examples of self sacrifice, gratitude, honor, and curiously enough, an idea of the atonement for sin, an intermediate state, and communication between this and the invisible world. Mr. Grinnell's "Notes," as he modestly calls them, are really a history of the tribe, its origin, its relationships, its medicines and mystery, and its present condition and progress. The book is beautifully printed, bound, and illustrated with first-rate drawings.—*Hartford Courant*.

The folk-tales are full of magic transformations and mystery, and they are related with a strong feeling for dramatic effect and often with much poetic grace.—*Springfield Republican*.

The Indian will become extinct or will be civilized. In either case their stories and myths will pass into oblivion. It is well that those of the Pawnees have been rescued and are preserved in this book so that generations yet to come shall read Indian tales as Indians told them to Indians.—*Home Journal*.

Their stories abound with humor, pathos and sentiment. The plan of the book is comprehensive and vividly portrays the Pawnee race from its historic, social and intellectual standpoint. The author has performed a valuable service, and his work will be welcomed and prized as it deserves.—*Magazine of American History*.

It is an important contribution to folk-lore literature that is especially valuable because of the insight it affords into the origin, customs and character of the Pawnee people.—*Philadelphia Times*.

This volume is a novelty and a valuable acquisition to American literature. While volume upon volume has been written of the folk-lore and hero stories of other and distant nationalities, the Indian (except in some fanciful sketches and romantic poems) has been overlooked. And yet the American Indian is the wisest and shrewdest and most manly of all the unlettered people on the globe. This collection, not fanciful, but drawn directly from the Indian oracles, shows that with his heroism and cunning he has wisdom and soul. * * * The volume is charming upon every page.—*Chicago Inter-Ocean*.

THE STRIKE IN FLY-FISHING.

ONE of the most difficult things to learn in fly-fishing, particularly when fishing for speckled trout, is the art of striking. To the uninitiated it may be explained that the term "striking" means the motion made by the angler with his rod when he fastens the hook into the fish's mouth as it rises to the fly.

Some writers on angling state that it is unnecessary to strike at all, while others say you cannot strike too quickly. But long experience teaches us that no general rule can be laid down, so much depends on whether the trout are much fished for and shy, or whether they are not used to the feathery deception and rise boldly and without fear. In the first case one cannot strike too quickly after the fish has taken the fly. And yet while striking quickly one must not strike hard, for the delicate gut leader, such as is necessary to use when fishing for educated fish, will not stand the sharp strain, particularly when the fish happens to be of good size. How often do we remember to our sorrow the unexpected and startling rise of a big fish after a long period of fruitless casting, the instinctive sharp strike followed by the limp return of the line, while the trout went sailing off with the whole cast trailing behind him. Of course when angling on wilder waters such very light leaders are unnecessary and such mishaps are not apt to occur. If the cast is properly made, the line will be quite, or at least so nearly, straight that it will require but the slightest motion to hook the fish. All anglers should carry a fine file, and see that the points of their hooks are as sharp as a needle, so that a slight turn of the wrist will bury the barb.

Seth Green could perform this delicate operation better than any one else we have ever met. The fish in Caledonia Creek required it, and he had, by long and constant practice, become very expert in striking. Some years ago Caledonia Creek from the mill down to Seth Green's line was open to the public. To those who know it not we may say it is the most difficult bit of water to fish we have ever seen or heard of. Running deep and still, clear as crystal and cold as ice, much overhung with bushes and branches, it is hard to wade and provoking to cast over. The trout, owing to much fishing and an abundance of natural food, were suspicious and shy beyond belief. On a dark day, with a favorable breeze to ruffle the water, a very good angler, using

drawn gut leaders and midges, would sometimes have great success, but these days were few and far between. Seth Green used to go over these waters almost every day in a boat. All the trout he caught went into his well, which he had built under the seat, and from the well into his pond below his house. But his fishing was wonderful. Mind you, there are lots of people who cast superbly but who know little or nothing about fishing; but he understood both; and if a trout ventured to touch his fly, quick as a flash it was hooked with a sharp movement of the wrist, and yet so slight that the flies hardly moved an inch on the water.

The fish on the Pacific slope require entirely different treatment. They show by their manner of taking the fly that they are more salmon than trout. Unless provoked by missing winged prey at the first attempt, they rise gently, take the fly between their lips and turn downward. Then is the time to strike and not before. It takes some time, when the angler from the East first meets these fish, to get over the habit of quick striking, and the chances are that he will miss many good offers at first.

ST. LAWRENCE RIVER NETS.

AMONG the bills introduced into the New York Legislature, are two relating to the St. Lawrence River. One of these, which originates with the Anglers' Association of the St. Lawrence River, forbids all netting except for minnows and bullheads. The other, which comes from the net fishermen, provides for licensing certain persons, on payment of a fee of from \$1 to \$25, to fish with nets, provided that if any game fish are taken in the nets they shall be returned alive to the water.

The record of the rapid increase of the fish supply in the river, since the public-spirited members of the Angling Association set about the task of enforcing the laws against nets, should be an all-sufficient argument in favor of restricting still more closely the destructive practice of netting. There is no surer way to deplete the waters of the St. Lawrence of game and food fish than to give such license as is now asked for by the netters.

The clause prescribing that game fish caught in nets must be returned to the water will be, as it is in every similar case, a perfect dead letter. Two years of such fishing as would be permitted by this bill in behalf of the netters would ruin the fishing of the St. Lawrence and deprive the people of that section of an annual revenue, now reaped from the angling visitors, aggregating tens of thousands of dollars each season.

SCHEMING FOR A RAILROAD.

THOSE who have followed legislation at Washington affecting the National Park know why that reservation is still without a government. Three times the Senate has passed bills for its protection, but these have always failed in the House.

The opposition to a Park bill in the House of Representatives has come from people who desired to obtain a franchise for a railway to run through the Park. A strong lobby has long fought for this grant, and the lobby declares that without some provision of the kind no bill for the protection of the Park forests, and the preservation of this national reservoir, shall pass the House.

Up to the present session the railroad lobby have professed to be governed only by a consideration for the public welfare. Ignoring other available railway routes from Cooke City, they have professed to desire the privilege of building a road down the Yellowstone River, so that the miners of Cooke City could get their ore out of the mountains to a trunk line. Now, this does not satisfy them. In order to conciliate the opposition and to hasten the progress of the bill through Congress, the friends of the Park have intimated to the railway people their willingness to so amend the Vest bill that the Yellowstone and Lamar rivers and Soda Butte Creek should form in part the boundary of the Park on the north. This would give an opportunity for a railway lying wholly without the Park to be built from Cooke City to Gardiner. Thus Cooke would have her outlet, and the integrity of the Park would be preserved.

When this compromise was offered to the speculators by the friends of the Park, it was refused.

It thus appears that the speculators are working, not for the good of Cooke City, but for their own pockets. What they desire is not an outlet for Cooke, but a right of way into the Park which they can sell to the Northern

Pacific R. R. It is not certain that this corporation would buy such a franchise, but the speculators think that it would do so, and that they would get their pay in good hard cash or negotiable bonds. It is understood that these speculators now strongly object to having the river made the boundary of the Park, since, if this were done, the N. P. R. R. could build a line to Cooke, and the value of any possible franchise obtained by the schemers would be greatly lessened.

The opposition to Senator Vest's bill is based entirely on the desire of these speculators to obtain from Congress for nothing a franchise that they can sell. They are ready in the hope of advantaging their pockets to stop a much needed bill, to put off indefinitely a measure which is of great importance to the whole Northwest.

The lobby which has this matter in charge is singularly fortunate in having on its side Mr. Payson, of Illinois, who is a prominent member of the Public Lands Committee, to which the Park bill must be referred when it reaches the House. It is probable that if he wishes to do so Mr. Payson can cause this bill to be smothered in committee, or else to be reported with an amendment granting a right of way to a railway into or through the Park. Such an amendment will effectually kill the bill, for it is certain that Mr. Vest, who has worked so long and so hard for the Park, and whose special charge in Washington it is, will not consent to a railroad in the Park.

BITS OF TALK.

CONCERNING STYLE IN OVERCOATS.

"I DON'T hanker after bear meat, but how will you trade overcoats?" said the man to the bear.

"I'll keep my own, if it's all the same to you," said the bear.

"I've taken a notion to black fur myself; yours looks as if it would fit me; hand it over," said the man.

"How will you have it?" said the bear.

"With a hole in it," said the man; "there is no use to dicker any longer about it." And he put a bullet where it would close the bargain at once.

"Take it, but you will find it a dangerous style of coat to wear in this country," said the dying bear as he clumsily shuffled off the coil.

So the man wore the bear's overcoat.

One day another man saw him in the woods. "That's my meat," said the other man, and he blazed away with a .44-long. "If I had known you were a man," he said, "I would not have shot. I was misled by your fur coat. I took you for a bear."

"You cannot always judge from appearances. Clothes don't make the bear," said the dying man.

MARKET HUNTING.

IT IS held by some of those who have studied the subject most carefully that the great bulk of game killed finds its way to market. If this theory is correct, what shall be done to reduce the destruction by market-hunting? Non-export laws are directed to this end. How one law works was told last week by a Detroit City, Minn., correspondent, who wrote that the transportation companies were receiving and shipping venison openly and with the advice of lawyers, although the law expressly forbade it. In our copy of the Minnesota law we can discover nothing whatever upon which these game shippers and their counsel base the plea that such handling of game out of season is legitimate. If there is any flaw in the statute the citizens of Minnesota should take the earliest opportunity of correcting it. A non-export law can be framed to hold, but there must be something more than the mere law in the books. The Connecticut non-export law did not amount to much until the association organized by Mr. A. C. Collins undertook to make it something more than a dead letter. The law was once a failure; it is now a success; the success is not due to any amendment, which is the average game protective panacea; its efficacy lies in active execution. Now come the Massachusetts Commissioners of Fish and Game with a demand for a non-export law like that of Connecticut. Such a law they assert to be almost essential for the preservation of the birds, because market-gunners are killing off the stock for New York and other markets. The plea is, we believe, quite justified by the facts. It is worthy of remark too that this movement for a non-export law is made in a State whose open game market at Boston is the depository of game unlawfully shipped from other States.

The Sportsman Tourist.

DUNGENESS—A WINTER HOME.—I.

LET me ask you to open your atlas and turn to the State of Georgia. Place your finger on the city of Savannah, then move it down along the coast past St. Catherine Island, past the mouth of the Altamaha River, past St. Simons Island, still on below the city of Brunswick, past Jekyll Island (which is owned by a club), across St. Andrews Sound and stop at the lower end of Cumberland Island, just seven miles north of Fernandina, Florida, and opposite the mouth of St. Mary's River. Lippincott's *Gazetteer* tells us that it is the largest and most southerly of the sea islands, is on the coast of Georgia, off Camden county, is twenty-two miles long and from one to five miles wide, and is famous as the home and burial place of Gen. Nathaniel Green. Gen. Nathaniel Green is not buried there, and the *Gazetteer* no doubt means "Light Horse Harry Lee." Now having pointed out to you the "winter home," I ask you to close your atlas and listen while I tell you how I enjoyed myself there.

Truly, it was a home to both visitors and family. It must remind those who have visited England of those estates which for centuries have been left from father to son; but with all the age, history and recollections connected with those English homes, one can in no wise compare the two places, and were a judgment passed, it would, I feel sure, favor Dungeness.

Our party of seventeen reached Fernandina, Florida, Dec. 29, 1888, after a most pleasant journey south in a private car. The night was unpropitious (how true the old saying, a bad beginning makes a good ending), for rain was coming down fast, and the wind was blowing from the north. Bravely the yacht battled with the storm as we plowed our way through the water, sparkling with phosphorescence like silvery specks. But at length we reached the wharf and jumped ashore on the lower part of Cumberland Island, called Dungeness.

Too eager to ride the rest took their way up the short cut to the house, while I drove up the avenue, which I thought the rest of the party had taken. It was dark as Egypt, the live oaks hung over us, and heavy with moss let no ray of light pass through. Suddenly a view of the house burst upon me, ablaze from tower to cellar, with lights in every window, and each one seemed a separate sparkling jewel. I ran into the hall, the last one to arrive, I wish you could have seen us all, the happy laughing faces; joy shone from every eye and the welcome seemed a welcome home. Entering the front door I turned to the left, and leaving the vestibule I emerged into a large hall 60x30ft., fitted up like a room, from which the parlor, dining-room and bedroom led off. At one end was a huge open fireplace, bordered with painted tiles, representing a deer hunt, and in carved letters above was a motto:

"The Hearth Our Altar, Its Flame Our Sacred Fire."

On the andirons great logs burnt to coals, and lay glittering in their own ruins. On either side of the fireplace were large windows opening on to the wide verandah, which extended around two sides of the house. Beautiful curtains bordered the windows, and antique iron chandeliers hung from the ceiling and jutted from the walls. Armor overhung the mantel, reminding of ancient days, and thick rugs deadened the footfalls. At the other end of the hall from the fireplace winding stairs led to the first floor. Half way up a large landing held an organ, and from the balcony, which was hung with an oriental shawl, one could command a birdseye view of the hall below. Under the steps, in a large, well-lit gun room, on deer-horn racks, hung numerous guns and rifles and horns for the hounds. At the organ Mr. C. played a joyful welcome.

A jolly crowd sat at table that night amid sweet flowers, fresh from the garden, and laughter awakened echoes in the large dining hall; and, just from the North, how we relished the new peas and potatoes!

The next morning I was early up and looking around to see by day what had appeared all loveliness at night. Gazing out of my window I saw an expanse of marsh, land bay and ocean, and the little creek like a thread of silver twisting and turning in its course. Each drop from the fountains as it fell appeared a diamond in the sunlight; the trees were green, the magnolia leaves glittered in the light, and the orange leaves glowed with color. Beneath the live oaks, festooned with yards of soft gray moss, blades of springing oats made all the earth look green and soft as velvet. The sun shone from a clear blue heaven; turtle doves made strange moaning calls and mockingbirds imitated their notes, the quail's *Bob White*, the hawk's shrill cry and the blackbird's whistling sound.

After breakfast, finding the tandem tricycle which had been sent down a week previous, Will and I jumped on and rode down the avenue which stretches from the sound to the sea, out to the broad smooth beach, three hundred yards wide in places and almost as hard as stone. We sped along at a surprising speed, taking no thought of time and hardly any of distance, until we had gone four miles. The sensation of freedom and loneliness was grand, the fresh air invigorating, expanding my lungs and chest so full that I felt as though my coat had grown smaller, and took it off and strapped it beneath the seat. The waves curled in upon the sand, each sixth or seventh coming a little further, so we decided to return. The beach stretched on, on for twenty miles with no living creature but us upon it, and all but a few miles was my friend's own. But taking counsel, as I said, we turned around, and having some breeze at our backs flew along, distancing the white foam as it slid along the sand like an ice boat upon a frozen river. Far ahead we would see a point of sandstone, and seemingly in a second it would be away behind us. How quick did we do it? Rather good time I think for beginners—four miles in twenty minutes. Thus we established a record there of which we boasted, and to my knowledge it was never broken.

The party which rode away on horseback next morning consisted of Will, Frank S., Frank C., Andrew and myself. Our guns lay across the McClellan saddles. Our little horses were fat and lively, having had nothing to do for many a day. The little beasts seemed to enter into the sport, and quickly galloped us through the gate out into the avenue of oaks, stretching, with only an open sand patch now and then, for over two miles. The sun penetrated the leaves only in places and cast long shadows

in front of us. Thus we rode until we came to another gate, which opened out into Gray Field. This we crossed, seeing still the furrows where before the war the celebrated sea island cotton grew. Then all the fields, and much of the land now overgrown with brush, were white with bursting cotton pods, and the curly pates of Stafford's slaves showed dark spots upon the sea of white.

Arrived at Stafford, Mr. Dilworth, the overseer, met us with a most sincere Southern welcome. The dogs came yelping about our heels as eager as we for the hunt. There were about a dozen, some brown and white, others a slate color, and as pretty a pack as ever my eye rested on. Out the gate we went and turning to the left went toward the pasture, one side of which bordered a thick woods. Along this Mr. Dilworth whistling the dogs in, while we remained out on the road, so as to gallop ahead to stands, where, in case any deer were jumped, they would be apt to cross.

Thus we rode on through Benny Field, resting there a while until we caught the sound of the pack as they struck a trail and then rode faster, until their long drawn yelps gave place to a full cry, and we knew the deer was jumped. We went like an arrow up the road, through a wood, out into Dilworth Field and there dismounted. I took a stand close to the woods, while Frank C. went out into the field; the others scattered behind on the road. Nearer and nearer came the sound, the whole pack were making the woods echo to a note I had never heard before. I was looking sharp, trembling slightly I must confess, but not with buck-fever, when suddenly two deer broke the woods about one-fourth of a mile away and came straight at me. "I am going to get the shot," I thought, but they sheered off toward Frank, and I saw a puff of smoke and heard a shot, quickly followed by another. I ran over to where he stood cutting the throat of one and he begged me to go out the throat of "that one lying there." "Did you get one with each barrel?" I said. I could hardly believe my eyes, there lay two deer, the first dead ones I had ever seen, and to get two seemed almost too much. Mr. Dilworth and the rest then rode up. Up behind my saddle we put one deer and Frank's horse carried the other.

"Enough for one day?" J. D. said. "Let's take another drive," said Andrew, and no one offering an objection, Mr. Dilworth took the dogs, and we stretched out down from the Baltimore gate to the swamp. Not fifteen minutes passed before I heard that heart-stirring sound and knew the dogs were coming right toward us. I thought they would break the woods themselves, they sounded so near. Just then I saw Andrew, who was 200yds. down the bank from me, raise his gun, fire, and run toward where he had shot. I quickly followed out in the cornfield about 70yds., to where he was. There lay the deer—dead. I helped carry her, for it was a doe, out on to the bank where his horse stood; and with a one, two, three, we swung the pretty animal behind the saddle.

Enough for one day that was. We talked it all over you may be sure, and J. D. said, "I reckon you don't need for me to carry a rifle." Great was the rejoicing when we rode up to the house, and I was very happy to record such an opening in the hunting book.

We saw the old year out, for it was the 31st of December, going out in the yard about midnight to see if Light Horse Harry was walking about on his yearly lease from the grave; but strange to say we saw him not.

Natural History.

NEW FISHES FROM THE GALAPAGOS.

WE have received from the U. S. National Museum an excerpt from its Proceedings containing "descriptions of new species of fishes collected at the Galapagos Islands and along the coast of the United States of Columbia," by David Starr Jordan and Charles Harvey Bollman. This is a fourth of a series of papers illustrating the scientific results of explorations by the U. S. Fish Commission steamer Albatross, and is published by permission of the Commissioner of Fisheries, Col. Marshall McDonald, in advance of its appearance in a general report.

About three years ago the Albatross made a cruise from Norfolk, Va., to San Francisco, and natural history collections were incidental to the voyage.

In the present article the authors describe thirty one new fishes, including among others a skate, a crampfish, a sting ray, two species of lizard fish, a silverside, a star-gazer, and three species of sea robin, giving the fish fauna a somewhat familiar aspect.

Following the descriptions of new species is a complete list of the fishes obtained at Panama, the Galapagos Islands and the various dredging stations off the west coast of the United States of Columbia. Many well-known Atlantic fishes are found in this region, the tiger shark, the ladyfish, a flying-fish, two of the half-beaks, two mullets, the scabbard fish, the thimble-eye mackerel and the Spanish mackerel, the cavally, the horsehead, the moonfish, the common goby, and various others.

We are glad to know that this important contribution to science is soon to be followed by others of a similar nature.

THE BIRDS' DRINKING FOUNTAIN.

Editor Forest and Stream:

In June of 1889, I had occasion to be out a mile or thereabouts from the town of Kentville, and was for some time detained in a strip of clearing about forty rods wide. While there I noticed woodpeckers continually crossing this clearing from one block of woods to the other. I thought nothing of it at first, as these birds are very common here, but after a constant stream of them had been going and coming for some time, I determined to go across a small field to a point of hard woods, where they all seemed to be going, and see if I could find the cause, expecting, of course, to find an old dry tree containing a couple or more nests of young birds, as I supposed the old birds were carrying food. On reaching the hill I looked around for the dry tree but could see none. On further examination I discovered that the woodpeckers were flying to and away from the top of a living white birch tree. Selecting a convenient seat, I waited there for some time to see what was going on. About forty-five feet up this tree the woodpeckers had thickly per-

forated the bark a space of about ten inches around the trunk, causing the sap to flow freely. I soon discovered that this was a drinking fountain, not only for the birds that had so diligently worked to bore these holes, but it seemed that all the small birds in the neighborhood were coming here to get a share of the sweet sap that was continually flowing from the wounded tree. At intervals when there would be no woodpeckers present the little flycatchers and warblers would come for a drink as well as to capture insects that had been attracted there by the sweet sap. At a time when there were no other birds occupying this drinking fountain, two little hummingbirds improved the opportunity of quenching their thirst, but darted away on the first appearance of any of the larger birds. I have often noticed our common red squirrel nip the bark of the maple in spring and drink freely from the sap. I have also seen the yellow-bellied sapsucker bore a single hole through the bark of a birch tree and drink the sap. I do not think they return to the same place when they want another drink, but instead they make another hole in the nearest suitable tree.

These perforated spots on trees have often come to my notice, but I had supposed it was done for insects that might be found in or under the bark, and was not aware that the work was done wholly for the purpose of making a drinking fountain.

W. L. B.

KENTVILLE, N. S.

CANADIAN BIRD NOTES.—The ornithological subsection of the Biological Section of the Canadian Institute was organized Dec. 21, 1888, at the house of Dr. William Brodie, Toronto, and Dr. Brodie was selected Chairman, Mr. Geo. E. Atkinson Recording Secretary, Mr. J. B. Williams Corresponding Secretary, and Mr. Ernest E. Thompson Editor. The second meeting was held Jan. 8, 1889, and the Proceedings for the year, covering the nineteen meetings held up to Dec. 31 last, have just reached us. This pamphlet contains 146 ornithological records, all of them interesting. Among them are the occurrence of the king eider duck (*Somateria spectabilis*) in Toronto Bay, Nov. 25, 1889, the first positive record for the Province of this species. At the same meeting the razor-billed auk was reported as having been captured in Toronto Bay, Dec. 10. There are many other notes of interest to the student of bird life. The pamphlet of 24 pages is neatly printed. We note one typographical error.

BOB WHITE IN TOWN.—Louisville, Ky., Feb. 1.—Yesterday morning in a Main street store my attention was called to the notes "Bob White" of a quail, which sounded on the tin roof. I gave the call and immediately received an answer. To further satisfy myself I went up through the skylight on the roof, and proceeding cautiously discovered the birds (for there were two), cock and hen. The cock had one wing spread over the hen, and their heads were not visible, being tucked under the wings, which gave the birds the appearance of a round ball of feathers. They were roosting on the tin roof against the chimney corner. I stealthily approached and covered them with my hat, capturing both. The birds are old birds and very strong. I now have them in temporary quarters at my home in Clifton, where they will receive my attention.—F. W. T.

FOOD HABITS OF HAWKS.—Schenectady, N. Y.—*Editor Forest and Stream:* While hunting among the Glenville hills, in one of those dark, gloomy gorges where the ruffed grouse abound, I saw an object on the ground some 30yds. distant. As I moved forward it rose and I fired and brought it to the ground. It proved to be a large hawk, having in its talons a grouse, every feather from which had been picked off, even to the tail. Upon the ground lay the feathers in a heap about the size of a half-bushel measure. I have read that hawks eat flesh, feathers and all, and afterward disgorge the refuse in the form of balls or pellets, which may be found in the woods under the trees where they roost. This circumstance, however, refutes their always doing so.—DORR.

STUNG IN WINTER.—Sing Sing, N. Y., Feb. 7.—An acquaintance of mine was walking along the street here with some artificial flowers in his hand, when feeling a sting he looked down, and there was a bee on his wrist. As I saw the red and puffed-up spot I could not help thinking that it was as good a sting as one could get in the summer time. Frogs have been heard peeping on several days during the past three weeks.—A. H. G.

EARLY SPRING.—A bluebird was seen at Sayville, L. I., Feb. 18, by Mr. E. R. Wilbur. On the same date the meadow larks were singing, the buds of the garden lilies were well advanced toward opening, and the "pussy willows" were large.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOXSOM 10 and 12, Sept. 28.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Aug. 12.	REMINGTON 10, Dec. 23.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 13.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

ABOUT THE KOSHKONONG "RATS."

Editor Forest and Stream:

Under the heading "Chicago and the West" in your valuable paper of Jan. 16, I find statements in regard to Lake Koshkonong, Wis., that call for a correction by some one; and as it has been my fortune, or misfortune, to be so placed that I have had peculiar opportunities to become acquainted with the different classes of shooters that have for the past fifteen years or more visited, or who live upon and near, the shores of this famous lake, I will attempt the correction. Again, if it were not for the fact that it is the established custom among sporting papers to give all parties a hearing, especially when some writer has innocently been led to show certain persons in an unenviable light, I would not think of attempting to criticize Mr. Hough; and I begin by stating plainly that

while I am speaking of the article in question, I am in reality replying to Messrs. Geo. W. Esterly, G. E. Gordon and W. Y. Wentworth.

Your correspondent states that he visited the Blackhawk Club through the courtesy of Mr. John L. Stockton, of Chicago. I risk the assertion that Mr. Stockton did not advance any of the ideas which appeared in the article, and which I may criticize in this letter; and I also chance the belief that if all the members of the Blackhawk Club had been of Mr. John L. Stockton's type of humanity, the differences and enmities that have so long existed between a few of the members and the shooters who live in the vicinity of the lake would have been buried long ago, and some mutual understanding arrived at which would have protected the game on this lake at least far better than it has been under the laws dictated by Mr. Geo. W. Esterly.

When a person by his own words and acts places himself before the public as an advocate of rigid game and fish laws, and with influence and money makes a great show of enforcing them, his individual acts must be very nearly above criticism; and whether or not such has been the case is my object in writing this. In speaking of the ride along Rock River to the Blackhawk club house, Mr. H. says, "Thanks, to the long efforts of Mr. Wentworth, who is game warden for the southern district of Wisconsin, it is also a very good fishing stream." It is probably not generally known to the readers of FOREST AND STREAM that the game warden mentioned has been a "market fisherman," during the winter season, nearly the entire time that he has had charge of the club house. It cannot be possible that the man who has "done so much" can be one of the "wise men who live upon its shores, men born with the joint butcher miser instinct, etc.," and that he will be one of the "Koshkonong robbers who will later on snivel and cry out that the poor man has no show, etc." Yet the great disagreeable fact remains that the "model game warden" has made a business of fishing winters and shipping his catch to Chicago nearly every season for the past ten years; and even since his meeting with Mr. H., he has more than once inquired of me where minnows could be obtained, and said that if he could get some he would go to fishing. Surely any further comment on this point is unnecessary.

I will quote again from Mr. H.: "We counted eight shanties and one big cabin boat as we drove down to the club house. In each of these were two or three down-trodden market fishers and hunters, waiting for the lake to freeze. These folks are called 'rats' by the sportsmen of the lake. They made a living formerly by legal or illegal floating on canvasbacks, legal or illegal netting of fish. * * * Poor unfortunate creatures, born too tired to do an honest day's work, who must restrict themselves to plain rat catching, fishing through the ice, etc." Now in simple justice to a large majority at least of these "rats" I will say that whoever gave Mr. H. the information that prompted him to write of them as he did has knowingly and willfully misrepresented them. To be more correct, Mr. H. must have counted at least one boat house and one haying shanty, one paper-covered frame intended for use on the ice; and, as my own cottage is mentioned as the shooting house, it really leaves but four occupied by the "rats."

As to four of the "down-trodden" I will explain that two at least are foremen in the shops of the N. W. Mfg. Co., at Fort Atkinson, the other two being employees. These men—although it may be a sin in the eyes of the Rev. Mr. G. E. Gordon—unfortunately enjoy a day with the gun or rod; and have built their shanties at this convenient point, where they keep their boats, cooking utensils, etc., so that occasionally, when the shops shut down for a day, they can run down and enjoy their shooting for precisely the same reason that the Blackhawk Club do; and I have never yet heard of one of them accused of either "legal or illegal netting or float shooting."

Of two more of these "rats," one of them a first cousin of Mrs. Wentworth's, I will explain that they are honest and industrious carpenters, who support their families in comfort at least, and who also enjoy a day on the water in quest of a mess of game or fish; but as they are not millionaires and do not "control a preserve," they are of course "rats" in Mr. Gordon's eyes. Perhaps Mr. H. included among these rat shanties one standing north of and some distance from the river; if he did, it is necessary to explain that it is owned by a highly respected citizen of Fort Atkinson, also a member of the Blackhawk Club, and used by him only during his hours of recreation.

Of some three or four of the occupants of these shanties I am compelled to admit that they are sometimes rat-catchers, otherwise known by all but a select few as trappers. To this they unquestionably must, and no doubt will, plead guilty. Surely the occupation of trapping should hardly of itself bring them into disgrace, as the character of a trapper has been repeatedly used by noted writers, and if my memory serves me, never in any manner except to represent fidelity, honor, manliness and hardihood. Undoubtedly the Koshkonong trapper of to-day and the trapper of Cooper's times would not be recognized as brothers; yet I believe there are hundreds of occupations considered respectable that would not bear the scrutiny that trapping will.

That these folks are called "rats" by the sportsmen of the lake is positively false. In all the years that I have spent or partly spent at Koshkonong, this is the first time I ever heard the slur applied to them. I did once hear that Mr. Gordon had referred to me as the "king of the river rats," but I paid little attention to it at the time, and have not let it trouble me much since. In no light in which they can be viewed can these men be made to appear to a wholly unprejudiced person as showing the selfishness and greed that have been displayed by the parties who already own or control 887 acres, and who are now "taking steps to get possession of more shore territory," which means simply that a few wealthy men are trying to get possession of Lake Koshkonong—commonly supposed to belong to the public—for no other purpose than to secure it for their own selfish use. Yes, they have already taken possession of a large portion of the best shore of the lake, and not only prohibit all parties from camping there, but peremptorily order off any shooter who unfortunately trespasses on their (Unole Sam's) game preserve. In justice to the Blackhawk Club I will say that I have never heard that they have ordered any one away while shooting, although they prohibit camping.

To quote again the saying of Mr. Gordon, "I want to make it as hard as possible for any one to kill a canvasback duck." If G. had said as hard as possible for *any one else* he would have stated the case squarely as it is. Mr. Gordon has also said that every duck that is killed ought to cost the shooter one dollar. If that could be accomplished perhaps some of the "poorer classes" might cry out that they had "no show."

Is it possible that the FOREST AND STREAM advocates the taking possession of the few remaining shooting grounds by a few wealthy sportsmen to "shut the public out and the game in?" And is not this exactly what the modern, thoughtful and consistent Mr. Gordon is doing as fast as it can be accomplished with the unlimited means at his disposal? If these are the qualifications required to make "sportsmen," I thank God I am not one; and I hope that I can always say, as I do to-day, that I have never refused any respectable person the privilege of camping on my lands, the free use of boats, guns, etc., when I could reasonably accommodate them. Is it not a fact that (to quote another writer) "it is money and its selfish use that is trying to squeeze every germ of pleasure out of the poor man and extend it to the rich?"

In this section of the State it is commonly admitted that the game laws—particularly those that apply to duck shooting—are the handiwork of Mr. Geo. W. Esterly, ex-president of the Blackhawk Club; at least they should be, as he has spent time, money and influence enough to entitle him to that honor. He is certainly the author of the law which is intended to, and should, stop all shooting on the open portions of our lakes. Mr. Esterly told me himself that he had visited Madison six times in the interests of the bill, and had done all he could in other ways to secure its passage. The bill was finally passed April 8 and was signed by the Governor on the 15th; and on either the 23d or 24th of the same month, he—Geo. W. Esterly—shot from a flatboat a half a day at least, on Lake Koshkonong, over a quarter of a mile from cover of any description. Not only that, but, in answer to a letter of mine, he wrote me that such shooting was a violation of the law, but claimed that it was done on April 8. That it was done either on the 23d or 24th can be proved by a large number of witnesses, among them the present Governor of this State, the present president of the Blackhawk Club, the last Chief Clerk of the Assembly and several others, including the writer; also by the club house register.

Another of Mr. Esterly's laws was one making it a crime to use a net of any description, even for minnows, within five miles of Lake Koshkonong. Probably the first violation of that law was by Mr. Wentworth, "the only intelligent and effective game warden," who hauled a seine for minnows in the canal close to the club house, to catch minnows to be used by parties staying at the club house. Such violations occurred frequently by the same parties. Even as late as a little over a year ago Mr. Wentworth openly violated the law by hauling a seine, which it was a violation of the law to use at all, and catching for bait fish that the law strictly prohibits catching; even fair-sized pickerel were taken from the net and saved. This was since he has held the position of game warden.

A somewhat different case occurred in November, 1888. One morning bright and early Mr. Wentworth brought a party of Chicago gentlemen down to the club house. I do not care to give their names, but may say that the names of two of them at least have appeared often in every prominent newspaper in the Union. This party brought the ducks they could find for sale and spent the day rowing about the lake shooting what they could, and I was informed that in both ways they obtained several dozen. Now it happened that on that day Mr. Wentworth was prosecuting a poor boy at Fork Atkinson for violating the law by shipping game out of the State. As the Chicago party had visited the lake before and had taken their ducks home with them, and had said that they would do so again, I thought it would be a good time for the "only intelligent" game warden to apply the law to one of the cases for which it was intended. I made it my business to go to Fort Atkinson and notify, first the deputy warden (Mr. H. Flint), giving the names of the parties, where they were and when they would leave, and demanded that when they attempted to take their game away they be arrested. I also made the same demand of Mr. Wentworth in the court room in the presence of a dozen witnesses.

The result was that nothing whatever was done, but the party took their game home unmolested. Remember that this was on the occasion of a poor boy's being prosecuted for the same offense. The Chicago party being very wealthy and able to pay a fine without any inconvenience, it seemed to me that this was just the kind of a case that the law was intended to cover. But such cases are never molested by the "only," etc.

I could fill columns of the FOREST AND STREAM with cases similar in most respects to the above, but I will mention but one more. About Nov. 15, 1888, I was myself arrested on a criminal warrant and taken before a justice and prosecuted by Mr. Wentworth; and when the testimony was in there was not one word to show that any law had been violated; and even if I had done what Mr. Wentworth said he had heard I had, it was not in any manner a violation of any law, nor any more than their own men had been doing all the fall, i. e., shooting from a flatboat. The fact was that Mr. Wentworth did not say one word to the witness before the trial began to find out what the merits of the case were. I being only a "rat," it of course made no difference whether there was any occasion for the arrest or not. It took the jury just four minutes to bring in a verdict of "not guilty." I believe it to be almost impossible for Mr. Wentworth to win a case before a jury in Jefferson county, no matter what the evidence may be, on account of the partiality shown and practiced to offenders.

In regard to the law's preventing the killing of good bags, Mr. Gordon is right in making it as hard as possible to kill a canvasback. As for myself, although at the lake during the fall, I did not get a single specimen, and killed, all told, six bluebills. At the end of the season of 1888 the club house register showed the names of thirty-six visitors, staying from one day to two weeks each. Upon inquiry of Mr. Wentworth I found that not more than twenty-five canvasbacks had been killed by them. Eighty per cent. of the shooters who visited the place did not get one. I did not look up last fall's record, but I believe it to be poorer still. Now, if you had been one of the many to go away empty-handed, perhaps for the

second or third season, and that too when the lake showed solid flocks of canvasbacks miles in extent, do you not think it might have appeared to you that Mr. Gordon's ideas had possibly been carried too far?

It has been for years the opinion of a large majority of the shooters who live near the lake, that by limiting the shooting to two or three days a week, and stopping all shooting whatever on the open lake, the shooting could be materially bettered without frightening the birds as badly as is now being done. As it is now, they are kept entirely off from their best feeding grounds through the entire season; and last season the canvasbacks remained only about two weeks, leaving in a body about Nov. 1. Such a law would have been passed last winter but for the opposition of Messrs. Gordon and Esterly. The petition asking for its passage was signed by every officer of the Black Hawk Club, and with one exception of Mr. Esterly by every member who could be reached, as well as by at least nine-tenths of the shooters living about the lake.

As I said before, Mr. Esterly is credited with being the author of many of the rigid game laws of the State; and yet with the single exception that blinds and flat boats are limited to the cover, I would like to have pointed out to me wherein the kind of shooting indulged in by him and some others have been in the slightest degree restricted, although far more injurious than other kinds that have been wholly prohibited. Mr. Hough practically admits that the flat boat is fully as destructive as the float, but has their use been prohibited? Certainly not, and for the reason that Mr. Esterly uses a flat boat.

Since writing the above I have read Mr. Hough's letter dated Dec. 9. In speaking of the laws allowing shooting but three days a week he says, "As I understand it, such a bill was attempted to be put before the Assembly, but the bill had a tail to it, it wanted to have but three days' shooting a week on Lake Koshkonong, but carried a repeal clause abolishing all other laws on this head."

Now, Mr. Editor, as I drew up the bill myself, and handed a copy of it, together with a large petition, to the joint committee on game and fish laws, I think I can safely say that no such clause was attached. I inclose a copy of the bill just as it was presented, and ask you to judge for yourself whether, even if such a clause had been attached, the restrictions of the bill itself do not appear sufficiently rigid when it is remembered that it applies to only one lake.

An Act for the Better Protection of Game on Lake Koshkonong.—Section 1. It shall be unlawful to take, catch, kill or pursue, or attempt to kill at any time any wild duck, goose, brant or any aquatic bird whatever on any of the waters of Lake Koshkonong, steamboat, snare or net of any description, or any punt or swivel gun, or any firearm not habitually held at arm's length and discharged from the shoulder. By the waters of Lake Koshkonong is meant the lake proper together with all the bays, sloughs and flowed lands connected with and adjoining said lake, and also that part of Rock River lying between the Newville Bridge at the outlet and the Blackhawk club house above said lake. Section 2. It shall be unlawful to use at any time in the pursuit of any of the birds before mentioned, any boat, box, or device of any description on any of the before mentioned waters outside or beyond a point 100 yds. in any direction from the natural growth of rice, rushes, canes or flags then and there projecting not less than 6 in. above the surface of the water. Section 3. It shall be unlawful to take, catch, kill, or pursue with intent to kill in any manner whatever or to shoot at from any boat or device whatever on any of said waters, any of the birds above mentioned on any days of the year except Mondays, Wednesdays and Fridays, between the first day of September and the succeeding first day of December. Section 4. It shall be unlawful to discharge a gun or firearm of any description on any of the waters before mentioned or from any of the shore within 50 yds. of the margin thereof at any time other than on the days mentioned in Section 3 of this act, except in pursuit of fur-bearing animals. Section 5. Any person who shall violate any provision of this act shall be guilty of a misdemeanor and shall be punished by a fine not exceeding \$50, nor less than \$25, or by imprisonment in the county jail not exceeding six months, or both. One-half of said fine when collected shall be paid to the informer. Section 6. All acts or parts of acts conflicting with this act are hereby repealed.

And this is not all, for in a conversation which I have just had with Hon. F. C. Kiser, of this city, a member of the Assembly and chairman of the Committee on Game and Fish Laws, and who had charge of this bill and gave it his special attention, he told me emphatically that no such clause was at any time attached to it. Certainly there seems to me but one solution, which is that some one who sat around the stove that 26th day of November must have intentionally misrepresented the matter to Mr. Hough, and the object in so doing was to excuse his own opposition to the otherwise unanimously supported measure.

Should any "angler or summer tourist" follow Mr. Hough's advice and take the trip down the famous "Rock" from Fort Atkinson, notwithstanding the fact that both sides of the river near its outlet in the lake, and also the best camping grounds on the lake shore, have been monopolized and all camping prohibited, there is still a strip of 600 ft. just above the club house on the right bank of the river, where they can—while the writer lives—set up their tents and enjoy themselves with the fish and game as the great Creator intended for all men. I admit that in this letter I have replied, not to Mr. Hough, but to those from whom he received his information, and in speaking of Mr. Esterly I do not mean the Blackhawk Club. And I challenge a denial of any statement I here make over my own signature.

DUANE STARIN.

WHITEWATER, Wisconsin.

WINTER IN THE ADIRONDACKS.—Northwood, N. Y., Feb. 3.—*Editor Forest and Stream:* The ice is from 8 to 10 in. thick on the still waters hereabouts. It is generally from 3 to 5 ft. thick at this time of the year. Flies, spiders and "skeeters" are seen in the woods almost every day by the loggers. There is no snow in the woods. Deer, hares and partridges have fared first-rate. I have not heard of a deer being killed since the season closed; but a few partridges have been killed this winter. Hares are very plenty this year. A man who lives here does not like hares to eat, but he goes out and shoots them "jest fer the fun of it," as he says. Four fine ones were given to his dog last week.—WOODCHUCK.

THOSE MAINE WOLVES.—Indian Rock, Me., Feb. 7.—*Editor Forest and Stream:* I notice in the FOREST AND STREAM of Jan. 30 a communication from "T." in regard to wolves in Maine; and in reply let me say I have seen a statement of one of the game wardens, who lives in the neighborhood of the wolf-infested district, who says there are no wolves in the North Woods, but the cause of the deer working south is the effect of hounding, and that the wolf scare was gotten up by persons who practice dogging deer.—C. T. RICHARDSON.

WITH THE SQUIRRELS.

Editor Forest and Stream:

Jas. B. Thorn, on Jan. 30, says that when the fox squirrel once gets to his home tree, the hunter might as well abandon the chase, and inquires how that squirrel so successfully eludes the hunter. Perhaps your correspondent has not had much experience in hunting that game, and for his benefit let me say that if the tree has a hollow and is the home of the squirrel, one may as well leave. If you have a keen eye, watch intently the entrance to the cavity, and the chances are you will see a couple of black eyes just inside the entrance, watching you. If your eye is not good, then inspect with an opera glass. However, I would not advise one to use the glass much, but to discipline the naked eye.

If the tree is not hollow, then look for the foxy little fellow generally on some one of the larger limbs near the body of the tree, or fork of large limbs. Inspect the limb inch by inch. Don't try to take in the whole top at once, but dwell on a point, and perhaps you will observe a paw or a few hairs, or more probably one side of the head sufficient for his eyes to observe you; or when watching intently and shifting your position, you will see a quick, slight movement, thereby detecting the fellow in trying to put the limb more effectually between him and you.

If you have the ability to detect differences in shades of color, the more successful you will be in discovering the game, because he hugs the limb closely, spreading himself out as thin as possible, his color blending with that of the limb. If you prefer to shoot alone, have a boy with you, and if you use the rifle, the best arm for the purpose, take a stand from the tree as far as you can well see into the top, with your gun ready to bring to the shoulder in an instant; then send your boy to the opposite side of the tree to make a racket, and you will see your squirrel spring into view.

I say, take a stand as far from the tree as you can well do and see into the top. My experience is the nearer the horizontal the line of aim is the easier the shot. Of course you will shoot off-hand and at the head. VIX.

KANKAKEE, Illinois.

Editor Forest and Stream:

In your issue of Jan. 30 I note an inquiry of Mr. Jas. B. Thorn as to the proper kind of a dog to use for both rabbit and squirrel hunting, and as I have had some twenty years' experience in hunting all the different kinds of game that exist in this country, and especially squirrels and rabbits in my first hunting days, probably some points from me might be of interest to him. I have used for squirrel and rabbit hunting all of the different kinds of dogs that can be had in this country, but the kind that afforded me the most pleasure was the black and tan terrier. I am particularly reminded of a bitch of this breed I once had the pleasure to own. For squirrels I think she had no superior; no fox or gray squirrel was smart enough to fool her. I have seen her climb a leaning tree to a height of 40 ft. to get to a squirrel; and whenever I heard her bark I was sure to find my game. For rabbits she was equally as good, being small she could go through the thickest brush, and many a time I have heard Mollie Cottontail squeal before she could get to her hole. I used her a great deal for hunting coons and possums, and she proved equal to the pursuit and capture of both. This bitch came as near being worth her weight in gold as any dog I ever saw. L. A. E.

SEDALIA, Missouri.

LOTS OF BIG GAME.

YELLOWSTONE NATIONAL PARK, Feb. 1.—*Editor Forest and Stream:* The effects of protection on the increase in number of all kinds of game animals in the Park has been very noticeable from year to year since 1883. At that date there were less than at any time in the history of the reservation. Up to '83 the slaughter of elk and other game had been very great, but from that time on the game has been carefully protected, until now the elk can be seen by hundreds, where once they were very scarce. Most of the game that now winters in the Park used to go to a less snowy region to pass the winter months. Especially was this true of antelope and white and blacktail deer. Even now most of the deer leave the Park when the snow begins to get deep. The antelope remain on the reservation, but at the lower altitudes.

Another thing very noticeable is that the animals are showing less fear of man since they have learned that they have nothing to dread from his presence. Traveling about as I do, through the Park during the winter months, I have paid considerable attention to the game, noticing its habits and doing all I could toward counting or making an estimate of number of animals here. From the window where I am writing these notes, I can see a large seven-point bull elk. He is lying down in the snow on a point of a hill, not over three hundred yards from the hotel. Another bull is down on the sidehill feeding where the snow is three feet deep. To get to the grass he is pawing the snow out of the way, and occasionally pushing it away by swinging his head from side to side. Men and teams are moving about, choppers are cutting trees for firewood only two hundred yards from these elk. There are seven bulls who have been camping on this hill for the past three weeks. When the sun comes out bright and clear they get in the shade to lie down. Dogs barking will only cause them to raise their heads for a look; they show no fear of anything they see or hear from the ranch.

From the hotel—Yancy's—we can see with field glasses hundreds of elk. Across the Yellowstone River there is a band of government animals, mules and horses. Two of the horses have bells on. Within a circuit of a mile about the horses are 300 elk; sometimes the elk are within 10 yds. of the horses. They pay no attention to each other unless to seek companionship. I am inclined to think the bells attract the elk, at least the sound does not drive them away or alarm them. They appear to stay with the horses that have the bells on them.

The mail carriers, freighters and travelers over the Mammoth Hot Springs and Cooke City road, see elk everywhere. From the time they leave the springs until they reach Soda Butte station, they are in sight of elk all the time. The elk are in bands from 25 to 50 and occasionally bands of 200, 300 and even 400 can be seen.

The greatest number are seen on the north side of the Yellowstone and Lamon rivers, or East Fork, their favorite winter feeding ground. Specimen Ridge is covered with elk at times. As the wind blows the snow off the grass

here, they congregate during the night and remain feeding until the sun comes out clear, when they go to the green timber to bed. Several hundred elk are wintering on and about Mt. Evarts, one band of these, some 45, came off the mountain down to the flats at the junction of the Gardiner and Yellowstone rivers; they were within easy rifle shot of the town of Gardiner for hours, some lying down, others feeding about on the sweet sage. Antelope are on this flat every day. Men from the town often ride out among them on their way over the "Turkey Pen" road. In one of these bands I counted 130 antelope, in others 80 and 63. Besides the antelope here, there is a band at Junction Butte and one in the Black Tail Creek country.

In Gardiner Cañon there are several bunches of mountain sheep. These are very tame. I have passed within 50 ft. of them, in plain sight, without their paying the slightest attention to me. They hardly notice passing teams or horsemen. In the cañon are two whitetail deer, the only deer of that kind I know of in the Park. There are quite a number of blacktail deer about. Bands of six and ten have been seen. These are not so tame as the sheep or elk.

Not long ago the mail carrier and a passenger saw soon after leaving the Hot Springs post office, first, a band of some sixty elk—these had been close to the Government pasture fence and along the road for a mile or two. Next a beaver was seen on the ice in Gardiner River. He was eating willows. While they were passing he swam across some open water toward the team, and cut some tag alder brush. He was feeding on the bark of this as we passed from sight. In the cañon of the East Fork of Gardiner—Lava Creek—were two bands of sheep, eleven in all; one band of blacktail deer (seven), and a bunch of elk (twenty-two) in the road ahead. These turned off to the left. Across the cañon were more elk in the dead timber. All these animals were seen within three miles of Mammoth Hot Springs and Camp Sheridan.

As no particular effort has as yet been made to find them, very few buffalo have been seen. One small band was discovered from the hotel at Grand Cañon and one band seen in Hayden Valley. They range away from any traveled route in winter, and to see them one must make a snowshoe trip with that object in view. Later in the winter they move out to Specimen Ridge, and sometimes across East Fork to Slough Creek. Others keep in and about the Lower Geyser Basin. Elk are as numerous in the Swan Lake, Madison and Gallatin basins as they are anywhere in the northern part of the Park. They are plenty in Hayden and Pelican Creek valleys, on Mt. Washburn, Holmes and the range extending to Electric Peak. They are everywhere. Their trails cross and follow the wagon roads; they have passed over thousands of acres of snow; they are about the soldiers' quarters on Soda Butte Creek. One old bull feeds on the waste hay thrown from the stable at the game keeper's cabin.

Any one who wishes to see large quantities of game, should pay the National Park a visit in winter. H.

THOSE BIG TEXAS PASTURES.

BEEVILLE, Texas, Jan. 30.—*Editor Forest and Stream:* The time was once when the boundless prairies and dense forests of Texas were heavily stocked with big game down to a squirrel; and were open to the world of sport; any one willing to venture his scalp among the Indians could hunt when and where he pleased. But of late years the country is filling up with people from all points of the compass; most of the lands have been fenced up either in large pastures or in farms; and in many places the usual sign is noticed tacked near the gate "No hunting allowed on these premises." But now the State law interferes and says that hunting cannot be prohibited in inclosures containing more than 2,000 acres except as is provided for in the general game law of the State in operation during certain seasons. This new law is accepted with general favor; and apparently has operated largely in reconciling the pasture owners to allow sportsmen to enter their inclosures.

The prevailing game laws are generally accepted and observed in this section of the State and the question of game protection is freely discussed among regular sportsmen. There are, however, but few gun clubs in operation, but there is a talk of a general organization among the different counties and townships in the Beeville region, which we hope soon to see perfected. The deer killing season expired Jan. 20; the turkey killing season expires March 15, the quail season at some time, I believe, which will naturally cause our sportsmen to lay aside the gun for the rod. Several expeditions have been formulated to visit the more famous fishing grounds in the district, but it appears that the majority of the expeditions will be headed for salt water, forty miles below on the small bays that fringe the Gulf of Mexico. Here almost all varieties of salt-water fish are found, including the tarpon or silver king. T. J. S.

THE WILY GROUSE.

SCHENECTADY, N. Y.—One day, in one of the "gulfs" or "gorges" (as the farmers call them) of the Glenville hills, I heard a grouse take wing but did not see him, and so could only locate him by the sound, as it is a place dense with evergreens. Moving on I came to the side of the gorge, and looking up to the brow of the hill saw a large dead log lying some 6 ft. from the top and parallel with it, dotted with stubs or the remains of broken off branches. These stubs were from 3 to 8 in. in length. About the center of the log I saw something that resembled the rest of the top of the log, and yet was not a part of it. It was the grouse attempting to make himself appear a part of the log in the following manner: His beak was upon a stub, his neck being high arched, his tail contracted and was stuck up perfectly perpendicular, while his legs and feet were stretched backward. It took me some time to make him out after I saw the object on the log, so perfect was the deception. I stood looking in amazement, and he finally perceived that I had penetrated his disguise, gave up and flew away. I have read of a tribe of natives in Australia who practice something of the same nature to deceive their enemies when caught on the open plains. They assume by their postures the forms of stumps and branches of trees as they would appear lying on the ground. I have from boyhood studied the habits and nature of the ruffed grouse, and could tell you many anecdotes of them, which I may in time if you and your readers would like to read them. DORF,

DEER IN THE OATS.

THE poachers are not being neglected by the Maine game warden this winter. Game warden Tom Allen and detective Geo. W. Harriman of Bangor, have just returned from a trip into the North Woods, in quest of certain poachers. Deer shooting in close time has been reported, and it is understood that the wardens have secured evidence sufficient to convict several parties in different locations, the cases of whom will receive attention in due season. The poachers are back in the woods, and their arrests will be a question of weather and the state of the roads, but it is sure to come.

The old story of deer in the oats appears again in a Maine paper, in this form: "I want to inquire through your paper if there is any remedy for a man who sows grain and then has it destroyed by deer, the law not allowing him to shoot or dog deer during close time, and the deer being very plenty around here. I had two acres of nice oats and they destroyed over half of them. They commenced to eat them before they were 6 in. high, and continued to feast on them until they were cut. I want to sow eight acres next spring in the same field, and it won't pay unless I can keep the deer out."

The editor of the *Wild Woods Echo*, in which paper the inquiry appears, advises the aggrieved Eustis farmer to present his bill for damages to the State. The State might readily pay any possible bill of actual damages of this sort, for the chances are that the field of oats was about as large as a beechnut, and that a couple of deer could obliterate the crop in one night. The chances are that the hunter-farmer's worst grievance is that he cannot shoot deer indiscriminately all through the season. SPECIAL.

THE WEATHER AND THE GAME.

THE mild winter must be favorable for the game. It would be interesting to have some reports of observations in different parts of the country. Readers of this column are invited to send to *FOREST AND STREAM* any notes they may have made on this winter's weather and the game supply.

I have to thank you for the good advice you gave last year as to how to cure my dog of canker in the ear, and how to trap otters. The dog is entirely well, and last night I caught two otters in one fish pond and now have their hides stretched on a board. "Bob White" was scarce with us during the fall, but this winter has been so very mild that there will be an abundance of breeders for another year. P.

FREDERICKSHALL, Virginia.

SARATOGA, N. Y., Feb. 11.—A meeting was held last night for organizing a game protective club. Mr. Levengston was chosen chairman and Mr. Mingay secretary, W. H. Boakes, W. A. Coster and Walter Hanson were appointed a committee to draft a constitution. All present conceded the need of such an organization to carry out its objects. State Game Protector Armstrong noted the fact that a town meeting would be held here in March and suggested that good men be placed on both tickets for game constable. The *Saratogian* suggests that the new club should take action to maintain the present deer law, and says: "It is not the four or six weeks of dogging deer that decimates them each year. With this they would increase rapidly, but it is the still-hunter, who creeps up to them and shoots them without the aid of a dog, that threatens their entire destruction. During the year 1886 a party of these still-hunters, as they are called, stopped on the bank of Moorehouse Lake, in Hamilton county, and by the use of 'salt licks' killed the extraordinary number of eighteen deer in one day and sixty-five in a week. The fish and game clubs should strenuously oppose any change of the present law in regard to deer hunting. Under its provisions, and with the aid of the game protectors and game clubs, the number of deer in the Adirondacks has multiplied fivefold within the past few years. Relaxation of the law means the extermination of game."

MASSACHUSETTS ASSOCIATION.—Boston, Feb. 16.—*Editor Forest and Stream:* A largely attended and important meeting of the Association was held at the Hotel Thorndike, Feb. 13, President Samuels presiding. Hon. James F. Dwinell was elected a vice-president. Twenty-one gentlemen were elected members and twenty-six proposed for membership, to be acted on at the next meeting. The committee on the importation of game reported that a large number of quail had been distributed on the Cape, and that large numbers were to be planted between now and spring. The Association has appropriated and raised by subscription the sum of \$1,000, to be expended in restocking the streams with trout and the woods with pinnated grouse, sharp-tailed grouse, Western quail, and, if possible, wild turkey; and to that end is importing large numbers of these varieties to be distributed. We are furnishing seeds and grain to be planted upon which these birds can feed. We can already see the interest which sportsmen are taking in our new work by our largely increasing membership list.—RICHARD O. HARDING, Sec'y.

THAT NEW JERSEY NON-RESIDENT LAW.—The Newark Sunday *Call* thinks that "One of the first things which the Legislature should do in amending the game laws is to repeal the obnoxious 'non-resident' law enacted in 1878 for the benefit of a few rich and selfish Philadelphians who ran the West Jersey Society. Of all illiberal game laws it is the worst. It provides for jailing a non-resident for six months or fining him \$50 if he can not show a certificate of membership in a New Jersey game protective club and is caught either fishing or shooting in this State. The law has never been enforced except in Camden county, and if the man had resisted stoutly then he need not have paid his fine as it is said that the law is clearly unconstitutional."

THE INDIAN TERRITORY.—Jamestown, N. Y., Feb. 13.—Charles Fenton, of the Adirondacks, and I have just returned from a trip to Texas and the Indian Territory. We took our guns and dog along. Were three weeks in the Indian Territory. Quail and turkeys were plentiful, the weather delightful, and we had a good time generally.—CAP LOCK.

ROCKY MOUNTAIN SPORTSMEN'S ASSOCIATION.—Denver, Col.—The following circular has been sent out to club secretaries: "With the object of making the annual meeting of our Association, which will be held on the evening of June 17 next, following the first day's tourney, especially interesting, papers will be read in the order of new business on the following topics, each paper to consist of about one thousand words: 'Trap-Shooting; Past, Present and Future,' 'The Preservation of Game,' 'The Shotgun of Olden Times,' 'The Preservation of Fish,' 'Our Friend, the Dog,' 'Shall We Tax the Gun.' Please present this matter to your club and invite them to make any suggestion they wish as to the addition of new topics or alteration of such topics as appear above; also, to suggest names of any members of the Association who are particularly qualified to prepare an interesting paper on any of the above subjects. Please advise as early as possible, so that ample time can be allowed for preparation of papers.—W. E. OSTRANDER, Acting Secretary, No. 10 Windsor Block, By order of C. M. HAMPSON, President."

SUNDAY SHOOTING.—New York, Feb. 14.—*Editor Forest and Stream:* I see in the last issue of FOREST AND STREAM that the Massachusetts Legislature are considering a bill to prevent persons hunting game on Sunday. I want to express my views on the subject, for there are plenty of young men like myself who have to work all the week, and Lord's day is the only day when we can have a little recreation; and if this is prohibited what can we do to enjoy ourselves? We cannot enjoy field sports like our richer brothers if this takes effect. And I think there will be plenty of ruffianism grow out of it, for we will have nothing else to do but hang around corners all day. If some of those gentlemen would think about this, I am sure they would do something to alter the present state of affairs. Now let me hear some one else's views on the subject.—T. M.

THOSE SPECIAL NUMBERS.—A Washington correspondent who has been reading the FOREST AND STREAM for fifteen years and should be a good judge, writes of our Christmas and Florida numbers: "I never saw better numbers of any publication in their special line than those, and I enjoyed them from cover to cover."

WATER COLOR HUNTING SCENES.—Mr. J. S. Bradley, Jr., of No. 1 Pine street, this city, has on exhibition three original water colors by C. A. Zimmerman, the painter of the well known pictures "The Tight Shell" and "Double." Lovers of this artist's work are invited to call and see them.—*Adv.*

Sea and River Fishing.

ON THE NORTH SHORE.—IV.

A THREE WEEKS' TROUTING-TRIP ON THE NORTH RIVER OF LAKE SUPERIOR.

WE sought new grounds that morning, coasting along a serrated shore that ran northward and which displayed huge ranges of parti colored rock and a long stretch of woodland that was sending forth the agreeable health-giving odor of the balsam, fir and pine. The rocks at times were smooth, then ragged and broken, and again ran along so solid that not even a fern or a flower could find a crevice to grow in. A deliciously soft air with the skies all aglow and the tops of the trees blushing in the early sun greeted us on every side, thus creating just such condition of the elements that charm the ardent devotee of the rod. Soon we came abreast lovely Maple Island, whose shore presented a weather-beaten aspect, the gnarled roots of many of the trees being exposed, the result evidently of the time battling waves. The beach, which was very irregular, appeared to be covered with fragments of red porphyry and slabs of dark red sandstone, many of which were plainly ripple-marked. It was dense in vegetation and timber, and Joe said it was the scene of a sanguinary strife between the Iroquois and the Chippewas ages ago, when the red man was lord of the forest.

We were now in the domain of the gamy trout, and being eager for the sport, went to work with a will, sending our flies in the most attractive places. I saw but a few yards ahead of me a ledge of rocks in the clear waters that I was confident harbored a golden fin. I stopped casting until I reached the desired spot, and then let my lures circle in the air and lightly fall on the edge of the ripples that raced o'er the ledge. In an instant a savage swirl broke the water where my dropper fell. I responded to it with a gentle strike, and then he turned tail and again sought concealment in his rocky retreat. A shade of disappointment ran o'er my placid face, while Joe, the barbarian prophet, looked up and grinned. Ned, who had witnessed the splash, exclaimed, "He was a daisy!" and then relapsed into silence. In a moment my flies were lifted from the water and again sent to the same spot and meeting the same savage response. This time I hung the lovely darling of the spotted jacket, and the reel began the song so sweet to the angler's ears. I soon had him in check, and after a fierce fight, which lasted the usual time, he came to the net a victim of man's subtle strategy. Joe expressed himself, pleased that I had at last broken the fatal charm that hung so sadly over me the previous day, and declared:

"You ketch fish now."

"Yes, I'll pile 'em up high to-day."

"What's the matter with me?" chimed in Ned.

"Oh, you are all right; you have the horns!"

"Yes, and I'll have the trout, too."

"All right, go ahead; but understand I fight for the laurels to-day."

After this brief conversation the flies were kept quite busy falling and quivering on the water. No more trout wishing to be deceived here we went along to a cluster of boulders over which the waters were gently breaking; here I raised another *fontinalis* to my fly and brought him safely in. Ned was getting sadly in arrears, for he had not yet had a single rise. Again we are on the move and soon reach some shallows which are deeply seamed, just the place for the quarry. Ned gets a rise and misses and I get one, hang the beauty and then he kisses me a farewell. Once more the flies are describing the graceful arc and falling like down on restless waters. Ned is finally rewarded for his perseverance with a

splendid rise and sends the cruel hook deep into the misguided trout and soon is rewarded by seeing the glittering fish displaying his symmetrical outlines through the meshes of the net.

Once more we proceed to the measured music of the oars and this time we halt in front of some old logs that had been washed upon the beach and where the trees are casting their faithful shadows o'er some debris of shattered rock which is about half covered with water. A kingfisher in his brilliant coat of colors is contentedly sunning himself on the top of a dead tree and is keenly eyeing the surface of the shimmering water, as if his breakfast awaited him in the aqueous realm. Our presence troubles him, but he holds to his lofty perch and soon is made aware that we are intent on robbing his preserve. I succeed in taking one of the speckled beauties from his present domain and Ned follows suit with another, and then the watchful bird raises on wing and flies a short distance, alighting on the limb of a ragged birch. A few more casts, which fail to secure a rise, satisfied us and we push ahead. We are now nearing waters that are checked with dark lines, significant of a creviced bottom. Here is fine cover for the dappled trout and we are confident of securing a trophy or two. Being in the bow I secure the first cast into the chosen water and at once sudden ripples race around my fly. I answer the summons, but too late, as the wary fish has discovered and rejected the counterfeit. Baffled, but not discouraged, I repeat the cast, striking the same spot, but the agile trout as he looks out from his stony lair is not soon again to be tempted with draggled feathers of reddish dye or tinsel glitter. Ned as he reaches the same locality sends his "terror of the lake," the horny-headed, into the same spot, but he decoys not a single fin to the feast. Again and again the horns fall and splash and hum through the air, until the angler is completely discouraged.

We move on, covering good grounds or waters with an occasional rise and an occasional fish, until Joe announces that he is hungry by telling us of the meridian hour; and then we go ashore, make some tea and indulge in a good lunch. We have come at least six miles and have been rewarded by the capture of seven trout, one of which—my first victim, I believe—weighs 4lbs., while the others range but little below 3. It has been a delightful morning, and the pleasure has been all that could be desired. Having now an ample supply of trout, we were content to head for the camp with our beautiful and toothsome spoils. Ned, having enjoyed a luxurious smoke after his lunch, announced that he was ready for the return; and so we got aboard, and with a cheery song from our vocalist, went gaily along under azure skies and over rippling waters, and by huge rocks that sparkled like gold in the bright sun. Occasionally we would make a cast when a choice place offered, but the rises were infrequent, as the trout were evidently not on the feed. Arriving near the spot where I had in the morning missed the savage dash of a greedy trout, I concluded to try the place again for him, and had a presentiment that I would be successful in my efforts. I had my line and leader well straightened by the little whipping I had indulged in since noon, and the flies were in perfect condition. Every gentle dip of the oar now was bringing me nearer and nearer to the desired spot, and by the time I reached it I was strung to a tension that foreboded ill to any inquisitive trout.

"There you are. Let 'er go, Gallagher!" says Ned; and away went the flies on their mission with unerring aim, and as they lit like a thing of life upon the surface a trout with a wolf-like snap broke the water, and being a little off my balance and unduly excited, I made a vicious strike, that not only made the pole crack from tip to butt, but sent the hook deep and safe in the tough jaws of the now bewildered and frantic trout. I looked to see my rod break every minute, but it held firmly while the fish fought with savage ferocity, and only when I saw him completely conquered and safely in the net did I breathe easier. He was a match to my first 4-pounder, beautiful in form and symmetry, and rich in radiant dyes.

Having more fish than we desired for our immediate use, I laid my rod aside, well satisfied with the day's sport. Ned, however, would not cease until he had caught one more, which he soon did, and then he reeled up also, content with the unalloyed enjoyment of the special trip.

Arriving at camp, I challenged my old adversary to our favorite game, and had the pleasure of routing him "horse, foot and dragoons," he only winning one game out of a series of five. It was a red letter day with me, as I had won the laurels on both land and water.

Having been in camp here fully a week we sighed for new worlds, and so concluded to leave in the morning for Harmony River, which empties its umber waters in beautiful Bachewanaung Bay. We broke camp early next morning and were off with a quivering wind that bade fair to bring us to the mouth of the river by noon. When we had gone half way over Maple Island Bay we made the important discovery that we had left behind our landing-net hanging to the limb of a balsam tree. Returning, the net was secured, and again we are off.

The sky that morning was of a soft silvery hue and almost cloudless, and the entire landscape, so like a dream of fairy land, was bathed in an exquisitely soft and delicious atmosphere. The prevailing breeze was giving animation to the wood-crowned hills, while the long shadows from the trees fell upon the curling waves that were playing a zephyr-like rhythm along the shore. Bachewanaung Bay is evidently one of the most beautiful bays on the Great Lake. There are some wilder in scenery, more abrupt in their shores, and with higher mountains, adjacent, but none that have the quiet soothing beauty with which it is so rife at every point. Thunder Bay, with its graceful old cape and the heights of Pie Island, presents a picture truly magnificent, but for the real poetic which charms to dreaminess and is full of restfulness, Bachewanaung surpasses them all. As you enter the bay there suddenly comes upon one's sight, clear and distinct over the green island and the miles of quiet water, the mountains of its northern and eastern shores, while the sky and water are of that intense blue which seems so unreal upon canvas. "The mountain line extends beyond the actual shores of the bay on the southeast, so that it seems one unbroken chain away beyond where we know Goulais River lies, while upon the north the shore gap through which Harmony pours its waters comes into view, with the higher mountains seen through it beyond." And with the summer sun casting the shadows of the

spangled chain of clouds upon the bay and mountains, it will make a picture that will rival the bay of Naples.

The breeze held good till we reached the northern side of the cluster of islands that repose so sweetly in this bay, and then the sail flapped idly this way and that, and the boat drifted with the gentle current. We were becalmed in the brilliancy of a noonday sun in this beautiful sheet of crystal water, fit home for the Naiads and Nereids. I never felt the force and beauty of that delicious poem "Drifting," by the poet-painter T. Buchanan Reed, as I did that day and at that time. Its mellifluous music in the soft, sensuous air and on the bosom of the murmuring lake is as pleasing as the notes of a lute. Listen as

Over the rail
My hand I trail
Within the shadow of the sail,
A joy intense,
The cooling sense
Glides down my dreamy indolence.

With dreamful eyes
My spirit lies
Where summer sings and never dies—
O'erweiled with vines,
She glows and shines
Among her future oil and wines.

Ned, who had an appreciative soul for the beautiful in nature, was deeply enthused with the lovely surroundings and declared that the fairies of Lake Superior could not have selected for their abode a more charming spot. At the mention of fairies the half-breeds were all attention, as anything of the romantic or supernatural is of deep interest to them.

"Fairies live here," says Joe.

"Yes, fairies black, gray, green and white. Fairies that trip after the night's shack and swifter than the wand'ring moon."

And Ned continuing said, "This is one of their most noted places of residence. Here they were frequently seen in bright moonlight evenings, and the fishermen while sitting in their canoes on the lake often saw them playing their pranks and skipping over the hills. There is a grove of pines in this vicinity called the manteowac or spirit wood, into which they have been seen to flee, on the approach of evening, and there is a romantic little lake on one of the elevated sand hills not far back from this great lake on the shore of which their tracks could be plainly seen. These tracks were not bigger than little children's footprints, and the spirits were often seen in the act of vanishing. On one occasion they went so far as to entice into the sacred grove and carry off a chief's daughter named Neemoga, a small but exceeding beautiful girl, who had been always inclined to be pensive, and took her seat often in these lonesome haunts."

"Beg pardon, Ned, did I understand you to say the daughter was named Neemoga?"

"Yes; why?"

"I was just wondering if she were related to the old woman who lived in a shoe."

"Rats!"

With this expressive Americanism he relapsed into deep silence, evidently annoyed at the interruption.

"Well, go on, Ned, and tell us what befell the beautiful Neemoga."

He paused awhile in consideration and then kindly taking up the thread of the romance said:

"Neemoga's parents desired to marry her to a noted hunter, but she was not inclined that way, as she longed to go to a region where there was no weeping, no cares, and no death. At length, after a series of conversational interviews on the subject, she announced her willingness to accede to the matrimonial proposals, and the day was fixed for this purpose. She dressed herself in the finest manner possible, putting flowers in her hair and carrying a bunch of wild flowers, mixed with the tassels of the pine tree, in her hand. One only request she made, which was to make a farewell visit to the sacred grove of the fairies before she visited the nuptial bower. This was granted on the evening of the proposed ceremony, while the bridegroom and his friends gathered in her father's lodge and impatiently awaited her return. But they waited in vain. Night came, but Neemoga was never more seen, except by a fisherman on the lakeshore, who conceived that he had seen her go off with one of the tall fairies, known as the fairy of Green Pines, with green plumes nodding o'er his brows; and it is supposed that she is still roving with him over the elysian fields amid the rosy bowers of love eternal."

"Ned, that sounds very much like one of the Hiawatha legends."

"One of the high-water legends; humbug; it is one of the fairy romances of Lake Superior."

"Oh!"

And I was cruel enough to allow his auricular mistake to go uncorrected, it was really too enjoyable for disillusion. The completion of the romance brought into activity the jargon of the half breeds, for any story that savors of fairies, enchanters, monsters or demons holds them spell-bound.

We were now well to the north of the islands and heading for the shore, which after reaching and following for about a mile brings us to Harmony River. Pete, who seldom addressed us, suggested a troll for a lake trout, stating that the bay was full of them. At this prompting Ned opened his junk bag, and diving one hand down amid all kinds of tackle, finally fished up a trolling line with spoon. A good-sized sinker was attached to the line and the spoon was sent spinning on the unruffled waters. It had been in but a few minutes before there came a terrific jerk, and then a captured fish was at once headed for the boat at a 2.40 pace. Ned got unduly excited over my rapidity in hauling in line, and kept advising me to deal more gently with him. Rapidity was my style, and before the fish could recover himself sufficiently to wag his tail he was in the boat flapping around among the camp stores in a surprising manner. He was about a 4lbs. lake trout. Again the spoon is quivering in the water, and this time a longer wait ensued between bites. It came, however after patient waiting as a 3lbs. brook trout, who fancied the silver-plated spoon was the next victim, and the last to the troll, as we deemed it sacrilege to catch these beauties with a troll, and therefore discontinued the use of the glittering spoon.

We soon entered the mouth of Harmony River, which was discharging a rich umber-colored water. This is the

case with all the rivers we met on the lake, the color being attributed to the presence of pitch, so stated by Agassiz. I wondered that brook trout frequented such colored water, but they do, as this river in the early season is said to swarm with them. We went up the sluggish current in the boat to the first falls, where a most magnificent view bursts upon you, with the sound of the roaring rapids. The heights along the river are steep and wooded and if you follow the narrow pathway on the left, that is trodden by Indians and anglers, you find it almost impenetrable. Huge boulders and broken rock lie scattered along the route as you follow the sinuous stream. Dense verdure, tangled thickets and prostrate trees are on every side, and in many places from the rocky crevices spring the balsam, fir and cedar. The hills, in ragged draperies, rise up from this surging stream of cascades, pools and shallows, with a wealth of coloring that is beautiful beyond compare. Nature has been unsparing here and created everything with an eye to grandeur and loveliness. This little world of beauty,

"Half drowned in sleepy peace it lay,
As satiate with the boundless play
Of sunshine in its green array."

The pools in this stream yield trout of three and four pounds, but their capture is dearly earned. It is fished early in the month of June by the Indians from the Catholic Mission in Bachewanaung Bay and doubtless others, who thus strip it before the rodster from civilization has a chance to wet his artistic fly in it. I doubt if one could have any comfort there in consequence of it being so badly infested with flies and mosquitoes, and, late as it was when we went, they were still quite numerous and gave us a very warm reception. We remained but a short time, as there were no good-sized trout then to be caught here. I went up the river from the first fall a short distance and found the forest too hard to penetrate, as tangled masses of brush and fallen timber meet you at almost every step. Ned caught a small trout at the first fall, and we were content to leave it, even with that small trophy, the visit being made simply in a prospective light. We rejoiced when we struck the clear, open waters of the Great Lake, and had our prow headed for one of the neighboring islands where we intended to camp that night. We reached our destination about an hour before sunset, and as the island presented no attractive lounging place, we sat musingly in the boat while our men pitched the tent, and watched the long shadows creep up the peaceful hills that confronted us from the east, and so grandly interlaced one another. Fleecy clouds, delicately tinted in silver and purple, lazily floated in the soft air, while the Great Lake was laughing and dancing with every ripple as unconsciously as if no form dear to human hearts had gone down beneath it. I never believe so much in the immortality of the soul as when at sunset I look through a vista of luminous clouds far down into that mystic region of light in which we are to imagine are deposited the secrets of the universe. I cannot believe that all this panorama of unimaginable loveliness, which is spread out over earth, sea and sky is without some significance. Deeply it touches and excites the emotions, and presents the omnipotence of God in language too plain not to be understood by the simplest heart. The untutored savage in evidence points to his happy hunting ground beyond the sailing clouds, while the barbarian of the East, as he casts himself under the wheels of Juggernaut, tells you of the God he seeks. Nature proclaims it everywhere, and the heart that fails to see it must evidently be without emotion, without reason.

As soon as the tent was in position we went ashore to survey the ground. Rank vegetation was on every side, and the odor it emitted was almost sickening. A decayed stump had been torn out to give place to the canvas, and this increased the nauseating character of the place to such a degree that I was positive I would be unable to court the drowsy god with anything like success. The smell was as of a tropical jungle, and I really did not think such a thing could be encountered in this invigorating climate; but the disagreeable proof was confronting us. The boys improved the atmospheric surroundings by gathering some balsam boughs and spreading them within and around the tent. It was a mingling of the sweet with the bitter, which happily resulted in a somewhat conservative odor.

The preparation for supper now commenced, and ere it was served darkness was fast creeping over the woods and the waters. Within a stone's throw of our camp lay an island that was a famous breeding place for gulls, and that night when we sought our pillows the screeching of those unmusical birds was pandemonium itself. They were relegated to the habitation of the fallen angels a thousand times that night amid a glare of verbal fireworks that would have done honor to a Billingsgate firewoman.

Joe, when he arose in the morning, said they kept him awake nearly all night, and emphatically declared, "I'd like to blow 'em all to h—!" "Me too," says Ned; and putting in my ballot, I voted for the same instantaneous graveyard. The camp in the "bush" not being at all pleasant, was at once vacated, and we started on our return. We had a discussion relative to going to Pancake Bay and Aguava; but as the trouting in the waters we had passed over was excellent, we concluded that "enough is as good as a feast," and so were content with the return trip.

There was an island just this side of Grindstone Point, that Ned had fished last year with excellent success, and we therefore headed for that. On one point of it huge blocks of stone ran at right angles into very deep water. It was noted as a famous resort for the dappled beauties, and Ned declared we would have unlimited sport there. Everything was very favorable for us, the sky being cloudy and the water breaking in respectable ripples. Ned and Joe could not agree as to the location, but after passing several islands we at last hit upon it as directed by Ned. The boat was run into the shore this side of the declivitous rock, in order to give Ned a chance for a trout from the shore. I was satisfied to remain in the boat until Ned had had his trial on the big rocks. He started, accompanied by Joe, who carried the landing net. After a rough tramp along a very broken shore he reached the desired spot, and then carefully walking out on the beveled and flinty blocks that were washed by the waves, he made a cast, and the "horny-headed," alias the "Terror of the Lake," was at once attacked by a vicious trout, and closely riveted to the same by the masterly tactics of the angler at the shore end of the pole. I

looked every minute to see Ned slide down the steep rock upon which he stood; but as he had hobnails in the bottoms of his boots, he clung to it as if he were part and parcel of the flinty stone. The play of the deceived fish was a joy to the angler, as his face glowed with pleasurable emotions as his reel sang the requiem and his rod beat the time. After Joe had landed the trout, Ned gave him his rod to use, and then he came where the footing was more secure. Joe missed two immediate rises, but the third was a success, and he killed the fish like an artist. Ned beckoned me to come over with the boat and in a moment the twain got aboard, and as soon as we reached the opposite side of the rocks the casting and the fun commenced at one and the same time, as both our casts were successful and two fish were waltzing to our music. There was great danger of the fish becoming entangled, as both were inclined to an interview. I bawled out to Ned:

"Shinny on your own side."
"I'm trying to."
"Reel up some."
"Reel up yourself."
"Oh, bother! I give him the butt."
"Oh, the devil! I give him the butt yourself."
"Say, you old idiot, put your fish on the other side."
"You petrified simpleton, don't you know enough to pull that minnow of yours out of my way?"
"Flop that tadpole of yours into the boat."
And thus the chaffing went on until both the trout were killed, and then came the same instant from both:
"Joe, net my fish."

Joe took Ned's fish and very leisurely gave his attention to mine, which was a beautifully mottled trout with a rich color of orange, and scaled 4lbs. Ned's was a perfect *fac simile* of mine in color and weight.

We caught four more at this point, two of which weighed 4lbs. each, with the other two registering each 3lbs. This spot reminded me of some of my halcyon days on the famous Nepigon, though in one respect it was far more enjoyable, as we had no strong currents to contend with, as is generally the case on that noted river, consequently the pleasure was enhanced. We pulled up to Grindstone Point and there caught four more of the royal beauties, which averaged about the same in weight as the others. Having more fish now than were really necessary for our table, we concluded to retire from the field and go ashore at the point and indulge in a few games of "crib" while the boatmen were preparing dinner. Two of the trout we had boiled, and a more delicious dish of fish was never prepared. The poetic Pope says "it is vulgar to boil," but if his palate had passed upon these trout he would have never given birth to such an assertion poetic as

The vulgar boil, the learned roast, an egg:
Hard task to suit the palate of such guests.

After dinner we hurried into the boat and started for our old camp at Maple Island Bay, and had not gone over a mile or two before there was positive indication of rain, as the "hooded clouds" were rapidly marshalling their hosts and threatening every minute to give us wet jackets. An ominous growl of thunder was soon heard, and then prelusive drops with "tinkling of innumerable feet," and at once the unwelcome rain came beating down in a most remorseless manner. We could have enjoyed it with a poet's fancy under good shelter, but exposed as we were, it was simply impossible to exclaim with Longfellow, "How beautiful is the rain." The sail was hanging damp and useless now, and our only resource being the oars the boatmen swung to them with an earnest will and soon landed us at our old camp. Our provisions had been well-protected during the storm by covering them with our tents, and Ned and I saved our skins with our rubbers. The boys were well soaked, but paid little heed to it, knowing full well that a rousing fire would soon bring them around all right. Shortly after reaching camp the rain ceased, much to our gratification, though there was a dampness in the air that chilled, and if you perchance touched a protruding limb of tree or bush, a regular miniature rain storm greeted you. Things were damp, sticky and muddy, and even our spirits, which are generally of a sunny nature, were shaded to sadness. The tents were soon in position and then a rousing fire was made, around which we all gathered and tried to drive dull care away with song and jest. It was not a genuine success, for soon after supper Ned and I sought our tents and our blankets and strove hard to enter the realms of Morpheus as a panacea for our utter despondency.

The morning opened quite unfavorably, as a leaden sky and high winds prevailed. Fishing was not to be thought of in such weather, as the white caps were tossing their snowy plumes on all sides, so we set to work and got everything about the camp in number one order. The boys gathered some balsam branches and piled them a foot high in our tent. Ned and I took an inventory of our wardrobe and concluded to improve our toilet by an entire change after we had first taken a good bath. The wind lulled sufficiently in the afternoon to permit of angling, so we went to the reef in front of the camp and after the most persistent efforts for two hours caught only one little trout. They would not rise at all, as it was too soon after the blow. This I have always found to be the case, as the trout during stormy weather either lie very quiet or else are not seeking food. Either horn of the dilemma is not agreeable to the rodster. Rough water, when it is not too boisterous, is always best for the sport. A mirrored surface fills no creel.

CINCINNATI.

ALEX. STARBUCK.

MOCK TROUT.—We are informed by Mr. S. F. Denton that in the western part of Massachusetts the dace (*Semotilus bullaris*) is called mock trout, from its habit of biting like *fontinalis*. He has heard the name used at Lake Pleasant and elsewhere.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st. Boston, or 199 Fulton st., N. Y.—*Adv.*

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this season will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

RANGELEY CAMPS.

THE possibility that the foreign trout introduced into Maine waters may prove to be something like the English sparrow, is mentioned by lovers of the rod and line, but it is again suggested that there would be considerable fun in catching them if such were the result. Still, our Commissioners cannot exercise too great care in introducing the eggs of foreign fish. It is not many years ago since the ponds of Maine were being stocked with that shark of all fresh-water fish, the pickerel. Indeed, they were put into Umbagog Lake, the lower great lake of the Androscoggin chain, a lake then greatly famed for the size and number of its trout. But from that date the day of trout in that lake was done. Now it is noted for its pickerel fishing, though with occasionally a big trout, that has grown too large for the pickerel to swallow.

The Thayer brothers, who purchased Birch Lodge at the head of Richardson Lake, one of the Rangeleys, last summer, have just had a steamer sent from Boston for those waters. She is known as the Kara, and is 41 ft. over all, and was designed by Burgess. The boat will be the biggest in the Rangeley waters, and is to run between the South Arm and the Thayers' camp at the head of the lake. She was sent by rail to Bryant's Pond. From there she was hauled on sleds, constructed for the purpose, twenty-one miles to Andover. Thence she has been hauled twelve miles through the woods, by the lake road, to the South Arm. Mr. Geo. Newton, so many years a guide for the famous (?) Whittier, has had charge of the steamboat transportation. The Thayers are men of wealth—millionaires, in fact—and they are greatly interested in the sports their camp affords. J. Parker Whitney, who has an office in Boston and is also actively interested in real estate in California, where he spends his winters, has a camp at Mosquito Brook on this same lake. This camp has cost Mr. Whitney something over \$40,000. He has spent the better part of his summers, with his family, at his camp for many years. He first visited that region over thirty years ago, a young man, with his pack and camping utensils on his back. Since that time he has "made his pile," but he cannot forget the happy days at the dear old camp. SPECIAL.

DISTRIBUTION OF FRESH-WATER FISHES.

Editor Forest and Stream:

The item, "Mysterious Stocking of Ponds" with fish, brings to mind boyish observations of long ago. There was, and still may be, a popular idea among a certain class of persons that earthworms and small fishes sometimes rain down, because earthworms would be found on the roofs of buildings and small fishes in pastures and meadows after a heavy rain. The popular idea as to the worms was banished from my mind when I saw them coming out of the earth after rains, and also saw such worms crawling up the wet sides of the old farmhouse. I observed that they could not climb unless the siding was wet.

After a short but very heavy rain I had occasion to go into the pasture about a fourth of a mile from home, and about 10 to 15 ft. higher than a spring brook on the farm, and found, in pools of standing water, many small fish about an inch long. Rained down, the people said. Not so. The heavy rains had formed rills from the pasture to the brook, and the fish had ascended the rills. My boyish judgment was satisfied in that regard, for I was quite a little fisherman, and had caught during the spawning season what we called a rock bass and placed it in the brook, where it had thirty or forty rods clear play. I watched my bass with great interest, and in due time found a great number of small bass in the brook, and among those fish in the pools in the pasture were many of my bass.

When I came West, Grand Prairie was unsettled, and for pastime I would take my dog, gun and horse, and go upon the high rolling prairie, sometimes fifteen miles and more from the river, in quest of prairie chickens, and many times, when beating the ground, would find in depressions or low places, which had held water for some time but dried out, skeletons of fish and fish in various stages of decay. They to my mind reached those elevated places from the river by way of various gullies, water courses and rills, during the heavy rains or spring freshets.

A farmer friend had fine fishing for a few days in his pasture meadow and plowed fields where he had ditches, catching pickerel, a few of them weighing as high as 10 lbs. In June there came an unprecedented heavy rain, flooding the farm. The fish came to the farm from the river during the rain, when the ravines and wet weather water courses were full.

Last summer I saw a small boy catching, with a hook, small fish in an artificial pond about two years old, made by a railroad company to catch and store surface water for use of locomotives. I asked the boy how the fish came in the pond. He replied, "Dunno." It was apparent to my mind. The pond was several feet higher than the road bed, and, at times, evidently overflowed, the water escaping alongside of the road to a creek, as I could determine by a belt of timber.

The method of stocking ponds has nothing strange about it when we remember the remarkable power fish have to ascend falls and rapid streams. I have watched them by the hour ascending and trying to ascend the pour of milldams about 8 ft. in height, watched them in their persistent efforts to pass over riffles in small streams, in ascending riffles so shallow that the water would not half cover the fish.

It may be asked, how does it happen that small lakes or ponds but a few miles apart so often contain entirely different kinds of fish? An answer for many cases can be, that during such floods it happens that one kind of fish only reaches one lake and another kind another lake.

I knew two lakes but two miles apart, one of which contained nothing of the fish kind but pickerel, the other was drained or dried up and was found to contain nothing but a large, worthless kind of fish, called in the West dogfish, both of which are found in the river.

PRAIRIE.

[The distribution of fresh-water fishes by sudden changes of level in streams is one of the best known methods of dispersion, but it is by no means the only one. Leaving out of the question geological changes which

may affect the level of a watershed, there are many fishes, among them eels and catfishes, which are able to migrate some distance over land, and may thus be carried into a different watershed leading them thousands of miles from their original habitat. We have previously referred to the action of wind storms in carrying fish through the air. Fish Commissioner W. L. May, of Fremont, Neb., has forwarded to us specimens of the fat head minnow (*Pimephales promelas*) that fell in the streets a couple of years ago. The scattering of species by means of subterranean streams is another important factor in distribution which we have omitted to mention.]

RANDOM CASTS.

IT is not that the laws for the protection of fish and game are inadequate in these parts, but in the lack of the right kind of men to enforce them is where the trouble lies. Of course the number of wardens is inadequate everywhere, but if those whose business it is to see that the law, are enforced did their whole duty, the benefit would soon be apparent. And perhaps it would be just as well to have the State pay these men more liberally.

Salmon, perhaps more than any other fish, are whimsical as to the fly they prefer at different times and localities. It is frequently the most ungainly looking object (called a fly by the native) that is the most killing.

A rod belt is a very valuable article in the outfit of an angler when after large fish. It will often be the means of preventing serious injury to the person and such as can never be cured when once received.

Most men need a hobby. A more innocent and healthy one than angling is hard to be found.

For the sins of omission and commission, the elaborate catalogue stands at the front.

I have been in the woods for weeks and weeks at a time, far from civilization and never yet felt the need of strong liquor, although wet every day and all day, sometimes only up to my middle, at others thoroughly drenched. With many it has become a habit to "take a drink," others do so because they are asked to. Why some people like to keep their insides in a constant state of pickle, is to me a mystery. When the time comes when a little liquor would be of benefit, these old hands are beyond the reach of any such advantage.

After hooking a salt-water trout on the fly, play him slowly and you are very likely to take a second one on the other fly before the first fish is exhausted.

A heavy reel is an advantage on a fly-rod, it assists in balancing.

A cheap line, as a rule, is a bad line, and a bad line is dear at any price.

The seine, out of bounds, as it now generally is, is a curse; under properly enforced restrictions it can be made a benefit.

BIG REEL.

PENNSYLVANIA FISH PROTECTIVE ASSOCIATION.—At a meeting of the Anglers' Association of Eastern Pennsylvania, held in Philadelphia, Feb. 8, the name of the association was changed by a unanimous vote to the Pennsylvania Fish Protective Association. This powerful society had long since outgrown its original designation and enlarged its scope of action, so that a more comprehensive title was a recognized necessity. Including in its membership many individuals who are identified with all the recent activity in matters pertaining to fishculture and protection in Pennsylvania, officially as well as personally, we are not surprised that its prosperity was phenomena, and we believe that a new bond of sympathy has now been established between the workers and the people in whose interest the work has been done. In the estimation of the Pennsylvania public this change of name will be attributed to a change of heart and hundreds of hands will be raised to help the protector of fish that would not stir to assist the angler. The membership of this society will be greatly increased and its power for good largely augmented.

Fishculture.

MASSACHUSETTS FISH COMMISSION.

THE twenty-fourth annual report of the Commissioners on Inland Fisheries and Game, covers the year ending Dec. 31, 1889, and is a continuation of the longest series published by a State Commission.

The fish wardens of Randolph call attention to the existence of eight dams on the Monaquot River and urge the enforcement of the law respecting the building of fishways to overcome these obstructions. The pollution of the Monaquot by mill refuse has created a nuisance which jeopardizes the health of the people living on its banks.

The fishways at Lawrence and Holyoke have been repaired. The first fish, a sucker, was seen in the Lawrence fishway April 19. Alewives, lampreys and suckers were the earliest appearing fish. The first salmon was noticed May 19, and the last one, Sept. 29. After Oct. 5 nothing but suckers were seen until Nov. 8, when observations closed. Black bass did not appear until June 21 and continued until Oct. 4.

After the shad have finished spawning in the Connecticut they will bite at flies or any small shining object that attracts their attention. A drop of solder, or a piece of silver on a hook, will enable the angler to catch at this season of the year either shad or alewives.

In 1879, because of artificial hatching on the Connecticut, shad were more abundant than ever before, and fishing became so profitable that the lower part of the river swarmed with pounds, weirs, gill-nets and sweep-seines. The Commissioners urged the protection of the shad from this destructive fishing, but without avail. Since 1881 there has been a steady and rapid decline in the value of this fishery until at the end of eleven years the decrease is over 90 per cent. "All profitable fishing on this river is at an end, most of the seines and gill-nets are hung up to rot, and many of the fishermen have been obliged to seek employment in some other direction. Pity they had not been obliged to do this before the mischief was done."

At the mouth of the Merrimac, under pretense of taking bait in June and July with fine-meshed seines, thousands

of young shad have been captured and sold for bait at about \$1 per barrel.

The artificial stocking of streams with trout has been successful in most instances. Associations have been formed in various parts of the State and are engaged in building hatcheries and ponds for the purpose of restocking streams in their vicinity. State encouragement of such enterprises is urged by the Commissioners. It is expected that about 500,000 trout fry will be distributed to applicants in April and May.

Two hundred thousand eggs of salmon were taken in the Merrimac. The fish averaged only 10 to 12 lbs. Several grise of 3 to 4 lbs. were caught in the nets, but were liberated and passed up the river. The young salmon appeared to be going down the river about the last of August. Nearly 600,000 salmon fry were planted in Penigewasset River in May. Superintendent E. B. Hodge has lost no salmon through fungus since the adoption of the new-shaped landing nets.

The experiment of hatching lobsters in floating boxes was only partially successful, owing to wave motion and heavy rains. It was found that eggs will not hatch until the water reaches a temperature of 50deg. Fahrenheit. A falling off in the catch of lobsters of nearly one-half million is reported.

The tables showing the returns of weirs, gill-nets and seines are very instructive. These indicate a very great increase in the number of sea-herring and menhaden, and a falling off in the shad, alewife, scup, squetagne, mackerel and bluefish as compared with the returns for 1888.

The name of Isaiah C. Young, of Wellfleet, should be added to our list of the Commissioners.

ERRATIC MOVEMENTS OF FISH.

THE fifteenth annual report of the Boston Fish Bureau presents a neat and attractive appearance and contains much information of interest to the trade. We shall not dwell upon this feature of the work, but call attention to certain items of value to the general reader. The improvement in this annual is due in part to the introduction of a number of illustrations credited to the reports of the U. S. Fish Commission on "The Fishery Industries of the United States." From this source, also, has been derived a portion of the text.

We are told that mackerel make their appearance on the Irish coast about the last week in March and some of the earliest fish weigh 3½ lbs. On the Norwegian coast the season usually opens about the middle of May.

"The erratic habits of fish have for ages been a mystery. The mackerel fishery is not alone subject to seasons of great plenty followed by seasons of remarkable scarcity. The bluefish for forty years left Cape Cod, but returned again in good quantities. More recently the menhaden disappeared in 1878, and ten years later they appeared on our coast in larger quantities than ever before. Other fishes of minor importance as food have disappeared from different sections at various times. The erratic habits of the bulleseye and frigate mackerel are well known. One year the catch may be almost entirely confined to the Gulf of St. Lawrence, as in 1880, another year to our shore, as in 1882. While at different periods there have been large southern catches, large catches in the Bay of Fundy, or it may be as at the Magdalen Islands the past season, where they have had the largest catch for sixteen years. It is a singular fact that a weir situated in the extreme northern part of Sommes' Sound, an indentation of the Island of Mount Desert, catches more mackerel, though few, than any other weir on the Maine coast. There are other weirs at the entrance of the sound, which the mackerel pass by."

After Nov. 30 very few mackerel were seen near our coast. On the south coast of England this species is caught throughout the year. While the yield in our waters has declined steadily, there has been a general increase on the coasts of Great Britain.

Three hundred and forty thousand Spanish mackerel were taken in the Chesapeake in 1889, showing a slight falling off.

Menhaden were more plentiful between Fire Island and Mount Desert than ever before since the fishery begun. The gale beginning Sept. 9 caused them to disappear from our waters suddenly and finally for the season.

NEW SPECIES OF TROUT.—Some of our contemporaries are announcing the expected arrival of two new kinds of trout from foreign waters and crediting the entire exchange to England. By reference to our columns of Feb. 6, page 51, it will be seen that only one new importation is looked for—the trout of Swiss lakes (*Salmo lacustris*). The salibling has become very well known to us, and was figured in FOREST AND STREAM, April 4, 1889, from a specimen caught at Sterling, N. Y. The introduction of this fine fish was begun by Government, in 1883. The Von Behr trout (formerly brown trout, *Salmo fario*) has become pretty well established in the United States, but attains to its greatest glory in New Zealand, where it is also an introduced species. We are to have three kinds of trout, only one of them new, and this will be obtained, not from Mr. Carter, but from the German Government. When we learn definitely which of the Swiss species Max von dem Borne refers to *Salmo lacustris* we will have something to say about its size, habits and qualities.

PENNSYLVANIA FISH COMMISSION.—Mr. H. C. Ford writes to Col. John Gay, of the U. S. Fish Commission, concerning the work at Pennsylvania fishculture establishments: "We are very busy at the hatcheries, and will have about 1,200,000 trout fry this spring. The Penobscot salmon have all hatched and are doing well. We will have a very early shad season." (Philadelphia, Feb. 14).

The Kennel.

FIXTURES.

DOG SHOWS.

March 4 to 7.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.

March 11 to 14.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Feb. 11.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. 3 to 23.—Meet of the Brunswick Fur Club, Great Island, Me.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club, T. M. Brunby, Secretary, Marietta, Ga.

NEW YORK DOG SHOW.

THE fourteenth annual dog show under the management of the Westminster Kennel Club was held on Feb. 11 to 14, at the American Institute Fair Building, on Third avenue. The reason for the change of venue was the rebuilding now in progress of Madison Square Garden, and the dates selected were a week earlier than those originally named, for the reason that the poultry men had an earlier claim on the building for those dates. "All's well that ends well," however, and the W. K. C. had no reason to object to either place or time, for the public filled the immense building on all of the four days, and but for a shower on Friday afternoon the weather was all that could be desired. It has been said that this was the largest exhibition ever held here, but such is not the case. This year's catalogue was made up differently from last year's, there being no duplicate numbers then as was the case this time. Had such been the case in 1889 the catalogue would have been numbered up to 1484 as against 1436 this year. But this difference of half a hundred dogs was much more than made up for by the vastly superior average quality of the entries. A really poor dog was an exception such as was never met with before, while in many of the breeds the quality throughout was superb.

It would be improper as well as foolish to overlook the severe criticisms passed upon some of the judging. This was not the old-time "kicking" of the disappointed exhibitor who sought to cover up his dog's failings by blackguarding the judge, but temperate objection to what was pointed out as errors. Exhibitors were also finding fault with the attendants for negligence and drunkenness. As to the latter, we saw no actual evidence, and had no chance of finding out the truth of the former such as exhibitors have. We would say, however, that the system of tipping the attendants is bad and naturally results in rum drinking. The proper method to adopt in such cases is to make a report to the superintendent, and not to newspaper representatives. It is not in the manner of offering an excuse for any negligence which might have occurred that we desire to say a word for Mr. Mortimer. Very few, indeed, knew the heavy load he was carrying in addition to the cares of such a show. On Wednesday morning he said to us, "I left one little boy dead and unburied when I came away from home on Monday morning and the doctor was attending another. I have not felt like myself either to-day or yesterday." Let us say no more about any seeming fault in not detecting the tricks of attendants after that.

We hope next year the show will be back in Madison Square Garden, for large and ample as the floor room at the Institute Building is, yet it was very apparent that the ventilation was defective compared with the old stand. "Ashmont" said the too liberal use of disinfectants was partly the cause of the oppressive air; and of course it reminded him of an apropos story about Elder Smith, who in a season of drought appealed with zealous fervor to the Almighty for rain. This was followed by a severe storm which washed away all the crops the drought had left, whereupon old Mrs. Potts remarked that Elder Smith never knew when to stop when he got a-going.

MASTIFFS—(MR. MARSHALL).

The mastiff classes were not quite equal in numbers to those of last year. The average quality, however, was very good, the two new comers, Beaufort and Cambrian Princess, helping out in this respect amazingly. The judge did not handle them nearly so well as he did last year, making a very bad break at the start in the challenge dog class by placing Homer over Sear's Monarch, a much better dog. Both have been described so often that a repetition is unnecessary. Lady Coleus, looking well, was alone in the bitch class. In open dogs, Beaufort completely smothered his competitors. He is full of quality and is very near perfection in make-up, and his outline could hardly be improved. He has a wonderful skull, a deep, square—almost too square—muzzle, and, although shown a trifle thin, he has plenty of substance and bone, and is exceedingly well-proportioned throughout. His left eye is affected and looks dim, and he does not move quite so well behind as he should. While admiring his vast size and symmetrical form, we more than ever regretted the death of Minting, as it would have indeed been a treat to have seen these two together. Ilford Chancellor, placed second, is also a capital dog, heavy and powerful, massive in skull and well proportioned. He is too throaty, which detracts somewhat from his appearance. Next in order came the well-known Melrose Prince, looking his very best. He was clearly entitled to the position. Fourth place went to Melrose Caution, a promising youngster with some of the head properties of his sire, including his heavy ears. He has a fair amount of bone and substance, and bids fair to make something above the average. His rather open feet are against him, and he might move better behind. There was nothing very striking in the class behind these. Czar, vhc., has not improved as he should. He has filled out and is quite fair in body and legs, but his bad eyes and heavy ears will always keep him back in good company. Lu Lu, he., is fair in body, but is weak in head and wrong in eyes. Eyric, also he., has rather a good head that is marred by heavy ears. He was shown too thin to get higher, which we imagine he would have done had he been in proper condition. There was nothing else in the class worthy of mention, although Macduff was given a card, probably for his size, as his weak muzzle and badly turned out forefeet could hardly have won it for him. This class was well judged.

There were nine of the eleven entries in the bitch class to face the judges. Cambrian Princess served her competitors as did Beaufort in his class. She is a capital specimen of the breed, with a wonderful head, which is almost too massive for a bitch. She is not just right in forefeet, otherwise she is grand and much the best of her sex in the country. Second went to Lady Orson, as complete a contrast to the first prize winner as could well be imagined. She has very good eyes, and that is about all that she has to recommend her. What the judge could see in her that was worthy of more than about the two letters we failed to find, as a brief examination revealed a weak head, a pinched and shallow muzzle, a lack of substance, cowhocks, and an almost total lack of true mastiff character. Mai, placed third, is a vastly superior animal, and she should have had the place. She has a good head, a short, square muzzle of good depth, good body, legs and feet. Lady Gladys was placed fourth. She has improved in size and substance, but not much in head markings. She was perhaps the next in order of merit, and should have been placed third. Lady Phyllis, vhc., was close to Lady Gladys, and she should have been fourth. She has not developed as she ought, but she shows character, and is better all round than Lady Orson. Pharaoh Queen, he., was looking fairly well, and deserved her card. Daisy and Miss Gibbs, both unnoticed, were properly treated. The former is of fair size, but has nothing else to recommend her, while the latter is weak in head and light all through. Only two dog puppies were shown. Sir Minting may improve, but he is at present too clumsy looking. He only succeeded in getting second, first being withheld. His litter brother, Duke of Norfolk, was unnoticed; he is weak in head and lacks substance. Karin, the winning bitch puppy, is from the same litter as the dogs, and is rather promising. She is of good size and has some character. Gerda II., winner of second, is just a fair specimen, too narrow in skull and defective in hocks to win in good company. Jessica, third, is well formed, but not so large as her sister Duchess of York. The latter has a fair head, but her ears hang badly. The novice class contained nothing worthy of mention outside of the winners that have already been mentioned in the other classes.

ST. BERNARDS—(MISS WHITNEY).

The St. Bernards were not up to last year in point of numbers. There were 152 entries, 14 of which were duplicates, leaving the actual number of 138 as against 106 last year. The quality was of higher average, however, and the display was a grand one. Miss Whitney handled the classes in a masterly manner, arranging them in groups and then comparing the different animals and selecting those worthy of notice and grading them according to merit. Her decisions were so nearly correct that it would be hypercritical to find fault, especially as in all cases where there is any difference of opinion, a careful examination shows that there is plenty of ground to leave no doubt that there are two sides to the question, and that were the positions of the animals reversed, there would still be room for an honest difference of opinion, and the exhibitors who have the best interests of the breed at heart are to be congratulated upon having so fair and capable a judge to decide upon the relative merits of their favorites. In the challenge class for rough-coated dogs there were four entries, the well known Duke of Leeds being the only absentee. Ben Lomond was placed at the head of the division. He was not in first-rate condition as to muscle and quality of flesh, being rather soft, but he was looking well and was clearly entitled to the place. Second went to Phinlimmon, Jr., a grand dog, except in head. He was in capital condition, while Barry II., vhc., was not well shown. In the corresponding bitch class Sniffon was absent, and the strife for the blue was between Miranda and Lady Wellington. This was their first battle for supremacy, and the decision was confidently expected by the friends of each to be respectively, for the former, with her better height and condition, and for Lady with her grand head and good legs and feet, as well as innumerable other points that were claimed to be superior in each. After a careful examination the fair judge cut the Gordian knot by cutting the ribbon in half and giving an equal portion to each. In the open dog class Hesper, Mr. Sears' recent importation, carried all before him. In general appearance and symmetry he is very taking to the eye. He has a grand head, skull good but showing too much peak, ears just a trifle long but well set on and beautifully carried, muzzle very deep, lacking a bit in squareness; expression and character of face very nearly a model, correct markings, plenty of substance and bone, good straight forelegs and feet, good body, coat and color, his hocks are too close together and his tail is not quite right. The standard for a perfect St. Bernard is a high one, and we may never see the ideal, and until the paragon stands before us, dogs as good as Hesper may well be called most excellent specimens of the noble breed. Donald, placed second, is a big dog, an inch or more taller than Hesper. His lack of black face markings detracts considerably from his otherwise imposing appearance. He has a good skull, better in width than that of the first prize winner. His muzzle is deep but not quite on the square, eyes a trifle too light in color, ears small and well carried, body very good—a trifle more length would make it better—does not stand quite straight in front or behind. He has a good coat and was well shown. Roland, placed third, is a small dog compared with the one placed over him, but what he loses in size he very nearly makes up in quality. He is a very symmetrical dog, with good head, body, legs and feet, his eyes could be improved and the carriage of his tail is not just right. Lysander, looking well, was placed fourth. The reserve card went to Kinglimmon. He is a tall dog with only a fair head. He is also a trifle weak behind the shoulders and his coat was not in good condition. His legs and feet are good and he stands on them better than the average. Kastelhorn II., looking fairly well, was vhc., the same position that was given him last year. Ivanhoe was also vhc. at both shows. He has improved in general appearance, but not in muzzle. Helfred, also vhc., is a well put-together symmetrical dog, too bony in head and lacking black face markings. Major Hector, bc., won second in the puppy class here last year. He has improved a trifle in head, but there is still lots of room for improvement, both in this as well as other points. Boniface II. is snipy and was not in good coat, otherwise he is fairly good. In the bitch class first went to Manon, a well-marked bitch with a typical head, good legs, and hocks much better than average. She was not in good condition. Lady Miles, placed second, is a nice bitch, a trifle behind the winner in head properties, but fully her equal in body and bone. She is not well marked, which detracts somewhat from her appearance. Zara, placed fourth, we liked exceedingly. She has a good head, except that it is deficient in stop and has no white markings; she is larger than the two placed over her and beats them in bone and coat. Recluse, not in good condition, was placed fourth. Reserve went to Queen; she is nicely marked and was in good condition, but is wrong in head and light in bone. Lady Floris is better in head, substance and bone than Queen, but not so good in color; we preferred her for the place. Lady Stella, hc., we did not find in her stall; as she appeared in the ring she is a nicely marked bitch, with a fair head, a little off in muzzle and ears, good body, legs and feet. Lady Una and Monopole, both hc., are nearly opposite in appearance. Lady is of good size, not very symmetrical, and her badly set ears detract much from her appearance. Monopole shows considerable quality, but lacks substance all through. Lucy, c., won in the puppy class four years ago, but she is far from being a winner now. Empress, also a former winner, was unnoticed. With the exception of Lady St. Gothard, the winner in the bitch puppy class, the youngsters were an ordinary lot. The winning dog is promising, but his place is in the smooth-coated class. Lady St. Gothard has a good head with very nice ears that are well carried; she is of good color and markings and will do to show again.

The smooth-coated division was the best we have seen. Hector came out strong this year, and not only beat the Victor of last year but Beauchamp, who also beat Victor as well. Hector was in capital form, his coat fairly shone, his flesh was hard and his muscles well developed; we have never seen him looking better. Second went to Beauchamp, also looking well. Victor Joseph was well shown, his too abundant coat is against him, and unless he can catch his competitors when out of condition as he did last year, he must take a back seat. The small but typical Thisbe was alone in the bitch class. The open dog class was a grand one with 15 entries, all of them with one exception receiving notice. Four money prizes, six vhc., three hc. and one c. card is a showing that the exhibitors may well feel proud of and still more proud that nearly all of them are American bred. Nevis, looking well, had an easy win. Duke of Sparta, a grand young dog, came next; his head is a trifle too long, otherwise it is good. He is of good height with a nice body and capital legs and feet. His coat is a trifle too long. Parson, placed third, was not up to the others. He is the only foreigner that got into the money. He is good in body, legs and feet, but is somewhat bony in head and long in coat. Fourth went to Earl, a big rather coarse dog, good in skull and body and straight on his legs. His eyes and ears are not right. Nigel, reserve, won second at Philadelphia last year. He was well shown. The remainder that secured cards were just a fair lot with nothing remarkably good or bad among them. The bitch class had seven entries, all bred in this country and all secured notice with but one below the three letters and that one the winner of third here in 1888. All are well-known with the exception of Cleopatra the winner. She is a capital bitch with good head, muzzle of good depth, good body and coat, and with considerable quality. She lacks face markings and her eyes could be improved. The puppies as seen in the ring appeared to be a very much better lot than those in the rough-coated division. The winner in the dog class

is a very promising one with a good head and nice, deep muzzle. He will probably be heard from again if he goes all right. The same may be said of the winning bitch except that she is not quite up to the dog in head and muzzle. Many of the others looked well, but some of them were taken home before we had time to examine them. In the novice class all that received notice were in the other classes with the exception of Pilgrim, the winner of second. He is a fair dog with good muzzle, plenty of substance, good body and legs. He lacks dark face markings and his ears are not quite right. There were three berghunde entered in this class, two of them were not for competition, and the other one, Nero, did not compete.

BLOODHOUNDS—(MR. JOHN DAVIDSON).

Brough & Winchell won first in both bloodhound classes. Behliss is deficient in wrinkle and Judith is flat-sided. Wamba we could not find anywhere.

NEWFOUNDLANDS—(MR. F. R. MAYHEW).

The presence of Lord Nelson gave Mr. Mayhew an easy introduction to his judicial work. The dog need not be described as he is well-known. Caro, unnoticed, should have been put in front of the sour-headed Sailor Lad. Spring-side Lass, Albany Lass and Prince Hall are promising puppies, with the right sort of coat. Bruno is curly.

GREAT DANES—(MR. F. R. MAYHEW).

Twenty-five dogs and nine bitches made up the best classes as to the number and quality ever seen here, Welz & Zervack making thirteen entries alone. When an owner has to carry a carriage whip to keep order among his great Danes the unarmed reporter may be forgiven for declining for being too inquisitive about these dogs. For that reason our notes are not as full as we would wish. Mr. Mayhew had to judge the dog class by installments, it being too risky as well as impossible, to have so many dogs in the ring at once. Notwithstanding this drawback he placed them very well. In a large number of cases straight hind-legs were noticeable, and one or two otherwise good specimens were put back for having lost a joint or two off the tail. The winner, Pascha, is a well-built dog, but he has a morose expression and is wide in skull, as is also the second, Duldun, who fails in head qualities as well. Turk was better in head than either of those placed ahead of him, but was not in good condition. Great Caesar is a grand fronted dog, head and expression excellent. If he had not been stilty behind he would have beaten the lot, and as it was he might well have been placed higher. He is also throaty. The remainder of the noticed dogs were all fair specimens. The bitches were a very nice lot and we fully expected to see Lucy given the blue, but Mr. Mayhew pegged her back for having a bit off her tail. Irene, the winner, is a very clean, well-built bitch, of a taking blue and white color. Flora was shown too fat and Bella was lucky to get her place, being wrong at both ends.

DEERHOUNDS—(MR. JOHN DAVIDSON).

Chieftain still wears wonderfully well and beat Clansman fairly for challenge honors, Ramona doing the same to Wanda in the bitch class. Only two in open dog class. Highland Warrior, heavy ears, flat-sided, a washy dog; and Argyle, weak-faced and overshot, but better in build and coat than the winner. Olga we should have placed first in bitches, being a truer made one than either of the Hillside entries. Lorna Secunda is a peculiar color, being grizzle in top coat and orange brindles below, the latter showing through here and there.

GREYHOUNDS—(MR. JOHN DAVIDSON).

In challenge dogs, Balkis first, Highland Chief second. Correct. Both in good condition. Cassandra alone in bitches. Open dogs. The Scavenger, first, heavy shoulders and a short neck are conspicuous faults. He was in superb condition. Master Rich, second, smaller than the winner and is also a rich brindle, was in splendid condition, as was also Babazon, third. Douglas Fleming, which the same judge placed first last year over Highland Chief when almost hairless, was this year put back to vhc. He had his coat but was soft. Miss Rare was first in bitches; white with brindle marking, a smart bitch hard pressed by Dora to whom she can give a little in neck. Catch Fly got nothing, evidently a mistake. Second Sight is a neat bitch. Kismet is a neat puppy and won easily. Mr. Huntington was booked as a sure winner of the special with Balkis, Cassandra, Highland Chief and Kismet against Master Rich, Babazon, Miss Rare and Catch Fly, and we did not agree with Mr. Davidson in going for the latter four.

POINTERS—(MR. WISE).

There were 120 entries in the pointer classes, exclusive of the duplicates and those exhibited by the club. Of this number 11 were absentees, making a total of 109 that were shown. Although a number of fine animals were present, the collection as a whole was below the average of past years in point of quality, especially was this apparent in the puppy classes, which were not nearly up to the standard of last year. We could not follow the judge in his decisions, nor account for some of them, except that he may have been somewhat rattled, in which case it is not to be wondered at that he mixed them up. In the challenge class for large dogs Robert le Diable, in capital condition, was placed over Bracket, shown in very bad form. In the bitch class Revel III. was an easy winner, with Golden Rod second. In the open dog class Brake, looking well, was placed over Duke of Vernon. This decision was wrong. Brake is a very nice dog, but Duke is a better one at nearly all points, and he should have been at the head of affairs. He was looking well, except that upon one side of his head there is a spot that is bare of hair, the result of an abscess, but the disfigurement is not a permanent one, and it is not of a nature to seriously affect his chances, as it was well healed and there was no enlargement on the part. Third went to Lord Graphic, a big dog, rather taking looking as we saw him in the ring. He is plain in head, muzzle not square and is too straight behind. We did not have an opportunity to closely examine him. Transit, placed fourth, is not a show dog in any sense of the word, his head is awful, his tail is carried straight in the air and he shows no pointer character. About the worst in the class. Tony White, unnoticed, although not a good one, was so far ahead of Transit that there is no comparison between them. There were several cards distributed, but some of the animals we failed to find in their stalls and cannot describe them. Nick of Beaufort is long cast, not square in muzzle, weak in back and a bad mover; not so good as Beaufort H., hc., well known. In the bitch class Queen and Woolton Game were absent and Belle Randolph, looking well, was placed at the head of affairs, with Lafford Pearl second. Third went to Cicely, a fair looking bitch, too shallow in chest and light in bone. Meally's Baby was placed fourth. She is better than Cicely, but was badly shown. Devonshire Countess, hc., was looking fairly well and she should have been higher up. Lady Snow received a commended card. She was just about good enough in this company for third place. In the challenge classes for the light weights, Duke of Hessen and Queen Fan were alone and won in their respective classes. The open dog class brought back to life Pommery Sec, who has not been seen in public for some time. He was in the very pink of condition and was placed first. He has grown wide in front and stands with his forefeet much too close together. Glamorgan, placed second, is plain in head, lacks stop and is wrong in shoulders. He has a fair body and good legs and feet. Ossining, third, is weak in head and not first-class in feet. His chest, loin and legs are good. Freedom, placed fourth, was the best in the class, but was not in good condition. We failed to

find King of Naso, vhc. Launcelot also was not at the show. Joy, Jr., the winner of second in the E. F. T. Derby, was also vhc. He was looking well and should have exchanged places with the winner of third, as he is better in head and much better in feet and nearly as good at other points. Naso Peshall, unnoticed, was looking well; he is also a better dog than Ossining. Forest King, also unnoticed, was well shown. He is nearly, if not quite up to the winners. Hickory's Staunch, unnoticed, was worth a card. In the bitch class, Merry Legs was placed first; she is pretty and was in beautiful condition, which were her best points. Her head lacks character, muzzle not square, shoulders wrong, wide in front and too straight behind. She would have been perfectly satisfied with a card. Sally Brass II. was looking well and deserved first instead of second. Third went to Lady Tammany; she was well shown. Miss Freedom, placed fourth, is quite a nice little bitch, with a fair head, good shoulders, loin, legs and feet; just about good enough for second place. There were a number in this class that we did not find in the stalls, but as we saw them in the ring, we thought it much the best in quality of any and there were several that were not noticed that looked worth cards. The winning dog puppy is quite promising. He has a fair head, good chest, legs and feet, he is a trifle too long in coupling and a bit coarse. The winning bitch is from the same litter. She also has a fair head, capital loin and good legs and feet and if she does not grow wide in front she will do to show again.

ENGLISH SETTERS—(MR. DAVIDSON).

What is the matter with the English setter? This question we have often heard in the past two years, but during the show it appeared to be in the mouth of every one, and no one seemed to be able to give a satisfactory reply. That the question is most pertinent, to bench show managers at least, is conclusively proved by a glance at the catalogue. Seventy-four entries, with nine of them duplicates, leaves a total of sixty-five, just about one-half the average number for the thirteen previous shows, with scarcely a new face worth looking at in the list. Is it possible that the bench show setter is going, as some would have us believe? There is an effort being made to form a setter club, and if the proper men are placed at the head of affairs it is possible that this very serious question may be solved and a remedy applied before the bench show setter becomes extinct. In the challenge classes Mr. Windholz, with his handsome string of four, as usual, captured all the prizes. The dogs were not in their usual show condition, but were greatly improved over their form at Lexington in December. Monk of Furness, not at his best, won in the open dog class. He is a grand dog to look at, but he does not move at all well, as his tied-up shoulders prevent that free action so necessary for a long and easy stride. Sir Tatton was entered in this class, and the meeting of the two English cracks was awaited with much interest; but Sir Tatton showed a little skin trouble and was not allowed to compete. There were quite a number of others that were about as badly off as he, on the third day at least, whatever their condition may have been when admitted. We presume that the heat of the room, which was much too great, may have had something to do with this. Roger, winner of second here last year, but better known as a field trial winner, was again second, with Kent II. and Royal Kent, both well known, respectively third and fourth, and Cincinnati, another field trial winner, was given the reserve card. The well-known Chance was entered, but he did not put in an appearance. Several cards were distributed, but we failed to find among the recipients anything much above the average. In the bitch class first went to Stray Shot. "Uncle John" rarely makes a mistake in placing English setters. Last year he gave Stray Shot an hc. card, and scored a bullseye, but this year the shot was in rifle parlance an "unaccountable." She is a nicely-made little bitch, with a beautiful coat that has greatly improved since last year. She has a pretty but weak head, that is spoiled by a wild-looking eye, that alone should keep her out of the money. Had she been given the three letters, and the others moved up in regular order, the slate would have been not far out of the way. The puppies we did not have an opportunity to examine closely, and only saw them in the ring, as many of them were absent when we went to their stalls. All of the winners in the novice class were entered in the regular classes.

IRISH SETTERS—(MR. DAVIDSON).

The entries in the Irish setter classes were the same in number as the English, and like them there were but few new faces in the open classes that were good enough to get into the money. There were six in the challenge class for dogs. Dick Swiveller, in the very best of condition, was awarded the prize. Although he is greatly improved since last year he is not good enough behind to beat Tim, even in the rather bad condition in which he was shown. Tim was given second and Blarney the reserve card. In the bitch class Laura B. scored another win. She was in splendid condition, although her being in whelp detracted from her appearance. Nellie made a good second, and the reserve card went to Yoube. Mollie Baya was but the wreck of the beautiful bitch that two years ago was champion at New York, Philadelphia and Newark; she should not have been shown. The open dog class was not an even looking lot, as several different types were represented. The winner turned up in Glangarry, a large good-looking dog, with a rather heavy head, a nasty light-colored eye, fair shoulders, good chest, body, loin, legs and feet. He is too straight behind, his elbows are a trifle in, and as a natural consequence he moves badly. It was as good as a play to see Joe Lewis handle Darby II. Lewis is very quiet, unostentatious and innocent in appearance, but he sometimes gets there, all the same, and he knows how to show the best points of his dog as well as any one. Now, Darby is an excellent dog broadside on, but otherwise he is all wrong, unless he is properly handled, as he was in this case, and lauded a winner of second place. He is rather small, but of good color and quite a handsome dog. His head is pretty but a trifle short. His shoulders are very badly placed, which throws out his elbows, and when he stands natural his toes are very nearly together. Larry S., well-known, was placed third; he was looking well. Ned, also well-known and in good condition, was fourth. Reserve went to Sunset. He was in good condition and should have won. He is better in head, eyes, ears, chest, bone and color than the winner, but is not quite his equal in quarters; he is fully up to him in loin, legs and feet, and is incomparably the best mover. With Sunset first, Glangarry second, Larry S. third, and Ned fourth, the prizes would have been well placed. In the bitch class first went to Ruby Glenmore; she was looking fairly well and had an easy win. Grace, winner of second, we failed to find in her stall. Vida, third, has a fair head, good legs and feet, and is fairly good in chest and loin. Fourth went to Bessie Glencho, looking well, and the reserve card to Elsie II., the winning puppy here last year. Ruby Glencho and Irene, both well-known, were vhc. The latter was heavy in whelp and did not show up at all well. Kate IX., unnoticed, is a pretty little bitch of good color and with no serious faults; she would not have disgraced the three letters. The winning dog puppies all look promising, but Irish setter puppies are very uncertain animals to hazard an opinion upon as to their future looks. Darrah Pat, winner in the novice class, is a very good-looking dog of nice color, he stands too high behind.

GORDON SETTERS—(DR. H. CLAY GLOVER).

The Specialty Club, that has in charge the interests of this breed, has adopted the title of The Gordon Setter Club of America, and we are informed that harmony now pervades the ranks of its members. This will be welcome news to

the lovers of this handsome breed, and we have no doubt that with harmonious action, seconded by judicious breeding, the club will at no distant day succeed in its cherished purpose, and that we shall soon see the Gordon setter in a better position than he is at the present day. The entries were not so numerous as those of past years, and as was the case with the English and Irish classes, not many new ones came to the front, and as a whole they were not a good lot. Dr. Glover, although laboring under the disadvantage of a very bad light in which to examine a breed of this color, got through his classes in a very satisfactory manner. Difference of opinion will always exist among experts as well as amateurs, but so long as no serious blunders are committed these differences should in a great measure be overlooked, or at least be discussed in a sensible manner, and in no case should they be allowed to make mortal foes of rational men. The question of type has in the past been the "burning question" among fanciers of this breed, and it is sincerely to be hoped that the members of the club are now as one on this vexed question and that the association may prosper, and by a judicious course bring out a better lot of dogs than we have been accustomed to see in the past. In the challenge dog class Beaumont, looking well, was placed over Little Boy, who was not quite at his best. In the bitch class Belmont was no trouble in beating Becky Sharp. Reserve went to the pretty little Madge, too tight in bone and weak in forelegs to get higher in this company. Roxie was not for competition. In the open class for dogs Dixon, the winner at Philadelphia last year, was placed at the head of affairs. We do not like his rather pointed muzzle nor straight hindlegs; otherwise he is good and a very taking looking dog. Second went to King Item, the winning puppy at Philadelphia last year. He has improved considerably, but not enough to make him a good one; his head is good and that is about all that we can say in his favor; he is shallow in chest, low at shoulder, weak behind and a very bad mover. Zango, placed third, is a much better dog at every point except in head, which is heavy and coarse, his body, chest, legs and feet are good and he moves very nicely. Tyras, placed fourth, also beats the winner of second at nearly all points; he has a good head, nice color and markings; he is too cobby and straight behind. There was nothing else in the class remarkably good. Jessie, with her good head, body, legs and feet and nice color, won in the bitch class, with Countess Roxie second. This is quite a fair looking bitch with wretched shoulders. Vic III., placed third, is a well made bitch, off in head and poor in tan. Fourth went to Countess Flo, good in head and color; she is too light, and her shoulders and forelegs are not just the thing. A poor class. The two dog puppies do not give much promise of future usefulness on the bench. The winning bitch puppy is quite young, she is well formed, well marked and very promising. In the novice class first went to Chandos, a big rather good looking dog, coarse in head, with good legs and feet. The others were entered in the regular classes.

FOXHOUNDS—(MR. DAVIDSON).

The foxhounds were a grand pack of sixteen, with not a bad one in the lot, and the display of shoulders, legs and feet was a study well worth the attention of the breeder. We did not critically examine the individual specimens, but have no hesitation in saying that a better and more sorry pack has never been seen at New York.

SPANIELS—(MR. A. C. WILMERDING).

Mr. Wilmerding must have felt exceedingly gratified with the support he received from the spaniel men, the entry being 120 all told. His work was done carefully and systematically, and was the subject of as little criticism as that of any judge. He began with the Irishmen, about which there could be but one opinion as to first—Patsy O'Connor, who, although not a first-rater, made a show of Countess of Bendigo and Capt. Muldoon. Clumbers led off with Boss III., and after him five it required a good deal of imagination to believe belonged to the same breed. Boss III. is the best headed Clumber we have seen for a long time, and Messrs. Bates & Geddes are to be congratulated on this acquisition to their kennels. In champion field spaniels Newton Abbott Don beat his kennel companion N. A. Laddie very easily. They are too well known to criticize. A new dog, Baron, was away out in front in the black dog dog class. He is a high-class dog—good head, ears neatly set on and well feathered; wonderful substance, excellent legs and feet, and true carriage of stern. Bolus, second, is thick and short in head, and his ears are set on too high; fair in body and legs. Compton Brigand is a plain dog, sadly deficient in coat. Darkness had a clean win in black bitches and the class was exceedingly well handled. Liver dogs found Newton Abbott Skipper at the post of honor, to which he was fully entitled. Don II., second, fails in head, is flat-sided and high on the leg. Napoleon, third, was off his bench when we visited it. The only other class was below the average. Newton Abbott Valor is an immature puppy, and it is guesswork to say how he will go. N. A. Torso has a little tan on his left foreleg feather and at vent, and it is a stretch to consider him "other than black and liver." Adonis is not a good field spaniel as they go nowadays. Mr. Bush should get a better one.

The much-discussed Jersey led off with a win in the challenge cocker dogs. Mr. Willey had him in excellent condition. Doc was not for competition, and Hornell Silk is showing his age. Spaniel breeders are missing it in not using this dog more. He is a son of English Obo, and though curly in coat gets straight-coated ones, as witness Bene Silk and other good winners, including the best cocker in the show at Buffalo. This same Bene Silk we think should have beaten Dolly Obo in challenge bitches. Dolly was not in show condition, her coat being lustreless, while Bene Silk shone like burnished steel. We also like the latter's head, Dolly Obo being stumpy in head. Rabbi, first in open dogs, was in grand shape. He is thick and short in head like a good many of the Obos, but he is excellent in body and has good legs. Nebo, second, we did not fancy at all; ears small and set on high, hollow back and legs not straight enough. Black Duke would not show himself off for us, but he seemed decidedly better than Nebo, while we certainly liked Young Doc, notwithstanding he is a shade weak in muzzle—he will improve there. He is nice in body, good coat, ears set on properly and true spaniel action of stern. Brush has his ears a trifle high, but is a good cocker. Piccolo is high on the leg and small in bone. Bessie Beard won in black bitches. We like her very much, and endorse the decision. Novel is a nice-bodied little bitch, a little short in head, and fairly beat Bessie W. for second. Marguerite is strong in head; Woodland Sally a little too long and flat in ribs; Lady Nebo, light bone, a nice-shaped body; Perhaps, long in coupling and crooked in front. Brantford Red Jacket was one of the spaniel sensations. He is a mighty smart little dog, and yet we could not altogether take to him. He looked too much like a terrier in his style and action to be true to cocker type. In color he is a chestnut red, his ears are a trifle too high, is a little slack in barrel and carries his stern gaily. He won in this class without difficulty. Cherry Boy we could not find. Red Doc has been described, as have most of the dogs noticed. Tory has a few tan hairs on forelegs and vent; we would not have noticed him in this class. La Tosca, first in bitches, is very hard to beat in body, legs and feet. Her expression is spoilt by a hollow between the eyes. Luna we could not fancy for second. She is badly out at elbows, hollow backed, high tail, coat short and in bad order. King Pharo's Sister C. carries her ears badly and is too small. Juliette we fancied for second place—a nice little black and white and ticked cocker, good head and true spaniel eyes and ears.

Pansy W. is another of the off-colored blacks. To go through the puppy and novice classes would be but a repetition of what has already been said, there being so many duplicate entries.

CHESAPEAKE BAY DOGS—(MR. HECKSHEER).

The display of this breed was meagre, and the specimens shown were not in good condition. There were no entries in the dog class, and but four in the bitch class, the well-known Romp being absent. Polly, the winner of second here last year, was placed in the same position this year, first being withheld. Lady, the winner of first last year, has gone the wrong way and could only secure a vhc. card.

COLLIES—(MR. SHOTWELL).

Without any hesitation we can emphatically assert that the collies surpassed anything hitherto seen at an American show, and the advance made since last year's display at Madison Square Garden was simply astounding. It was no easy task Mr. Shotwell had undertaken in accepting the position as collie judge, and in addition to have so many exceptionally good dogs and all new faces to deal with, he still further handicapped himself by keeping his ring crowded instead of weeding out the inferior dogs. He then began by placing his winners before making a thorough canvass of those which did not impress him so much at first, which is a bad plan, it being much safer to work from commended upward. Though the way of beginning at the first prize winner and going down the scale, and also keeping a crowded ring, will account for some of the errors made by Mr. Shotwell, yet it in no sense absolves him from placing Charon second in the open dogs, Sky Pilot at the head of the bitches, or putting Scotilla over Flurry II. for the President's cup. He passed these dogs under a critical examination, and his placing them as he did is simply unaccountable. In the challenge dog class Scotilla beat Charleroi II. If the latter could only grow a coat such as we are told he had in England, his grand collie character would more than counterbalance what he loses to Scotilla in his failing to carry his ears up. Robin Adair was not for competition and Clipper was absent. In challenge bitches Flurry II. beat her daughter Flurry III., and there was no error in that award. The open dog class was a scorcher and no mistake, there being over thirty dogs led in for the four prizes. First went to Roslyn Wilkes, a son of Scotilla and Bertha. This dog's head and expression is a picture, the white hairs on his blazed face running into the sable and adding much toward the lovely expression. His ears are small, well-carried; he has good legs and feet, and collie character all over. His coat is not yet out, but he is only a puppy, and he has yet time to improve. What there is of it is right. Charon, second, had no business with anything above hc. at the very best. He is simply a well-grown puppy, but has not a grain of collie character. Third went to Hempstead Zulu, a truly grand dog. He takes looking over, as his color is not exactly pleasing, but to a man who knows a collie this dog will grow on him. He has a long clean cut head, not quite so good in skull as Roslyn Wilkes (who looks the gentleman, while Zulu is the workman). Ears a shade large, but carried high and well clear of the head; good shoulders, legs and feet; a nice length of body and the true collie twist to tail. Will this dog grow a coat? that is the question. What he has is dense and of the right sort, but it ought to be twice as long. We have had no year for growing collie coats, hence it is hard to judge. Richmond came next. He has a sour expression with a wild eye and a smutty face, which only helps to make matters worse. Outside of that he is a well-built dog with a good quality of coat. The reserve was given to Fairlie, who should have been placed before Richmond. He has a real collie "lookout," but he would not show at all well on the chain, which was something new to him. Scotilla II. is a most aptly named dog, for he is Scotilla all over again in general appearance, a trifle larger in size, a little longer in body and more faulty in tail. If Scotilla was properly placed by Mr. Shotwell as the best collie in the show, Scotilla II. was badly used with a vhc. Apart from that consideration we would have placed him third. Roslyn Dandy was entitled to his card, and Heather, unnoticed, was a little dog quite up to hc. form at any rate, and a great deal better than Scot's Guard, who did have that honor. Glenelg, another unnoticed dog, was certainly entitled to vhc., barring his slight roundness of skull and full eye there is little fault to find with him. In the next pen was Strathmore Ben, and it looked strange to see him with hc. and Glenelg with nothing. Roderick is not a taking dog in color, his ears are heavy in leather, but well carried; head of good length, but lacking in expression. Maxwell was another overlooked one; he could be improved in head, but in body, style and coat he is really good. Boskie is weedy. Lotbion Guard, considering that he was all out of condition from distemper, was given too much with vhc. In the best of condition it is as much as he could get in such company. Surbiton got nothing at all; surely he was worth mentioning, and here is another one, Eugenie. Admitting that the latter is a little strong in head and was shown too fat, he is a collie from tip to tip. Orange Jim has a liver-colored nose. Prince Charlie is wide, though flat in skull, has a good lively expression and is taking in color, a dog of good size, needing more depth of chest.

There were a dozen better bitches than Sky Pilot, who should never have got first prize. She is plain in face, too full in eye, and has a brow. Her coat looked all right, but there was no under coat whatever. Zulu Princess II., being placed second, was equally faulty. She was not even a good puppy last year, and is not as good now as she was then. The two best bitches in the class were Bonnie's Baby, third, and Roslyn Clara, vhc., and for third place we picked out Cora II. Bonnie's Baby is a little better in head and expression than Roslyn Clara, but it is a close thing between them. Cora II., if as good in head as the other two, would smother them, for behind the head she was probably the best bitch in the show. Jeannette, fourth, has a fair head and ears, a nice quality of coat and good understanding, she was entitled to her position. Hebe of Nessel Doon is a black and tan with a lot of quality, and her vhc. was well earned, but Orange Girl is far too light in bone and weedy for an equal distinction. Hero's ears were in bad condition and she is yet short of coat, but she shows good breeding and was properly recognized with three letters. Mermaid is already getting thick in head, but she is good in ears, has excellent legs and feet, and a perfect quality of coat. Norma is a weak-muzzled toy. We could not see anything about Cressy's Mint which called for hc.

The Hempstead Farm Kennels showed several very nice dogs, of which Hempstead Ben was placed first, a most promising youngster as to size and character, ears though a shade large and well carried. His trouble is likely to be in coat, which at present is open and curly behind the saddle. Second to Charon, already described and who should not have been placed. This would have let in Fairlie for second and the third best was Lord Fauntleroy, a black and tan with white markings, good in head and character, nice size and excellent coat, but lacking in carriage of ears. Climax, reserve, is a litter brother to Charon, and like him wrong in head. He was well shown and has good coat and size. Our notes as to Roslyn Exile seem a little mixed and we cannot call the dog to mind. In bitches Bonnie's Baby was properly first. Thistle Blossom, second, we thought was lucky. Roslyn Parole, reserve, beating her so decidedly in ears. Parole is weak-faced at present. Brenda is never likely to be placed higher than here, where she got third, for she is already strong in head for an eight months puppy. The best of the Hempsteads was Mona, unnoticed, she being a much nicer puppy than either Maid or Lorna. Busy wants time; she is a big bitch with good length of head, but rather

heavy in ears. Lillian Redgauntlet also needs time, but she looks like training on into a nice one, and her faultless ears both as to size and carriage will always tell with a good judge. As it was, we preferred her to Brenda, and the question of place should have been between her and Roslyn Parole. Lady Meg deserved her card, but Fanny did not, while Miss Nancy is spoilt by a sour expression.

Nearly all the Novice Class candidates have already passed under notice. Placing Hempstead Ben over Roslyn Wilkes in the dog class virtually decided the destination of the Collie Club trophy and the club stakes, but it was a grievous mistake and impossible to account for in any way. No person could be more surprised than the Hempstead Farm people; their entries proved this, for if they had any notion that Ben could compare with their Zulu he would have been entered in the open dog class. Ben is a good dog, but when placed against Wilkes he isn't in it, that's all. Phil, vhc., is a plain dog, not particularly noticeable except for condition. In Novice bitches, Roslyn Flirt should have been second. The smooth-coats were better than usual, and properly placed as to first and second, but Ladybird, should have been third.

POODLES—(MR. HECKSHEER).

There were twenty entries in the poodle classes, four more than last year. Mr. Sanford's trio, Styx, Brigand and Marquis, had it all their own way in the class for black dogs. The bitch class was a poor one, and the judge very properly withheld first and second prizes, giving third to just a fair-looking one that may do better next year. There was but one to show up in the other than black class, a very poor specimen that the judge kindly gave hc. Floquet was entered, and showed up the next day looking good enough to win, but too late.

(BULLDOGS—MR. PORTER).

Rabagas and Portswood Tiger was the order in the challenge dog class, with Britonartus alone in the bitch class. The open dog class brought a grand one in Harper, the English crack. He arrived the day previous to the judging, and was soft and light in flesh; he is a bit plain in face and a trifle small in skull, but otherwise he is remarkably good; he has plenty of bone, is well out at elbows, and has the best bulldog gait that we have seen in a long time. Second went to Monarch VI. He was in excellent condition, which accounts for his greatly improved appearance. Third went to Joker, a fairly good native; he is domed in skull and lacking in muscle. Dimple, first in the bitch class, is a light-weight and a very good one, with lots of bulldog character. Naiad, placed second, is plain in head but otherwise good; she has plenty of bone, is well out at elbows and was well shown. Third went to the well known Thespian, not in good condition. Bess, reserve, is not a show animal; weak and pinched in muzzle and heavy behind are serious defects. First in the puppy class was withheld, and second given to Badajos. A slight change in name would just cover the case, his worst fault is bad jaws.

BULL-TERRIERS—(MR. PORTER).

There were no entries in the challenge class for dogs. In the bitch class Starlight had no trouble in defeating Royal Rose. The latter has grown lippy and was badly shown. In the open class for large dogs Spotless Prince had an easy win. He is a capital dog, a bit heavy in head and long in back and tail, and was badly shown. Don Pedro, placed second, was looking well. Briton, third, is a very nice dog, good body and legs; a trifle cheeky and weak in muzzle, otherwise he is a better specimen than Don Pedro. The bitch class brought out a rare good one in Queen Bendigo. With the exception of too much stop, which is all wrong in a Bull-terrier, she is almost perfection, and just about good enough to win the special which went to Spotless Prince. Second went to Rose, quite a good bitch except that she is cheeky and too light in eyes. Enterprize, placed third, is well known. White Rose II. was given hc. She is too cheeky, full in eyes and light in bone for the show bench. The light-weight dog class was small, but a very warm one. Dusty Miller, placed first, is a very nice dog, but he is too weak in muzzle, full in eyes and light in bone to be placed over the second prize winner Chesset's Flyer, a grand dog all through, better in head, body and bone than Dusty Miller, but not quite so good as he in tail. Dick, placed third, is a little fellow with lots of terrier character, a weak muzzle is his worst fault. The bitches were not so good as the dogs. Grand Duchess, well known and looking well, had an easy win. Luce, placed second, is a fair bitch, not shown in first-class condition. Snow Queen, third, is not a show bitch. The winning puppy is quite a fair specimen with a good coat and plenty of bone. He is a trifle weak in muzzle and was shown too fat.

BASSET HOUNDS—(MR. PORTER).

There were eight entries in this class, with the well-known Canace absent. This class was the largest that has ever been seen here, and the quality was fair. First went to the well-known Bertrand, shown too fat. Mr. Gilbert also showed two of the get of the old dog, but they are not up to his form. We thought Mauprat, unnoticed, should have been in the money, as he is a well made dog with lots of character, but an examination showed that he knuckles over on one leg and is overshot.

DACHSHUNDE—(MR. PORTER).

There was nothing new in the dachshund classes that was able to compete with the winners last year, which were nearly all present. Rubenstein scored his first win in the challenge class, and Superbus II. that was second to him last year in the open class, had no trouble in securing first this year. Thelma, the winning bitch last year in both open and puppy classes, was first in the bitch class. She has improved in chest and substance, but is deficient in crook. Bessie K., placed second, is rather promising. She was the only puppy shown.

BEAGLES—(MR. SCHELLHASS).

There were thirty-six entries in the beagle classes with two absentees, making the largest showing of this breed that has ever been seen here. The number of entries has never been equaled but once, and that was nine years ago, but at that show there were a large number of absentees. Mr. Schellhass is a very careful and painstaking judge, and he worked hard to get them right, but we regret to say that his success was not commensurate with his efforts.

In the challenge dog class Storm was somehow gotten under the 15in. standard and given first. We have measured this dog more than once, but never succeeded in catching him when he was quite down to the 15in. mark. The principal dogs in all the classes have been so often described in these columns that it is unnecessary to repeat the criticisms. We found nothing new worthy especial mention except the winner in the "under 13in. class," Blue Belle II., one of the sweetest little bitches we have seen for a long time. She was shown too fat and soft. We also found in the puppy class that Lord Fauntleroy is a female, a state of affairs that has long been suspected, but is now verified and made public for the first time.

FOX-TERRIERS—(MR. FRED. HOEY).

Lucifer was not for competition. Mr. Belmont relying upon Dusky Trap and Blanton Rubicon to do the work in challenge dogs. They did so, but not justly, for to our mind Baby Mixer was a clear winner. Heald showed Mr. Thayer's dog in the perfection of condition. We never saw him looking better. His face is cleaner cut than it looked before and he looks a terrier. He should have won. Dusky Trap was light, he lacks bone and substance, is slack in loin, feet bad and a poor set of tail. Rubicon was also shown a little light. His skull is not right and he is too

strong in muzzle. Rachel, New Forest Ethel and Diana was the order, correctly, in challenge bitches. The Messrs. Rutherford led off in open dogs with the beautiful Raffle. He only wants a little more size to be of the highest order. Blenton Volunteer, second, is fair in head, good terrier expression somewhat spoiled by his markings, coat bad. Warren Bluffer third, weak in muzzle, lacks substance. Blenton Trump has gone plain and fails to realize his promise of last spring. He was placed too high in this class. Reckoner should really be retired. He has done duty enough on the bench and has no chance at his age to get to the top of a good class. Hillside Dandy is another of last year's good ones gone wrong. He is now very cloddy. Warren Bombast has good bone and substance, but is high on the legs, not clean in throat and ears set wide.

Blenton Consequence and Blenton Brilliant were first and second in bitches. The former has seen her best day, having gone off a good deal since she was out last. She needs size and is failing in front. Brilliant is of nice size, but plain in head and expression. We did not fancy her for the place. Richmond Dazzle, third, is the one we spotted for first place. She is a beautifully shaped bitch of the right size, has plenty of substance and a rare made one behind. The same owner's Rosa Canina is small and her face is not right. Blenton Enid has a good coat and taking expression, but she is small in head. Princess has terrier expression, nice head, ears good, bad in front but good behind. Hillside Model and Hillside Freda are not flyers. Warren Jasmine is another Diana in head and expression, lacks size, but has plenty of bone and substance. Warren Tease, small head and faulty ears. Suffolk Risk was lucky enough to set his poor ear right when he went into the ring and he kept it right, consequently he won. He is plainish in face, the markings being one-sided, good in bone and front, wants letting down, very nice in outline. Blenton Racket, second, is a nice topped dog with good bone, but is spoiled by a very plain face. Warren Laird, third, is a rare little terrier, good head and front, plenty of bone, nice face, ears and expression. Warren Sabre is a little domed in skull, carried his ears badly and was shown too fat; good bone and substance. In the bitch class Blenton Enid, already noticed, was first. Blenton Toil, second, carries her ears badly, feet open, was shown too heavy, has good bone. Blenton Edna, head too small, off in ears, good bone, excellent legs and feet, nice topped bitch. Suffolk Rarity, good body, weak in face, not enough of her and not likely to be.

WIRE-HAIRED FOX-TERRIERS.—(MR. R. F. MAYHEW).

Suffolk Toby was placed first of the four dogs. A good stamp of terrier with grand expression, nice size, plenty of bone, falls away behind. Suffolk Settler lacks character and coat. Billet, short head and legs, soft coat. Cotswold Jocko was sent out for being undershot. Capsicum, first in bitches, is weak-faced and light in bone. Suffolk Vixen is good in shape and legs, but short in head and soft in coat. Latchet is too small. First was withheld in puppies and second given to Locker who is not and never can be a good one.

IRISH TERRIERS.—(MR. R. F. MAYHEW).

The two Irish terrier classes were well handled. With one exception the prize list may be left to speak for itself, there being so many of last year's winners in it. This exception is Breda Florence, the latest importation from Mr. Graham's kennels. Without hesitation we say this is the best of the breed ever shown here. Just the size, grand expression, good color, coat of excellent texture and good legs and feet. She is in whelp, and Mr. Comstock should get some good ones from her.

WELSH TERRIERS.—(MR. MAYHEW).

Which and T'Other occupied their usual positions; both were looking well. Rough, the only other entry, is a descendant of theirs, but is not quite good enough and the third prize was withheld.

SCOTCH TERRIERS.—(MR. MAYHEW).

There were four entries in this class with one absentee. First went to Meadowthorpe Donald, of good type and with a good head, except that the skull is a trifle thick and one ear is carried badly. He has good length of body and a good coat; would do better if shown natural. Our old friend Rosie, looking well except that she shows age, was placed second. Third went to Glencoe, Jr., a nice dog, spoiled for the show bench by a tail that had been docked.

DANDIE DINMONT TERRIERS.—(MR. MAYHEW).

Border Wang in the dog class was placed over Meadowthorpe Reiver. The latter is better in head and fully the equal of Wang in other respects. In the bitch class Border Wonder had an easy win, beating the well-known Pansy at nearly every point except in mouth. There were five Bedingtons shown, Sir George being the only absentee. They were a fair looking lot in the ring and we thought the awards properly placed.

SKYE TERRIERS.—(MR. MAYHEW).

The judge made a mistake in the dog class in placing the two big dogs Sir Stafford and Sir Roger over the typical and good Lovet and Drollie. The latter two should have been first and second, both are good specimens. Sir Stafford is of good type, but much too large, while Sir Roger is not only too large, but all wrong in head and ears. The bitches were properly placed. There were no dogs and but one bitch, a fair specimen, in the drop-eared division.

In the Clydesdales Loris was placed over Lady. The latter is better in ears and shows the most quality and terrier character.

BLACK AND TAN TERRIERS.—(MR. MAYHEW).

The black and tan terriers were the best collection that has yet been seen. In the challenge class, Rochelle Lass was placed over Buffalo General. The latter is growing coarse. In the open dog class, first went to Kaiser, the winner at Toronto last fall; he has a good head and stands well on his legs, but was not in good condition. Rochelle Knickerbocker, placed second; we did not like for the place, he is rather heavy in skull, thick in muzzle, too large eyes and is smutty in markings. Rochelle Oolab, reserve, a much better dog except in ears, was entitled to the place. Dick, placed third, is of good type, but is too large and too wide in front. Meersbrook Maiden, in good form except that she was too fat, was an easy winner in the bitch class, with Desdemona a very easy second. Third went to Rochelle Queen, too coarse for this company.

YORKSHIRE TERRIERS.—(MR. MAYHEW).

The Yorkshires were well represented, and the exhibit was much the best that has yet been seen in this country. Bradford Harry, looking well, was alone in the challenge class. In the open dog class, Mr. Symonds's recent importation, Fishpool Gem, won easily. He is a very nice little dog with good coat and color, except that he is somewhat deficient in tan on head. Second went to Toon's Royal, that was third at Boston last year. Prince Al, placed third, is a nice little dog off in color. Little Swell II, reserve, is also a well made one a trifle dark in color, but with a good coat. We thought the last two rather uncomfortably pressed by the nicely formed Lancashire Ben with his beautiful coat. The bitches were just a fair lot and not up to the dogs in coat or color. In the toy terrier class first and second went to two rather moderate specimens of the black and tan.

PUGS.—(MISS WHITNEY).

There were forty-two entries in the pug classes, a number that has been exceeded here but once. The quality, except in the puppy class, was very good indeed, and taken as a whole the exhibit was the best ever seen in this country. Kash and Dude met in the challenge class and were given

equal first. Dude did not show at all well, as the ring was very dirty, and he appeared to be afraid to move, while Kash showed up well. Bessie was alone in the bitch class and added another win to her long list. In the open dog class last year's winner, Bob Ivy, had to make room for a better dog, Tim, a very nice little dog with few faults. His skull is not quite large enough and his muzzle is pinched, but aside from these faults he is very nearly perfect and had not much trouble in triumphing over the rest of the class. The former winning, Saxon and Climax had a close race for third place, the former winning. The remainder of the class were all fair specimens and all received mention. The bitches were also good, and every one received a card. Bo Peep II, was placed first, but it was a close thing between her and Myrtle, and we imagine that had the latter shown well the decision would have been reversed. The puppies were just a fair lot. Cashier, the winner, is a very well made dog, with many good points, and is especially good in wrinkle and tail, but he is much too large and coarse, and is somewhat smutty in color.

TOY SPANIELS.—(MR. MAYHEW).

In the challenge class for toys, Roscius and King's Victor were placed in the order named, both looking very well. Romeo, placed first in the class for King Charles, was the best of a poor lot. Rex was absent in the Blenheim class, and Grenoble, the only other entry, was given first. He was very lucky in having a lenient judge, as second would have been an ample testimonial to his merit. Sweet Violet, looking very sweet, was at the head of the Prince Charles and Ruby division, with Bell, a moderate one, second. Prince, placed third, we did not see. Three very fair Japanese spaniels were shown. The winner is quite good except in face. In Italian greyhounds the well known Cupid had a very easy win. In the class for Mexican hairless, the judge, who is as well up on the breed as any one, selected Pippo for first place. He is built on fairly good terrier lines, and we are glad to learn that this is the orthodox formation.

MISCELLANEOUS.—(MESSRS. DAVIDSON AND MAYHEW).

The miscellaneous class was composed of big dogs, little dogs, Chihuahua dogs and Schipperkes. In the first division the Barzois dogs, better known as Russian wolfhounds, were well to the front with Ivan Romanoff first, Zerry second and Rival reserve. Ivan was bred by the Czar of Russia and Rival by the Empress of Germany. Mr. Wade is the authority on these dogs in this country, and he should at once sift this matter and inform us whether political bias or sound judgment governed the decision. Meadowthorpe Diamond and Pearl, both retrievers, were respectively third and he in this class. In the class for small dogs the Chihuahua captured everything but third, which went to a Chinese Chow Chow. The Schipperkes had a class to themselves. They are bright, pert-looking little dogs, and from our knowledge of the breed we have no hesitation in saying that the class was remarkably well judged.

SPECIAL PRIZES.

Masteriffs: Kennel, E. H. Moore; Mastiff Club specials, Westminster challenge cup, Melrose Prince; Taunton medal, Mair silver challenge cup for best American-bred, Melrose Prince; dog owned by member, Beaufort; bitch (2), Cambrian Princess. St. Bernard's: Kennel, E. B. Sears; St. Bernard Club special, smooth-coated stud dog, Victor Joseph; rough-coated, Benj. Lombard; American-bred smooth-coated dog over 18 months, Nevie; bitch, Thisbe; dog under 18 months, Mordant; bitch, Italia; rough-coated dog under 18 months, Alciphron; bitch, Zara. Kennel Great Danes, Westminster challenge cup, Kennel deerhounds, J. E. Thayer; brace in open class, Hillside Warden and Theodora. Kennel greyhounds, Rookwood Landseer Greyhound Kennel. Pointer kennel, Hempstead Farm Kennel. Best, Robert Le Diabole with field record, same; stud dog, same, with Glamorgan and Ossington. Kennel English setters, E. Windholz; best, Monk of Furness. Kennel Irish setters, Kildare Kennels. Kennel silver challenge cup for best American-bred, King Item; bitch, Sally Beaumont. Kennel foxhounds, Rockaway Hunt. Kennel Clumber spaniels, Bates and Geddes; American-bred, Queter; puppy, same. Kennel field spaniels, J. P. Wilver. Kennel cocker spaniels, same. Spaniel club sweepstakes: Field spaniels, first, Napoleon; 2d, New York; 3d, Bodo; 4th, Dorothy. Cocker spaniels, 1st, Bessie Beard; 2d, Brantford Red Jack; 3d, Volving Dog. Kennel collies, Chestnut Hill Kennels. Collie Club trophy, Hempstead Ben. President's cup, Scottell Sweepstakes, 1st, Hempstead Ben; 2d, Roslyn Wilkes; 3d, Fairlie; 4th, Busy. Produce stakes, dogs: 1st, Hempstead Ben; 2d, Roslyn Wilkes; 3d, Fairlie. Bitches: 1st, Bonner's Baby; 2d, Busy; 3d, Thistle Blossom. Futurity stakes: 1st, Hempstead Ben; 2d, Roslyn Wilkes; 3d, Fairlie; stud dog, 1st, Benadig; 2d, Scottella. Best poodle, Sir W. Woodcock; Harpor. Best bull-terrier, Spottless Prince. Basset hound, Bertram. Hund, Rubenstein. Kennel beagles, Somerset Kennel; best, Storm; dog owned by member Beagle Club, same; bitch, Belle of Woodbrook. Kennel fox-terriers (2 prizes), Blenton Kennel; brace, Dusk Trap and Rachel; best, Rachel; puppy, Suffolk Risk; bitch, puppy, Belle of Woodbrook. CORRECTIONS.

In mastiff bitches J. L. Winchell's Lady Gladys was 4th. In rough-coated St. Bernard dogs Erminie Kennels' Lysander was 4th; W. V. Porter's Grover, Contocook Kennels' Kastlehorn II, and A. W. Wallack's Ivanhoe were very high com.; G. H. Smith's Major Hector was high com., and J. S. Bache's Bruce II, G. R. J. M. Hyam's Lady Stella was very high com. In bitches com., and P. Schmitt's Lucy was high com. instead of high com. In the dog puppy class Barney was absent. In the bitch class Urd was reserve, and J. F. Hall's Princess Mona was very high com. instead of high com. In the smooth-coated open dog class Nigel was reserve, Albert Philinmon was very high com., L. S. Dillenbeck's Barry was high com., and Westworth Kennels' Prince Wentworth was com. In dog puppies, O. B. Meersbrook's Danger was very high com., and in bitches A. Morey's Psyche and Daphne were high com., and in the novice bitch class Lady Stella was reserve. In great Dane dogs Nero was high com. instead of very high com., E. Kelly's Great Caesar was very high com., and Welz & Zorweck's Caesar II was com., and in the bitch class R. P. Allen's Diana was high com. and T. Honerger's Ulna III was com. In Newfoundland dogs, Marshall's Prince Hal was high com. In deerhound bitches Geo. Sheppard Page's Alida was very high com. In greyhound bitches Miss Rare was 1st instead of Minnie, Woodhaven Kennels' Louise was very high com., and Gipsy was com. instead of high com., and in the puppy class Mrs. Geo. H. Whitehead's Kingfisher was very high com., and Nery's Zazel was com. In large pointer dogs E. R. Bellum's Graham was high com. instead of high com., and J. R. Purcell's Don's Don was com. and in the bitch class Wilms and Vail's Lady Snow was com. instead of Queen, who was absent. In the light-weight dog class Launcelot was absent, and in the bitch class Stratford Kennels' Wanda was high com. instead of J. Gardner's Taffy, and J. R. Purcell's Ion was high com. In dog puppies G. W. Lovell's Beaufort's Lass was 3d, and Hempstead Ben was high com. In the novice class L. A. Bidle's Glamorgan was 1st. In the English setter dog class Cohannet Kennels' Kent II, was 3d, Cincinnati was reserve in the bitch class Pearl Bondhu was reserve, Nahmke Kennels' White Wings was unnoticed, and N. McIntosh's Blue Jennie was very high com.; in dog puppies E. T. Brown's Little Alice was com.; J. W. Collins's Daisy Foreman II was com. in bitch class. In the novice class Gypsy II was high com. instead of Eudora II. In the Irish setter dog class Samuel was reserve, H. B. Goetelius's Chief II was high com. and in the bitch class Elsie II was reserve, Leda Glenchee was unnoticed, Hudson River Kennels' Ruby Glenchee, and J. Douglass's Irene were very high com., and N. McIntosh's Onota Belle, J. F. Wolf, Jr.'s Allen Aroon and M. Flynn, Jr.'s Sedan were high com. In dog puppies C. H. Gallun's Bluff was 3d and Ruby Boy was reserve, and in the bitch class Wichita was reserve. In the novice

class Rye Lilly was reserve. In the Gordon setter challenge bitch class Beaumont Kennels' Madge was reserve instead of Roxie. In the pointer class J. B. Blossom's Gordon was very high com. and H. F. Smith's Grace was high com. In foxhounds Rockaway Hunt's Rascal was 3d instead of com., in black cocker spaniels dogs G. H. Bush's Felix was high com., and in the other-color class Hornell Dick was reserve. In the collie dog class Lothian Guard was unnoticed, H. Johnson's Glenelg was very high com., and Orange Kennels' Orange Tom was com., and J. S. Bacon's Fly and Warren J. Hamilton's Helen Mettregor were com. instead of in puppy class. In bitch puppies Mrs. W. Vardley's Norma was com., and in novice dog class J. A. Haskell's Tyke was high com. In black poodle dogs P. Lawrence's Abel was high com. In bulldog bitches Retnor Kennels' Bess was reserve and J. L. Taitler's Columbine was very high com., instead of in puppies, and J. H. Mathew's Quiberon was high com. in the puppy class. In basset hound dogs M. W. Taylor's Babette was reserve and C. B. Gilbert's Jose and Bud were very high com. and high com. In dachshund bitches Orange Kennels' Kate was 3d. In fox-terrier bitches Blenton Enid was reserve, Princess was very high com., in the dog puppy class Blenton Egbert and Blenton Brawler were very high com. and L. & W. Rutherford's Warden was high com., in the bitch class J. W. Bowen's Special Mixer was high com., in the novice dog class Blenton Brawler was very high com., and in the bitch class J. W. Leveing's Irene was high com. and C. Rathbone's Beverwyck Breeze and J. Mortimer's Incognita were com. In challenge black and tan terriers Rochelle Lass was 1st and Buffalo General 2d. In pug dogs Puck was unnoticed, O. W. Roger's Leo was very high com., and in the bitch class Paquette was very high com. and Mrs. J. F. Campbell's Judy was com.

AMERICAN KENNEL CLUB.

THE regular annual meeting of the American Kennel Club was held at their rooms, No. 44 Broadway, N. Y., Feb. 13. Present: American Pet Dog Club, M. H. Cryer; American Spaniel Club, James Watson; Long Island Live Stock Fair Association, J. Prime; Maryland Kennel Club, H. Malcolm; New England Kennel Club, F. B. Fay; St. Paul (Minn.) Kennel Club, A. D. Lewis; Southern Field Trial Club, James L. Anthony; New Jersey Kennel Club, A. C. Wilmerding; Massachusetts Kennel Club, R. Leslie; Hartford Kennel Club, A. C. Collins.

Mr. Anthony was appointed chairman in the absence of the president and vice-president.

THE CHAIRMAN.—The question is now whether, with the limited number of delegates present, we shall proceed with the meeting or adjourn. As I understand, the American Kennel Club is composed of forty-five clubs, located in all parts of the United States, and, of course, it is impossible to have a majority of those forty-five clubs present at an annual meeting. It has been ruled by the chairman of a former meeting, under the same circumstances, that a majority of those present constituted a quorum. If there is no objection, in order to bring the question before the meeting, I will rule that there is a sufficient number of delegates present to proceed with the business for which this meeting was called. The chair will entertain any appeal from that ruling if it is the desire of any of the members to so appeal.

MR. PRIME.—I move that the former ruling of the chair be accepted for this meeting.

THE CHAIRMAN.—That was my intention. I believe I stated in the first part of my remarks that the chair would sustain that ruling, and would make it the ruling for the meeting to-day, unless there is objection. I don't think it is necessary to offer a resolution. If the question does not come up the chair will not even make a ruling. The secretary will proceed with the business before the house.

The minutes of the last annual meeting were read and approved; on motion of Mr. Watson the reading of the treasurer's report was dispensed with, owing to its publication in the *Gazette*. The report of the Stud Book committee was adopted as follows:

To the American Kennel Club—GENTLEMEN: Your committee begs to report that during the year 1889 it acted upon the most important matters referred to it by the American Kennel Club, and reported its action at the regular meetings of the committee of said club, and by them approved. Several unimportant matters are still in abeyance, and your committee in such cases reports progress. The Stud Book received during the year 4,217 voluntary registrations made up from the following sources: Cash entries, less thirty-five returned as not eligible, 3,912; associate entries, 27; A. K. C. entries under the new rule, 8; total 4,217.

The rule allowing A. K. C. entries to be accepted (without charge) upon application of owners, was rescinded by the committee April 15, 1889, and said action was ratified by the American Kennel Club, May 23, 1889. The copy for Vol. VI. of the Stud Book was delivered to the printers Feb. 1, and the book will be ready for sale and distribution the first part of March next. The delay in publishing Vol. VI. was caused by the great number of entries received during the month of December, amounting to 1,153, the examination and compilation of which, together with the other business of the office, consumed the entire month of January, notwithstanding the employment of additional clerical force. The composition, proof reading, examination by the committees of the specialty clubs, and finally the binding of the volume, were completed from January 16 to the 1st of February. In March it is possible the secretary will forward the book to each associate and subscriber. Respectfully submitted.—THOMAS H. TERRY, A. D. LEWIS, Committee.

The minutes of the annual meeting of associates were read and adopted, as follows:

ANNUAL MEETING OF ASSOCIATE MEMBERS, Feb. 12, 1890, 7 P. M., Dr. Perry presiding.—Dr. Perry addressed the meeting, admonishing the associate members to be more active, to make suggestions and improvements, and thus create a livelier interest in kennel matters. He further stated that, as delegate to the American Kennel Club, he had been most courteously treated, his suggestions and motions favorably considered, and that he was fully convinced of the perfect wisdom of the action in the future would exist and great benefit derived from cooperation. Dr. Perry then resigned the chair to Dr. Meyer. Minutes of the previous meeting accepted as read.

Dr. Perry stated that as the election of officers and delegates of the associate members was not in strict conformity with the constitution, and was therefore illegal, he had refused to open and certify the election. He then asked the question to vote, and it was carried that the action of Dr. Perry was in conformity with the requirements of the constitution and unanimously indorsed by the associate members.

On motion of Mr. Whitman it was carried that a temporary secretary be appointed to ascertain who are eligible for election as officers and delegates, and that he send a list of same to the secretary of the American Kennel Club.

It was resolved that the executive committee of the American Kennel Club be asked by unanimous consent to consent to postponement of the election of officers and delegates to April 10 of current year.

Mr. Watson moved to reconsider last motion. Seconded by Dr. Foote. Carried.

Mr. Watson, seconded by Mr. Goodman, resolved that the executive committee of the American Kennel Club be asked to consent to the postponement of the election of the officers and delegates, and that a correct voting list be sent out on March 26, and to otherwise conform to the constitution regarding counting and announcing of the votes. Carried.

Mr. Vredenburg brought forward a proposition to suggest amendments to the A. K. C. regarding the rules governing associate members.

Motion by Mr. Whitman, seconded by Mr. Goodman, to table the proposition of Mr. Vredenburg. Dr. Foote offered as an amendment that the proposition be taken up section by section. Seconded. Mr. Watson moved as a substitute that the propositions be not entertained. Substitute lost and amendment carried. Section I, Article IV, amended. Section 2, Article IV, amended.

Mr. Watson presiding. On motion of Mr. Huntington it was recommended to the American Kennel Club that the \$100 voted to defray the expenses of the delegates should apply to 1889, and not simply to 1890, as understood by Mr. Vredenburg. Carried.

On motion of Mr. Whitman, Section 3, Article IV, was amended to read "may be" instead of "shall be" dropped.

A special meeting was called for general business for the second day of the Boston dog show.—H. W. HUNTINGTON, Sec'y A. K. C. A. M.

The following are the articles and sections referred to as amended, and notice of the proposed changes is hereby given:

ARTICLE IV., Section 1. Any person vouched for in writing to the secretary of the American Kennel Club by not less than two members of any club, a member of this association, or by two associate members, shall, upon payment of \$5 annual dues, and the indorsement of his application by the president of the American Kennel Club or of the associate members, become an associate member and be announced as such in the next issue of the *Kennel Gazette*.

Section 2. An associate member shall be entitled to the *Kennel Gazette* and Stud Book, and to two free registrations in the Stud Book during the current year, for which his dues are paid.

Section 3. The annual dues of five dollars shall be payable on the 1st of January of each year to the secretary of the American Kennel Club, and any person whose dues are not paid on or before Jan. 20 shall thereby forfeit his right to be included in the list of members eligible for election to office, and to vote for officers for the ensuing year; and if his dues shall remain unpaid at the next annual meeting of the associate members, his name may be stricken from the roll, provided, however, that upon remitting the five dollars dues with an application of membership he shall be reinstated upon the indorsement of his application by the presidents as hereinbefore provided.

MR. WATSON—I move that the American Kennel Club consider the recommendations of the associate members made in the report. Seconded and carried. The recommendations contained in said report were then taken up, read, and severally adopted.

Article IV., with proposed amendments, was then read, and on motion the secretary was instructed to publish them for thirty days in the ordinary form, to be acted upon at the next regular meeting of the American Kennel Club.

MR. WATSON—Referring now to the treasurer's report published in the *Gazette*, I desire to ask one or two questions. I desire to say first I am not asking these questions in a fault-finding way. A number of people have come to me and pointed out certain things, and one point which they have brought forward is one that should be cleared up. I have been informed that between Jan. 1 and Jan. 11 there is something that is not to be published. I don't think there is ever anything done in the American Kennel Club that it would hesitate to have published, and the question is, what happened between Jan. 1 and Jan. 11, if anything, that is to be concealed?

THE CHAIRMAN—I will call on the secretary-treasurer to make that clear.

MR. VREDENBURGH—I am very glad that Mr. Watson has brought this matter up. It gives me an opportunity to flatly contradict rumors that have been put forward, and which are being circulated. The closing of Volume V. of the Stud Book was really the first day of January, but as there were a number of registrations that had come in which were not accompanied with fees, and were otherwise irregular, we did not really close until Jan. 11, and then transferred the account into the new cash book. That is the reason it was Jan. 11 instead of Jan. 1. When the auditing committee, Major Taylor and Mr. Wilmerding, met, it was ascertained that Mr. Fay, who was on the auditing committee, could not be present that day. They were appointed to audit the accounts of 1889 only, but I showed them the books for 1888. They went over those books and they saw exactly the source from whence every dollar came to make the balance on hand that I carried over to the new book on Jan. 11. That committee had a perfect right and opportunity to question anything, if they saw any irregularity or apparent crookedness in the account. If there had been anything of the kind they certainly would have mentioned it in their report, but, as you see, they found that the sources of income were the sources mentioned in the report. They have satisfied themselves that the balance of \$1,228.28 was the legitimate amount on hand when we closed our old books for 1888. They satisfied themselves of that before they touched the accounts for 1889. On the 18th of January, having a special meeting here, Mr. Fay telegraphed that he could not get here, and asked the president to appoint some one in his place. Mr. La Rue, of the Pointer Club, was present, and I, knowing that he was a good book-keeper and a strong personal friend of the gentleman who is circulating these reports, requested Mr. Belmont to appoint him in Mr. Fay's place. He accepted the appointment and spent the balance of the afternoon going over my accounts. He said he was very glad to sign the report of the other two members of the auditing committee.

MR. WATSON—What was the balance that was named that was presented last year?

MR. VREDENBURGH—\$1,624.09. That was the balance on the 20th of February.

MR. WATSON—You published a statement at one time somewhere that you had a balance on hand of \$1,228. Can you tell me where that was?

MR. VREDENBURGH—That was in the February *Gazette* of money received by the American Kennel Club from all sources and of expenses of every description to Feb. 16. Receipts to Jan. 11, 1889, as by balance carried over per new book, \$1,228.28, and then the different sources from which we received money from Jan. 11 to Feb. 16 made \$2,375.

MR. WATSON—I want to know how you bring it up to that point.

MR. VREDENBURGH—Because we had no meeting from Dec. 6, and in the meantime when I closed my books for 1888 and carried over my balance for Jan. 11, the balance happened to be \$1,228.28. Then the following meeting is where I made my report of a balance of \$1,624.09.

The chairman stated that the advisory committee had instructed the secretary to show the books to any person properly authorized to see them, or, in other words, any delegate, it not being necessary for the club even to instruct their delegate, but he wanted it distinctly understood that the books were not open for investigation by the general public or those who have no personal interest in the affairs of the club.

The election of officers now being in order, Mr. Watson nominated Mr. August Belmont, Jr., for president. Mr. Leslie nominated Mr. Thomas H. Terry for vice-president. On motion the secretary was instructed to cast a ballot for Messrs. Belmont and Terry, as president and vice-president, respectively. The secretary proceeded to cast such ballot, and Messrs. Belmont and Terry were declared elected to the offices named.

MR. LESLIE—I move that we now proceed to ballot for members of the advisory committee. The chair appointed Messrs. Wilmerding and Lewis as tellers to receive and count the votes for the members of the advisory committee, who later announced such vote to be as follows: Total number of votes cast 17. For Mr. John S. Wise, 9; for Mr. J. L. Anthony, 7; for Mr. James Watson, 1. On motion of Mr. Watson the election of Messrs. Wise and Anthony was made unanimous.

MR. FAY nominated Messrs. Thomas H. Terry, A. D. Lewis and James Watson as Stud Book committee. On motion the secretary was instructed to cast a ballot for the three gentlemen named as such Stud Book committee. The secretary cast the vote and they were declared elected.

Adjourned. A. P. VREDENBURGH, Sec'y.

MEETING OF THE EXECUTIVE COMMITTEE.

Present: American Pet Dog Club, M. C. Cryer; American Spaniel Club, James Watson; Long Island Live Stock Fair Association, T. Prime; Maryland Kennel Club, H. Malcolm; New England Kennel Club, F. B. Fay; St. Paul (Minn.) Kennel Club, A. D. Lewis; Southern Field Trial Club, J. L. Anthony; New Jersey Kennel Club, A. C. Wilmerding; Massachusetts Kennel Club, R. Leslie; Hartford Kennel Club, A. C. Collins; American English Beagle Club, H. F. Schellhass. Mr. Jas. Watson appointed chairman. The secretary read his report as follows:

FEB. 12, 1890.—To the Delegates of the American Kennel Club: GENTLEMEN—Since my last report I have received applications in

proper form from the Duquesne Kennel Club, of Pittsburgh, Pa.; the Buffalo Kennel Club, of Buffalo, N. Y., and the Kansas City Kennel Club, of Kansas City, Mo. These applicants are eligible to membership, and their admission is respectfully recommended. The secretary of the California Kennel Club, which has been laid over since the September meeting, cannot yet be acted upon, as no official notice has yet been received of the expected amalgamation of that club and the Pacific Kennel Club. The latest communication on the subject was written Dec. 23, 1889, and signed by Mr. J. B. Martin, committee of the California Kennel Club, in which he advises this club that he will inform them immediately when the matter is taken up.

I have a communication from Mr. Otis Fellows requesting that the awards made at the Elmira show, held in September, 1889, be officially recognized by this club, that the entries were made with the understanding that the wins would count, and he respectfully asks for your favorable action. In this connection I would say that the Elmira show was held Sept. 17, 18, 19 and 20, 1889, and it is stated in its catalogue that the judging will commence promptly at 10 o'clock on the morning of the 17th. The club was elected to active membership in the American Kennel Club Sept. 19, 1889, two days after the awards were made, and, while it has been stated in some of the weekly journals that the Elmira awards should have been published in the list of "recognized shows," I beg to submit that I had no authority so to do, and would quote from my report, read at the September meeting, as follows:

Your secretary begs to call your attention to the fact that some of the clubs whose application for membership are now before you, have held their shows since filing such applications, and, if said clubs are admitted, he would respectfully recommend that some action should be taken at this meeting as to whether this association will or will not recognize the awards made at such shows. The secretary of the Elmira Kennel Club has written me, as no official notice of the prizes of the Elmira show has ever reached this office, President Belmont, Jr. suspended all the officers of said club under Rule 23, referring to the application of Rule 25. I duly mailed notices to that effect to Mr. W. C. Hudson, President; B. Gallup, Secretary; and Gen. Amasa J. Parker, Jr. and Robert C. Pruyn, members of the bench show committee.

This matter is now before you, and in accordance with the rules, "The executive committee of the American Kennel Club must, in every case of suspension, at their first meeting thereafter, either remove the same, or impose a penalty of disqualification for such period as they may decide upon."

At our last meeting Mr. Lorenzo Daniels preferred charges against Mr. Wm. Graham, of Belfast, Ireland, but the same were ordered laid upon the table, on the ground that said Daniels had not objected to the club, and that he had not yet had his case considered until he had complied with the decision of the club, rendered in July, 1889. Under date of Jan. 15, 1890, Mr. Daniels inclosed to your secretary a check drawn to the order of the American Kennel Club for \$50.10, being the amount awarded by the advisory committee to Mr. Graham, and requested that his charges against said Graham be taken up by this club and acted upon. Your secretary promptly referred the matter to President Belmont, Jr. for instructions, and under date of Jan. 20, 1890, forwarded me the following communication: "I beg herewith to notify you that in view of the payment to you by Mr. Lorenzo Daniels of \$50.10, being the amount due Mr. Wm. Graham under the decision of the American Kennel Club of July, 1889, the suspension imposed upon Mr. Daniels by the American Kennel Club on Dec. 19, 1889, is hereby removed and action by the American Kennel Club at its next quarterly meeting will be kind enough to hold the amount before paying the same to Mr. Graham until such action as referred to above is taken." A copy of the above notice from President Belmont was duly mailed to both Mr. Daniels and Mr. Graham, and the check was deposited in the bank pending such directions regarding it that you may deem proper to give at this meeting. Respectfully submitted,

A. P. VREDENBURGH, Sec'y.

The treasurer's report was read and adopted, and is as follows:

FEB. 12, 1890.—To the Delegates of the American Kennel Club: GENTLEMEN—In accordance with the resolution adopted at the last meeting, I have prepared my annual report in detail in the *Gazette* of January 12, which fully sets forth the financial condition of this club, and I leave it in your hands without comment for your action in the premises. Since Jan. 1, 1890, I beg to submit the following:

Received from all sources to date.....	\$2,974.72
Expenses for same period.....	234.33

Balance on hand.....	\$2,680.39
----------------------	------------

The following clubs have failed to pay their annual dues for the year 1890: Albany Kennel Club, Chattahoochee Valley Exposition Co., Connecticut State Kennel Club, Elmira Poultry and Pet Stock Association, Hartford Kennel Club, Montana Kennel Club, Pacific Kennel Club, Southern Field Trial Club, Syracuse Kennel Club. Respectfully submitted. A. P. VREDENBURGH, Treasurer.

The matter of the charges of Lorenzo Daniels against Graham, referred to in the secretary's report, was, on motion, referred to the advisory committee.

In the matter of the request of the Elmira Kennel Club that their awards be recognized by the American Kennel Club, Dr. Cryer moved that said request be granted. Motion seconded and carried.

On motion of Mr. Lewis, the secretary was instructed to notify W. C. Hudson, G. B. Gallup, A. J. Parker, Jr., and Robert C. Pruyn, of the Albany Kennel Club, that they are disqualified until the awards given by that club are paid in full.

The following kennel clubs were admitted to membership: The Duquesne Kennel Club, the Buffalo Kennel Club and the Kansas City Kennel Club.

The request of the American Gordon Setter Club to change their name to the "Gordon Setter Club of America" was, on motion, granted.

Mr. Anthony moved that the delinquent clubs be notified that if their dues are not paid within thirty days they shall be dropped from the roll. Carried.

Mr. A. P. Vredenburg was unanimously elected secretary-treasurer of the American Kennel Club for the ensuing year.

MR. LESLIE—Before we adjourn I move that a vote of thanks be tendered to all the officers of this club for the satisfactory manner in which they have performed their duties for the past year. Motion seconded and unanimously carried. Adjourned. A. P. VREDENBURGH, Sec'y.

Editor Forest and Stream:

I herewith submit extracts from the report furnished to me by my stenographer of the proceedings at what purported to be the annual meeting of the American Kennel Club last Thursday:

Mr. Watson said he wanted to ask some questions in regard to the treasurer's report. Several people came to me and pointed out certain things in the report, but which I did not feel informed. It has been told me that between Jan. 1 and Jan. 11, there is something that we did not want to have published. I do not think anything has been done that the American Kennel Club should not be willing to publish, and the question is what happened between Jan. 1 and Jan. 11.

THE SECRETARY—I am glad that Mr. Watson has brought up the question, because it gives me an opportunity to contradict rumors that are pushed forward at every chance they can get for those interested in it. The closing of Vol. V. of the Stud Book was really the first day of January, and as there were a number of registrations that had come in without the fees and the full fees had not come in and there were a number of irregularities, that time. They were appointed to audit the accounts of 1889 only, but I took out my books of 1888—showed them those books. They went over those books and they saw just exactly what source every dollar came from to make the balance on hand I carried to the new book on Jan. 11, and that committee certainly, as long as

I showed them the books, had a perfect right to correct anything, and if they saw anything incorrect in the accounts they certainly would have mentioned it, but you see it is published that the source of income was only from the sources mentioned in the report. They satisfied themselves that the \$1,228.28 was the legitimate amount on hand when we closed our old books for 1888. They satisfied themselves that we had them attached to the accounts for 1889. On the 18th of January, having a special meeting here, Mr. Fay was accepted. He telegraphed that he could not get here and asked the president to appoint some one in his place. Mr. La Rue was present, and I, knowing that Mr. La Rue was a pretty good book-keeper, and was a strong personal friend of the gentleman who has circulated these reports, I requested Mr. Belmont to appoint Mr. La Rue to take his place. He accepted, and came up and spent the balance of the afternoon going over the accounts. He said he was very glad to sign the report of the other two members of the auditing committee.

MR. WATSON—What was the balance named in the report that was read, Mr. Vredenburg—the report that was read at the last meeting, what was the balance?

MR. VREDENBURGH—\$1,624.09. That was the balance on the 16th February.

MR. WATSON—You published a statement at one time which had a balance of \$1,228?

MR. VREDENBURGH—Yes.

MR. WATSON—I ask for information.

THE SECRETARY—In February's exhibit. The treasurer's report shows the money received by the American Kennel Club from all sources and what the expenses were of every description to Feb. 16, as follows:

Receipts to Jan. 11, 1889, as per balance carried forward.....	\$1,228.28
Different items were received Jan. 11 to Feb. 16.....	2,275.53

MR. WATSON—I want you to connect that \$1,228.28 there in the annual report—why do you bring it up to that?

THE SECRETARY—I have not met from Dec. 1 to February, and in the meantime when I closed my books for 1888 we carried over the balance on Jan. 11. The balance happened to be \$1,228.28. Then the following meeting is where I made my report of balance of \$1,624.09.

MR. WATSON—That was the report presented to the executive committee. It seems to me this \$1,228.28 ought to be the balance presented at the annual meeting.

THE SECRETARY—I was told. If the annual meeting was next July you would have the total amount that would be received from Jan. 1 or whenever I closed my books up. At the same meeting when I reported I may have had \$200 or \$300.

THE CHAIRMAN—This has all come about in this way. Mr. Peshall severed his connection with this club because certain things were said about him that he wanted. He came here with blood in his eyes and was going to do some mischief in the New York Street Jail. Neither Mr. Peshall nor any one else can come in here and intimidate me or Mr. Belmont or any one else, and we told him virtually to go to the devil. I said to him if the New Jersey Club will appoint some one from his club to look at the books he could do so. The advisory committee hold themselves responsible to show the books to any member, but we decline to have every Tom, Dick and Harry who may come from the gutter to come here and examine the books. "Now, Mr. Peshall, there is the door and you can go out." I think you will decide that the secretary and advisory committee and officers were right not to open our books and accounts to everybody to pick them to pieces and have the papers filled with trash and nonsense. The committee has given you the account of what there is anything more Mr. Wilmerding or any other delegate want to know, the secretary of the committee will be instructed to open the accounts or the books to any person who is entitled to that information.

MR. LESLIE—I think the chair is out of place. Mr. Peshall is not here to defend himself. I think such remarks out of place.

THE CHAIRMAN—The chair will assume the responsibility for his remarks.

MR. LESLIE—I think the remarks entirely out of place. **THE CHAIRMAN**—The chair in answer will say that he has always been perfectly courteous in every way, but this question has become one that should be met, and the statement should be met as I met it in my motion. If the members do not agree with me, I accept the personal responsibility for my remarks. I regret that Mr. Leslie should think anything personal as to the necessity of having the chair assume the responsibility of those facts.

THE CHAIRMAN—The officers of the American Kennel Club have sought to keep the amount of money received for the Stud Book by itself. They have also sought to keep the amount of money received for the *Kennel Gazette* by itself. They have thought associate members of the club and the clubs themselves were really the only ones who should be interested in the American Kennel Club, and their object in keeping the accounts of the club was to show exactly what has been received for the Stud Book and what has been disbursed for the Stud Book, the same for the *Gazette*, believing that the American Kennel Club account, which was a general account, should be taken from that account to make good. But there has been no deficit. This association has been managed upon the same principle that a very large dry goods store or any store has been. We have tried to make it as simple as possible. We give the sources of revenue and disbursements. That is the reason they have been kept in that shape.

THE SECRETARY—Mr. Belmont is perfectly satisfied to stand by his guarantee in this manner of keeping accounts.

MR. LESLIE—I would like to ask when did Mr. Belmont become guarantee?

THE SECRETARY—For five years from the 1st of January, 1889, to the extent of \$5,000 per year.

As I have been much amused at reading the speech made by the chairman, I suppose that it will be of interest to your readers. Some of your readers, upon reading Mr. Anthony's speech, and especially those who have not the honor of his personal acquaintance, might form the idea that he was a blackguard, but I can assure them that such is not the case. Mr. Anthony is a gentleman, and while I do not submit his speech as evidence to prove my assertion, I will submit the fact that he has heretofore, often in his letters, mentioned that he was a gentleman, and as we are, one and all, in honor bound to believe any statement that he may or might make, and as we have no right to differ with any opinion or statement that he has made or may make, consequently it must be a conceded fact that he is a gentleman.

As to his conclusion or ruling that nine delegates representing nine clubs out of the forty-five clubs which constitutes the membership of the A. K. C., make a quorum for the transaction of business, after what I have above said, I do not feel like expressing an opinion in opposition to his ruling, yet I submit to your readers the unfortunate position in which his ruling places the law as we find it laid down in "Cushing's Manual," which is the recognized authority governing all clubs, not only in this country, but in England. "Cushing's Manual" should now be revised so as to conform to the ruling made by the president of the A. K. C., and the ruling made by Mr. Anthony as chairman of the A. K. C. at the last meeting.

Mr. Watson evidently tried to get the treasurer to explain to his (Mr. Watson's) satisfaction the item of \$1,228.28, and he perhaps would have been successful if the chairman had permitted him to have further interrogated the treasurer upon this subject. This balance of \$1,228.28 I have heretofore claimed and do now claim was never earned by the club, it is there simply through a system of book-keeping; and the answers made by the treasurer in explanation to Mr. Watson are as trashy and as full of jugglery as the report made by the treasurer and published in the official organ. It does not require a book-keeper to see at a glance that this account is juggled.

The treasurer upon the same day, at the same time makes one report and two statements, as appears in the February (1889) number of the official organ as follows:

TREASURER'S REPORT, 1888.

A. K. C. Account.

Balance on hand Dec 5, 1888.....	\$5.39
Received from clubs for annual dues.....	370.00
Received for registration of prefixes.....	15.00

\$390.39

Expenses.

Returned dues to Tenn., P. & S. Sk. Association, said club withdrawing its application.....	\$10.00
Stenographer, meeting Dec. 6, 1888.....	25.00
Office furniture.....	15.00
Petty expenses.....	6.94

Balance.....\$333.45

Clubs in Arrears for Dues.

American Field Trial Club.....	\$10.00
National Poultry Association, Atlanta, Ga.....	10.00
Stafford Kennel Club.....	10.00
Winsted Kennel Club.....	10.00
A. P. VREDENBURGH, Treasurer.	

TREASURER'S REPORT, 1889.

Of moneys received by the A. K. C. from all sources, and of expenses of every description to Feb. 16, 1889.

Receipts to Jan. 11, 1889, as per balance carried forward to new cash book.....	\$1,228.28
Receipts from Jan. 11, 1889:	
From registrations Stud Book.....	182.00
Sales of Stud Book.....	145.50

Annual dues active members.....	90.00
Annual dues associates.....	507.50
Claims for prefixes.....	15.00
	\$2,375.53

Expenses from Jan. 11, 1889:

For Stud Book, including editor's salary on account last year.....	\$191.29
For Gazette.....	365.64
For club.....	194.51— \$751.44

Balance on hand..... \$1,624.09

A. P. VREDENBURGH, Treasurer.

On Dec. 5, 1888, according to the treasurer's report, there was a balance on hand amounting to \$5.39. Other items received swell this to \$390.39. The expense account is then given, which leaves a balance of \$33.45. The treasurer in the same report makes a jump, and in the leap this sum \$33.45 is swelled on Jan. 11, 1889, to \$1,228.28.

I have several times asked Mr. Vredenburg this question, "Give us the items which go to make up this sum of \$1,228.28, and in addition thereto the items of expense between Dec. 5, 1888, and Jan. 11, 1889." We do not want any juggling. What we want is a plain statement of facts. You have the books and you keep the bank account.

JERSEY CITY, Feb. 17.

THE PACIFIC COAST FIELD TRIALS.

[Special Report.]

[Our esteemed correspondent, Mr. N. E. White, of Sacramento, Cal., being unable to attend the trials on account of sickness, we made arrangements for a report, which was published last week. Mr. White, it appears, also made arrangements for a report, which we publish below, omitting entries and summary, which were published Feb. 6.]

THE seventh annual field trials of the Pacific Coast Field Trial Club began at Bakersfield, Cal., on the morning of Jan. 20, with the annual Derby for setters and pointers whelped on or after Jan. 1, 1888.

The judges were W. C. Nelson, formerly of Trenton, Tennessee, presiding judge; Ike N. Aldrich, of Marysville, Cal., and Hon. D. M. Pyle, of Bakersfield, Cal. Mr. Nelson is well known to Eastern and Southern field trials as an expert field trial handler and breaker of setters and pointers. He also occupied the responsible position of manager and breaker of the Syracuse Kennel Club, N. Y. At these trials he fairly established himself in the estimation of all the sportsmen present by his fairness and evident capacity for analyzing and comparing the work of competing dogs, and his courteous but firm manner toward all he came in contact with assisted largely toward making the trials proceed without friction or caviling. Ike N. Aldrich is an old favorite with California field trialers, and has the confidence and respect of all. Hon. D. M. Pyle is universally loved and respected, and is a first-class trial judge. The decisions of the judges were correct and received without one word of faultfinding.

The attendance at the trials was large, although many of the regular attendants were absent owing to the sickness of themselves or some member of their families. The ever loyal president of the club, Mr. J. G. Edwards, was kept at home by La Grippe, and his absence was keenly regretted by all. The herculean Mr. P. D. Linville, of San Francisco, was marshal during the trials, and acquitted himself of his duties in a faultless manner.

The regular annual meeting of the club was held on the night of Jan. 21, and the following gentlemen joined the club, viz.: R. Porter Ashe, J. M. Kilgariff, Robt. Liddle, Wm. Dornier, San Francisco, Cal.; Andrew Jackson, Napa; Charles W. Busse, New York; Dr. W. H. Myers, San Rafael; F. B. Dexter, Fresno; Austin B. Sperry, Stockton. The entire board of officers was reflected to serve during the ensuing year. The list is as follows: President, J. G. Edwards (relected for the fifth time), of Oakland; 1st Vice-President, Austin B. Sperry, of Stockton; 2d Vice-President, M. H. Drummond, of Davisville; Secretary, H. H. Briggs, San Francisco; Treasurer, J. M. Kilgariff, San Francisco; Executive Committee—C. N. Post, Sacramento; J. S. Dunham, Stockton; Wm. Schreiber, San Francisco; J. M. Bassford, Jr., Vacaville, and Hon. D. M. Pyle, Bakersfield.

The club unanimously decided to hold their trials next year at Bakersfield, commencing on the third Monday in January, 1891.

A resolution of thanks to the Student and Sportsmen's Club, of Bakersfield, and to the citizens of Bakersfield generally, was passed for courtesies shown. The club decided to offer next year a trophy of the value of \$25, to be competed for by dogs owned and handled by members of the club. A beautiful gold match box, properly inscribed and having a spirited engraving of a dog on point on each side, had been procured as a testimonial to President Edwards by the club; but Mr. Edwards not being present, a committee was appointed to present the same at Mr. Edwards's home.

Of the twenty-one entries for the Derby but six qualified—four setters and two pointers. The work done in the Derby was good, as a rule. This trial demonstrated the great strength of the California Kennel in the setter line, first and third in the Derby and first in Aged Stake being won by dogs belonging to that kennel, and third in Aged Stake being divided by dog bred by that kennel and Count Dick.

Salina, winner of first in the Derby, was bred and is owned by the California Kennels, Sacramento, Cal. She is a very handsome white bitch, with orange ears, of the Llewellyn strain of English setters. Her head is good, barring rather short ears and a trifle too much width of skull. Her neck and shoulders are the best I have ever seen; chest deep and narrow, ribs well sprung, legs and feet good; in fact, good all over in body, with the exception of being a little long in coupling, and has a beautiful long coat. Her style in motion, on point and when backing, is very fine. She is a fast, wide ranger, shows much judgment in hunting her ground, displayed a grand nose, and was perfect to gun and wing. Her chief fault was overcautiousness on birds, her nose being too great for her limited experience. She was broken by Mr. Geo. T. Allender, who, owing to the death of his father the Saturday before the opening of the trials, was compelled to absent himself during the running of the Derby.

C. N. Post, one of the owners of the bitch, although entirely strange to her, was compelled to handle her, which of course prevented her showing at her best. Her breeding is equal to her merit, she being by Harold (Gath—Gem) and out of Sweetheart (Count Noble—Dashing Noble).

Sankey, winner of second in the Derby, is a very rapidly built leon and white pointer dog. While he is formed on speedy lines he is grandly muscled, showing in this the

benefit of a rational amount of work when young. His owner, Mr. G. H. Hughes, killed dozens of birds over him last year when only eight or nine months old, but never worked him long enough at one time to stale him. He has had more birds killed over him probably than any dog that ran at the trials. He is a light-weight pointer with great speed and splendid style when galloping, is a good wide ranger, is rather incantious and headstrong, his handler having to caution him continually when on birds. His style on point is somewhat marred by his wagging his tail a great portion of the time and as a rule he backed only to order. He displayed a fair nose, but Mr. Bassford claimed that Sankey had contracted a cold on his way to Bakersfield a couple of weeks before and at one time a few days before the trials had been quite sick. Sankey is owned by Mr. G. H. Hughes, of Copay, Cal., and was bred by Mr. Geo. W. Bassford, of Vallejo, Cal. He was sired by Point (Vandevort's Don—Drab) and out of Blossom (Glen R.—Josie Bon), a pedigree that shows a deal of field trial blood, and Sankey is certainly a credit to his breeder and breeding, and his owner may well feel proud of him. He showed to be a very game dog and is passionately fond of hunting.

Stephanie, winner of third in the Derby, is a litter sister to Salina, winner of first, and resembles Salina very much in color and general appearance, but is not quite so well formed and not as stylish. She has a first-class nose and is perfectly staunch before and behind and to gun and wing. Like her sister she is as yet over-cautious when scent is very strong. She did not seem to be on good terms with her handler, acting at times as though she feared and disliked him, and in her first heat and the first part of her second heat she seemed to sulk at his frequent sharp commands and almost incessant whistling and potted somewhat, but when finally thrown on her own resources she ranged fast and wide until the close of the heat as she did also in her final heat with Rose.

Sunlit, winner of the All-Aged Stake, is probably the peer of any setter living. She did not make a mistake from start to finish. In form she is of the highest type. She has a perfectly marked orange and white head, with a heavily orange ticked body. She weighs when in field condition 41 lbs. She is a very fast, wide ranger, displays rare judgment in finding, locating and pointing birds, carries a high head, goes to her points boldly, is dead game, and displays superb style on point and back, is perfectly staunch both before and behind, and to gun and wing, and has a wonderful nose. She can boast of more first prize winners at field trials in her pedigree than any setter ever whelped in the world, for her brothers and sisters. Out of her first fourteen ancestors, twelve are first prize winners of field trials. She was sired by Sportsman (Gladstone—Sue), out of Sweetheart (Count Noble—Dashing Noble). She was bred and is owned by the California Kennel, Sacramento, Cal. She won the California Derby of 1887. Last year she started in the Aged Stake, and after beating her first three opponents pointlessly, she seemed to get off in nose and ran wild and reckless, finally winning third. After her heat with Count Dick, Judge W. C. Nelson publicly declared her to be the best dog he had ever seen.

Patti Croxeth, winner of second in the Aged Stake, is a magnificent liver and white pointer bitch, imported from the East and owned by Mr. A. B. Truman, of San Francisco. She is beyond a doubt the best pointer ever seen on this coast. She is a fast, wide ranger, fine style on point and back, staunch to wing, gun and on point, but backs only to order; has quite a good nose, hunts her ground with good judgment and has a beautiful disposition. She has won a number of first prizes and specials at bench shows and is very highly bred indeed, being by Croxeth out of champion Patti M. Her work throughout the stake was even and of a very high class.

Sirius, who divided third with Count Dick, is owned by Mr. Thomas Bennett, of Oakland, and was bred by the California Kennel, being litter brother to Sunlit, winner of first. Sirius is a very large dog, perfectly marked orange and white head, and orange ticked body. This was by far the widest ranger in the stake and is fast. He is thoroughly broken and is perfectly staunch at all points. He lacks style when in motion, but on point and when backing his style is grand. In his first heat with Nestor B. he displayed an exquisite nose and ran a splendid race, but in his subsequent heats he seemed to be clear off in nose and was at times quite willful and refused to obey the whistle of his handler and was a great disappointment to his owner and friends.

Count Dick is a liver, white and ticked pointer, owned by Mr. Austin B. Sperry, of Stockton. While Dick cannot lay claim to a symmetrical form, yet he is an exceedingly racy-looking fellow and displays fine style in motion and good style on point and back, bar his wagging tail. He was well-broken and ran a good race for his age, he being still a puppy, though not entered in the Derby. He has a fair nose and great bottom, and ranges fast and wide. Count Dick's win was very popular, as his owner Mr. Sperry made a fast friend of everybody whom he met at the trials.

THE DEBY.

The field trial party did not leave the Ingleside Hotel for the grounds until nearly 9 o'clock, consequently it was 10 o'clock before the first race in the Derby was cast off.

First Series.

LISSOME AND SANKEY B.

were cast off in an open field on section 18, about four miles from town. Sankey went away like a race horse, ranging fast and wide. Lissome seemed to lack dash, and went as though sulky or under constraint, at only fair pace. Continuing across the open field to a long swale covered with sage and weeds both dogs began to draw. Lissome was first to point a single and was steady to wing when her handler flushed. Next Sankey pointed a single and Lissome backed. The brace was run for one hour, Sankey maintaining his fast wide ranging all through the heat, while Lissome would at times spurt off quite merrily and fast, and then would slow down again to a moderate gait. After running one hour and ten minutes the judges awarded the heat to Sankey. Sankey was best in pace, range and style when in motion and made six points on single birds. Lissome was best in style on point and showed best nose. She made eight points on singles and was staunch to wing and gun. Both backed to order and were equal in quartering.

STEPHANIE AND BEN HARRISON.

After lunch the second brace was cast off to find a fresh bevy. Stephanie was superior in pace, range, quartering and style. After a run of twenty-five minutes Stephanie, after a fine piece of roading, located and pointed in beautiful form a very large covey of birds, Ben not near to back. The covey was flushed and Stephanie dropped promptly to wing. The birds made a very short flight and ran into some high thick cover of sage and weeds. The dogs were then put on to the scattered birds. Ben went very slow and Stephanie was over-cautious, continually drawing and pointing on the hot-footed scent. Finally the dogs were got among the birds and did some good pointing and backing. Ben made two flushes and three points on singles. Stephanie made four points on singles, and after being down one hour the judges awarded the heat to her.

SALINA AND ROSE.

At 3 P. M. the last brace in the first series were cast off in a wide open field covered with sage, salt grass and short willows. Soon after being cast off Salina caught sight of a hare and chased it out of sight, paying no attention whatever to Mr. Post's commands and whistle, he being an entire

stranger to her. The dogs were ordered up until Salina could be brought under control. She soon returned and the brace were cast off again. Both bitches went a slashing pace, Salina the wider ranger. A large portion of the field was hunted over without finding when Salina, making a cast to the right up wind, pointed a covey. Salina's handler flushed the birds in front of her and Mr. Bassford shot; both bitches steady to shot and wing. The dogs were then worked on the scattered birds, Salina drawing very cautiously to her points, Rose inclined to be reckless and headstrong, and her handler kept continually cautioning her. Rose flushed and attempted to chase, but was stopped by her handler. Rose pointed and Salina backed promptly and in beautiful style. Salina pointed and Rose refused to back. At the end of 45m. the judges awarded the heat to Salina. This closed the work for the day, and the field trial party returned to Bakersfield.

Second Series.

STEPHANIE AND SANKEY.

On Tuesday the weather was very foggy and the field trials did not start for the ground until nine o'clock. The first brace in the second series were cast off in the same field where Lissome and Sankey ran their heat the day before at 10:30. Sankey got away at top speed, as did Stephanie. Sankey maintained his speed and range throughout the heat, while Stephanie's handler soon began to whistle and call to her, which seemed to make her sulk and confused her. Stephanie was first to find, pointing a small covey in fine form. Sankey not near to back. Stephanie steady to gun and wing. Sankey next pointed a single, Stephanie backing promptly. Sankey steady to wing and gun. Stephanie next pointed a single; Sankey brought up to back, refused, and going past Stephanie deliberately put up the bird and was going to chase, but stopped at command. Sankey next pointed a single bird and was steady to the flush. Stephanie next pointed a single bird. Sankey's handler, when Stephanie pointed, said "Careful!" in a very sharp manner to Sankey, and this caused Stephanie to leave her point; the bird immediately thereafter flushed. The dogs were then taken up and watered. Down 45m. Cast off again, Stephanie ranging better than before, found and pointed a small covey in good form. Sankey not near to back. Stephanie steady to flush. Sankey then made two points on singles and Stephanie pointed a dead bird, which was picked up by her handler. After being down 80m. the judges awarded the heat to Sankey. Down in all 1h. 10m. This was a very close heat, Sankey winning by his superior pace and range.

Salina having a bye in the second series the party got into their wagons and proceeded to the field where Salina and Rose ran the day before, and partook of a fine lunch.

Third Series.

SALINA AND SANKEY.

At 1:10 Salina and Sankey were cast off to run for first prize. Salina seemed to have in some degree become acquainted with her handler, and gave more attention to his commands than she did the day before. Both started off at a great pace; Salina the wider ranger; both displaying beautiful style in motion. Salina again was first to find, pointing a covey in some heavy cover of sage and grass. Sankey not near to back. Salina steady to flush. Sankey then ran into and flushed a large number of birds, and Mr. Bassford shot and winged one. Salina ordered on, was bent on retrieving the winged bird, and only after a number of sharp commands could she be induced to leave it. The dogs were then worked on single birds. Salina was overcautious and Sankey careless and ruck. Sankey got a point on single and Salina backed. Salina then got two points on single birds, and after being down 45 minutes the judges awarded the heat and first prize to Salina. Salina was best in style, on point and when backing, and was steadiest to wing and gun, and displayed much the better nose. Sankey was willful and ruck, and was continually cautioned by his handler throughout the heat.

ROSE AND SANKEY.

Rose being the best dog previously beaten by Salina, was selected to run with Sankey for second prize. At the expiration of 20 minutes they were cast off to run for second prize. Both were handled by Mr. Geo. W. Bassford. Both went at a clipping pace and ranged wide. A long stretch of territory was covered without finding, and after being down about 30 minutes it began to rain. Soon after some birds were flushed by spectators and the dogs were put on to them. Both acted ruck and wild, Rose the worse of the two. Sankey soon got a good point on several birds, and after being down 30 minutes was declared winner of the heat and second prize.

As it was now raining hard, the field trial party suspended operations for the day and scampered for Bakersfield.

STEPHANIE AND ROSE.

Wednesday morning broke clear and sunshiny. The start was made from the hotel at 8:30. The judges selected Stephanie as the best dog beaten by Sankey to run against Rose for third prize. At 9:30 they were cast off on the same ground used for opening the trials. Both bitches went off at a rattling pace, Stephanie's handler having concluded apparently to cease interfering with her. She did better in this heat than any in which she had run. After a twenty minute spin, during which nothing was found, the handlers were ordered to cast their dogs to the left, across a large, open piece of ground covered with salt grass. When half way across the open ground Rose pointed staunchly what afterwards clearly appeared to be foot-scent of a covey. Nothing was found to the point and Rose cast off to the left. At the same moment Rose pointed, Stephanie, a few feet to her right, struck the trail of the running covey, and circling around twice, roaded straight on across the open ground to some tall grass and a bunch of willows, and located and pointed the covey in fine style. Part of the covey flushed, Stephanie steady to wing. Rose coming on ran into the rest of them and ran riot among them. She deliberately flushed a number and jumped in the air after them. Stephanie then casting to the right, pointed a single a long way off and won third prize. Down 29m. This ended the Derby.

THE ALL-AGED STAKE.

The Derby being completed then came what the crowd had been anxiously waiting for, the All-Aged Stake. The work done in this stake as a whole was in point of finish and quality very much superior to any ever seen before at a field trial on this coast, and some of it was pronounced by men who have attended the great Eastern events the very best they had ever seen. The dogs were well broken and as a rule well handled.

SIRIUS AND NESTOR.

were cast off at 10:35 in a large open field covered with low sage, grass and weeds. Both got away fast. Sirius the faster. Sirius gave a magnificent exhibition of ranging. Nestor hunted his ground irregularly. He would make a cast out from his handler and then come in again, frequently hunting over beaten ground. Nestor's style in motion was very good, in fact better than that of Sirius. Nestor pointed a single bird on the bank of a sand slough. Sirius not near to back. Bird flushed wild, Nestor steady to flush. Going on up sand slough Nestor again pointed a single and was steady when Allender flushed and shot. Sirius all the time ranging fast and wide, looking for a covey. Finally Sirius was seen to jump into a magnificent point a quarter of a mile away across the open. When his handler got to him

he could flush but one bird which he killed, Sirius standing staunchly until ordered to retrieve, which he did perfectly. Nestor backed this point to order. Ordered on Sirius cast ahead south and circling to the left located the balance of the covey. The birds were running and when his handler came up to flush Sirius made another cast and circle and pointed them again. DeMott flushed and both dogs were steady. Cast off again Sirius false pointed. On again, Sirius after a splendid piece of roading, located and pointed a single in magnificent form. DeMott flushed and killed and Sirius was perfectly steady and retrieved when ordered in perfect style, and was awarded the heat after a run of one hour and five minutes. Sirius ran in magnificent form and Nestor never was "in it," although he is a good dog.

SUNLIT AND PATTI CROXTETH

were cast off at 1 P. M. to find a new covey. This was a clipping race from start to finish. Both bitches got away fast, Sunlit the faster and wider ranger. The handlers were about as keen as the dogs and set a merry pace for the crowd to follow. The dogs were down an hour and a half without finding, the only incidents during the time being that Patti pointed some doves that were feeding and Sunlit backed. Sunlit soon after backed staunchly a small sign-board that was stuck in the ground on the side of a ridge, which led to several inquiries of Judge Post as to how long it had taken him to teach Sunlit to read road signs. At last both bitches galloping nearly side by side up wind through a field of sage struck the birds at about the same time, Patti pointing an outlying bird and Sunlit the main body of the covey. The birds were flushed, both dogs steady and then the dogs were sent on after single birds. They soon found the birds and points and backs were made too rapidly to be described. One simply had time to tally the points, flushes and backs. The spectators were worked up to fever heat, as the work was all done in full view of everybody. Both handlers were forcing their dogs to do their utmost, and Mr. Allender at one time nearly lost his head with excitement, giving expression to some language more forcible than elegant, for which he afterward apologized to the judges. The first strip of sage into which the birds had "covered" being finally worked out, the dogs were ordered to be cast a few yards to the left into another piece of likely looking sage, and this gave opportunity for a breathing spell. Sunlit was soon on point again, and then again and again, and finally pointed, and Patti was brought up to back, but refusing to back passed on between Sunlit and five birds that she was pointing and flushed them. Judge Post killed one and Patti was ordered to retrieve, which she did perfectly. Judge Post had previously killed over Sunlit and she had scored a perfect retrieve. Sunlit was awarded the heat. The judges' scores differed as to the number of points made, some showing twenty-five and one twenty-two. Your reporter's score gives Sunlit one covey and fourteen single-bird points and Patti eight single-bird points. Patti made one bad flush of several birds. Patti backed only to order, Sunlit perfect in backing. Dogs were down altogether 2h. 10m. The handlers, dogs and spectators seemed to all understand that it would be "hammer and tongs" from the outset, and the result verified the prediction. The oldest field trialers present were perfectly bewildered by the rapidity and brilliancy of the work, and everybody was delighted with what they had witnessed.

COUNT DICK AND DICK F.

At 3:10 P. M. this brace was cast off in a field of sage, grass and weeds. Both ranged fast, the setter a trifle wider than the pointer. Count Dick was the first to point a single. Dick F., brought up to back, refused and went by the pointer and deliberately put up the bird. Count staunch under very trying circumstances. Going on, Dick F. pointed a rabbit and Count backed. Count Dick soon pointed another single, and Dick being brought up to back evinced great jealousy and repeated his previous performance of refusing to back, and passing by the pointer and deliberately putting up the bird. Dick F. next pointed a single in beautiful form. DeMott killed and Dick F. retrieved well, and was also staunch to gun and wing. Count then flushed a single up wind, and going on flushed another. Count Dick then pointed another single. Dick F. then false pointed and then pointed a single in good form. Count Dick then pointed a single very handsomely, and was awarded the heat. Down one hour. The setter was best in range and style. They were equal in speed. The pointer backed well, while the setter refused to back at all, and ran rank and wilful. This closed the first series and work for the day, and the club returned to Bakersfield.

Second Series.

SIRIUS AND SUNLIT.

At 10 A. M. on Thursday Sunlit and Sirius were cast off at the usual pace of beginning each day's work. Everybody expected a bruising race between this brace, owing to the fine heats each had run the day before and to their great private reputation. Both got away at race-horse speed, casting clear ahead across the open into a likely-looking "draw" overgrown with sage and weeds. On arriving at the "draw," the course was changed so as to work down the draw with the wind fair. The dogs quartered out the draw without finding, when Sunlit made a cast to the left and pointed a large covey on the brow of a sage-covered ridge. Sirius coming on behind her backed in splendid form. It was an inspiring sight, both dogs in beautiful attitudes and perfectly staunch. Judge Post flushed the covey before Sunlit, she dropping promptly to wing and Sirius perfectly steady. The brace were ordered on to the scattered birds, which had flown to some very fine salt-grass cover. Sunlit soon pointed a single and Sirius backed beautifully. Sirius then pointed in fine form and Sunlit backed. Some very fast and brilliant work was then done by Sunlit, Sirius apparently off in nose and disposed to be wilful. After a run of fifty-five minutes Sunlit was declared winner of the heat. Her work in this heat was wonderfully clean, neat, positive and snappy. She made one covey and ten single-bird points to four single-bird points by Sirius. She was best in nose, style in motion, and was much too quick on birds for him; otherwise they were equal.

Third Series.

SUNLIT AND COUNT DICK.

At 11:30 A. M. Sunlit and Count Dick, who had a bye in the second series, were cast off to run for first prize on a beautiful piece of level ground covered with salt grass. As the dogs were cast off the scene was heightened by the arrival in carriages of some thirty ladies, the very elite of Bakersfield society. The conveyances containing the ladies were drawn up in line and all were enabled to see all the work done in the heat. The result of the race was never in doubt from the time the dogs started. On being cast off Dick cast ahead and Sunlit to the left. Coming back from her cast while going at top speed down wind, Sunlit, quicker than a flash, whirled to a beautiful point on four birds fully 20yds. away. Her attitude was the counterpart of that in which Tracy has sketched her famous grandsire, glorious old Gladstone, and it evoked exclamations of delight from the ladies present. The birds were flushed before Sunlit, she dropping promptly to wing. Casting to the right Sunlit gave the spectators a taste of her quality by running up a score of eight points on single birds in about as many minutes, also a perfect retrieve of a bird killed by Judge Post. Her work was simply perfection. Count Dick was never "in it," and was beaten pointlessly. Sunlit was awarded the heat and first money. Down twenty-five minutes.

The ladies then spread a bountiful lunch and invited the hungry field trialers to join them in disposing of the good things, an invitation that, it is needless to say, was joyfully

accepted. After half an hour spent in social intercourse the ladies rendered a number of vocal selections in an artistic manner and with beautiful effect. The inspiration of the moment seizing Judge Nelson violently, he, in a gallant and dramatic manner, exclaimed, "I shall favor Bakersfield as the place to hold our field trials even if there is nothing better than jack rabbits to run the dogs on."

There was not one present among the field trialers but that fully appreciated the high compliment paid them by the ladies in thus honoring them with a visit, and it was unanimously resolved that hereafter the last day of the trials each year should be known as Ladies' Day. Lunch being concluded, it was decided by the judges to run Sirius and Patti Croxteth a side heat to see which should compete with Count Dick for second money.

PATTI CROXTETH AND SIRIUS

were cast off at 1:15. Sirius was best in range and speed. In quartering they were equal. Sirius seemed completely off in nose, and was somewhat wilful and disobedient. Patti ran in high form and completely outpointed Sirius, making seven single-bird points to three for Sirius. After a run of 40 minutes Patti was awarded the heat.

PATTI CROXTETH AND COUNT DICK.

At 2:15 Patti Croxteth and Count Dick were put down to compete for second money. This was rather a tedious heat. Birds seemed scarce and a great deal of ground was covered before any work was done. Patti was best in pace, range and quartering, worked her ground with better judgment and outstayed Dick in motion and on point. Patti was first to find, pointing staunchly a single bird and was steady to wing and gun. Patti outworked Dick on birds, and after a run of one hour, was awarded the heat, having made four single-bird points to Dick's one.

SIRIUS AND COUNT DICK.

At 3:20 Sirius and Count Dick were put down to run for third money. Sirius was best in pace, range and quartering, although Dick ran better in this heat than he did in the heat before, conclusively proving that he is a stayer. The work of this brace on birds was very ordinary. Sirius seemed to be scarcely able to smell a bird at all, and both he and Count Dick ran close to birds that they should have pointed a number of times. Sirius was more disobedient in this heat than in any he ran in. After running for fifty-five minutes the judges ordered the dogs up and reserved their decision until they should have time for consultation at their hotel that evening. Each dog had four points on singles. Sirius was best in pace and range and style on point and back, and had one flush and a false point against him. Dick was most obedient, had best style in motion and worked his ground with best judgment. It was a very close thing between them. That night at 8 P. M., in conformity with the wishes of the respective owners of the dogs, they were declared equal third by the judges.

Thus ended the most successful trial the club has ever held. There was not an unpleasant incident to record during the whole trial, and not one unpleasant word was said regarding the judges' decisions.

PACIFIC.

EASTERN FIELD TRIALS.

THE Eastern Field Trials Club has secured grounds for running their trials next November at Otterburn Springs, Va. Mr. F. R. Hitchcock, who was appointed by the committee to make arrangements, reports that the grounds secured are much better in every respect than any he has yet seen. They are nearly level, free from briars and with no bad thickets. They are situated some two miles west of Amelia Court House and about forty miles distant from Richmond. There is a large hotel recently built, and the accommodations are ample. Birds are fairly plentiful, and with the protection which they will now have there will be enough to thoroughly stock the grounds.

AMERICAN GREYHOUND CLUB.—Some members of the Western and Eastern coursing clubs, with exhibitors of greyhounds at the New York show, met at the call of Dr. Van Hummel at the American Institute Building on the 13th inst. Dr. Van Hummel was voted to the chair, and Edwin H. Morris acted as secretary. It was considered that in view of the increased interest now being taken in the greyhound, the investment in large sums in them and the importation of some of the English cracks, together with the formation of fresh coursing clubs, that something should be done to insure proper consideration at the hands of bench show committees, some provision should be made for supplying information to those wishing to form local clubs to hold coursing meetings, and to insure their being carried out in a thoroughly sportsmanlike manner, rules, judges and slippers should be recommended. It was also thought that some supervision of pedigrees should be taken in conjunction with the American Kennel Club, as in the case of other specialty clubs. As these matters were not within the province of a coursing club, it was decided to form a club to be called the American Greyhound Club, as advocated in letters which had been received from different parts of the country and were read to the meeting. The following officers were elected for the first year: Dr. Van Hummel, President; Mr. Chas. L. Griffith, Vice-President; Mr. T. Frank Cleaveland, Treasurer; Mr. Edwin H. Morris, Secretary, who with J. Herbert Watson and Mr. Geo. C. Taylor of the committee will proceed to prepare a constitution and by-laws, which will be published in due course. Any suggestions and names of those wishing to become members may be addressed to the secretary, 101 Waverly place, New York.

ARRIVAL OF THE SQUIRE.—The Chestnut Hill Kennels' long-expected collie The Squire, a champion in England, arrived at his new home on Saturday last, and on Monday I journeyed out to the kennels to take a look at the new comer. He was still as he had arrived from the ship and was therefore seen under disadvantages as to condition. He is a large dog, bigger than Charleroi II, and in color is what St. Bernard men would call rich orange tawny with white legs, a collar and tag. For a dog of his age his head is still good, he has small ears and is a dog of great substance combined with liberty. I know of no dog that he can be compared to, but in size, action and style he put me very much in mind of my dog Glenlivet, who was seen at Newark show a few years ago and killed soon after. Some of your readers will remember him. Glenlivet was then young and needed filling out to be what The Squire now is. The new comer is showing his age in a gray tinge about the muzzle. Mr. Jarrett tells me he is going to take him to Chicago.—J. W.

COLLIE CLUB PRIZES AT NEW YORK.—The competing dogs for the prize cups and stakes of the Collie Club were a great improvement on those shown last season. Having awarded first in open class to Roslyn Wilkes, the judge supposed he had named the winner for all the C. C. prizes, but a surprise was in store for him when Hempstead Ben was shown in the puppy class, and subsequently came in competition with Roslyn Wilkes in the novice class, where he was placed ahead of the latter, thus winning the Collie Club Trophy, as well as first prize in all the C. C. stakes. These stakes amounted to \$358, of which Hempstead Ben received \$196.50, Roslyn Wilkes \$57.40, Dr. J. P. Gray's Bonnie Baby \$46.50, the balance going to Fairlie, Busy and Thistle Blossom.—J. D. SHOTWELL, Secretary.

PHILADELPHIA KENNEL CLUB.—*Editor Forest and Stream:* I note in your issue of Feb. 13 a statement made by Mr. James Watson, that on Secretary Brown's notice of a business meeting he saw no mention of a dog show to be held in Philadelphia this year. Permit me to state through your columns that there will be no bench show held by the Philadelphia Kennel Club this year. As a rule bench shows in Philadelphia have not been a financial success. We propose, however, to give our attention to the field trials. Our trials held at Widewater, Va., last November, were of such a highly satisfactory character that it has infused a new life into the club. Our membership has been largely increased. We have secured larger quarters, which are now being very handsomely furnished. The meeting held on 4th inst., when the handsome silver bowl, presented by the Philadelphia Item, was christened, was quite an enthusiastic one. This piece of plate is to be competed for in the members' stake, and is to be won by a member—not necessarily with the same dog—three times before it becomes his property. No less than five members here have purchased crack dogs, and several more are on the still-hunt for good ones to compete with them. It would surprise even Mr. Watson so hear the names of the dogs that are being dickered for. If this pace is kept up the club will hold trials that will be second to none in the country for the number and quality of the dogs run. The trials will be open to members only, and will be freed from the many objectionable features now experienced at some of the other trials.—FRANCIS G. TAYLOR, Treasurer.

POINTER CLUB MEETING.—New York, Feb. 11.—The regular meeting of the Pointer Club of America was held at the American Institute Building, New York city, President Wise in the chair. The report of secretary and treasurer showed total receipts for year ending Feb. 11, 1890: Balance from Feb. 20, 1889, \$127.55; receipts during the year, \$275; total \$402.55. Disbursements (as per vouchers), \$70.81. Balance on hand, \$331.74. Approved. Present membership, 40; new members received during the year, 13; resignations accepted, 2, Messrs. Peshall and Lovell. Executive committee elected for year ending February, 1891: Pres. Wise; Anthony, 1st Vice-Pres.; Hitchcock, 2d Vice-Pres.; Seitzer, 3d Vice-Pres.; Collins, 4th Vice-Pres.; La Rue, Heath, Arnold, Swain, Munhall, Daniels, Winslow, Stoddard and Saunders, leaving one vacancy to be filled at next meeting, caused by retirement of Mr. Oyster from the club. Applications for membership received from Messrs. Paul H. Gotzian and Wm. H. Hyland, who were duly elected. After lengthy discussion it was resolved that the American Field pointer cup be offered for competition at Chicago as originally decided by the club, and notice be sent to members accordingly. The Pointer Club also decided to give the following additional special prizes: Rochester, N. Y., 1890 show, \$10 each for best pointer dog and bitch exhibited and owned by a member of the Pointer Club, and the same at the Baltimore, Md., 1890 show.—GEO. W. LA RUE, Sec.-Treas.

IRISH SETTER CLUB.—At a meeting of the Irish Setter Club, Feb. 12, the following officers were elected: President, W. Dunphy; Vice-President, C. T. Thompson; Secretary, M. Wenzel; Treasurer, B. L. Clements. Executive Committee: W. L. Washington, W. H. Child, M. Flynn, Jr. On motion of Mr. Thompson it was decided to change the name of the club to the Irish Setter Club of America; and it was decided to apply for membership in the A. K. C. The following committee was appointed to act with the A. K. C. in looking over pedigrees for registration: C. T. Thompson, W. H. Child, Max Wenzel. The following gentlemen were elected members: Louis Condit, H. Clay Glover, New York; G. H. Covert, Chicago; F. H. Perry, Des Moines; F. S. McGraw, E. M. Beale.

DAYTON KENNEL CLUB.—Dayton, O., Feb. 18.—*Editor Forest and Stream:* Dayton Kennel Club has elected Mr. Gustav Sauder President for the ensuing year; Mr. Ed. T. Cooper, Vice-President; Dr. D. S. Porter, Secretary and Treasurer, and Mr. Chas. G. Stoddard Chairman of the Board of Directors. The financial report shows the club out of debt with some cash in the treasury as a surplus.—BUCKEYE.

BALTIMORE DOG SHOW.—From advices received from headquarters we judge that the Baltimore dog show will be a "howling success." Entries are coming in freely, and the citizens of the city are coming out strong in the way of specials. Intending exhibitors should bear in mind that entries close March 4.

PET DOG CLUB MEETING.—*Editor Forest and Stream:* Will you kindly notice that the next regular meeting of the American Pet Dog Club will be held at 129 East Sixteenth street, New York, on Thursday, Feb. 27, at 8 o'clock P. M.—MARION E. BANNISTER, Sec'y.

THE GREYHOUND COURSING BILL in the New York Assembly has been reported adversely by the committee. If coursing is conducted then it must be settled in the courts whether the practice belongs in the category of cruelty to animals.

POULTRY SHOW.—The American Institute Fair Building will be occupied this and a portion of next week, beginning to-day, by the poultry show, and many of the best known prize winners in the country will be present.

A LARGE LITTER OF ST. BERNARDS.—Mr. P. J. Slane's St. Bernard bitch Maude whelped on Feb. 4 a litter of fifteen, thirteen of them dogs, by Wyoming Kennels' Pinlimmon, Jr.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks.

Clayton Bang. By W. H. Dowsett, Norwich, Conn., for black, white and ticked pointer dog, whelped Aug. 8, 1889, by Duke (Drake—Accident) out of Daisy Bang (champion Croxteth—Vickery's Daisy).
Virgo. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped Sept. 3, 1889, by Rochester (Othello—) out of Isatrum).
Minnie. By A. E. Adams, Clyde, N. Y., for silver fawn pug bitch, whelped Nov. 25, 1888, by Mo (champion Bradford Ruby—Lady Flossy) out of Panny (Floyd's Teas—North's Flirt).
Topsy. By A. E. Adams, Clyde, N. Y., for apricot fawn pug bitch, whelped Aug. 25, 1888, by Port (Santa Clara—Judy) out of Daisy (Smut—Susie).
Bonnie Obo. By Simonds & Aborn, Wakefield, Mass., for black cocker spaniel bitch, age not given, by Pete Obo (Black Pet—Miss Ginger) out of Floss B.
Sunnyside Kennels. By F. W. Chapman, Melrose, Mass., for his kennels of setters and beagles.

BRED.

Notes must be sent on the Prepared Blanks.

Rosa Croxteth.—Wm. Tell. Geo. T. Corman's (Cochituate, Mass.) pointer bitch Rosa Croxteth (Royal Croxteth—Maggie V.) to C. A. Parker's Wm. Tell, Dec. 9.

inform Mr. Stice, and the shooting went on as usual. The scores will show that Mr. Stice came out ahead by 6 birds. It is not as

easy as it looks to shoot as well as Jim Stice can. The No. 8 trap faced the evening sun and threw a hard bird, made worse by a stiff breeze. Messrs. John Wilkins and Chas. Hummel, Jr., acted as judges. C. W. Dimick referee. Score:

Eastern Team.	
H. McMurphy.....	11111111111111111111

The boys will leave this quaint but busy old town with regret. This is a hustling town; it is a good sporting town. To-morrow will afford another pleasant hunting experience to the party if all goes well, and then we pull out for El Paso, over the Sunset route.

El Paso, Feb. 18.—Trap shooting to-day: Eastern Team—McMurphy 34, Volstercroft 33, W. E. Perry 33, W. S. Perry 29, Whitney 36, total, 164. Western Team—Budd 34, Heikes 35, Stice 34, Ruble 33, Caboon 25; total, 162. E. Hooton.

LINCOLN GUN CLUB.

Such that trap-shooters here took advantage of the sunshine and warmth and began shooting. On Monday, Feb. 3, the following shoot took place on the grounds of the Nickle Plate Gun Club. Conditions, 25 singles Keystones, American Association rules; Harry Webber.....11111111111111111111—18
Schwerdtfeger.....11111111111111111111—17
O. T. Russell.....11111111111111111111—17
R. M. Williams.....11111111111111111111—17
C. O. Kenner.....11111111111111111111—17

The angles in this shoot were not strictly in accordance with the rules as there was only one trap used and the first five birds were straightaway, the second five right quarter, the third five left quarter, the fourth five at right angle (90 degrees) and the last five at left angle. The last two were extremely difficult shots as the trap was screwed up to the last notch and the birds husled away with lightning speed to a point at least 65 yds. from the trap.

A match at live birds was shot, 4 birds per man, 30 yds. rise, American rules, with following result:

Harry Webber, 10-gauge Ithaca, 30 yds.....	1231—4
L. C. Schwerdtfeger, 12-gauge Lefevre, 25 yds.....	1110—3
O. T. Russell, 10-gauge Lincoln, 30 yds.....	1110—3

On Tuesday, Feb. 4, the Lincoln Gun Club held its regular monthly badge shoot. Conditions, 25 singles, Peoria blackbirds, 3 traps, unknown angles, American Shooting Association rules. The score was as annexed:

L. C. Schwerdtfeger.....	10111111111111111111—22
Samuel D. Patterson.....	10111111111111111111—19
Hiram Stansell.....	10103011111111111111—17
R. M. Williams.....	11101011111111111111—15
George Atwell.....	11101111111111111111—15
Harry Webber.....	10101011111111111111—12
James Walker.....	10101011111111111111—12

Schwerdtfeger took the gold badge and Walker will carry the leather token as an initiatory, this being his first badge shoot.

On Wednesday a match was shot at live birds for \$25 a side, 10 birds each, American rules, 30 yds. rise. The day was clear and the wind blew a little brisk to help the birds along. The attendance was large and a good shoot was expected, as both men were determined to do their best. The birds were all old birds and were carefully handled by a veteran trapper who was quick and understood his business. The following is the score:

Chas. H. Wheeler, 10-gauge Ithaca, 30 yds.....	1110210211—8
L. C. Schwerdtfeger, 12-gauge Lefevre, 30 yds.....	11111011—8

There being no more birds at hand the tie shoot off was postponed. Wheeler's gun is a heavy 10-gauge of 11 lbs., and he shot black powder with No. 7 shot in both barrels. Schwerdtfeger shot a 74 lbs. Lefevre with 34 yds. Schultz and 14 oz. No. 7 shot in the first barrel; in the second he shoots 34 yds. Eagle Duck and 14 oz. No. 6 shot, but the birds were so close that he was unable to get a hit. He had little use for the second; he pumped both barrels into the two birds that got away, but never hit one. It was a close match and well shot.

The constant banging of guns has set trap-shooting in the front rank as the topic of the day in this city, and we are to have a new gun club soon, to be known as the Postvillians, after the name of the addition to the city, which was formerly called Postville. They are a peculiar set of people, these Postvillians, and as rabbit hunters they cannot be beaten. Their practice at the trap has heretofore been at what is known as the Postville swallows, which we in common parlance would designate as old oyster and tomato cans. The trapper is a brawny son of toil, who with sleeve rolled up, regardless of gripper or anything else, holds his club as the boys have him, and with a steady aim, with might and main into the air or shower of shot as the case might be. He is tireless, this trap, and a little swig once in awhile oils him up. They don't shoot for fun either, these Postvillians, but money, and there was considerable bad blood shown at the last match because one of the shooters had a plugged dime for his entrance money. The manager of the club is Judge A. S. Mohr, while Frank Rasmussen acts as advance agent. Considerable interest is felt here in the club, as the members are all good shots. Their first engagement will be to shoot in Mount Pluskis. SACHEN.

CHICAGO TRAP INTERESTS.

CHICAGO, Feb. 15.—Editor Forest and Stream: Interest in the coming Kansas City—Chicago team match continues to increase as the dates set for the big shoot draw near. Kansas City has already made her standard bearings, and we are sure to make a team hard to beat. Chicago has not been so hasty in naming her final representatives, although that will probably be done in the course of a week.

A team of 30 of the best shots in Cook county has been requested to get into active practice, and from that list we hope to be able to select the winning team. The committee having in view the entertainment of the visiting sportsmen, and other arrangements for the contest are already at work, and the shoot promises to afford much enjoyment as well as an excellent display of skill with the shotgun.

The interest in pigeon shooting continues at fever heat here. Each day new matches are made, and it looks as if the entire fraternity had gone daff on the subject. The number of pigeons shot at the Miller-Bell private advance prize shoot, for example, exceeds the record of any previous year. Of course the uniformly mild weather has been responsible to a great extent, but it is quite evident that the sport has experienced a decided boom. Should the new shooting park become a reality it is certain that Chicago will pass rapidly to the front as a trap-shooting center.

The shoot of the Gun Club on Friday was a pronounced success, no less than seventeen members attending in spite of the cold rain which fell all the afternoon. It was the first shoot of the year for the new medals of 1890, and Uncle John Watson had provided an unusually good lot of birds. The live bird medal was won by R. B. Organ on the excellent score of 20 straight. P. F. Stone won the artificial target medal on the score of 19 out of 20, and defeating C. S. Burton with whom he was tied for the artificial target medal of 1889, killing 19 out of 20 birds.

The South Chicago Club or the "Yellow-legs" as they have been irreverently dubbed, had a very enjoyable shoot at Watson's Park on Wednesday last. The birds were probably the best lot that have been shot at this year, as shown by the fact that not a single score was under 18, although the club contains many of the best shots in Chicago.

The Lake George Sportsmen's Association have arranged a very enjoyable programme for Saturday next, Washington's Birthday. A large number of live birds have been secured, and shooting at both live and inanimate targets will be indulged in. Many guests have been invited and a good time is assured. It is probable that several interesting private advance prize matches will be decided.

Cumberland Club likewise will celebrate the immortal George's natal day by a shoot and other festivities at its beautiful lodge in Indiana. Some disputes among the club members as to their relative shooting abilities will be decided on that day, and the Herick diamond medal, presented by the genial president of the club, will be contested for. The Cumberland Clubmen are gentlemen all, and most of them are cracking good shots.

The meeting of the sportsmen to decide upon the location of the new park will probably be called for this week, and some active steps taken. At present the matter remains *in statu quo*.

Reports from the various duck shooting points near here are to the effect that the birds are more numerous than for several seasons past. There is no doubt but what the northern flight of

the duck has already commenced, fully six weeks in advance of the usual time. Some excellent bags have been made at Mack-saw-ba, Cumberland and English Lake clubs. The Tolleston marsh is reported alive with birds. From the Fox Lake region comes the report that the ice has gone and the bluebills and redheads are showing up in quantities. The Illinois River the shooting is reported excellent. At New Boston mallards and pintails are plentiful, and Fred Allen, of Monmouth, is already at work among them. Geese are coming in fast, and a number have already been killed. The shooters are taking full advantage of the early flight of the birds, and all the club houses are well patronized. During the past week it has been hard to find a duck shooter in town. All of them are reported "gone to the club."

The stock of the defunct Western Arms & Cartridge Company was bought entire last Monday by Schoverling, Daly & Gales, the consideration being something less than \$15,000. It will be partially sold out here and the balance of the goods shipped to New York. Guns and material have been very cheap here for a long time, but are coming up now.

The Jenney & Graham Gun Company have secured the store at 102 Madison street, and will move into their new quarters in May. The new location is unexcelled, being next door to Mussey's billiard hall, the daily resort of all the sportsmen, and within two doors of A. G. Spalding & Bros. great sporting goods house. This will have a tendency to concentrate the trade in guns, fishing tackle, baseball, lawn tennis and other sporting supplies, and will be patronized by the masses in the city.

A match at 25 live pigeons each, for \$25 a side, will be shot at Watson's Park, Grand Crossing, on Friday next, between J. W. Sheahan and W. P. Mussey, Mussey conceding the odds of one of Sheahan's lost birds scored dead. The match should be interesting. W. P. Mussey.

Grand Crossing, Ill., Feb. 7.—At 25 live pigeons, \$25 a corner, 5 ground traps, 30 yds., 8 yds. bound, Illinois State rules:	
F. A. Place.....	1011202111232121112231—20
O. F. Malcolm.....	101212021122121110121—20—40
J. W. Sheahan.....	101212111122121110121—24
W. P. Mussey.....	121121110212011101201—20—44

Feb. 8.—At 25 live pigeons, \$25 a corner, 5 ground traps, 30 yds., 8 yds. bound, Illinois State rules:

C. Burton.....	21121112121121101101101—21
F. Lord.....	01121212101111101200221—16—37
C. E. Willard.....	0202121111212022301101—18
F. Donald.....	03222110120101010110120—14—32

Feb. 10.—At 50 live pigeons, \$50 a side, 15 ground traps, 30 yds., 8 yds. bound, Illinois State rules:

John Orvis.....	212121111121211012101210121—42
W. P. Mussey.....	1212121101101212121025010292112011102101—38

Feb. 12.—South Chicago Club, 10 live pigeons, 5 ground traps, 30 yds. rise, 8 yds. boundary, Illinois State rules:

G. Kleinman.....	8 F. Willard.....8 W. Reeves.....8
A. Kleinman.....	7 Lem. Willard.....9 Ike Watson.....8
J. Watson.....	4 P. Miller.....5 C. Templeton.....8
Dr. Larkin.....	5 Ed. Marsh.....6 P. Loftis.....7
E. J. Reeves.....	6

Ties on 8: Kleinman and Marsh tied on 4 and divided second. A. Kleinman third. At last club shoot J. Watson, Geo. Kleinman and Abe Kleinman were tied and tied were shot off in to-day's match shoot, which G. Kleinman wins medal for last shoot. Same day, 20 Peoria blackbirds:

F. Willard.....	14 G. Kleinman.....16 O. F. Templeton.....16
Lem. Willard.....	18 J. Watson.....17 Ike Watson.....16
E. J. Reeves.....	19 Dr. Larkin.....17 Abe Kleinman.....16
P. Miller.....	14

At 25 live pigeons, \$25 a side, 5 ground traps, 30 yds. boundary, Illinois State rules:

Lem. Willard.....	1210121212101021011101—19
Frank Willard.....	1011201011011010120121—16

Feb. 14.—For gun club badge, at 10 live pigeons, 5 ground traps, 30 yds. rise, 8 yds. boundary, Illinois State rules:

W. P. Mussey.....	10 Burton.....10 E. E. Willard.....10
Deiter.....	8 Foss.....9 L. C. Willard.....10
Dicks.....	7 Wileox.....5 Organ.....10
Price.....	9 C. E. Willard.....6 Stone.....10
Hamlins.....	8 Lord.....4 Shepard.....7
Hutchinson.....	9 Wheeler.....9

For medal, Ties for medal: Mussey 1111—4, Burton 2120—4, Organ 1111—5, 2121—5, wins medal. Other ties divided.

THE CANADIAN CHAMPIONSHIP.—Toronto, Feb. 12.—The pigeon match to-day at the Woodbine attracted a large number of spectators. It was for the McDowall cup, representing the live-bird championship of Canada, 25 singles per man, 30 yds. rise, 8 yds. bound, 103 and 103 and was continued till 4:30, when it was postponed till morning. Some excellent shooting was done. Mr. Charles killing 25 straight, Mr. Glover 21, and Mr. Tyson 23. Among those yet to shoot are some of the best of the entries, and some long scores are looked for from Messrs. Wayner, Budd, Rice, Jones and Tracy. Shooting will commence promptly at 10 o'clock. After the match concludes a sweepstakes will be shot at live birds, at which there will be artificial bird shooting, and a match for medals. Ties for medal: Mussey 1111—4, Burton 2120—4, Organ 1111—5, 2121—5, wins medal. Other ties divided.

Feb. 13.—The great pigeon match was concluded this morning. Mr. Charles wins the cup and the championship. The shooter is allowed to use his second barrel to kill a wounded bird while on the ground, and to eliminate all elements of cruelty this was done in nearly every instance, which accounts for the large number of times the second barrel was used. Under the rules the winner of the cup is compelled to defend it against all challenges, and it remains now to be seen whether the crack shots of Canada will allow Mr. Charles to remain in undisputed possession of the championship or will have sufficient grit to challenge for it.

J. W. Wayner, who was in poor form, H. Catton, W. McCann, J. Jones, J. Rice and C. Budd retired without completing their string.

TORONTO, Feb. 12.—Stark's Eastern Gun Club was organized to-day at Charles Ayre's hotel, when the following were elected officers: Pres., F. Patterson; Vice-Prest., T. Chambers; Sec., Treas., Charles Ayre; Executive Committee, S. Smith, G. Platt, H. Page and E. Harrison, chairman.

Feb. 15.—The members of the Toronto Gun Club held a splendid shoot at Woodbine Park this afternoon. The contest was presented by one of the members. A strong wind was blowing, which made the shooting rather difficult; 15 birds each. J. Townson 13, D. Beldam 12, B. Pearsall 12, F. Andrews 11, R. Wright 11, J. Rice 10, G. Pears 10, C. Budd 9, F. Bayles 9, W. Pearson 8, E. Leroy 8, W. McDowall 8, D. Bled 7, F. Martin 7, C. James 7, P. Wakefield 7, G. Henry 5. The Stanley Gun Club continued their prize shoot at Woodbine. The contest was presented by one of the members. A strong wind was blowing, and in consequence the score was very poor. After the club shoot a couple of sweepstakes were shot, but it was too cold for comfort, and the shooting ended at an early hour. Stanley club shoot at 20 birds: Sawdon, Jr., 13, Sawdon, Jr., 12, Henry 15, McDowall 12, McClure 12, Winchell 12, Harrison 11, Bayles 10, Sweep at 10 birds: McDowall 9, Emond 9, Pearson 7, Henry 7, Andrews 7, Patts 6, Sweep: Emond 10, McDowall 8, James 6, Martin 5.

WELLINGTON, Mass., Feb. 15.—The pleasant weather to-day attracted the largest attendance of the season to the grounds of the Wellington Club. There were some two score of gunners present, including several of the crack shots of New England. The wind was a little strong for clean scores, but otherwise the conditions for shooting were good. In the merchandise match at 15 blue-locks, Leslie was first with a clean score of 15. The other scores were: Oliver and Scott 14, Sanborn, Melcher, Spring, Edwards and Warren 12, Chase, Dill, Stone and Schaefer 11, Roston and Bond 10, Lee, Bowker, Henry and Leonard 9, Covey, Hildes, Hooper 8. In the silver pitcher match at 20 blue-locks, Leslie and Spring tied with 17 each. The other scores were: Oliver, Scott, Schaefer and Allerton 16, Lee and Warren 15, Sanborn and Peabody 14, Green 13, Bowker, Covey and Field 12, Chase, Purdy, Roston, Henry, Edwards and Stone 11, Dill, Bond, Hooper and Porter 10.

CINCINNATI, Feb. 8.—A private shoot at live birds was shot to-day on the grounds of the Independent Gun Club, the old Avenue Ball Park, the participants being five of Cincinnati's most noted shots. The pigeons used proved an extra lot, the majority of them sprang away and right and left and requiring fights. Five matches were shot with the following results. Conditions, live birds, 28 and 30 yds. rise, American Shooting Association rules. Sweepstakes: First match, 5 single birds, entrance \$2, divided in 2 moieties: Dayton 5, Frank 4, Murphy 4, Bohemian 4, Bandle 2. Dayton first money, ties on 4 second. Second match, same conditions: Bandle 5, Bohemian 3, Murphy 4, Frank 4, Dayton 4. Bandle first money, ties on second round agreed to let result of the next match decide second. Third match, same conditions: Murphy 5, Dayton 4, Frank 2, Bohemian 3, Bandle 4. Murphy first, and second on match No. 2, Dayton and Bandle second. Fourth match, same conditions: Dayton 3, Frank 1, Murphy 4, Bohemian 2, Bandle 5. Bandle first money, Murphy second. Fifth match, same conditions, 4 birds per man, 1 money: Dayton 2, Frank 2, Murphy 3, Bohemian 1, Bandle 3. Bandle and Murphy first money.

FEBRUARY 22.—The boys will be out in force to celebrate the birthday of the Father of his country on the 22d with much banging of guns, killing of pigeons, breaking of blue-locks and glass balls. The Central Gun Club of Long Branch will begin its big open shoot on the day before and continue it on the 22d; shooting to commence at 10 A. M. each day. American Association rules will govern. The New York Suburban Shooting Association grounds at Claremont, N. Y., will be open all day, and a large attendance is expected. The sportsmen of Long Island will meet at Louis Miller's Dexter Park and shoot a selected lot of live birds. The American Gun Club of Flatbush will journey to Jamaica and give the Monahan tribe of that borough satisfaction for the defeat administered on Jan. 30. This time the tables may be turned, as the targets will be glass balls. The Washington Heights Gun Club will hold a shoot at a fine lot of live birds on their grounds near the city on the same week. The New York Rifle Club will continue its off-hand handicap match at the Cypress Park range, Newtown, L. I. All the Jersey clubs of Newark, Paterson, Passaic, Cherry Hill, Rutherford and Springfield will hold club shoots on the same day.

NEW JERSEY ATHLETIC CLUB, Feb. 15.—The gunning continent of the N. J. A. C. indulged in some excellent sport at clay-pigeon shooting this afternoon on the organization's grounds at Bergen Point. The first event was the second match of the series for the club's annual championship trophy, an affair requiring twenty-two gold bars, one for each match, and a device of crossed guns from which an appropriate and handsomely chased gold medal is pendant.

The first match of the series was by Edward L. Vredenburg with 18 out of 20, on Feb. 1. To-day Bayard T. Kissam won first, the scores being as follows: De Witt C. Smith 14, B. A. Kissam 10, C. C. Pope 10, O. Schuyler 10, S. Vreden 13, E. L. Vredenburg 11, R. S. Pats 15, H. A. Popham 10. Second event, 20 birds, 3 prizes: E. O. Schuyler first, with 19, B. T. Kissam and R. S. Paret tied for second on 17, Kissam winning on shoot-off; De Witt Smith third, with 16. The other scores were: E. L. Vredenburg 15, H. M. Popham and C. A. Pope 13, G. S. Vreden 12, S. L. Davis 11.

Third event, handicap, at 20 blue-locks: Paret and Schuyler tied for first, 16 each, Paret winning on shoot-off; Pope and Vredenburg tied for second on 15, Pope winning on shoot-off; De Witt Smith and Popham tied for third on 10, the former winning on shoot-off; Vreden broke 8.

Fourth event, at 18 birds: Schuyler first, with 18; Smith second, with 14, Pope third, with 13.

BROOKLYN, Feb. 14.—The match between H. Balzer, of Flatbush, and Elias Helgans, of East New York, came off this afternoon on the Dexter park grounds on the Jamaica plank road. Although the conditions were 30 yds. rise, 10 yds. bound, 100 a side, 50 birds each man, Balzer refused to shoot with an, but his own 10-bore gun, while Helgans adhered strictly to the agreement, using a friend's shooting iron, a 12-bore Parker hammer gun. The weapon used by Balzer was a Scott hammerless, 10-bore. No handicap was allowed, both men shooting from the 30 yds. mark. Helgans being entitled to an allowance of 2 yds. Nearly every shooting club in Brooklyn and vicinity has been ruled. The score: E. Helgans 37, H. Balzer 31. J. Schlemm, referee. A return match between Balzer and Helgans under the same conditions will come off on the Woodlawn Park grounds, Gravesend, L. I., on Thursday, Feb. 27.

CINCINNATI, Feb. 11.—An impromptu match at live pigeons was shot this afternoon at the old Avenue Ball Park, the principals being two youngsters in a friendly contest at birds, which was truly a treat. The birds were without exception extra strong, and the contest the toughest. The match was arranged at about 12 o'clock noon, necessitating the capturing of the birds used between that time and the match. Bohemian's fourth, ninth, fifteenth and nineteenth birds ought to, and no doubt would, have been good kills on ordinary birds, but not so on the lot shot to-day, the rises mentioned managing to retain sufficient life to fall dead out of the specified boundary. The match was a very even one, the scores being as follows: E. Helgans 37, H. Balzer 31. J. Schlemm, referee. A return match between Balzer and Helgans under the same conditions will come off on the Woodlawn Park grounds, Gravesend, L. I., on Thursday, Feb. 27.

CLUB OFFICERS.—The new officers of the Minneapolis Gun Club are: Pres., Lou Harrison; Vice-Prest., Dr. Kilvington; Sec., A. F. Schuler; Treas., W. L. Walford; Capt., C. U. Sign. The Frankford Gun Club, of Philadelphia, has elected the following officers for the ensuing year: Pres., Harry Longhead; Vice-Prest., Edward Dawson; Sec., Edward Beck; Treas., A. Wingert; Capt., John Crowther. The University Gun Club held a meeting on Feb. 11 at the college, and reorganized for the coming season. F. B. Neilson, '90, last year's president, was in the chair, and the following officers were elected: Pres., J. H. Brinton, '90; Vice-Prest., F. B. Neilson, '90; Sec., T. W. Lindecker, '91; Treas., G. D. Rosengarten, '90; Board of Managers, F. C. Williams, '91; W. Brinton, '93; S. W. Dougherty, '89, P. G.

CLAREMONT SHOOTING ASSOCIATION.—Claremont, N. J., Feb. 15.—Sweeps at 10 blue-locks, 50 cents entrance, ties divided. No. 1: Sigler 9, Miller 10, Johnson 8, Tatham 2, Nixon 4, DeWitt 2. No. 2: Sigler 9, Miller 10, Johnson 8, Tatham 2, Nixon 4, DeWitt 2. No. 3: Sigler 9, Miller 10, Johnson 10, Tatham 6, Nixon 8, DeWitt 3. No. 4: Sigler 9, Miller 10, Johnson 10, Tatham 8, Nixon 7, DeWitt 5. No. 5: Sigler 9, Miller 10, Johnson 10, Tatham 7, Nixon 2, DeWitt 8. No. 6: Sigler 9, Miller 10, Johnson 9, Tatham 6, Nixon 6, DeWitt 6. No. 7: Sigler 10, Miller 9, Tatham 4, Nixon 5, Rose 7. No. 8: Sigler 10, Miller 9, Tatham 4, Nixon 5, Rose 7. No. 9: Sigler 10, Miller 9, Tatham 4, Nixon 5, Rose 7. No. 10: Sigler 9, Miller 8, Johnson 10, Nixon 6, Budd 8, Evans 8.

HARTFORD, Conn., Feb. 15.—The following scores were made by members of the Colt Hammerless Gun Club on their grounds. C. H. Burbridge won the medal with a clean score of 25 blue-locks. C. H. Burbridge 25, F. L. Whiteside 24, S. B. Douglass 22, E. L. Hooper 22, M. F. Cook 21, Allen Willey 21, C. L. Hotchkiss 20, C. Cook 18, B. A. Jackson 18, C. Griswold 18, J. Alger 17, L. B. Bushnell 17, H. F. Nichols 17, E. S. Young 16, A. C. Collins 15, Louis Wyler 16, Col. E. M. Graves 15.

GLENWOOD, N. J., GUN CLUB, Feb. 12.—Match at 27 blue-locks, 18 yds:

W. H. Van Winkle.....	11111111111111111111—25
G. D. Martin.....	11111111111111111111—23
C. Belcher.....	11010111111111111111—22
J. F. Drew.....	11010111111111111111—21

At live pigeons, 22 yds., both barrels:

W. H. Van Winkle.....	1101—5
F. Packard.....	101010—5
G. D. Martin.....	101001—4
J. F. Drew.....	00011—3

The club will have a contest with the Walkill Valley Club on Feb. 22 at live pigeons and blue-locks.

PHILADELPHIA, Feb. 15.—The match between the Philadelphia Sportsmen's and West Jersey gun clubs on the latter's grounds to-day resulted in a victory for the home team, 20 single on 25 yds. The scores were: West Jersey Gun Club, J. H. Leckner 14, Bennett 13, Griffith 11, J. W. Chalmers 8, Archer 8, total 59. Philadelphia Sportsmen's Club—Kidd 6, Brown 8, Smith 3, Garton 14, Dr. Glass 14, Erwin 11; total 56.

MIDDLESEX GUN CLUB.—Plainfield, N. J., Feb. 13.—There will be sweepstakes shooting at live and inanimate targets on the grounds of the Middlesex Gun Club

PATUXENT, Md., Feb. 15.—Geo. P. Willey's afternoon tournament was well attended by the local shooters from Patuxent, Laurel, Jessup, Odenton and Elliptic City. Trap-shooting in this place is in its infancy yet, which will show the reason of small entries for the money pools. From the interest shown, however, it is fair to believe that time will develop a goodly number of cracks capable of holding their own in any company.

First event, three traps, 6 singles, 50 cents entrance. R. Bond 6, Dr. Brown 6, F. Bond 4, Willey 4, Clarke 4, Elliott 3. Ties for first and third div., F. Bond second.

Second event, 18 singles, \$1.50 entrance, three moneys: R. Bond 16, Dr. Brown 16, F. Bond 15, Willey 14, Clarke 14, Murray 13, Elliott 11. Bond and Brown first, F. Bond second, Clarke and Willey third.

Third event, 6 singles, 50 cents entrance. Willey 6, Dr. Brown 6, R. Bond 5, Reeler 5, Clarke 4, F. Bond 3, Murray 3, Elliott 3, Gorman 3, McClellan 3. Ties div.

Fourth event, same conditions: Dr. Brown 5, Reeler 5, R. Bond 5, Clarke 4, McClellan 4, Willey 4, Travers 4, Gorman 3. Ties on 5.

Fifth event, same conditions: R. Bond 5, McClellan 5, Dr. Brown 4, Travers 4, Clarke 3. First div., Brown won second on shoot off, Clarke third.

Sixth event, same conditions: Reeler 6, R. Bond 6, Willey 5, Dr. Brown 5, Clarke 4, McClellan 4, Gorman 3, Travers 2. Reeler first on shoot off, second div., Clarke won third on shoot off.

Seventh event, team match for purse, 9 targets:

F. Bond.....8	Dr. Brown.....9
Clarke.....8	Widell.....7
Welch.....7	Elliott.....7
R. Bond.....5	Murray.....4-29

PICUS.

JAMAICA, L. I., Feb. 15.—The Monahan Gun Club intended to hold its regular shoot Feb. 22, but as they will have their hands full on that date in their match against the Amersfort shooters, they concluded to hold the club shoot to-day. The targets were glass balls, each man shooting at 10, the rise being 21 yds., Mr. W. Hopkins being the only member with a handicap, shooting from a 20 yds. mark. President Elliott, of the club, covered himself with glory by winning the leather medal, his total in 21 being 8 hits. The gold medal went to Mr. Thoutre, who shot 8. Bramwell on the tie. After the regular shoot at 10 balls the members shot a sweepstakes at 11 balls, adding the latter score to the first. The score:

Club	Shoot, Sweep, Tot'l	Club	Shoot, Sweep, Tot'l	
G. Blacke.....5	6	11	H. L. Van Sienlen.....5	17
A. Theuret.....9	10	19	W. Garnett.....8	9
J. R. Van Sienlen.....7	15	22	W. Monahan.....7	15
H. Bramwell.....9	7	16	W. Hopkins.....6	9
E. Moesch.....7	7	14	J. H. Eldert.....4	8
J. Anderson.....7	6	13	E. Frost.....4	5
W. Charles.....9	0	9	H. Camden.....5	3

WOODS, N. Y., Feb. 15.—North Side Gun Club, of Long Island, March 15, 1890, 5 Kings' group trials, handicap rise, no back boundary, 80 yds. boundary, club rules, 6 moneys:

C. Meyer.....001110-4	Gru.....110011-5
Duryea.....111110-4	Dr. Schroeder.....110110-5
Lyon.....011111-6	Siems.....000110-2
Dr. Franz.....111101-6	Chevalier.....101100-4
Blanch.....101101-4	Helmken.....010101-3
Eberhardt.....101111-4	

The club will hold its regular monthly shoots every second Tuesday of the month, commencing March 11, at Feldmann's Queens County Park, Grand street, Maspeth, L. I. Mr. T. Lyon was elected as a committee of one to represent the club at the convention of the New York State Sportsmen's Association for the Protection of Fish and Game, to be held at Lyons, N. Y., June 9 to 13.

HUGHES, Conn., Feb. 14.—I inclose you scores of Hutchison Gun Club of Jan. 29, 15 single blue-rocks: Young 15, Taylor 12, Winters 12, Burslem 9, Allen 9. Medal match, 35 single blue-rocks: E. H. Young 33, M. Taylor 29, F. Burslem 24; Young won medal. Feb. 14 the shooting of Eli Young for the professional order and exceptionally fine, he only missing two shots in the entire shoot. The shooting of W. R. Clark, a visiting sportsman of Richmond, Ind., was also good, while "Col." Burslem polished up his lenses and kept the boys guessing. Mr. C. R. Dods did good work for a new beginner, at which practice will make one of the best shots in the club. First match, 12 single blue-rocks: Young 12, Burslem 9, Dods 8. Second match, 9 single blue-rocks: Burslem 9, Clark 8, Young 8, Dods 7, George 5, Allen. Third match, 6 single and 2 pairs blue-rocks: Young 9, Clark 8, Burslem 8, Dods 7, Allen 6, Menke 6, George 4. Fourth match, 12 single blue-rocks: Young 12, Burslem 10, George 8, Menke 7, Allen 6, Dods 5. Fifth match, 6 single blue-rocks: Young 9, Burslem 7, Dods 5, Menke 5, George 4.

ELM CITY TOURNAMENT.—New Haven, Conn., Feb. 12.—The Elm City Gun Club claim Good Friday, April 4, for an all-day tournament, which will be held on their grounds near the terminus of the State street horse railroad in this city, on the above date. A cordial invitation is extended to all shooters in this State and vicinity to be present. Programmes will be sent out soon. The club is in a flourishing condition, and now numbers among its members some of the best trap shots in this city. The grounds have been very much improved, having been recently graded and a new set of pits dug, which with the new trap-pulling apparatus will add much to the convenience of the visitors.—ELM CITY.

PERTH AMBOY, N. J., Feb. 14.—I inclose scores of three matches shot at Morgan's Station, on Feb. 11. There will be a number of matches at live-pigeons on the Perth Amboy Gun Club's grounds, Feb. 22; \$200 in cash prizes will be shot for. Matches to-day: At live-pigeons, 1 trap, 25 yds.; M., Midway Club; P. A., Perth Amboy Club; A. T. W. Hartmann (P. A.), 1101111 —6 At 15 birds: C. Applegate (M.), 1100100110011—7 S. Hall (P. A.), 0100100101000—4 At 10 birds: D. Applegate (M.), 0000010001—3 E. Sylvester (P. A.), 1001100001—4

MANHATTAN GUN CLUB.—Woodside, Feb. 12.—Match at 7 birds, Lichtenberger 23 yds., Lambrecht 22 yds., others 21 yds.: M. Lichtenberger 4, J. A. Hoffman 4, John V. Bayer 1, Louis Herbet 2, Joseph Breitkopf 3, Geo. Ehrenkopp 2, E. J. Lambrecht 4, John N. Geenerich 4.—J. A. HOFFMANN, Secretary.

PLEASANTVILLE, N. J., Feb. 10.—The Pleasantville Gun Club made the following scores to-day, with 20 clay-pigeons: M. Sanders 19, W. R. Adams 12, E. Adams 12, E. Leeds 18, L. Barrett 5, P. Adams 5, M. Willis 13, F. Hammill 5, A. Adams 12, H. Hackett 11.

THE ROCKAWAY POINT ROD AND GUN CLUB will hold a shoot on their grounds at Rockaway Park, Rockaway Beach, Feb. 22, open to all amateurs, standard blue-rocks.

SOUTH NORWALK, Conn., Feb. 15.—South Norwalk Amateur Gun Club match at 25 blue-rocks: O. Crum 9, R. Finch 10, J. Coleman 17, S. Dunning 10, F. Norrhop 11, E. Seymour 11, P. Hough 8, J. Fiedler 15, W. Austin 15.

NEW HAVEN GUN CLUB will hold a tournament on Washington's Birthday, Keystone.—H. H. BATES, President.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE SECOND CRUISE OF ORINDA.—III.

BY DR. W. H. WINSLOW.

THE fog cleared at sunset and next morning we ran out and into the Thoroughfare, a good harbor between Kimball's Island and the upper end of Isle au Haut, where a club house and several cottages have been added by Boston and New York men to the shabby, straggling, sleepy village of the Narrows. The club grounds are north of the bar; a sterile, rocky hillside faces a pretty arm of the sea and several spruce-covered islands, and one can distinguish far across the channel the feathery shore line of Vinalhaven. A steam launch runs daily to Green's Landing and carries passengers and the mail. The club has not flourished and it is contemplated to open the house to the public next season. For boating, fishing, rough rambling and pure air, no place could be better.

We were surprised to see a narrow, high-sided, tall-masted cutter at anchor in the harbor. She was the Mr. E. C. Baker, of Washington, D. C., from his plans, by Mr. Turner, a local boat builder. She showed good workmanship, but, having no outside

ballast, it has been impossible to get her down to her waterline with her keel up and under the cable door, and she is cranky as a Texas burro. Her keel was 6 in. square and timbers the same size, and she was copped like an East Indian. And this recalls to my mind quite a number of other yachts (?) that have been built in shipyards along the coast of Maine by native talent, that have been dreadful failures, not only in speed, but also in seaworthiness. Every ship carpenter down there thinks he knows how to build a yacht and is ready to furnish one several hundred dollars less than the regular builders in the yachting centers. The owner gets a good smack that he is ashamed of, and he gets rid of her at the first opportunity, convinced that there are specialists in yacht building in as many other branches of business. *Ne sutor ulra crepidam.*

There was a light N.E. wind that helped us out of the harbor and we had much pleasure watching the breakers swirl, curl, break and flash in the sunlight upon the point of Kimball's Island. When it fell calm and the glassy sea gradually covered with mist like a mirror breathed upon, and the yacht's sails flapped ominously as the swelling sea rolled her from rail to rail and left us helpless in the broad bay. But soon catpaws scratched the smooth surface seaward with patches of spangled silver; and the sea breeze came, a cool, fresh breeze from the southwest filled the restless sails and sent us westward with a merry ripple under the lee.

Two hours' fine sailing took us within sight of Widow's Island, in the mouth of Fox Island Thoroughfare; the wind died away at sunset and left us anxious and dampening in the dew, when Mr. McDonald proposed to tow us onward, and I yielded to his desire for exercise. The towing was done by a pair of oarsmen with the tender and a pair of oarsmen when the wind came out northeast. He came aboard, and we ran cautiously into the broad Carver's Cove south of Widow's Island, and anchored about 8 P. M. The sails were heavy with dew, but we gave them a fisherman's furl and rushed below, where Fritz had a square meal for all around the table.

As we were encircling the moon, we discussed the probabilities of a storm and our open roadstead in case of an easterly, and turned in early "to sleep with one eye open."

I awoke at 4:30 A. M. with music in my ears and unsteadiness in my surroundings. A strong northeast wind was fingering the strings above the deck in a morning pean, and the sea was coming right at us through the eastern entrance of the Thoroughfare. We were on a lee shore, so all hands were on deck. In a jiffy we got under way quickly and flew like a gray gull in the mist and breaking daylight fairly into the channel and toward safety, when we had difficulty in seeing the buoys and landmarks. We ran to North Haven very soon, picked a way through the large fleet of coasters there, and let go the anchor off the steamboat wharf just as a thick fog settled and rain came with the gusts of hard wind to drive us at breakfast. Yachts Kimball, Elbow and Aquila were here, where Mr. Weld has built a handsome villa upon a prominent bluff. A boat touches here going to and from Rockland and Bar Harbor every other day.

The gale raged an hour, and then to our astonishment abated, the fog lifted and the sun shone brightly. We made a hasty visit ashore, then got underway immediately and ran with a free sheet, a strong breeze and lively sea at our western entrance of the Thoroughfare, past Sugar Loaves and the tall shaft of Peller's Ledge, and shaped our course for Camden. This was a red-letter sail. The sun shone brightly, the white clouds sailed across the sky, the air was full of ozone and seemed to sparkle from friction of its atomic elements, the waves gave us a gentle quarterly undulation, the cutter's sharp prow sent lines of rushing silver along the water, and the sails were full of wind. The cutter's contour, keeping a steady strain upon the rigging, and the helmsman reclined upon the deck and breathed in the health and wealth of nature.

Talk of a reception of the *élite*, the grace, splendor and intoxication of a dance, the pleasure of choice viands and old wines of a banquet, the gratification of successful hunting and the wild riding after the sunset, these things we do not equal the delight that is felt by the yachtsman on such a day when the sea has adjusted his winged machine accurately to nature's forces, and with the feeling of a conqueror speeds swiftly over the sea, enjoying its caresses and languishing in the sun-kissed breeze.

The wind lessened as we approached the main shore, as it frequently does under the mountains, and we dropped anchor in Camden just the hours for the start. Kimball and Jamie left us here for the leaving of McDonald, Fritz and I stayed on to finish the cruise together. We ran up to Belfast, replenished stores and started out again one afternoon at three, intending to go to Rockland, but the wind failed and we towed into Gilkey's Harbor, guided by the light and the roar of the surf upon the shore of Islesboro, where we anchored at 9 o'clock. It began to blow and rain during the night, so we took out a second anchor, gave good hard work to the crew, and took out a third anchor when the rain three days, during an ugly wet southeaster. This is an admirable harbor and is much used by coasters. It was our first spell of rough weather, and Jack thought such yachting was tedious.

Mr. Windsor and other gentlemen of Philadelphia have bought a farm in the bight of the inlet or bay and have established a club house in a respectable farmhouse, upon a commanding hill overlooking the harbor and the sea. The house is a fine one, with a floating stage and boat house upon the shore, and have several good boats, a small sloop yacht and a steam tugboat. A road leads across the island about three miles to Dark Harbor, where a wharf and dam have been built, and a larger and finer club house is under roof upon a hill from which there is an extensive and beautiful view of many islands and the broad eastern channel. Camden is a fine place, and I think it is the best place in the club, but it appeared to be a family affair of Philadelphians. They have certainly secured the very best of Islesboro for their summer home, as Gilkey's Harbor has good fishing and sheltered waters at all times, and the eastern shore is breezy and cool in hot weather.

We caught cunners and flounders, dug clams along shore, got milk and bread from the farm, sailed around the bay in our tender, which we had fitted with spritsail and rudder. Fritz and Jack went a hunting and returned one night with a fish hawk that weighed about 5 lbs. He was an old settler and looked vicious. The second day we saw a sloop with close reefs make into the harbor. The only man aboard stood near us and inquired about the anchorage, and then let go his anchor near by. He was in a hurry to get his boat under way, and was in a great hurry. The sloop was half full of water; he had some stores for a camping party upon Ensign Island. He had left them in the morning and run over to Camden, then returned and could not find the island in the fog, the gale had driven him to leeward fast, and the boat had nearly foundered, when fortunately the fog lifted and showed the entrance into Gilkey's. We took charge, sailed the craft into a sheltered anchorage, her repairs, her masts and rigging, and a college man, named Wilbur, and told good stories and proved very agreeable. He was made comfortable and happy till the next day, when he started by the inside passage to relieve his comrades. The little sloop and tug went over the rocks during the night, our tender chafed the "guess warp" block off the boom, a lashed alongside and was driven to leeward, and this was all the damage done by the gale that we knew about.

At 1 P. M. on the third day the gale moderated, the fog lifted, the rain ceased, and we got up anchor, fiddled the topmast, cleared the rigging and deck and carried the mainsail and jib across to Camden. The mountain forests were black with moisture, the fields and hillsides were a lively green, and long veils and streaks of mist, made curious figures and shadows in the valleys. Seaward the storm clouds swept onward in great masses of blue-gray and black, and vessels flew up the bay under close reefed mainsail and storm staysail. One schooner had her foremast broken off twenty feet above the deck and the head gear was in a tangle, holding the broken jibboom athwartships. We ran across close-hauled very comfortably and only wet the forecabin with a little spray, and anchored off the steamboat wharf, near the yacht Widgeon, of the Eastern Y. C., which had been here all the season. The wind was now S.S.W. the southern point gave us shelter from the sea, we rolled easily and went to sleep.

The next morning at 9 o'clock the barometer had fallen from 30.45 to 29.35, thermometer stood at 65° F. it was raining, and before we could get breakfast it began to blow a fierce gale from the S.W. We hauled up to the anchor, let go our 50 lbs. one and veered on the cable for twenty fathoms, then the topmast, lashed the spinnaker boom along the deck, dropped the boat astern, put tackles on the boom, and made everything secure above and below. The wind and sea had full sweep from the coast of Africa right into the open side of the harbor, and the yacht was soon standing upon one end and then the other in alternation, as she courted to Neptune.

It blew great gusts for sure, equal to a hurricane in the tropics, and the sea was very heavy. One moment the yacht would throw her forefoot into the air and come down aft with a splash till the rail was even with the water, the next the stern would go up and show the heel of rudder post, the bowsprit would rise or three feet under and a hoghead or two of water would rise over the forecabin and run off the bow and waist. We took turns watching things on the topside, and had a round of whisky and water in the back. If the anchors were let go, the yacht would ride the gale out safely, if not the rocky shore was 200 yds.

astern and we should smash the craft and swim for life, or perhaps might just stay still, get clear of the point on starboard quarter and run upon the flat never the town, Jack was sick and wanted to go ashore, but the boat was half full of water now and Mr. Macdonald said, "Gad! she could not take you." It blew terribly from 9 to 12, but Orinda rode the seas beautifully, and did not start an anchor or break a rope yarn. Then the wind hauled around to S.S.W. and we were sheltered behind the point. The wind quieted down some, but it blew a gale and kept us anxious till next morning. The barometer had a greater radius of variation 30.45 down to 29.15, then rose as the gale moderated to 29.45, and stood at 29.60 the next two days.

It will be remembered that on last year's cruise Orinda dragged anchors several times, thereby getting into some dangerous water, from which hard work and good luck rescued her. I sent her two anchors to J. G. Alden's anchor works at Camden, Me., and Mr. Alden cut and fashioned them according to his judgment, knowing whereof I complained. It happened they had their first severe trial before his own home, and I am thankful to say, they stood a crucial test, and to him I owe the safety of my yacht and crew. If we had been obliged to use the anchors as they were last year I believe we should have gone upon the rocks. The change was shocking the tanks and stocks, sharpening the bills, enlarging the gill netting and giving a greater radius of curvature to the flukes. They were thus made more compact, lighter, and easier stowed and handled. It is not necessary to have the long ungainly, troublesome shanks and stocks of the fisherman's anchors to hold a craft, but the ordinary trade anchors of the ship chandlers' cannot be depended upon. Let the amateur yachtsman look well to his anchors if he wishes peace of mind and safety.

The next day, after the great gale, there was a moderate gale and heavy sea. We started under single reef and jib to beat down to Rockland, but after plowing along half an hour gave it up, because of the great strain upon the gear and the discomfort of tumbling around. Mr. Macdonald had gone out on the bowsprit to fish the anchor, and was still there when we poked the yacht's anchor overboard. The water was behind the Norm Island into the rough bay. I told him to hurry and get in, but he was too slow, and as a sea rolled under and lifted the bow he lay down on the bowsprit with one foot on each footrope and one hand fast to each bowsprit shroud. The next moment the yacht plunged him in up to his neck. He spluttered and got aboard before the next sea, a sea which I believe these crotchets I believe they are built to drown people. I don't care for the wetting of anything but my rubber boots; it'll take them three years to get dry again. Everybody laughed, and Fritz dried him up with three fingers of *spiritus frumenti*.

Jack and I got a team and had a breezy, enjoyable ride over the hills through Rockport to Rockland after the mail. The views from the seashore are magnificent, and it was a pleasant change from sailing. An hour's riding on the water was better than two days' sailing. I told him to hurry and get in, but he was too slow, and as a sea rolled under and lifted the bow he lay down on the bowsprit with one foot on each footrope and one hand fast to each bowsprit shroud. The next moment the yacht plunged him in up to his neck. He spluttered and got aboard before the next sea, a sea which I believe these crotchets I believe they are built to drown people. I don't care for the wetting of anything but my rubber boots; it'll take them three years to get dry again. Everybody laughed, and Fritz dried him up with three fingers of *spiritus frumenti*.

We crossed the Western Bay, rounded Mark Island, skirted Islesboro, taking a good look into Dark Harbor before mentioned, stood past Cape Rosier, sailed in and out of Orent's Harbor, and then went into Buck's Harbor and anchored behind the island, which makes a perfect haven for vessels. The little crescentic bay is about a mile wide and two miles long, and has good landing ground and plenty of water, except abreast of the island, where there is a reef with 2 ft. at low tide.

We caught many fat cunners and flounders around this reef and inside, where the bottom is muddy and soundings shoal toward the island and its pretty cove, with an empty house and small wharf in a valley between two rounded grassy hills. Buck's Island is saddle-shaped, the depression running north and south crosswise, and the grass is very coarse. The eastern elevation is a rounded hill covered with grass, and has a rather steep shore line; the western is rough, ledgy and irregular, covered with grass, huckleberry and evergreen bushes and sumacs and bordered by ledges shelving down to the water. The views from this island down among the islands and channels of the bay, across and down the magnificent Reach, and inland to the high, wild, conical, and rugged peaks of the crags of Wicwac's head, are fine enough to induce a long journey to enjoy them. There is a rough granite wharf upon the main, a granite quarry, two stores half a dozen houses upon the cleared land bordering the country road, and a few patches of garden stuff. The soil is very poor; the inhabitants work in the quarry or go to sea, and coasters use the harbor for shelter, and land goods for Brookville and the back country. An hour's riding on the water was better than two days' sailing. I told him to hurry and get in, but he was too slow, and as a sea rolled under and lifted the bow he lay down on the bowsprit with one foot on each footrope and one hand fast to each bowsprit shroud. The next moment the yacht plunged him in up to his neck. He spluttered and got aboard before the next sea, a sea which I believe these crotchets I believe they are built to drown people. I don't care for the wetting of anything but my rubber boots; it'll take them three years to get dry again. Everybody laughed, and Fritz dried him up with three fingers of *spiritus frumenti*.

Water could be obtained only from a spring occupied by half a dozen large frogs, but we were too much in need to be nice and filled up the tank. The drought had dried up all the wells and cisterns, and the only water Jack went out with his shotgun and shot a partridge, a squirrel and several robins to eke out the mess, for we were suffering for fresh meat. I believe the first two were orphans, for nobody could find any more of the species. Jack would make a good hunter in a game country; he is sly, patient, energetic and quick. Fritz made a French stew that seemed the best meal of the trip.

On the fourth day the wind from the northwest the night after our arrival and kept it up and us with anchor down for three days, but Orinda lay very easily head to wind and we made pleasant excursions afloat and ashore, so thoroughly were we protected by the island and hills. The temperature ranged from 60° to 65° Fahrenheit and barometer 29.60 to 29.90 during the gale. Half a dozen wind schooners came in, and two coasters from Portland, and a schooner from New York. On the fourth day, at 5 A. M., she had deck covered with barrels of petroleum and hogheads of molasses, her rigging and sails were dilapidated and dangerous, the hull was ordinary model and the crew consisted of the captain and his fourteen-year-old son. She started for Blue Hill after loading some freight on the wharf here.

A Bostonian has bought Congdon's Point, just west of Buck's Harbor, and he intends to build a hotel, and will be another financial failure, because there is not any harbor for boating and fishing, and tourists will be deprived of the very things that make the seaside delightful.

The fourth day the wind was light, the sun bright, the air warm, and, refreshed by long sleeps and much cabin rest, we started for the open bay with light north-easter breeze. We had to stand fast to escape the sweep of the tide upon the rocks, but weathered it and raced with flowing sheets past a fine island sloop of some pretensions to model and smart sails. The captain said we could not do it in a stronger breeze, but we laughed at his ignorance of cutter weather and showed our stern.

After a short visit to Castine we started for Belfast at 3 P. M. and took for the morning at 4 o'clock. Jack went out and sailed and snoring during the afternoon. The next day we had a good haul and got nearly everything into the storehouse, expecting to haul out the next morning, but a rain and gale set in and Jack and I left Mr. Macdonald and Fritz to get her out and cover her over, which they did several days after. How important it is to take advantage of a fine day to dry sails and strip ship and end the cruise. A delay of a day at the end of the season often means a week of annoyance and loss of time.

From a window of the steamer Penobscot we watched the storm and crippled Orinda as long as we could, as she rose and fell upon the rising seas and bowed us farewell. Were they tears that hid her at last, or the fierce rain that beat against the window glass?

MINNETONKA Y. C.—This club, whose members are mostly citizens of Minneapolis, Minn., is now in its eighth year. A new club has been organized, and the club's membership is increasing rapidly. The club station is on Lake Minnetonka, near Minneapolis. The officers are: Com., E. J. Phelps; Vice-Com., H. J. Burton; Sec., F. C. Nickels; Fleet Captain, C. B. Eustis; Directors, Messrs. Phelps, Burton, Nickels, Eustis, C. B. Eustis, Smith, Reeve and Hardenburg.

A NEW RACING CATBOAT.—Mr. John H. Cornwall, the yacht builder and designer, of Port Washington, L. I., has about finished a 20 ft. racing catboat for Mr. W. J. Jones, of the Riverside (Conn.) Y. C. The boat is very handsomely finished throughout, and it is expected that she will be very speedy. She will be raced in the regattas of the Larchmont, New Rochelle and Riverside clubs during the coming season.

LYNN Y. C.—At the last meeting, on Feb. 4, measures were taken to repair the float and approaches, including the dredging of a new channel, all of which improvements will greatly benefit the club. It was also decided to hold an open regatta on Labor Day, the yacht building for Mr. S. A. Rogers and one for Mr. C. J. Riechen, in addition to the new steamer for Com. Baker.

1,500 MILES IN AN ADIRONDACK BOAT.

PART VIII.

ST. LAWRENCE RIVER, Oct. 1, Wednesday Afternoon.—The view on entering the great river was perfectly beautiful; the wind, heretofore strong, had died down, and with the darkness the moon rose, and the whole scene was entrancingly lovely. The river became as smooth as glass, while not a sound disturbed the serenity of the evening. Shortly before dark I espied evidences of a farm house, and putting in and walking up through the woods, found a pretty little house shut in by a grove of trees. Here a buxom matron gave me apples, milk, etc., and when I made a request for pie or preserves said, "Now I know you are an American." On my asking the reason for this she replied, "Oh! Americans are always as good as gold." I kept on the main shore on the north for some distance and then tried to follow that of Howe Island. The little isles that I passed were covered with cedars, pine and birch, looking ghostly in the moonlight. They were also very confusing, being well-nigh innumerable, and I had much ado to keep my course. Later in the evening, the moon becoming obscured by clouds, I had several narrow escapes from running on rocks and minute islands, the river being full of them and there being but a narrow channel between.

As the moonlight gradually failed, navigation ceased to be a possibility in such a place. About 6:30, on emerging from a maze of small islands, I came upon a wider expanse of water, and being thoroughly mixed up, struck out for the nearest shore, a knoll covered with pines, and, drawing the boat up on the stony beach, slung the tent and gear on the shore, and afterward took a delicious swim in the placid river. It was so refreshing, and I felt once more that a wilderness surrounded me. Having retired inside the boat, I ate supper and then read until 11 P. M.

The St. Lawrence River here is twelve miles across. South of my bivouac (which was on the mainland, as I subsequently learned) is the extremity of Howe Island, also Wolfe Island, and south of this comes Chippewa Bay. I had rowed 35 miles, which would easily have been covered had there had not prevailed such a strong head wind. Near Kingston I saw a steamer or two, besides several canoes, yachts, etc., these waters offering every attraction for such sport. From Toronto to Kingston by steamer is 167 miles; by my route it is 196 miles, the former omitting the Bay of Quinte, of course.

St. Lawrence River, Oct. 2, Thursday.—The night was very cold, but I slept like a top, being tired from the hard pull yesterday against the wind. Daylight brought to view a small but perchance on a hill on Howe Island, half a mile distant. I rowed thence, and climbing up through a mass of brush and rocks found an Irish family, a hospitable woman and her husband and a buxom and pretty daughter. On my applying for breakfast, a little table was set in the best room, and the pretty girl, who had been waiting for the "English gentleman." This was conducive to a good appetite, and I fell to on eggs, potatoes, etc., with zest; but noticed at the same time that the old lady kept a lookout on the young one every few minutes. The old fellow followed me to my boat and pointed out the course, which at best looked rather complicated.

A powerful head wind, N.E., was blowing, soon increasing to a gale and then finally ending in a genuine hurricane, keeping up until midnight. This was most discouraging and I was almost persuaded to camp behind some island, staying there until it subsided. After rowing two miles across the bay in the teeth of the storm, I crept from island to island, endeavoring to avoid the blow by this means; but the effort was only partially successful, and rowing was laborious and disheartening. I had to summon up all my resources, and the pretty girl, as energy on hand for such occasions, to counteract the mental and physical depression of such hardship, and rowed on six miles to the town of Gananoque, on the Canadian shore, looking very much out of place in the wild and romantic scenery on all sides of it.

Passing Gananoque, I continued due east for four miles, finally becoming completely confused in the mass of great and small islands. At one time I went ahead only to see every side entirely blocked by an endless shore; but on approaching nearer this would unravel itself into a hundred or more isles and islets. Groping around in such a place as this for an hour, trying to keep my direction, but failing utterly, I came suddenly on a wide stretch over which the wind was howling furiously; and, rowing across, espied with joy a fine farmhouse some distance away on a hill, on which I pulled up and landed. This was Gananoque, one of the largest of the 1,500 in the river hereabouts.

After waiting twenty minutes I took dinner with a nice family. The farmer was a noble fellow and a thoroughly genteel man; he said grace before eating, and the whole of them were more refined than one usually finds among those of their calling in such an out-of-the-way region. With a can of milk and some apples, the farmer and his wife, and a young man, well proportioned, went to see my boat and pointed out the proper channel.

The rowing henceforth was specially hard and the boat scarcely made any progress at all. A large steamer with barges in tow passed me going to Kingston, and she appeared so suddenly around an island that the apparition seemed to have risen from below the surface of the river. At one place the wind had a sweep of 3 or 4 miles across the river, and the waves made the boat pound considerably. It grew cold in the afternoon, and the wetting occasioned by the spray added another item to my misery. In fact it was not the most ideal day for the Thousand Islands, the beautiful scenery being changed into a howling picture of pandemonium and desolation, though even now it would be exceedingly picturesque and wild enough to suit the most romantic disposition if one were not pulling against a 30-knot gale.

I passed several islands, some 10 miles long and some not 10 ft. in length; but all covered with pines and birches, with masses of fern-covered rocks and moss in abundance, rank underbrush abounding in rocky caverns, pretty green banks and quiet coves. Three miles after leaving the dinner station I sighted a small lighthouse on a tiny island, and entering a narrow channel observed quite a current. This ran past Fair Island, and here the waves were very high, the wind blowing from the north of several miles, blowing directly against the current. The place was not half a mile across and the waves presented a most unusual spectacle, being high enough to make considerable watchfulness necessary. I passed several cottages on the islands, but they were all shut up, the season having ended. Getting off my course during the afternoon, I tried to row ashore twice to inquire the correct direction. Some of the islands were not over 15 ft. across, while others were 2 miles wide. I struggled hard against the hurricane during the remainder of the day, gaining foot by foot, though frequently three strong strokes would not take me a yard. A nasty choppy sea added to this, and it became a mere question of how long flesh and blood could keep it up.

On reaching Gananoque Island I kept close around its shore, holding as close as possible under its lee. At last, at dark it came to an end and I had to cross around the further extremity of the island, exposed to the full battery of the storm. It was one of the most disagreeable evenings that I had yet experienced, and being exceedingly cold and wet I at last gave up and made haste to get under shelter. The islands virtually end here and the wind has its own way for 6 or 8 miles. The river is of that width here and seems enormous. The wind here blows from the east and of Grenadier or Bathurst Island was marshy and covered with a dried acres of reed beds and shoals flanked it on all sides. I had much difficulty in finding a harbor, but finally passed clear around the island's end trying to find some dry ground, and, rowing half a mile up the other side on the north, came upon a little grassy spot near a huge rock close by a small thicket of aspen trees. The marshes surrounded me, but I hastily drew my boat up and slinging the tent over her, got together a few sticks and built a fire to warm myself at 9 P. M.

The storm was perfectly terrific. I camped under the great rock and was soon appeasing my hunger and fatigue, eating and reading in my boat wrapped up in dry blankets, safe from the elements roaring loudly within a few feet overhead. It is a lone-some spot and one of the most beautiful in the world. To the main shore north, the river is about three miles wide and to the American side five miles. Just before dark I saw several wild ducks, some blue herons and a host of large size. The day's log shows twelve miles before dinner and fourteen afterward, every foot of the latter distance being wearisome and laborious. I was wet and cold, and on my whole trip I have not relished my snug quarters more than to-night, when I crawled into my little habitation out of the rain.

St. Lawrence River, Oct. 3, Friday.—I woke at 6 A. M., and, as it was still raining and storming, went to sleep again. At 10 the rain had temporarily ceased, and eating some bread and milk and striking tent, I packed up and got off again. I rowed straight down the river six miles until opposite Chippewa, on the American side, and then, compelled not only by hunger, but by a strong desire to see some of the islands, I made for a little farmhouse on the Canadian shore. It began to drizzle as I arrived, and the wind blew strong from the south, having changed during the night from the N.E. An Irish family lived here, very kind and hospitable, who gave me all the pork and potatoes I could eat, but whose information concerning the country hereabouts was exceedingly limited.

Launching again at 2, I rowed on through the fog and rain, the wind blowing up a nasty, choppy water, which unsteadied the boat and made rowing irksome. The river below the islands is 2½ miles wide, and flows N.E. The view of the Thousand Islands

from the north is very fine, and the St. Lawrence River impresses one with its vast proportions. At one time no land could be seen looking down the river, it being beyond the river's sight. It was quite a long time yet before I could say good-by to the Lake of the Thousand Islands, but finally the last one of the group, with its tall pines and bare rocks, sank out of sight in the mist.

Soon after leaving the dinner station I was wet enough to satisfy any storm, but the rain still kept on. There were several loons and many ducks on the river enjoying the weather. Above Brockville is a group of small islands, and here again I noted the current, which was plainly perceptible, though not at all swift. The shores on both sides were pretty, the Canadian side appearing to be more settled. Two large steamers passed, and beside these I saw a few canoes on the water, owned by farmers taking their grain to town [probably St. Lawrence skills, not canoes—Ed.]. Some of the islands built on the heights along the river occasionally, or on an island here and there, bespoke the summering places of the wealthy.

About 10 miles from my mooring brought me to Brockville, Canada, a pretty place built on a succession of ridges rising gracefully from the shore. Its population is 8,000; it was laid out in 1892, and the people are largely interested in manufactures. There are many of the houses built the town, erected in the woods on a rise of ground and not far from the shore, and here again I noted a precipice 60 ft. high, consisting of a huge rock slanting into the water. Below Brockville I passed two small villages and an extensive powder mill on the north shore. Twelve miles below comes Prescott (3,000 people), where I arrived at dark, and being thoroughly wet, cold and miserable, went to the Daniels House. For a square meal, as well as a place to sleep, I was set upon by a dozen questioners, and I was told that I was going to Ogdensburg, N. Y., with its 10,000 inhabitants, is directly opposite Prescott. It is near the mouth of the Oswegatchie River, which flows from Cranberry Lake, up in the Adirondack Mountains.

St. Lawrence River, Oct. 4.—At 6 this morning I set about making inquiries concerning the rapids below and the navigation of the river generally. Having found 25 miles to-day from Brockville to go down and look at my boat; he gave me some valuable hints and information, but the advice from all sides was not to think of running the rapids; and the large company of advisers who had collected entertained me with numerous tales of mishaps, etc., for which the river was responsible. However, discounting the advice liberally, I loaded my boat differently, fastening everything down, and placing the life preservers and painter's foot and aft, in easy reach, started off with the hope of getting to the "Long Sault" before night.

When pushing off from the slip I said good-by to quite a crowd, among them two pretty little girls of the better class, who, filled with curiosity at what their brother told them, came down to see whether the "man" was really rowed from Philadelphia to Prescott. As long as I could see them they stood waving their handkerchiefs after the lonely voyager. It was the most encouraging thing of the morning, as I had many forebodings about my chances in the great rapids, and felt as though I were going to my doom.

About one mile below Prescott, at a place called Windmill Point, are the ruins of an old stone windmill, where, in 1837, the Polish patriots established their headquarters, and where they were driven with severe loss. Two miles below the town is a lighthouse; four miles further on is Chimney Island, and here the Gallopes Rapid begins. A steamer passed me on the way, and by it I could see where to go, for the channel between the islands was very winding. As the current became swift I had to use care whether the "man" came, the steamer was so close behind, and running foul of some bar, around the wrong side of some shore, or the disadvantage, but several times I cut across places where the steamer had to go half a mile around, and twice, on this account, I was ahead of her. At three different points the current, striking on a projection from the American shore and owing to some islands, coursed directly across the river.

While passing Chimney Island suddenly the river narrowed, and the water came rushing down the rapids, and I was driven me when the rapidly increasing current hurried me around a rocky point, and I beheld the Gallopes; unaware of their proximity before I was fairly in them. Very fortunately I was near the Canadian shore, and thus avoided the heaviest swells, though in the most rapid water. Entirely at the mercy of the waves, and being nearly accustomed to such a swift current, I was in any case a pleasant surprise. Being so low in the water, I was afraid that she would run me down, being so close behind. The heaviest swells were, as far as I could judge, about 6 ft. high, and my little boat was tossed about in great fashion. Once the back water in the trough of two huge swells came over the boat, the water piled up down at acute angles and was knocked about like a cork. However, the waves were quite regular, though very high, and the waves, with but one exception, did not break near me, though they made a great noise.

The Gallopes Rapid is very short, only a few hundred yards long, and almost immediately after it come the Rapides du Plat. This was quite long and also exciting, the current being remarkably vigorous, but the water is almost level and smooth, the descent of the great rapids being scarcely noticeable. My companion here shot ahead and distanced me quickly, and it was a fine sight to see her racing along at railroad speed. She swung round a curve and was soon out of view. It was a difficult matter to decide which way to turn, as the islands are confusing and often more than one channel would appear; but generally the direction of the current indicated the proper course. Coming on the Gallopes so suddenly, I had no time to unship oars and substitute the long double-bladed paddle; but now, fearing another like experience, I thus prepared for it.

While shooting these rapids a thunderstorm came up, and the boom of the thunder, added to the roar of the troubled waters, was quite terrifying. It rained hard after this for an hour or so, but my thoughts were upon the navigation, and on avoiding the great rapids, and I was not at all annoyed by the rain, and casting the boat several yards ahead, I was on the Canadian side, on the American side, is Waddington, with 1,200 inhabitants. The views along the river are very pretty, and above the Gallopes Rapid are many farms, but below the islands were wooded and the place quite desolate.

About 8 o'clock I reached Morrisburg, on the north shore, also coming about 1200 and here the entrance to the canal, eight miles long, around the two rapids above. Just before arriving at the town the current was very swift, at one place nine miles an hour, and the sensation of being carried along by the river was very curious. When not rowing or paddling the water about the boat was perfectly motionless, but on looking at the shore the trees and other objects were all moving rapidly by. I just managing to reach land before being overtaken by the town.

Crossing the canal on a bridge I walked into the town to get a fair dinner. There were numerous Indian articles at the little stores for sale—lacrosse rackets, snow shoes, etc. Morrisburg is twenty-three miles from Prescott by water, which took me four hours, having paddled the greater part of the morning. On attempting to run the "Sault," I floated down the river, owing to a large basket of fruit procured at Prescott, having been too much occupied to attend to it during the morning. The basket being large the absorption of its contents nearly incapacitated me from resuming the oars for a time. There were numbers of black ducks on the river, and I also observed some huge fish leaping up, doubtless sturgeon. A few miles further on a mink appeared, trying to swim across the river and having a hard time in the current.

There were two smaller rapids some distance below Morrisburg, but they were not difficult. Two short canals are cut around them for vessels ascending the St. Lawrence. It rained very hard during the afternoon, at one time pouring in torrents. I passed Goose Island, the last of the Thousand Islands, and the towns of Iroquois and Farren's Point. It cleared off toward evening, and the scenery along the river with its smooth waters and wooded islands was lovely. I also saw Chrysler's Farm, where in 1813 a battle was fought between the English and Americans; and Louisville, a small village, whence stages run to Massena Springs, seven miles distant. Just before dusk came a group of islands, and before the sun had set I was in the rapids. The view is very fine, and I noticed about two miles further on a point from the American side, which extended far across the river, shutting it off from view beyond.

The current now gave evidence of becoming swift again, having for some time past been barely noticeable, and soon I heard with a throbbing heart the distant roar of the "Long Sault Rapids." I was passing Chrysler's Island, the last of the group, I remembered the warning received from the old fur trader at Prescott, not to get drawn into the rapids accidentally, so I began pulling with might and main for the American shore. When within one mile of the point I escaped the current and reached a back eddy which was slowly coming up the river close along the shore, being caused by the projection below. It is curious to see this counter current rearing its head so close to the shore, and the swift water was clearly defined, but the current was slowly coming up, the latter rapidly pursuing the opposite direction.

With the fading daylight my heart entirely failed me, and I

thought it best to defer the dreaded task till to-morrow. Landing in a little cove on a sandy beach, I climbed up a steep bank covered with birch and balsam, and espied a farmhouse near by, the first seen in a considerable time. Being cordially welcomed, I was soon getting dry and warm while conversing with Mr. Scarboro, the farmer. His family consisted of about 11 persons, including one pretty, but very shy young lady, who would not permit any protracted conversation.

In the evening I had a long talk with Mr. Scarboro who is intelligent and well informed. His farm of 400 acres is the first American soil I have stepped on since leaving Lewistown near Niagara Falls. Dickinson's Landing with its lighthouse is opposite, as is the entrance of the Corawell Canal, 1½ miles long, passing around the rapids. The Grass River from the Adirondack region, flows into the St. Lawrence 4 miles below, and 10 miles still further down the St. Regis and Raquette rivers empty their contents into the mighty flow. This place is (directly north of the Adirondacks; three weeks ago I was on the Erie Canal, just to the south of the same mountains. I have rowed 17 miles, the current, making 40 for the day, having used the paddle for about 20 miles of that distance.

Mr. Scarboro and his family strove to amuse me by narrating all the frightful incidents, loss of life, etc., connected with the "Sault" as it is called here, the last story being of a man who while endeavoring to cross the rapids above in a small boat was drawn down by the current and so lost, while, strange to say, that his life nor his body were ever seen more. These tales had a dismal effect on my mind, and when I informed my host that it was my intention to shoot the falls, there was much ado, contrary advice and expostulation. I found that they could give me but little real information, however, and had hard work to keep my spirits up, going to bed with the feeling that the "Sault" was "my last." To heighten this feeling the thunder of the great cataract came through the window, forbidding sleep for two hours, in spite of my exhausted condition.

PHILADELPHIA, Pa.

M. B.

THE A. C. A. AND W. C. A.

THE following letters between the W. C. A. and the Central Division A. C. A. explain themselves:

34 MONTAUK BLOCK, Chicago, Jan. 20.—Mr. James K. Bakewell, Purser, Central Division A. C. A., Pittsburg, Pa.: DEAR SIR—In accordance with the terms of a resolution adopted by a unanimous vote of the executive committee of the Western Canoe Association at its meeting of the 11th inst., it is my pleasant duty to extend through you to the Central Division of the American Canoe Association a cordial invitation to join with the Western Canoe Association in its next annual meet, to be held at Ballast Island, Lake Erie, from July 12 to 26, and to participate in its races. Very truly yours, JAMES K. BAKWELL, Sec'y-Treas. W. C. A.

PITTSBURG, Pa., Feb. 5.—J. B. Keogh, Esq., Chicago, Ill.: DEAR SIR—I have received your kind letter of Jan. 20, inviting the members of the Central Division of the American Canoe Association to join with the Western Canoe Association in its next annual meet, to be held at Ballast Island from July 12 to 26. After considering the matter the executive committee of the Central Division desire to thank you for the invitation, while at the same time they feel compelled to decline the same, owing to the fact that so many members of the Central Division of the A. C. A. would be unable to attend the meet. Our division will probably hold a meet upon some lake in the State of New York. With many thanks for the kindness of the W. C. A., I remain very truly yours, JAMES K. BAKWELL, Purser Central Division A. C. A.

IANTHE C. C.—The camp-fire entertainment of the Ianthe C. C. will be held on the 26th inst., instead of the 28th, as announced last week, and it promises to be a great success. Tickets have been sent to all the neighboring clubs and but few have been returned, which looks as though there would be a good attendance.

A CHALLENGE FOR THE NEW YORK C. C. CUP.—Mr. Ford Jones, winner of the A. C. A. Trophy, proposes to challenge for the New York C. C. Cup next summer. The challenge will come from a new club to be organized in Brockville, Canada.

STAR C. C.—A canoe club by this name has just been organized at Winthrop, Me., the officers being: Pres., C. S. Neil; Vice-Pres., Percy Jackson; Sec'y, Arthur Jackson; Treas., Col. Ellsworth Hayward. A house will be built on Lake Narrows in the spring.

CORINTHIAN NAVY.—Meetings were held this week to organize the various squadrons. A meeting of members will be held on March 6 at the Hotel Marlborough to adopt racing rules.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

T. M.—You will not be permitted to shoot game on Long Island on Washington's Birthday.

G. C. T., Brooklyn, N. Y.—The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

C. T. B., Salem, Va.—The cases will not injure a gun; and they may be procured from any of the general dealers, whose addresses will be found in our columns.

H. H. W., Racine, Wis.—There are no works on frog raising that we know of. This subject has been somewhat extensively discussed in the FOREST AND STREAM and no successful system of frog farming has yet been devised.

C. T. W., New York.—For certificate to kill birds for natural history purposes in New York State apply to Mr. J. A. Allen, Assistant Commissioner of the Department of Fish and Game, for Massachusetts permit apply to Commissioner H. H. Lathrop, Springfield, Mass. The laws vary in different States.

H. A. C. B., Allegheny County, Va.—A friend of mine, an Englishman, has an idea of settling in Virginia with his family. He is a good sportsman and has money. I should like to know of any properties in the market where there is plenty of rough shooting and fishing within reach of railway, particulars of sport, cost of living, etc. Ans. We have no list of properties for sale in Virginia. Apply to some of the real estate agents in your vicinity.

GRAMA.—Will you please inform me on what dates bass fishing begins in the following States: New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois and Wisconsin, and whether there are any efficient local means of enforcing the law as to close season? Also, do you think it possible or expedient to allow rod-fishing at an earlier date than seine fishing? Ans. In New York and Pennsylvania the open season is from June 1 to Jan. 1; in Ohio, June 15 to May 1 following, and streams flowing into Lake Erie are open all the year below the first dam above the lake. Michigan has no close season for rod and line. Our copy of the Illinois law contains no reference to rod and line fishing, but fishing with mesh not smaller than two inches square is lawful between July 1 and March 1. The Indiana law is silent about rod and line fishing, but the new association recently organized may take a hand in framing protective laws. We believe Wisconsin does not prevent fishing with rod and line. Rod-fishing is less injurious than seining, but we would have neither during the breeding season.

NEW PUBLICATIONS.

A SOUVENIR of the "Dead Head," as acted by Irving, comes to us from Messrs. Cassell & Co., New York. Price 40 cents.

THE PRACTICAL HOUSESHOER.—Compiled and edited by Mr. T. Richardson. Illustrated. New York: Mr. T. Richardson, 1889.

SPORTING CELEBRITIES is the title of a new publication by Sampson Low, Marston, Searle & Rivington, London. The first number contains photograph portraits and biographical sketches of the Duke of Beaufort and H. Cholmondeley-Pennell. Price 1 shilling.

FOREST AND STREAM, Box 2,533, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Bird Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Syllilene" and other competent authorities to be the best treatise on the subject extant.

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms
EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements—Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel**, carefully inspected for workmanship and stock, and **GUARANTEED**. Do not be deceived by **IMITATIONS** largely manufactured of **malleable cast iron**, and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.

A Book Warmly Welcomed.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

In these stories we find examples of self sacrifice, gratitude, honor, and curiously enough, an idea of the atonement for sin, an intermediate state, and communication between this and the invisible world. Mr. Grinnell's "Notes," as he modestly calls them, are really a history of the tribe, its origin, its relationships, its medicines and mystery, and its present condition and progress. The book is beautifully printed, bound, and illustrated with first-rate drawings.—*Hartford Courant*.

The folk-tales are full of magic transformations and mystery, and they are related with a strong feeling for dramatic effect and often with much poetic grace.—*Springfield Republican*.

The Indian will become extinct or will be civilized. In either case their stories and myths will pass into oblivion. It is well that those of the Pawnees have been rescued and are preserved in this book so that generations yet to come shall read Indian tales as Indians told them to Indians.—*Home Journal*.

Their stories abound with humor, pathos and sentiment. The plan of the book is comprehensive and vividly portrays the Pawnee race from its historic, social and intellectual standpoint. The author has performed a valuable service, and his work will be welcomed and prized as it deserves.—*Magazine of American History*.

It is an important contribution to folk-lore literature that is especially valuable because of the insight it affords into the origin, customs and character of the Pawnee people.—*Philadelphia Times*.

This volume is a novelty and a valuable acquisition to American literature. While volume upon volume has been written of the folk-lore and hero stories of other and distant nationalities, the Indian (except in some fanciful sketches and romantic poems) has been overlooked. And yet the American Indian is the wisest and shrewdest and most manly of all the unlettered people on the globe. This collection, not fanciful, but drawn directly from the Indian oracles, shows that with his heroism and cunning he has wisdom and soul. * * * The volume is charming upon every page.—*Chicago Inter-Ocean*.

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAÎTRE PIERRE SUR L'AGRICULTURE ET LES FORÊTS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

	ANSWERS TO CORRESPONDENTS

THE NATIONAL ZOOLOGICAL PARK.
AT the last session of Congress a bill was passed providing for the establishment of a zoological park in the District of Columbia. A commission, consisting of the Secretary of the Interior, the President of the Board of Commissioners of the District of Columbia, and the Secretary of the Smithsonian Institution, was created by this act and was intrusted with the selection and securing, within a specified area of a tract of not less than 100 acres of land suitable for such a park. For the carrying out of this provision the sum of \$200,000 was appropriated.
The site for this park which seemed most desirable was described in these columns at the time the matter came up, and a map of the tract was printed in FOREST AND STREAM. The report of the year's work, made by the Commission to the Speaker of the House of Representatives last month, shows that the labors of that body have been successful beyond their most sanguine hopes. It was thought by some of those interested that the owners of the lands selected would place prohibitory prices on their holdings and that the land would have to be condemned, and taken by the Government. This has not proved to be the case. Instead, the owners have met the Commission in a fair, liberal spirit, and the result has been that 181.14 acres of land have been secured by the Government at a cost of \$158,856 76, leaving 35.34 acres to be acquired by the slower process of condemnation, making the whole area of the park 166.48 acres at a probable cost of not more than \$178,000. The actual cost of the land purchased agrees very closely with the estimates made by the officers of the Smithsonian Institution when the original bill was submitted to Congress.
The question of the land having thus been satisfactorily disposed of, that of preparing the park for occupancy and use, and of caring for the animals, naturally comes up. To meet this a bill, introduced in the Senate by Mr. Morrill, appropriating \$88,000, has passed that body, and on Feb. 19 was reported favorably in the House of Representatives by the Committee on Public Buildings and Grounds.
There seems to be good reason to hope that this bill

may pass, and when this occurs there is no reason why work on the Zoological Park should not begin at once. As soon as there is a place to keep the specimens which are offered to it, the Government will receive large numbers of native wild animals, and with reasonable care in tending them it seems quite certain that in a short time there will be gathered at Washington such a collection of our indigenous species as has never before been seen.

NATIONAL FISHCULTURE.
WE publish in this number a statement prepared for the U. S. Commissioner of Fisheries, Col. Marshall MacDonald, showing the amounts of money appropriated for the propagation and distribution of food fishes from 1886 to 1889, both inclusive, together with the number of stations operated, the number of miles traveled and the total output of eggs and fishes. A glance at the tables will show the significant and very gratifying fact that there has been a steady and marked increase in the results desired. Comparing 1889 with 1886, we find that with a smaller outlay, and notwithstanding the added expenses of six new stations and an increase of 40 per cent. in the number of miles traveled, the product of eggs and fish was nearly doubled. In 1886 ten fish were produced and planted at a cost of one cent; in 1889 the number was raised to twenty and a large proportion of these were yearling fish. Until 1885 no yearlings were distributed. After that year the desirability of making a decided impression on streams by introducing yearlings became more and more evident and the Commissioner has now greatly developed the improved system of stocking. In 1889 were sent out from Wytheville 60,000 yearling trout; from Northville, 112,000 trout and other members of the salmon family; from Maine, 112,000 salmon; from Illinois, 131,000 individuals of the choice native species; 500,900 shad, also, were kept over in Washington until they had reached a length of nearly 6in.

This notable achievement is to be credited in part to improved apparatus and methods of work, partly to the increased efficiency of the employees and to a more intimate knowledge of the conditions of success in fishcultural operations, and largely to the wise economy practiced in the management of this important division of the Fish Commission service.

Now that the organization has reached a high stage of efficiency, the Government should profit by its skill. Multiply stations if desirable, but at the same time furnish the means to make them productive, otherwise they will add no results of their own and impair the value of those already established.

THE RIGHT TO ABATE A NUISANCE.
A DECISION has been reached in the case of Lawton vs. Steele in the New York Court of Appeals, which settles the important question of the right of game protectors to destroy unlawful fishing nets. The case, whose progress has been reported in our columns, grew out of the action of State Game Protector Steele, who seized certain fishing nets in St. Lawrence River waters and burned them, acting under the statute which declares such unlawful nets to be nuisances and directs that they shall be summarily destroyed. Suit was brought against Steele to recover for the value of the nets, on the ground that their summary destruction had been a confiscation of property without due process of law. The judge, Williams, gave a decision for the plaintiff, holding that, although the law declared such nets to be nuisances and provided for their destruction, the Legislature had no constitutional authority for the law, which interfered with the rights of property. The General Term reversed the decision of Judge Williams and the case then went to the Court of Appeals, which has just handed down a decision sustaining the integrity of the law. It is held that the Legislature had the right to authorize the summary destruction of nets, the setting of which it had declared to be a public nuisance.

The Jefferson County Fish and Game Protective Association, which has stood behind Protector Steele in this affair, is deserving of all praise for carrying the case up. The effect of this decision will be to discourage the net fishermen, who had combined to make this a test case. But the battle against the evils of netting has not yet been finally won, for the net fishermen are at Albany in force this year, asking that what the State has once declared to be a nuisance shall now be legalized. As we said last week, their demands should be resisted, for nets

in the St. Lawrence River waters will surely work improvident destruction of the magnificent food fish supply which has been fostered there under the present laws. The pretense that under a system of netting the game fish will be exempt from this speedy destruction is calculated to deceive. The St. Lawrence netters will not return to the water live game fish caught in their nets any more than the menhaden fishermen return to the sea the food fish they scoop in their nets.

AN INIQUITOUS SCHEME.
AN effectual way to maintain and keep in condition for all time a great public park, like the Central Park of New York city, would be to divide it up into plots of convenient size and lease the desirable portions to wealthy individuals for villa sites. When all the choice parts were fenced off and occupied by residences and the private grounds attaching to them, the public could walk around on the outside of the park limits, contemplate the picturesque cottages and magnificent mansions, and rejoice in the pleasing consciousness that Central Park was in safe hands, to be cared for and protected during the lives of those in possession and by their heirs for generations to come.

Such a scheme would settle forever the problems of public park administration; but not even in a city that has boasted a Tweed could a mayor be found who would under any pretense whatever deliberately set to work to put the choice bits of Central Park into private hands for safe-keeping. The plot would stamp its originator a hopeless idiot or a gigantic rascal. Yet a scheme of similar nature has been put under way at Albany with reference to the public lands of the Adirondacks.

A bill was introduced into the State Assembly last week, which, if passed, means a surrender of the Adirondack wilds by the people of the State to private possession. The bill calls for the appointment of two additional commissioners, who shall mark out a State Park area and purchase lands within the boundaries decided upon; and further—

"Sec. 6. The said board are hereby authorized and empowered to lease for such time as they may determine small tracts of land within the limits of said park, not exceeding twenty-five acres in any one parcel, or to any one person or corporation, for the erection of camps and cottages for the use or accommodation of campers and occupants and sites for hotels for the accommodation of the public, which leases shall be general in form except as to the length of time and amount of rental, and shall contain strict conditions as to cutting and protection of lumber, prevention of and protection from fires, and reserving the right of passage over or across the same for travelers at all proper and reasonable time, which leases, as to form, restriction, reservations and conditions, shall be approved by the Attorney General of the State."

It would seem as if the bare declaration of such a scheme as this should be sufficient to condemn it. The leasing of twenty-five-acre plots will be an excellent thing for the hotel men and summer cottagers who are behind this bill, but the State lands belong to the State; they should be held and kept free for the citizens of the State, for the hunter and fisherman, camper and health-seeker, who may pitch his tent where he will; and not given over to the hotel-keeper nor to the summer cottager.

If hotel men want to build hotels, let them purchase grounds from private owners and pay for them. If wealthy men want to build summer houses, let them acquire land in the same way. This State park bill is fully as preposterous and as impudent in its purpose as would be a measure to lease city parks. And the results would be in one case just what they would be in the other; a betrayal of public interest for individual benefit.

The need of the hour with respect to the Adirondack wilderness, is not of a plan to hand it over to private occupancy, but of a system that shall conserve this priceless possession for the people of New York (and of other States as well), both now and for the future.

On Friday last the National Park bill for the fourth time passed the Senate. It now goes to the House of Representatives, where it will be referred, as has always been customary, to the Committee on Public Lands. What its fate will be in that committee is uncertain, but all who are interested in the reservation will hope for speedy and favorable action on the bill as it stands to-day.

THIS issue contains the index of Volume XXXIII.

The Sportsman Tourist.

DUNGENESS—A WINTER HOME.—II.

THE next day Frank S., Frank C. and I saddled up and were off quite early to Stafford, whence we rode down to the Old Quarters, where still stand many lone chimneys, the hearths of one time slave cabins.

Old Stafford before the war was owner of four hundred slaves, who came to his beck and call, and worked in the fields over which we hunted. Four thousand acres were then in cotton. What a glorious sight it must have been, and what a life the old man led, planting and picking his cotton, tending his vast domain, feasting his guests, or attending the meets of the Camden Hunting Club, riding after the deer, or sitting at the regular hunting dinners, and rising to offer a toast. The club was composed of gentlemen who owned plantations near by on the mainland, and offered in turn the hospitality of their homes and their hamaks, swamps and woods for the pursuit of deer. The rules of the club were strict, and sure was the penalty or fine for breaking any of them. Mr. Dilworth told me he once asked old Stafford if he remembered when they fined him that basket of champagne. "You bet I do," he answered, "but," hitting his hand on his pocket, "cotton's a dollar and a half a pound, so what did I care." The list of fines kept in the back of the old books was very strange reading. First came "Mr. Floyd, six bars of lead for not wearing a red coat." "Mr. Dilworth [J. D.'s father], two boxes of percussion caps, only one spur;" and "Mr. Stockton, one hundred cigars for missing a deer at 40yds." Many were the other fines, and many more names appeared in the records of the hunts. Stafford, living as he did on an island, was not so frequently a participant of the hunts as the others. J. D. S.'s father was probably the one most often present, and in reading over the books, dated 1832 to 1897, I see he was also the best shot, seldom if ever missing a deer. When the meets were held on Cumberland Island the hunters were rowed across the sound in barges manned by their own slaves, and accounts were given of boat races, each plantation owning its launch and training a crew. But I am wandering in the past glory of the South, and we must come back to the decay of what was once a thriving settlement of negro quarters.

Passing through the old quarters we entered an avenue of live oaks, which led thence to the beach, a distance of perhaps half a mile. We followed this until we came to a sandhill, and riding to the top of it, gained an extended view of beach, ocean and little narrow lakes. From the nearest lake a bunch of ducks rose and flew rapidly up the beach, alighting in another lake not far off. I rode up opposite to where they had settled, and dismounting tied my horse to a palmetto root behind a high sandbank. In vain I tried to crawl upon the ducks. I could not shoot low enough to kill them it seemed, for long before I could get near enough to shoot they would be gone.

The lakes or ponds formed a continuous chain for over two miles. They averaged probably 2ft. deep and 50yds. wide, were bordered on one side by myrtle trees and on the other by the beach. Two small creeks a few feet wide and very shallow drained the water, which was fresh, into the ocean; a rich grass somewhat resembling water-cress grew in the water, and this was what the ducks fed upon.

The two Franks each took separate blinds and I another, but after a tiresome wait with only one high wing shot we decided to give it up.

Glancing through my note book, I see it was Jan. 5 that an ambition of my life was satisfied. Frank S., Frank C., and I were the only hunters who went from Dungeness. At Stafford we were joined by J. D., who very kindly volunteered to jump a deer for us. "Frank," he said, "you take G. and Frank S. to those stands by Hickory Hill, and I will drive this side of the swamp where we are sure to start a deer." Frank was hardly placed and I had not even gotten down off my horse, before the dogs set up that quick yelp. When they were about half a mile from where I stood, I heard a shot ring out near where Frank S. was stationed. I rode over rapidly and found him standing proudly over the first deer he had seen. He was very happy, for it had been a magnificent shot at 60yds., the deer running rapidly, and six out of the nine buckshot were in the body. J. D. rode up while we were discussing the shot and congratulating Frank. "Ha, ha!" he exclaimed, "you didn't blood him," and leaning down he dipped two fingers in the deer's blood and painted Frank's face. Oh! don't draw back, if you ain't blooded you never will kill another." When the painting was finished Frank resembled some wild Indian. I could not help laughing and poking fun, but I would have been willing to take the coat of crimson paint for the honor.

As J. D. knelt upon one knee busily engaged in dressing the deer, he all of a sudden raised his head, then jumped to his feet and told me to run to a rising mound 100yds. "There is another deer coming," he yelled, "the dogs are bringing him round." I waited fully five minutes and was walking back toward him, when he hallooed, "Why don't you shoot?" I turned quickly and not 50yds. off was a deer running at full speed. My gun was at my shoulder in a jiffy. First one barrel, then the other, but the deer kept right on. I followed as fast as I could, pulling out an empty shell and putting in a new one. Just as the deer bounded over a hill at over 100yds. I fired, this time in sheer desperation, for it was impossible to kill at that distance. I kept on to see the run he would take to the woods beyond, but just over the top of the hill the deer stumbled over dead. I gave a yell, "I've got him," and in a moment had the others by my side. Which of the two shots hit him I will never know, but he ran 200yds. after he was hit. J. D. took even greater pains to paint my face, for he wanted to give Frank a chance to laugh at me and also to let him see me as others saw him.

It would have been hard to tell which of us two was the happier, for they were the first deer either of us had ever shot at, and to have such good fortune was indeed mighty lucky. Thus was my ambition satisfied.

The day was well spent, for we were no sooner home from the morning hunt than we were off in a sailboat to a point where several lakes offered excellent feeding places for ducks. The wind being fair we reached the point quickly, and while Will, Andrew and I went on shore, the others remained in the boat. The way was

rather roundabout, but we trusted Will to find the path, and after many scratches from briars and several falls from grapevines and roots, we came in sight of a pretty lake. Pine trees rose out of the water at one end, thence on both sides to the other end oaks and palmettos grew close to the water. Andrew and I remained quietly among the pines while Will crawled on a bunch of ducks he saw at the other end. He was gone hardly ten minutes when we saw the flock rise out of the water, and with that he shot. From where we stood we could not see any birds fall, but did see Will wading out into the lake up to his waist. Supposing he had killed some, we made our way up one side to meet him where he crossed. When opposite we called to him, and then went down to the water's edge. He was still wading around for I think I got one duck; we thought it was a canard, but not the kind he was after. At last, some 20yds. off in the water he found one duck, a blue-winged teal. It was then quite late, and as we would not get any more shots, we turned back, taking a short cut. We had not gone far before we came to a low spot, 30yds. wide and full of water from recent rains. Will, being wet, offered to carry us across, so taking a gun in each hand I put both arms around his neck. When nearly across he stumbled over a hidden log, but recovered only to strike a second. He then tried to run and save me, but I saw he was going to fall and made a spring for the shore like a frog. But it was no go, I was too heavily weighted, and one foot catching him around the neck we both fell flat, I on top. Both went under, and a dripping sight we appeared to Andrew, who stood on the other side, just making the wood echo with his yells of laughter. I sat on the bank and roared, for even if I was drenched the comical side of it all appeared uppermost. Andrew did not care to risk a wetting all over, so waded in and came across wet but to the waist. A trio of damp, chilly boys rode home in the sailboat that night a little the worse for wear, but just so much richer in experience. Thus a week slipped by as though it had been a day.

Monday morning we set out in the yacht for the sea fishing banks. The pilot gave us the course, and when out an hour and a half, with no land in sight, he started to heave the lead. A heavy sinker, a foot long and hollowed at one end, was attached to 15 fathoms of line. For nearly two hours he swung this trying to fetch coral bottom. Several cakes of soap were used in sticking pieces in the hollow end of the sinker, to show the kind of bottom the lead struck on. At last, fast in the soap, we found a little piece of coral. Then the yacht was stopped and baited hooks sank rapidly to catch the first fish and win the pool. My hook had hardly reached the bottom before I had a fish, and Will, who was fishing by my side, started to pull in at the same time. Just after I threw my fish on deck his followed, for he could not pull in quite as fast as I did, having caught two. We had hoped to catch red snappers, but it was too early, and so we had to be satisfied with blackfish. For an hour and a half I enjoyed better fishing than I had ever had in my life. The captain, pilot, crew and ourselves, all had lines out, and we jerked them in two at a time. I must confess I got tired toward the last, for a pound sinker on 12 fathoms of line grows heavy after hauling it in fifty times. The ocean was as calm as a mill pond, and but for a swell was

"As idle as a painted ship
Upon a painted ocean."

The sun was sinking rapidly, and the pilot advised us to start home; so taking on the dory which we had anchored as a mark (the bank in places was only 100yds. wide), we steamed away. On the return trip we counted our catch and found 275 fish, which made quite a respectable string. Some weighed over 2lbs., but the majority averaged from 1 to 1½lbs. It was almost dark before we got the red lights of Fernandina's lighthouse in range, and four bells sounded as we made fast to Dungeness Dock.

It was in the afternoon of a cloudy day soon after that six of us took the yacht bound for a quail hunt. We stopped at St. Mary's, Georgia, the next oldest town (so they claim) in the United States. It is a deserted place now; but once a stream of life flowed backward and forward along what are now beautiful grass-grown streets, or more truly avenues, 100yds. wide. Many of the houses were falling in ruins, and one I noticed was thatched and moss-grown. Large village pumps stood in the center of the streets and old live oaks clustered about the wells. A few whites, but a majority of negroes, greeted us at the wharf and stood looking at me with staring eyes as I took a photograph of them. The warehouse at the dock had long since been deserted, and on the shelves where once silks and satins found resting places, mice now held high carnival. Connecting with the office was a little brick building, built for the safe, but now a hiding place for rattlesnakes. The glory of the spot seemed to have been in the past. Without visiting the cemetery the most interesting spot would have been overlooked. We entered the cemetery over a stile. Epitaphs told of the illustrious departed, and crumbling gravestones showed that the families, which once had gathered near and offered to the dead their last tribute, had either forgotten them or followed to the land we know so little of. The earliest inscription bore a date of 1790 odd, and that which to me told the saddest story, I copied. It ran thus:

Here rests what was mortal of Sam'l Burr, Esq., age 42. In search of health, far from his endeared home, death arrested his progress on the 2d day of April, 1831.

Quietly he fell asleep in the Christian hope of immortality and glory forever.

O vanity of man at his best estate, Traveler, pause and drop a tear at the early grave of one so highly worthy and deeply lamented, and learn wisdom for eternity.

What food for thought in that inscription alone. How did the old place look in those days of 1831? Then the planters were kings, ruling each his principality, expecting no more their downfall than their slaves expected freedom.

A few rain drops fell as I was still kneeling before a crumbling stone, scraping the dirt from its base, and I reluctantly turned back. The whole scene was wild and everything was in keeping; the gray moss which hung in profusion from the trees was a fitting shroud for the old city of the dead. Much as I wished to linger, the purpose for which we landed, namely, to get old Cray Pratt and his dog, being accomplished, we went aboard the yacht and steamed up the river some sixteen miles to camp. With oak and fat wood (pine full of pitch) we built a roaring fire on the river bank. Its flames caught

some moss hanging from a tree above, and running among the branches, lit up the woods and river.

Old Pratt's face fairly shone when he stood on the log, which we were burning in half, and told in his quaint way his hunting tales; and how once he got drunk on champagne one Saturday, and the following Saturday when working in a hot field, the wine still in his system, made him terribly drunk again. The tree could not bear him up in his tale, for just then burning through, it sent old Pratt sprawling on the ground. But the hours had crept by.

"And then while round us shadows gather faster,
And as the firelight fell,"

we went quickly to bed, each one with a hope for the morrow.

We did not rise early, for we heard rain beating upon the deck; but when I had turned over from my first awaking, and had just fallen to sleep again, Pratt called us all, saying, "The rain has stopped and it looks like it was clearing."

Nine sportsmen started out, all prepared to slaughter the quail. The place was excellent (for the birds), a growth of grass cover all through the woods and adjacent swamps gave sure safety when once the birds were flushed. As scouts we scattered in a long line and fairly swept the woods. The dog, Hec by name, and a Hec of a dog by nature, ran sniffing about ahead of us, and twice I believe ran over a covey of two or three birds. But he did not stop, having some other business in mind. Cray got one bird after letting two of the others shoot. It was very discouraging to tramp among the pines and palmettoes in water and bog and flush no game. The old man at last grew mad at his dog's actions, and called him names which do not bear repeating. I very nearly went with three of the party when they turned back after going a mile, but could not be outdone by Pratt, who was sixty-six at his last birthday. I had always thought the pine woods of Georgia were alive with game, but one learns much from experience.

After walking around for miles we made for the yacht, got steam up and went down the river to Port Henry. The St. Mary's River is the boundary line of Florida and Georgia, so having hunted all the morning in Georgia we decided to try Florida for the afternoon. We flushed a number of birds, but the dog spoiled the fun, Cray not being able to control him. After killing five we stopped, for it was late, treasuring, however, the place in our minds for a future visit. We reached home for dinner, bringing six little quail as the result of nine guns and a day's shooting. And so another week sped by.

One bright morning shortly after, I rigged my split-bamboo and tried my luck from the little wharf. Unfortunately I started rather late, but during the fall of the tide I caught 23 trout, some weighing 3lbs. I had rather good sport, but they played only half-spiritedly and did not fight like their fresh water brethren.

That afternoon we thought to start the buck, in Gray Field Scrub, which I had shot at and missed a day or two before. Not ten minutes elapsed, after we had whistled the dogs in, before they jumped him. I saw him come out of the woods ahead of me, and gave chase through a run into New Field, taking a shot off Coony's back just as I saw him disappear. The dogs were not far behind and in the thick brush gained. They gave tongue for over a mile through the scrub and brought him round to where I had ridden in half-way to the beach. For an instant only I saw the white tail and raised my gun to fire, but saw no more. I got back through the brush as fast as possible to give Will warning, and got out into Gray Field just in time to see the buck going across and also to see Will take aim and fire. Heels over head he fell, pierced through the heart by a rifle bullet. It was as pretty a shot and sight as I had ever seen, the deer leaping brush and log, the pack of hounds not 200yds. behind, and then to see him fall and the dogs one by one run up still yelping as we threw the deer up behind the saddle. Will was very happy at his 80yds. shot and in the fullness of his heart presented me with the antlers, which now adorn my room and tell me the story of the deer I missed and Will killed.

A few rainy days kept us in and around the house a good deal, until we grew tired and decided the first clear day to go up the river again after quail. The day came shortly and after lunch we all went aboard the yacht and steamed off. At Port Henry the yacht only slowed up long enough for some of us to go ashore and then went on up the river to take the rest of the party for a sail.

We flushed a good many birds, but the shooting was poor, for out of all we only killed seven. In places the cover was very thick, coming up to one's shoulders, making the finding of dead birds difficult.

The old man who farmed the place came down to the wharf while we were waiting for the yacht. He was bent of back, gray hair showed beneath his old slouch hat, his clothes were patched in places with new pieces of cloth, which made the rest look worse. But beneath his battered coat beat a kindly heart, and under the slouch hat his memory treasured many an experience only years could give. He had come from New York State, broken in health, seeking new life and strength. Florida was not the place he thought it would be, "but I have only one life to live," he said, "and the mistakes I have made can never be rectified." The sun had just gone down when we saw the yacht come round the bend and I stepped on board.

Away to the west heaven's night lantern rose out of a long wide marsh. One light showed where St. Mary's was, and then we sailed out on to the sound. I climbed into the rigging, and sat upon the cross-piece, looking seaward, as we went out of the harbor for a moonlight sail. Straight into the silvery rays we steered, casting from either side a glistening shower. A full square-rigged ship, all sails set, met us, and as we passed close by appeared to stand, right out of the water, a vision of the sea. We could hear the captain giving orders to come about on another tack, and then as she turned the sails moved around, first one set, then the other. Up where I sat the tossing waves swung me as a pendulum, to and fro. At length we turned backward and again landed from a pleasant cruise.

G. F. BLANDY.

NAMES AND PORTRAITS OF BIRDS, by GURDON TRUMBULL. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

THE WASATCH FOOTHILLS.

Editor Forest and Stream:

During September last and the following autumn I made a trip by wagon extending from the southern part of Utah north along the foothills of the Wasatch and Rocky Mountains, about one thousand miles. There were two of us, and both were experienced in camp life. Our outfit, therefore, comprised all that was needful for comfort and nothing more. My fellow voyager often remarked after supper, when our tent, well warmed by a stove, was lighted up for an hour's reading, that "we were at home every night."

The principal cañons opening out from the mountains contained streams well stocked with trout, and furnished pleasant camping ground and resting places on our route. To take what trout we needed for use was not difficult, though in September the fishing season is regarded as over. The streams have then become too low for fishing and frosts begin to appear in these high altitudes, the average being from 4,000 to 6,000ft. above sea level.

In dressing twenty trout caught at one time in the month of September, eighteen of them were found to be females and contained eggs nearly fully matured. I presume, from the fish laws of Utah, it is regarded as a fact that trout in the mountain streams of that Territory deposit their spawn in spring; their open season for fishing begins June 15. My own observation is that the trout of these streams spawn in the fall, say from the last half of September to the first of November. It would be of little use if they did so during the spring months. The melting snows from the high mountains keep the streams swollen to many times their size for the rest of the year. Great boulders go grinding down the creek channels with a noise like distant thunder. The fish themselves are only protected by finding, in the lower portions of the streams, some more level places not subject to the moving rocks or changes in the creek channel, such as occur in the streams for nearly their whole length. Nature makes no mistakes, nor is she guilty of flagrant waste. In the early fall these streams are quiet; the water is warm and filled with a thousand forms of life suitable for the food of the young trout.

The waters of none of these streams flow into the sea until, coming north, we reach the tributaries of the Snake River in Idaho. Some of these creeks, of perhaps a dozen miles in length, are found well supplied with trout, and all of them, soon after leaving the mountains, are lost in the sands of the valley. It is sometimes a question as to how trout got into these short streams. Standing where their waters sink into the sand, you may see their earliest beginning in the side of the hill but a few miles away. The shortest answer to this question suits me best, and I say "just as the fish got into the sea." I cannot believe there was but one time and one place on our globe for fish creation, or for bird, animal or vegetable creation, and that the whole earth has been supplied by migration from that one place.

South of the Snake River to the Colorado, the streams contain two varieties of trout, the smaller and most common is the brook or mountain trout, with flesh of a delicate flavor and nearly white color. The outside coloring varies greatly in the same stream owing to the accident of living much in sunshine or in deep, shady pools, and black lava rock of the region through which the stream flows. The second variety is a brown trout of much larger growth, having flesh as red as that of the salmon and of a less delicate flavor than the first named species. One of the principal sources of interest in fishing these streams I found in the chances that while your tackle is so light as to be suitable for a 6 or 8oz. fish you are liable any moment to hook one of 2lbs. or more of the brown species. Then the question of landing him, with the brush and rocks to be avoided in case of success, is one of immediate interest. My experience is that more than half the time I lose my hooks or break my rod.

The large brown trout generally has his home under some bank, and is best reached by a live minnow. One day, to catch some minnows and get them into my pail with the least injury, I took a cambric needle and putting it into the blaze of a candle to draw the temper I bent it into shape for a hook. A yard of black minnow thread made my line and the tip of my trout rod furnished a pole. My bait was stiff dough from wheat flour. With this outfit I sat down on the grassy bank of a creek and commenced business. A bunch of willows grew on the bank two yards above. The stream had worn the earth away under the willows, making a good cover for trout. Soon a mink came gliding past me and disappeared in the willows. I saw she had worn a well-defined path in the short grass leading to the place of her disappearance, and had there made a round hole through the turf leading directly into the water. I now understood the matter. My lady had a nest back from the creek a dozen yards or so, and came to the willows to do her fishing. She could from her hole in the turf plunge directly upon the trout under the bank. A good trout breakfast for a couple of men could be made from what this one mink would use every evening for herself and family. My shotgun lay beside me, and when the mink returned from her fishing, some ten minutes later, she met with an accident. Minks on these streams are numerous and very destructive to trout. Toward evening one can hardly find a good pool for trout but he will find a mink there. I have often been tempted to strike one with my fishing rod, and refrained only because it was more likely my rod would suffer than the mink. A single otter will kill more fish than many mink, for he, like the wolf, kills for the sake of killing.

My mink disposed of, I sat down again to my fishing. But just then I saw the head of a trout protruding from the root of an old stump on the bottom of the pool and immediately under my hook. I had about me only a very large hook, and that I put on to my thread line and baited with a live minnow. Sinking my bait as I had before, the trout seized it and had it quite in his stomach in a few seconds. I managed him as well as I could, but soon my tip broke, and I took the thread in my hand. Finally I ventured to lift him out, and, when nearly high enough to swing on to the bank, my thread broke and my fish, not half killed, ran up and down the pool, diving his head into the mud bottom so often as to make the stream very muddy, and at last went to his house under the willows and remained there. The next day I found him there, lying with his head in the sand and several small trout beside him. The second day, with three large hooks on a stiff pole, and a boy to help, I got him. I recovered my hook and found my trout weighed

two pounds, an unusually large size for that stream. For half an hour before hooking that trout he had been in his place under the stump, and within ten inches of any quantity of minnows, from which I had caught a dozen or more. He could have caught a minnow at any moment, but only showed a disposition to do so when I offered one in distress from my big hook.

A friend of mine, and one of the best hunters I ever saw, told me this: He had followed the tracks of a doe until he saw where she was lying. At the same time he found that a large gray wolf was also hunting the same deer, and was then in a cedar thicket near by. The hunter could not stalk the wolf so as to get a shot before discovery. He therefore concealed himself and began to bleat rapidly in imitation of a deer seized by wolves. The wolf at once sprang from his cover, so as to be not only "in at the death," but to get his full share of the venison. He got the hunter's bullet and the doe ran away. I wonder if the cases of the fish and the wolf illustrate a law of pretty general application among men?

It was near this scene of my fishing exploit that I observed in a dog an unusual instance of inherited intelligence. There was a broad plateau used as a cattle range, upon which my tent was placed, and in sight, ranged by themselves, some twenty-five calves. The ranch buildings and the rest of the stock were two or three miles distant. For several successive nights I found that this bunch of calves were being driven about, sometimes much against their wills, by some animal acting much like a dog. The calves were made to keep well together and forced to "move on" to many fresh feeding grounds in a night, getting little or no time to lie down. During the day they were less disturbed. But I often saw a dog in their vicinity, moving through the sage brush and sly as a wolf. I went to the ranch house and told the herders what I had seen. They explained that a bitch, belonging to the ranch and famed for her good herding qualities, had littered in the chaparral and that they had not found her nest until the pups were well grown, and of course wild; that they succeeded in capturing all but one of the pups. It was that one, they believed, that I had found in charge of the bunch of calves. I then engaged the two herders with their horses to try and catch the pup for me by running it down. They did their best one day with some little help of mine, but with no success. The pup had to get a living, like a fox or wolf, by hunting; and this it did in daytime mainly and spent the night herding the calves.

As dogs mix readily with wolves, it might occur that these wild hybrids would be found protecting some stray lambs, though for such a case the progenitor must be trained to sheep herding. These incidents are related here only, because in this way a more perfect knowledge may be had of the life and habits of animals coming under the observation of writers and some further advance made in natural history.

One morning, as we were driving through a sage brush region, we saw a large coyote stop suddenly, as if he had met something which required his serious attention. He had arrived within a yard or two of the hole of a badger. That the proprietor was at home was certain, for we could see his head protruding from the front door. After a little hesitation the coyote stepped forward and at the same time the badger advanced quite out of his hole and stood with his nose close up into the face of his visitor. We now regarded them with interest. I expected in a minute or two to see a well whipped wolf. But not so. The badger remained firm but the wolf turned away. I had once seen a large dog under just such circumstances as with this wolf. The dog's self-conceit forced a collision, and in a minute he discovered his mistake. He returned to his master with nose and side well slashed. The badger is the most industrious of animals. Often he digs half a dozen holes in one night, and from one to two feet in depth, in the hardest clay and gravel, and as often in the road as elsewhere. These pits become traps for bugs, crickets, lizards and other insects, and furnish the badger with the food he expects when he digs the pits.

I had hoped to mention some other animals and fishes met with on this trip, but cannot do so without taking too much room in your paper. I found a very rare animal called the skunk bear, which might more properly be called "musk bear," and would be glad to learn if it has been described by naturalists. I have heard of but three individuals of the species having been met with. One in the Wasatch and two in the Oquirrh Range of Mountains.

GEO. H. WYMAN.

BOISE CITY, Idaho.

[The "skunk bear" is the wolverine (*Gulo luseus*), not a very rare animal in some parts of the mountains of the West, but one very seldom seen.]

Natural History.

THE EVENING GROSBEEK.

Editor Forest and Stream:

While making a professional visit one mile from the village on Feb. 14, my attention was called to the piping note of a strange bird by a lady patient, with the request that I do something to keep it still, as it had annoyed her all the morning. On leaving the house I heard the sharp, shrill note repeated at intervals of about one minute, and saw a stranger sitting in a maple tree. After some delay I secured a gun and shot the bird. Great was my surprise when I picked it up to find I had secured a fine female evening grosbeak. The bird was evidently alone, as the lady who called my attention to it informed me that she had heard the bird since daylight, and it had been constantly piping its single note, until I came to the rescue about 11 A. M. A careful search failed to detect the presence of any other birds. I mounted the specimen, and it will hold a conspicuous place in my cabinet. This is the second instance of the capture of this bird in Che-mung county, as far as I know, the other one having been reported by Edward Swift, of Elmira, in December, 1887.

J. W. GEE, M.D.

VAN ETENVILLE, N. Y., Feb. 15.

Editor Forest and Stream:

The evening grosbeak, which has attracted so much attention of late, made his first visit here this season Dec. 15, a second flock Jan. 15 and another flock of six Jan. 23; in fact I have seen them almost continually since their arrival until the present, my boy having seen them to-

day feeding upon the red cedar berries as usual. I have preserved in all twelve fine specimens, males, females and young. I dissected all of them carefully and found their stomachs to contain only the berries of the red cedar. I also noticed that the flesh smelled very strong of the same. Generally these birds were very tame, allowing me to approach within a few feet without causing any alarm, and then again, at first sight they would all leave the tree in a body, uttering a rather loud whistle, flying high in the air, to return again in the course of a half hour. They seem to be a very restless bird.

I do not think the heavy snow in the West (as reported) has anything to do with their migration here, as you know they have very heavy snows there every year. This is, I believe, the second appearance of this species here in Ohio since 1860, when Dr. Kirtland took several specimens.

ALBERT HALL.

LAKE WOOD, Ohio, Feb. 11.

Editor Forest and Stream:

Sometime during the winter of 1886-87 I secured four specimens of the evening grosbeak, one full plumaged old male and three females. I shot them all at one shot and they comprised the entire flock. I did not know then what I had killed, but surmised it was the pine grosbeak. I mounted the male and two of the others and have two of them in my collection yet. The other I gave to a friend. The birds are the only ones I ever saw either alive or dead, and I do not know as they have been taken in this part of Ohio before. I described the male to a taxidermist of Cleveland and he said it was a pine grosbeak, but when I saw the out of the evening grosbeak in Coues's "Key" I discovered the mistake.

SEVILLE, Ohio, Feb. 15.

CHIPPewa.

Editor Forest and Stream:

While strolling on the banks of the Des Plaines River, on Jan. 28, about eight miles from the city hall, Chicago, Ill., I saw a single bird in a large elm near the water's edge. Having a .32cal. Stevens pocket rifle, with shot cartridges to match, slung to my shoulder, I collected the bird and found the poor unfortunate, as I had thought, a stranger to me. Upon returning to my den I looked up his antecedents and identified him as the evening grosbeak. He was an adult male in very fine plumage. When shot he was alone in a very large piece of timberland along the river. Although I remained in the same vicinity for several hours and searched with all the eagerness of the "skin butcher," I saw none of his kindfolk to share his untimely taking off. He was very suspicious and reticent, giving me the impression at first sight that he was out of his customary element somehow. Although not caught in the act, I am inclined to mistrust from his position when first seen and other circumstantial evidence, that he was trying to crack the ice with his ungainly great bill and drink from the river. Another evidence that he was a stranger, for no bird "to the manor born" would attempt to drink from a Chicago river, summer or winter! His digestive apparatus contained but little food and that little too nearly digested to permit of its identification. It was evident he had breakfasted early and been too busy for lunch up to the time of our meeting. I believe the birds are not uncommon visitants of this State, yet their presence just now in connection with their appearance further east, is interesting. Just what brings them so far east and south this winter, is a question for your ornithologists to decide.

Apocryphal "ornithologist." I wonder if your correspondent, Dr. A. K. Fisher, will forgive me if I take exception to a remark in his article of Feb. 8. He says, "The gentleman who observed the bird was presumably not an ornithologist, and hence mistaken in his identification."

Now, it seems to me that "the gentleman," being, as I imply from the name, a man of intelligence and education, and enough of an observer to notice a strange bird in a season of the year when birds of any kind were not over plentiful, would be fully as apt to reach, with habits of handling books of reference, the correct identity of the bird as is necessary to establish the fact of its presence in the State; especially since proof of its return thither is indisputable. I have seen many men, without "book larin'" and making no claim to be "ornithologists," at whose feet some of our so-styled "scientists" might with becoming grace sit for some time very advantageously. I object to this "stand-and-deliver" way of demanding the dead songster's paltry dermis, and, lacking in this, of rejecting as "unauthentic" the results of observation; observations, too, often times as carefully, and who shall say less accurately, made as those of the skin-plundering, nest-rifling sort. Ah, Science! "What crimes have been committed in thy name!" An illustration in point. While walking to-day on the tracks of the Chicago & N. W. R. R., returning from my work, I saw and eagerly conversed with a Bluebird (*Sialia sialis*), that demure, bay-breasted herald of spring, from the blue skies of the sunny South and bearing their banner. Now do not rise in your benches, oh, learned judges! and demand the herald's bonny blue armor as evidence of his presence in the stern camp of winter. I assure you, though I am not an "ornithologist," and did not slay the trusting messenger to spoil him of his few square centimetres of azure and leave his mutilated body "a prey to dogs and all birds," still do I demand that it be recorded as a matter of history that on Feb. 17 *Sialia sialis* was observed and identified within the city limits of Chicago.

KORAX.

IRVING PARK, Ill.

Editor Forest and Stream:

The appearance of the evening grosbeak in the Eastern States prompts me to make a few remarks on some other birds which I have observed for the past ten years.

A notice of the taking of the evening grosbeak has been sent to FOREST AND STREAM by your old correspondent, Dr. E. Sterling. I may say in addition that when I killed one of the birds the others would follow their wounded comrade to the ground. I have also heard of a great many more being taken along the Lake Erie shore. They have migrated to our northern borders in large numbers, but in scattering flocks. They are seen only in orchards and dooryards, where the red cedar abounds.

I took a specimen of the pine grosbeak (*Pinicola enucleator*) Feb. 15. It was perched upon a larch tree near the house. This is the second occurrence in this vicinity since 1860, when it was recorded by Dr. J. P. Kirtland.

I notice that the tufted titmouse (*L. bicolor*) is exceedingly abundant this winter, more so than I have ever seen

it before. They are very restless little fellows, continually darting from tree to tree, picking at everything they see, uttering at intervals a loud whistle, "peto" which can be heard a long distance. They breed here, I have always seen them while woodcock shooting in July in the dark woods, where the elm, black ash and hickory raise their great branches to the sky, almost hiding the sun from the earth.

Dec. 4, 1878, I shot seven whitewing crossbills (*Loxia leucophaea*). I saw them feeding upon weeds, and they were so tame that I could almost take them with the hand. After shooting at them, they would fly to a tree or a weed near by and continue their search for seeds as if nothing had happened. This allowed me to kill them all without once moving from my tracks. I have remarked this same tameness in nearly all rare birds that I have seen. This species is reported as being quite numerous in the vicinity of Cincinnati, O., in the winter of 1868-9.

A man recently brought me a barn owl (*Strix flammea* var. *americana*), which he shot on the lake shore, near Rocky River, in the summer of '87. This is the first recorded occurrence of this species in northern Ohio.

LAKEWOOD, Ohio.

A. HALL.

Editor Forest and Stream:

To my notes on this subject printed in your issue of Feb. 6 I can now add the following:

On Jan. 31 a flock of eight evening grosbeaks appeared at Boxford, Essex county, Massachusetts, where they remained at least five days, frequenting cultivated grounds about houses in the heart of the village, and attracting general attention and interest by their familiarity and striking form and coloring. They were seen occasionally in Norway spruces, frequently in maples and other deciduous trees, and very often on the ground where they seemed to find an abundance of food of some kind, probably seeds. Rev. Mr. Coggin, about whose house they remained much of the time, thinks they also "ate grass," and he observed them "in a tree on which old crabapples hung," but did not actually see them feeding on the apples. Their usual call note was a "loud, quick whistle as if the syllable *pee-uk*, uttered as if in alarm." When several were together they also made "a low, sociable peeping." There was only a single full-plumaged male in the flock, all the others being either females or young birds. One which was shot and examined proved to be in good condition with "flakes of greenish fat" about the neck. After the departure of this flock none were observed in Boxford until the 14th or 15th of February, when two were seen and others heard calling. On the 18th two adult males were killed. These must have been new comers for, as already stated, the flock which arrived in January contained only one bird obviously of this sex. I am indebted to the Rev. William P. Alcott, of Boxford, for the above facts, some of which were published in a note in the *Salem Gazette* of Feb. 7, the others kindly communicated to me by letter by Mr. Alcott.

On Feb. 11 three of these grosbeaks were shot by Mr. R. F. Lewis at Crescent Beach, a station of the Revere Beach & Lynn Railroad, near the southern extremity of Revere Beach in Suffolk county, Massachusetts. I saw these birds in the flesh next day at Messrs. Goodale & Frazar's, and afterward secured them for my collection. One is a male in fine plumage, the other two are females. Mr. Goodale, who skinned them, found their gullets filled with what he took to be maple buds. Mr. Lewis writes me that he first saw them in a thicket of sumacs, where they were flitting restlessly from bush to bush. The male then descended to the ground and hopped about for a minute or two, apparently "picking at the grass." After he was shot the females flew into a cherry tree and began calling loudly until they also were killed. Mr. Lewis could find no others in the vicinity. The place where the birds were taken is in the middle of a dense settlement of small, cheap houses, huddled closely together along narrow streets, bordered by rows of young poplars and other deciduous trees, with a few wild or cultivated shrubs in the occasional vacant lots or cramped little gardens behind the houses.

Concerning my previous record of the Seabrook, N. H., specimen, Mr. Eaton has very kindly sent me the following corrections: "I received the bird Jan. 9, as reported, but it had lain around several days before I got it. Being confident that it antedated the Milford specimen, I have since called on Mr. Boyd and ascertained that it was killed five or six days before I received it. I have also learned that it was not alone, as I at first wrote you, but, on the contrary, was accompanied by another bird of the same species, the sex of which Mr. Boyd is not certain about." From this it appears that the date of capture of this specimen should have been given as Feb. 3 or 4 instead of 9, and the name of its captor as Mr. Boyd instead of "Mr. Brooks." The latter mistake was due wholly to my own carelessness, for on referring to Mr. Eaton's first letter I find that the name is there written clearly and correctly.

In my previous article on these grosbeaks I said something about certain supposed peculiarities of coloring in some of the New England specimens. Since then I have brought together a large series of western skins and added five birds to my New England series. Upon going over this material with some care, I fail to find any constant differences between the New England birds and those from Wisconsin and Minnesota.

CAMBRIDGE, Mass.

WILLIAM BREWSTER.

Editor Forest and Stream:

I am very much interested in the notes published in *FOREST AND STREAM* on the occurrence of the evening grosbeak (*Coccothraustes vespertina*). My attention has been drawn to its occurrence here by Mr. Caulfield, taxidermist. One specimen was shot in this city the latter end of last month, and four were shot at Laprairie on the south side of St. Lawrence River, about nine miles above Montreal, last week. I saw two of these birds after they were stuffed. This is the first record of their occurrence in this district.

MONTREAL, Feb. 20.

ERNEST D. WINTLE.

NOTES OF SPRING.

ON Feb. 8 this locality was visited by a large flight of the common redpoll. They were in very large flocks, and accompanied a snow storm which swept through the Chemung Valley on this date. I had about a dozen fine specimens brought to me by a young man who fired into a flock that was feeding near the house. This first called my attention to them, and on going out I was surprised to find them all over. A very few snowflakes were also seen among some of the flocks. Yesterday, while on my way to church, I saw a red and buff-shouldered blackbird. He was all alone in the top of a dead tree, and his notes reminded one of spring. He looked very lonesome.

ELMHURST, N. Y., Feb. 10.

E. A. S.

Saw the first bluebird to-day. Last week saw a logger-headed shrike capture a field mouse.

ALBERT HALL.

LAKE WOOD, O., Feb. 11.

This week I have seen a brown thrush and a flock of yellow-legs. Woodticks have made their appearance, and I have picked several off the dogs.

B. S. T.

WEST YARMOUTH, Mass., Feb. 14.

CLIFF SWALLOW NESTING IN DECEMBER.—We are indebted to Dr. B. H. Warren, State Ornithologist of Pennsylvania, for the following interesting letter relative to nest building of the cliff swallow (*Petrochelidon lunifrons*) in Pennsylvania in December: "New Lexington, Pa., Jan. 1, 1890.—* * * I wrote you on the 28th ult. that it was reported to me that the cliff swallows were building at a farmer's barn some six miles away. I investigated the matter by going there myself to see if the report was correct. I saw the nest, but the swallows had gone on last Saturday, probably driven away by the sparrows. The farmer, John Shaff, and his daughter told me that they first noticed the birds on the 23d of December, and they were already building. They commenced to build on the foundation of old nests. They had one nest completed and two others partly done. During all last week the temperature never ranged below 40° nor above 65°. In an open winter like this one it may not be unusual, in some parts of the State, for swallows to make their appearance in midwinter; but, as far as I can learn, they were never seen here before in December. You state in your 'Report' that you have never seen retort-shaped swallows' nests. I have often seen nests with the opening from 3 to 5 in. long. Sometimes this neck is fastened to the ceiling in a horizontal line, and at other times it is curved slightly downward.—H. D. MOORE, M.D."

FOOD OF THE GOLDEN-EYED DUCK.—We are indebted to Dr. B. H. Warren, State Ornithologist of Pennsylvania, for the opportunity to determine one of the food resources of the golden-eyed duck (*Glauconetta clangula americana*).

On the 18th of January Dr. Warren bought an adult male of this species in a market at Philadelphia, Pa., and, on the following day, forwarded to us the contents of its crop and gizzard. He wrote that the "small rounded and egg-shaped bodies when the bird was opened seemed to be held together by a greenish colored membrane." The bird was shot on the Susquehanna River in the neighborhood of Port Deposit. Dr. A. K. Fisher, of the Division of Ornithology and Mammalogy of the Department of Agriculture, submitted the food materials to one of the botanists of the Department and learned that they were composed of tubers from the subterranean stems of *Chara*. The circular tubers are scarcely one-eighth of an inch in diameter and consist of a thin and brittle shell inclosing a snow white mass of starchy crystals. We did not ascertain the species constituting this food mass. One species of *Chara* is popularly known as "feather-beds" and another is called "stone-wort."

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the *FOREST AND STREAM* Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

PARKER 10, hammer, June 6.	

A QUAIL HUNT IN NORTH CAROLINA.

IT was quite late in the fall when Ed. broached the subject of a Southern quail-shooting trip. However, a protracted and wearisome trial, a generally fagged-out feeling, and the natural desire of one whose quail shooting has been hitherto confined to the uncertain hunting grounds adjacent to New York, to see what good shooting really was, readily decided us to acquiesce in the proposition; so a few afternoons later the Southern Express on leaving Jersey City had aboard, among various other things, the writer, Ed. (an excellent shot and an enthusiastic sportsman), our two pointers Graph and Stauch, and the usual accessories to a shooting trip. A night and a day's ride found us safely ensconced in the farmhouse which was to form the base of operations against the North Carolina quail, with everything in readiness for the shooting which we hoped to commence early the next morning.

Wright, the colored boy, under whose tender care we were to put ourselves for the day, so far as our conveyance and the place of our shooting were concerned, was late in coming. He had promised faithfully to be at the house "befo' sun up," but it was very nearly 8 o'clock when Sam Hinson's white horse Joe, his two-seated spring-wagon (both hired for the occasion) and the grinning features of Wright made their appearance, and the expedition got under way.

The morning was cool, bright and clear, our spirits ardent and our enthusiasm and expectations of a good day's sport unbounded. The drive occupied about an hour and a half, and embraced an interview with one Coleman, the owner of the first plantation over which we expected to shoot. His land was "posted," and birds

were said to be very thick upon it, but it was necessary to obtain permission to hunt there. We found Mr. Coleman, who was a kindly-looking and courteous Southerner, in the woods felling a mighty pine. Ed suggested that we open diplomatic negotiations with him. Shortly prior to our visit to this section, one Shelly, a native of the North, had been arrested for trespassing upon the land of Mr. Coleman's next neighbor and we did not know just how Coleman felt on the matter of Shelly. We approached the wood-cutter, with a smile and a cheerful "Good morning," but not without certain misgivings as to what position we ought to take in reference to Shelly. We told Mr. Coleman we were from the North, and should like to hunt over his property if he had no objections. He inquired whether we were from New Jersey. We smelled a Shelly rat and said, "Oh, no, we were not from New Jersey, we were from New York." He said he did not mean any offense, but was our name Shelly? No, not by any means, our name was anything but Shelly; in fact, we were totally unacquainted with Mr. Shelly, never having met him in our lives. Indeed we were fast approaching a state of reckless reiteration in our efforts to get further and further away from any association with Shelly, when we were pulled up short, Mr. Coleman remarking that whether we knew him or not, Shelly was a fine fellow, that he had been down there to shoot a little while before and had treated him "real handsomely," that he had sent him a nice present upon his return home, and that as Shelly was a "somewhat red complected man" (as he put it), he had suspected us of being at least his brother. We congratulated ourselves upon our narrow escape, obtained the required permission, and proceeded on our way.

Reaching a turn of the road Wright thought that would be a good spot for him to bivouac while we were hunting, and we thought the adjoining field a likely place to find birds, for it was large and consisted partly of a thick growth of ragweed, partly of an old corn patch, and partly of winter grain, one end of the tract being covered with a tall growth of broom sedge, interspersed with young pine trees; so donning our shooting coats and taking an ample supply of shells, we speedily made ready for the start, as the morning was now pretty well advanced and we felt that the sooner we made a beginning the better. Our dogs were in splendid condition, and as they impatiently yawned and stretched while waiting for the signal to start, their bright eyes and eager manner formed a fit corollary to our enthusiasm. We had barely proceeded 20 yds. from the fence before Graph began to make game "Look out," said Ed., "there are birds near by," and just as he spoke Stauch, who was a little to the right of Graph, drew up in a stiff and determined point, Graph backing him, the moment afterward, most handsomely. Congratulating ourselves upon our luck, we walked slowly in, one on each side of the dogs, but no quail arose. We were not more than 15 ft. apart and it seemed hardly possible that we could have passed the birds. But such was the fact, for on retracing our steps and moving a little nearer one another, up jumped the covey, and a moment afterward four reports rang out, and there were three less live quail in North Carolina than there had been a few minutes before. The remainder of the bevy scattered in the adjoining woods, where there was very little cover and where they lay very poorly to the dogs. Nevertheless, we got three out of five that were started, one being a wing-tipped bird, which gave us a pretty chase, and which, but for the absence of thickets and briars, would probably never have been bagged. The pursuit of these birds took us in a semi-circular course through the woods, and we entered the field again at its lower end. On looking over the ground we got an idea that the tall broom sedge and young pines would offer a pretty good cover for another covey, should there happen to be two in the same field; and sure enough, in beating through it we flushed a covey of about twelve well grown and strong birds that whirled off like so many feathered bullets. The dogs, being in the adjoining field, had failed to scent them, and we walked right into the midst of them, and as they rose on all sides of us we must confess to having our nerves somewhat shaken. However, we managed to knock one with the second barrel and marked the rest down on a side hill, which was scantily covered with young oak trees and small pines, together with a good deal of underbrush.

The flock flew across the railroad, and as we were watching them we noticed four or five colored boys walking down the track. Two of them had guns, the others were apparently unarmed, and they had half a dozen dogs of as many breeds and colors. Evidently they were rabbit hunters. A North Carolina negro is a born rabbit hunter. A dozen or more of them will get together with possibly two or three guns among them and a horde of dogs of all kinds. Then they will have a rabbit hunt. Just as soon as a cottontail is started every nigger sets up the most unearthly yell that he can evolve from his inner cussedness, and away go the dogs and men and boys after the unfortunate rabbit, with perhaps two or three scattering shots to help swell the noise. We were walking to the hillside, where the second covey had scattered, when up jumped a rabbit almost under our feet, and heels over head he went with our first barrel, but jumping up again began to dodge through the brush. We sent another ounce of shot after him; still he went on, struggling over the bank right in front of the band of negroes, who from their point of vantage on the railroad embankment had watched the whole scene. Of course they were highly delighted, and their remarks were anything but complimentary to our skill; but we didn't say a word—at least not loud. However, a moment afterward a shout of joy went up as one of the rabbit hunters' dogs trotted in with the dead rabbit in his mouth. Upon our claiming the game it was handed over, and the gift of a ten-cent piece sent off the colored contingent with many grins of delight.

In a few minutes we reached the sidehill and Graph pointed right at the edge of the brush; a moment afterward two birds shot off across the field; the first one dropped to Ed's gun, and the second, after a shot from our hammerless, struggled on to the edge of the adjoining woods, where it fell, but was never gathered, and joined the great army of lost birds. A moment after another was flushed and wing-tipped, and after a hurried search given up; but a hundred yards further on Graph pointed again, and this time it was our wounded quail. Three or four snap shots were made in the thicket, and then, just as we were passing through a small piece of pine woods, and within a stone's throw of a farmhouse,

we found another covey, but did not dare shoot in such close proximity to the dwelling. However, we drove the birds further down, and although some flew over our heads and returned to the woods, we managed to get some of them down in the bottom, where we added several more to our bag. Of course all this took time.

The quail of North Carolina resemble the Northern bird in some respects; for instance, they will not fly to order. Try as you may to drive them in one direction, if they have made up their minds to go in the other they will go that way, even though they have to fly over a whole line of dogs, men and guns. Consequently our "quail drive" was neither an easy nor a short matter. Besides that, it had become very warm; and owing to the combined effects of the heat, the brambles and the perversity of the birds, our hunting had not been for the last hour or so of the most rapid description. By turns we had discarded first our cardigans and then our vests, and what with driving the birds, sitting on fences to rest, hunting for wounded quail and shooting, the morning had pretty well sped away. The "edge" of our enthusiasm had been somewhat worn off by the practical realization of our hopes; our legs had gradually grown heavier and heavier, and the early eagerness of our manner was superseded by a somewhat warm and languid style of behavior. Each rest on the fence grew a little longer than the last; the cool air of the morning had given way to the warm and lazy stillness of noon, and we concluded to quit hunting for birds and to hunt for our lunch; so we turned our faces wagonward.

On recrossing the track we discovered Wright in the distance just setting out on horseback to procure milk at the farmhouse. As we glanced toward him a pair of birds took the opportunity of jumping up to the left of and somewhat behind us, diving directly into a clump of pines. Wheeling around we shot, and peering through the branches we saw a few feathers floating in the air, and the next minute Graph trotted in with a fine cock bird. As we opened our guns to reload, another bird whirled off, and we watched Ed, as he calmly raised his gun and fired; simultaneously with the report we saw the bird make a convulsive movement, drop an inch or two, shake itself all over and then resume its flight, almost in a direct line toward Wright, who all this time had sat motionless upon his steed watching our movements. "Mark," we yelled as the bird flew on. In a few moments there was a stagger, an effort as if to tower, a clanging and grasping at the empty air, and our game fell fully 250 yds. from the place where it was shot, and was presently gathered, stone dead. As the bird fell Wright turned his horse's head to resume his journey. The animal had not taken ten paces when a bevy of birds rose right before it and flew to the edge of the adjoining woods, where we afterward found them, but upon getting a couple as they were flushed concluded to abandon hunting and to respond to the calls of the inner man.

After eating our lunch we concluded to wait, so that both we ourselves and the dogs might rest. There was a sleepy, sultry feeling in the air; it seemed far more natural to lounge and bask in the bright sunlight than to tramp through the woods and tear through the briars, so we dozed the time away. After remaining in idleness for an hour or more, our natural love of the sport began to assert itself and we concluded to drive on a little further and try it again, so on we went.

It was about 2 o'clock, and we hardly expected to find many birds at that time of the day. The ardent eagerness of the early morning, born of our native enthusiasm and of the uncertainties which always attend quail shooting, even in the best of localities, had given way to a steady and cool determination to enjoy the good luck which fortune had sent us, and we marched on like veterans, while the dogs hunted hither and thither with unabated zeal. "Look out," called Ed from a pine thicket which he was traversing, "the dogs are making game." Hardly had he spoken, when *whirr, whirr, whirr* went the quail, and the air seemed full of birds. Another big covey had been started, and they quietly sailed out into a field of ragweed in full view and within a couple of hundred yards of us.

Well, if we didn't have shooting, then we are afraid we don't know what shooting is. There were some eighteen or nineteen birds in the covey, and inside of an hour we had bagged fourteen of them, and lost one wing-tipped bird as well. The dogs seemed fully aware of the importance of the occasion. Not once did they break shot and never a bird did they flush. They never acted better in all their lives, and to-day we hold them in grateful recollection. Just as sure as a bird was missed in the ragweed he went back to the pines where the bevy was first flushed. These constituted but a small tract of woods, and as sure as we missed a bird there just so surely he went back to the ragweed field—a fatal mistake in so many cases that we wonder the birds did not discover wisdom sooner than they did—only two or three of them having sense enough to escape into the depths of a neighboring swamp. But there were few of them that made the double trip, for we were shooting now with a calmness and steadiness that surprised even ourselves. The early morning shooting had, owing perhaps to an over-eagerness on our part, been at times a little erratic, and the languor of the mid-day hours had made us a trifle careless then, but now, woe to the bird that rose before us; and our pockets grew heavier at almost every shot.

It was getting cooler all the time. There was just a rustle of a breeze from the north, it had become quite cloudy and the scent seemed to be unmistakable, for the dogs winded the birds again and again at surprising distances. On one occasion in particular Staunch was rushing down the hill for all he was worth, the ground was covered with dead leaves and pine needles, with here and there a fallen treetop and occasionally a bunch of brambles; suddenly he whirled around, and, quick as thought, was as rigid as though graven in stone. Graph happened to be close behind him, and so sudden was the stopping of Staunch that Graph could not check himself in time, but came to a point with his head extending clear across the neck of the other dog. How we wished for a Kodak just at that moment. Of course all things end at last, and so did our shooting at this bevy, but it so happened that on returning from a canebrake where our last bird had dropped dead, after perversely flying just as far as he was able with a half-dozen No. 8 in his gamy body, the dogs began to trail, and, taking us clean across the corner of an old oat patch into a field of sedge grass, both came to a point. It was still another covey. As the birds

rose, seven or eight went to the left and the rest to the right. The left-hand group rose together and went off so prettily that, checking our first impulse and pausing for an instant we saw two about to cross, and firing just in the nick of time, secured them both. We had been shooting so much that there had been no time to think of fatigue, and we felt almost as fresh and as steady as when we started out, but the dogs had begun to look somewhat worn, so, after flushing this covey, we decided to give the birds a chance to run for a while in the bottom where they had scattered, and to rest the dogs, and taking them over to a neighboring spring, we sat ourselves on a fallen tree trunk for a recess of ten minutes.

While sitting here Wright, who had accompanied us in the afternoon hunt in the character of marker, put in a plea for an early return. He urged us to stop so that we might pass through the village before sundown. Upon a cross-examination as to his reason for wishing to be home so early, he explained that when he smoked a cigar going through the town after dark (and we had observed that he had always saved his cigars until he reached the village) no one could see him, and so he had to waste his greatness on the desert air; while if he went through in daylight with a cigar, a stiff collar and a silk cravat, every "yellow fellow" in town could see him, and his stock would be just so much elevated. We promised to take his request into consideration, but, unfortunately for Wright, the scattered birds in the bottom lay so beautifully to the dogs, and made such excellent shooting, that they kept us busy until very nearly sundown, and then on our way back to the wagon we found several single birds, evidently a covey which had been disturbed by the rabbit hunters, so that it was very nearly dark when we started for home.

On counting our game we found that altogether we had thirty-seven quail, a rabbit, two gray squirrels, and a gigantic red-headed woodpecker. The woodpecker grows to be considerably larger than a pigeon in the South—indeed it is probably a different species from the Northern bird—and this one had flown out of a tree with a tremendous clatter, so that for a moment we had almost imagined it to be a wild turkey—although what he was doing in the tree, we hadn't time to stop and consider—and had banged away at him, only to discover our mistake when we picked him up.

And so the day's sport was over. As we reached the wagon and donned our overcoats, the tired dogs threw themselves panting upon the ground, ready enough to wag their brier-scratched tails at a kind look or a friendly word, but utterly fagged out; and as we gazed at their mud-stained and weary forms, we began to realize that we too had done a good day's work. From the time of leaving the wagon in the morning until we were ready to return home we had constantly found birds; this meant "go" all the time. Every successful shot had added zest to the sport and no thought of weariness had intervened. But now, as we seated ourselves in the wagon, lit our pipes, drew our garments about us to keep out the gathering dampness of the evening, and watched the red and yellow tints of the receding day, while Wright urged Joe briskly homeward, we appreciated the fact that there is a limit to one's endurance, even in quail shooting. On our way home we met our early morning acquaintance, Mr. Coleman, who, after cordially inquiring as to the result of our shooting, gave us a hearty invitation to hunt upon his farm whenever we felt like it. A rapid drive home, a hearty supper, a quiet game of whist, and an early bed, formed the closing scenes of our first experience in a quail hunt in North Carolina. H. W. K.

LOST IN THE WILDERNESS.

I RECENTLY read in an American paper an account of a gentleman having narrowly escaped with his life through being lost for two days in the bush. On one occasion, about twenty-six years ago, I was almost lost, and think that perhaps the incident might be worth relating.

In December, 1863, I was in the Royal Artillery at Montreal. Feeling tired of garrison life I obtained ten days' leave, and joined a couple of professional hunters residing in a hut on Lake Chateaugay, close to the Adirondack Mountains. I was not much experienced in bush life, but during the previous autumn had traveled for two months about the Ottawa district, and had frequently gone alone after deer several miles from camp or hut. I had never found any difficulty in returning, being guided by the compass, the sun, the wind, or the configuration of the land; so I invariably went out alone while at Lake Chateaugay, having noticed that the chances of a shot at deer were greatly diminished when any one accompanied me.

Neither the hunters nor myself had any success for some days. The snow was covered by a crust, which made silent walking impossible, and deer were scarce, having been driven away before the winter commenced by continued hounding. At last, on getting up one morning, we saw that there had been a fresh fall of snow, and the hunters predicted that we would get a deer before nightfall. I went into the woods on the opposite side of the lake, but did not find any tracks till late in the day. I followed these for a long distance into the middle of a large cedar swamp, not noticing, in the eagerness of pursuit, that evening was drawing near, when suddenly a heavy snowstorm commenced, and in a few minutes it was impossible to see many yards in any direction. I started for the hut, but had not gone far before night came on, the darkness being so intense that the snow on the ground could not be distinguished from the tree trunks. I was almost blinded by the twigs continually striking against my eyes, and at short intervals fell head first into the snow through stumbling against fallen trees; or else dropped up to my knees in the small pools and streams, for owing to the dense growth of the cedars the ice would not bear my weight, although that upon the lake was about Sin. thick.

The barrel of my rifle, a single muzzleloader, became plugged with snow, but I did not realize that there was any danger. I thought that even if unsuccessful in finding the hut I would be pretty sure during the following day to shoot a grouse or rabbit if not a deer; but on feeling for the powder flask I discovered that in one of the numerous tumbles into the snow it had been flung out of my pocket. The idea then occurred to me that I ran a considerable risk of being starved to death, and I felt so terrified that I sat down upon a fallen tree to decide upon what had better be done.

There were matches in my pocket, but the darkness

was too great to allow of dry wood being found. The food brought from the hut had been eaten at midday. I had a compass but it could not be used for steering without looking at it every few yards in such dense brush as that. The hut was probably quite four miles distant and beyond it, in the direction of the settlements, the nearest house was seven miles further. On the opposite side the hunters had told me that there was no house for thirty miles. They would be unable to follow my tracks in the morning because the snow had filled them up. I was afraid to sit still because my socks and moccasins were soaked with water and would soon freeze, and also because I might fall asleep from the cold and freeze to death before daylight—which could not be expected for twelve hours, as it was then about six o'clock. If I walked without some means of keeping straight, I would probably go in circles until I sank from exhaustion. While thinking of these things I suddenly remembered that in the morning the wind was blowing from the northwest. I had walked across the lake and into the bush toward the north, then gone west and afterward followed the deer tracks in a southerly course. If, therefore, the wind had not changed, I might return toward the lake or its neighborhood by feeling it blowing obliquely against the back of my left ear. There was much difficulty in doing this, because the trees were so close together that only a slight puff of wind could be felt now and then, but I groped along, frequently falling as before over prostrate trunks, until at last I emerged from the swamp. The trees then were much further apart and allowed of the snow being seen between the trunks, and the snow having ceased I was able to travel with comparative ease. After a time the ground began to slope toward the north, and thinking it might lead to the lake I walked down hill and soon found myself on the shore (about two hours after the snowstorm had commenced in the swamp).

A walk of two miles along the banks upon the ice brought me to the hut, where I met the hunters in a state of great alarm. They had been firing their rifles repeatedly in order to guide me, but I had not heard them, probably owing to the wind being in the wrong direction and the trees too close together. I was informed that only two winters previously a hunter had been lost in the snow and had afterward been discovered frozen to death.

Of the various means of steering there are none equal to the compass, even for the most experienced woodsman, and of all compasses, none are equal to Singer's patent. This has a dial plate of mother of pearl, the north half of which is painted black. The uncolored half can be distinctly seen even by starlight. Little reliance can be placed upon the "mossy north side of trees," so often mentioned in travelers' books; but after a snowstorm the snow will frequently be seen sticking to the windward side of most of the trees, and attention to this may help a man traveling by night.

Many of the lower animals have, without doubt, a mysterious sense of direction, for numerous well-authenticated cases have occurred of dogs, cats, etc., being sent long distances from home by rail, and afterward finding their way back by road. A hunter with whom I spent two months in the bush of western Canada had a tame deer, which often accompanied him through the woods, but would never go further than about seven miles from home. The man assured me that, however circuitous a route he might have taken, the deer always started back on what he found, on reference to his compass, to be a straight line.

When shooting in India I have often walked for hours, accompanied by one or two villagers, through jungles where there were no apparent means of steering. It seemed to me that the more utterly uncivilized these men were the more readily they knew the direct road back to camp.

Is it not probable that man has naturally the same sense of direction as the lower animals, but that this sense becomes atrophied among civilized men by the excessive cultivation of their other powers?

COMBIMARTIN, England.

J. J. MEYRICK.

CHICAGO SHOOTING.

CHICAGO, Feb. 23.—*Editor Forest and Stream:* We are now almost in the height of the duck shooting season here, and excellent sport is reported from all points. The Kankakee marshes in Indiana especially are said to be alive with ducks and geese. The members of the Tolleston Club are having perhaps the best shooting, and this is as it should be, for the Tolleston marsh is probably the best natural duck country in America for its size, and then the club has spent a large sum of money each season to properly bait the marsh and provide food for the birds. This is the course that must be adopted by all the shooting clubs near Chicago that hope to preserve their sport, as it is evident that the natural food supply is not enough to attract and hold the birds.

The Liverpool Club, an organization which shoots near the Tolleston marsh, reports superb sport last week, many excellent bags having been made. From the Cumberland Club comes word of very heavy shooting early last week when the birds began to arrive, one man having killed a hundred ducks on last Thursday. Mr. Harry Stephens, however, who has just returned from Cumberland, states that the birds have now located themselves in almost inaccessible parts of the marsh, and that but a few of the members are getting good shooting.

Mr. Abner Price was at English Lake a few days ago, and reports thousands of birds, but all are away back in the meadows where they cannot be reached. Good sport was had at Mak-saw-ba, Roll Organ bagging thirty birds on Saturday, and another shooter scoring forty-seven, nearly all being mallards. W. H. Haskell killed seventeen on Monday. Other good bags were made, but as at other places the birds have located in pond-holes hard to reach. The cold snap during the middle of the week closed up the marshes and drove many of the birds to the rivers, where good shooting was had. At Water Valley, on Friday, Dick Turtle killed fifty-one ducks, mostly pintails. A. C. Buchner bagged thirty-three mallards and pintails at Mak-saw-ba on Thursday and Friday.

The prospects for the coming week are excellent, and the season's sport will probably reach its height in the next ten days. But few bluebills and redheads are reported as yet, but a few days of warm weather will bring them with a rush. Shooters in this latitude must get to work soon if they expect any spring sport. W. P. M.

THE MULE'S ROSARY.

A FEW years ago, while my father and I were in southern California, we made a journey from Santa Barbara over to the Santa Inez Valley to look at some quicksilver mines, in company with a gentleman who lived in the city of our departure. We had a horse to carry our pack. Several days were passed very pleasantly on the Santa Inez River, fishing, collecting fossils and examining the outcroppings. Trout were found in great abundance. We met a party of white men one day who had a clothesline full of trout hung up to dry. They were jerking venison at the same time.

On the riverside one day we discovered in the sand fresh tracks of a bear, and after going a little way below we met a miner and told him what we had seen. He did not appear to show much enthusiasm over the information we furnished and remarked that he hadn't lost any grizzly that he was looking for.

We pushed on down to a point at which the stage road crosses the valley. Here father and our companion returned to Santa Barbara. I hired a horse and took along with me a Spaniard, who was bound in the same direction. My destination was the home of a friend who owned a quicksilver mine on a little tributary of the Santa Inez.

We had traveled several miles up the stream, thinking of no danger, when the Spaniard suddenly halted and, pointing with his finger, told me to "look!" Directly in the trail and about 200 yds. ahead was a monstrous grizzly seated on the body of a mule which he had killed and having his forelegs ready for instant action. He appeared to us as big as an elephant. We were both armed, but prudent and did not care to attack a bear of such proportions, so we turned around and went down out of his way, returned to the trail after a long detour, and continued to the home of my friend, the mine owner. Here we related our experience and learned that the unfortunate mule belonged to a Spaniard who worked in the mine. The owner of the property had advised the Spaniard to put the mule in the corral and not let him run loose and become the victim of a grizzly, but the man's foresight was not equal to his hindsight and he decided to pursue his own course. He fortified the mule by tying around his neck a string of beads with a crucifix attached; and felt certain that these would protect him from bears and other dangers. In order to allow the charms full play, he hobbled the animal and then turned him out to graze. The result we know.

While my friend and the Spaniard were getting their guns and ammunition ready I went up to the mine, expecting to be back in time to go with them and see the battle with ruin; but I became interested in some handsome crystals and stayed so much longer than I intended that when I returned they had gone. I followed them on horseback, but arrived on the scene too late for the fray. When I neared the place I saw them coming back with the skin of the bear lying across their horse. The fight had been short, sharp and decisive, and the conquering party had found in the stomach of the bear a trophy—a string of beads and a crucifix.

U. S. FISH COMMISSION, Washington, D. C. S. F. DENTON.

A VIRGINIA DEER HUNT.

WE started from Washington, D. C., to Virginia a party of five and arrived at friend Spencer's the next evening, all tired and hungry. He and his family received us with true Virginia hospitality, and we soon forgot the fatigue of the journey when called to supper. What a supper! Those "griddle cakes!" Well, I can almost fancy I am eating them now. After supper the old hunters called to see us and tell yarns of former hunts. Then they gave us some instructions, and when I told them that I had not killed my deer, and in fact never saw a wild one, you could have heard their smiles. "Another greenhorn; we will have lots of fun with the city chap." They then told me that when they put me on a stand I could only shoot at a deer, turkey, fox or bear, and if I shot at anything else I would have to pay the penalty, and that if I got the deer fever and failed to shoot, or shot and missed I was to have my shirt tail cut off and treat the hunters. They also said the rules of all hunts are that the party killing the deer had horns, skin and first choice of meat; the drivers came next, and the rest was divided equally among all in the chase. Well, I was put on a stand in the woods with the last caution to listen as well as look, as you could often hear a deer coming before you could see it. I waited about two hours, and began to think that if this is what you call deer hunting it is the tamest shooting I ever had, when I heard something move in the thick brush.

I was all attention, cocked both barrels of my 15-gauge shotgun, which had 9 No. 1 buckshot in each barrel, and tried to see what was coming. I hadn't long to wait, when I saw something black moving. I thought of the bear and said it wouldn't do to have any wounding here, and was just going to shoot when I saw the head and ears and found out in time that it was a big black hog. I thought to myself that the old hunter would have had the joke on me if I had shot. I waited a half hour longer when I heard the welcome sound of the hounds, in full music, coming my way. Looking in the direction, I saw what looked to be a streak of lightning shooting through the woods. As this came nearer I saw what I thought to be a calf; then it broke cover and came in a little opening in the trees, about 1,000 yds. off, and I saw a large buck, horns and all, and now for the buck fever, I thought. I had on a canvas gunning suit the color of dead leaves, and I dropped down in the tall broom sage grass, fearing that the buck would not come near enough for me to get a shot. Fortunately for me another of the party was above me on another stand, and had on a black suit of clothes and kept moving, which attracted the deer's attention and made him change his course, bearing him nearer my stand. Reader, have you ever been there? A large 200 lb. buck, jumping 12 to 15 ft. at every leap, and coming right to you, and the hounds in full cry. The first deer too! I let him come to within 40 strides, when I jumped up.

The buck saw me and raised its head, showing the white breast. I fired my right barrel; he gave a jump and I heard his heavy thump as he hit on the ground. I broke my gun, put in a new cartridge, and went over the deep gully which divided me from where the deer fell. Judge of my disappointment when arriving where I saw the buck on the ground to find no deer. Then I did feel mean. By this time the other hunters came up and

asked me what I shot at. I told them a big buck. "Where is it?" they said. "Don't know," I replied; "it was on the ground there just now, but where it is at present I cannot say." "Back up to a stump; we are going to cut off your coat tail for missing the deer." "All right, pards," I said, "but give me one chance. I know I hit that deer, and here is where it fell," showing them the print in the soft ground, "and here are its tracks where it ran off; let's follow them, and if you don't find the deer I will give you the whole coat." We took up the trail. Reader, think how I felt, a green one among those old hunters, when in advance of the rest I saw what at first looked like a big stone, but on my near approach proved to be my buck, dead, with five buckshot in its breast! One of the old hunters came up to me and took my hand and gave me a big ginger cake, saying, "You will do; you take the cake."

This was Wednesday. Friday they put me on the same stand, and in less than an hour I heard the dogs, and keeping still and not leaving my stand, which, by the way, is unpardonable, I had the pleasure of seeing approach within gunshot a large doe. As it came to a wood road I fired and put seven shot in her neck, killing her in fine style. Monday I was placed on the same stand; was there for three hours, getting very tired, when I heard the dogs, hid behind a tree, gun cocked and ready, when a large deer came along. It was flying—couldn't call it running—it hardly touched the ground. The dogs were within 40 yds., and music, ho! the Boston Ideals were left. The trees were so thick that I could not get sight on neck or shoulder, so I had to hit it in the flank. I saw it drop its hindquarters, but still running, and I could not get in my second barrel before it was out of sight, but running slower, showing me it was hit hard. I put the dogs on the track, and one of the drivers came up on horseback, followed on a run, and soon came back with the deer on his saddle, but not before the dogs had eaten a big hole out of the flank. This was the last of my deer hunt. I killed all the deer of the party but one that was killed after I left, and did not lose my shirt.

UNCLE EOK.

BEAR AND TROUT IN NEW MEXICO.—Denver, Col.—In the fall of 1889 I ranged with that fine hunter and sportsman's guide, Capt. Ed Richmond, for a month, bear shooting in northern New Mexico and southern Colorado, meeting the Captain at Chama, on the Denver & Rio Grande R. R., Sept. 1. By his suggestion that the trout fishing was fine on the Rio Brazos and bears plenty, we decided to make our first camp on that river. The first evening in camp we saw five bears feeding on berries, all within 1,000 yds. of camp. The Captain killed one fine black bear. We found the trout fishing as represented. The following day I took 40 lbs. of trout with flies in four hours. We were four days at this camp, killing four bears. We afterward camped in the Coneo Mountains, on the Navajo and Blanco rivers, killing in all 26 bears, 5 deer and a great many grouse; and taking all the trout we cared for. We had five varieties of bear, silver tip, two varieties of cinnamon, and two of black. I would advise sportsmen coming for bear shooting to try this range. S. N. Morris, at Chama, New Mexico, would be a reliable person to advise in regard to present bear shooting.—B. [It is hardly necessary to repeat what has been so often stated, that there are only two species of bears found within the limits of the United States, namely, the grizzly (*Ursus horribilis*) and the black, brown or cinnamon (*Ursus americanus*).

SOUTH CAROLINA.—Bamberg, S. C., Feb. 18.—A few additional points relative to this region may be of interest. This town is located on the S. C. R. R. seventy miles from Charleston and sixty from Augusta. For carrying my dog in a light crate from Charleston here they charged me \$1.50, and another gentleman traveling a distance of sixty miles they tried to charge \$5 for two dogs. He resisted so strongly that they made the charge more reasonable, which charge he paid under protest. A white man offered a dozen quail, which he had trapped, for sale on the principal business streets of the town at sixty cents for the lot, and found a ready buyer. Trapping and the negroes are killing off all the game hereabouts. Fish of all kinds found in the fresh waters south are found in the Edystone River, two and a half miles from town.—BLUEROCK.

OHIO.—Dayton, Feb. 19.—Reports from all sections between the Ohio River and the Great Lakes are that quail have kept in fine condition, and are more plenty than for years before at the close of winter. The law has been respected, nesting will begin early, and there is every reason to expect splendid shooting next fall if the Legislature does not pass the proposed law forbidding quail hunting until November, 1892. Snipe will come in early, and wild ducks are already flying along the rivers. A large flock of wild geese, flying high, passed over the city to the north Saturday morning. The marshes in all this section will be in grand condition for woodcock. Rabbits abound, but the coon hunters and trapshooters with inanimate targets monopolize winter sports.—BUCKEYE.

EXPENSIVE DEER MEAT.—Herkimer, N. Y., Feb. 21.—A few weeks ago District Attorney I. R. Devendorf, of Herkimer county, began suit in the Supreme Court against Dr. Balch, Dr. Vandenburg and Edward Willard, of Saratoga county, for violating Section 1 of the game laws. The offense was killing fawn in Hamilton county last fall, and two penalties are prescribed. The case was set down for trial at the April term of Court. A settlement, however, was made yesterday by the defendants' paying District Attorney Devendorf one penalty and costs, total \$143.92. The gentlemen from Saratoga consider that Hamilton county deer are expensive.

A WORTHY TROPHY.—We have received from Mr. C. L. Stratton, of Chattanooga, Tennessee, a large photograph of the very handsome elk head he took home with him from the Rocky Mountains, as related in our issue of March 7 last. It is a trophy of which any one might well be proud.

SHNIPE.—Reports are coming in stating that English snipe have been seen on the meadows near New Durham, N. J. One man flushed a large number during the month of January, and they have been coming and going all winter.—W. II.

THE NEWBURGH (N. Y.) FISH AND GAME PROTECTIVE ASSOCIATION has been formed, with these officers: President, Gardner Van Nostrand; Vice-President, Harry C. Higginson; Secretary and Treasurer, James G. Graham, Jr.; Counsel, Cornelius L. Waring; Executive Committee, Dr. Willett Kidd, Homer S. Ramsdell, of Newburgh; William Patton, of Little Britain; John Brewster, of Coldenham.

THE NEW YORK DEER LAW.

Editor Forest and Stream:

In issue of Feb. 13 a communication signed "Osceola," from northern New York, states that at a special meeting of the Lewis County Sportsman's Association, held at Lowville, a resolution was adopted indorsing the Crawford bill that has been or is to be presented to the Legislature, which will lengthen the season for killing deer from the 1st of August to the 15th, and shorten it for bounding from fifty to thirty-four days. Shortening the bounding is in the right direction, but better abolish it altogether. They also say that as deer will be killed in August, and even earlier any way (they evidently seem conscious that it is not exactly the right thing to do), they unanimously resolve that the easiest and best way out of the difficulty is to legalize the killing. By all means let this bill, if introduced, pass, that New York may enjoy the enviable distinction of being the only State in the Northern States that would make it legal to shoot wet does in August, leaving the deer fawns to starve. I suppose this amendment will be entitled "An act for the further protection and preservation" of our deer. Why not add "for the protection of those who would be law breakers any way." As men will be thieves and steal, don't protect property, but legalize theft that thieves may become honest men. A VETERAN.

HOLLAND PATENT.

TWELVE million one hundred and twenty-one thousand one hundred twenty dollars paid to policy holders—such was the fee provided by the New York Life Insurance Company for its patrons in 1889. Over five millions of it went to the heirs of men who died, and probably no money came to them with so little trouble on their part, as these life insurance claims. Probably few investments made by the deceased gave such good returns as their life policies. The New York Life has been in business forty-five years, and has many old policies on its books, yet the average return on policies maturing by death is something over two and a half dollars for one. This is equal to 8 per cent. per annum upon money invested in equal annual installments during a period of twenty years. The Tontine Policies of this company, which are now maturing, show good investment results to the living, in addition to the insurance protection during a term of years. The full statement, printed in another column, will repay careful perusal.—Adm.

Sea and River Fishing.

"MYSTERIOUS STOCKING OF PONDS."

Editor Forest and Stream:

I notice in a late issue of FOREST AND STREAM a question and answer concerning the above matter. I have during the past twenty years answered the question many times, giving the following incidents in corroboration:

There is no mystery about the stocking of ponds having no visible outlet or inlet, providing due patience is exercised in making investigations. About forty-five years ago I was one day creeping through the bushes by the side of a mill pond in Medina county, this State, in order to get a shot at a single duck up the pond. Suddenly I heard the peculiar swish of duck wings when settling rapidly into water, and looking up saw five mallards passing low over my head. They struck swiftly into the water among some grass within 50 yds. of me, diving as they struck and at once coming to the surface and swimming into open water toward me, and commenced running their bills over their feathers, particularly on their backs. Laying my rifle upon the little bank in front of my hiding place, I drew out my small but powerful pocket telescope and for ten or fifteen minutes watched the operations of the ducks. They would run their bills all over their feathers, and it was plain to see that they were eating something. Occasionally one of them would swim back into the grass and dive, come quickly to the surface and out into clear water and commence gliding the bill over the feathers again. After watching them to my satisfaction, I returned my telescope to my pocket, and securing a good rest upon the bank with my rifle, quacked in imitation of a duck, when the five mallards instantly "huddled," and as their heads came well in line I fired, when two of them flew away, leaving three of the little flock shot through the head and flopping in the water.

Passing a considerable distance around the dam and up the other side of the pond, I waded into the shallow water and secured the ducks. Their feathers were coated with glutinous spawn of fishes, and this is what they were eating. Most of our pond fishes belong to the family *Cyprinidae*, which spawn during the entire warm season, casting their glutinous eggs upon grass and small aquatic plants generally. As will be seen by the foregoing narrative, ducks feed upon this spawn after attaching it to their feathers. Of course more or less spawn remains attached to their feathers when they leave the water for other aquatic pastures. When striking into the next body of water some of this spawn is detached, and, being already impregnated, hatches where dropped. Ducks soon find all new bodies of water, such as artificial reservoirs, fish ponds, etc., and search them for food. In this way any isolated, small body of water becomes stocked with various kinds of fishes.

Several years ago I had a fountain in front of my residence in New Jersey stocked with goldfish. One day I discovered some very small specimens of young fry, and a microscopic examination showed them to be the fry of common pond minnows. How they came there was a mystery to me, as the fountain was supplied by spring water, which first passed through the pipes of the house and into the attic, and from there to the fountain. The matter was not long a mystery. A few days later I had been to the post office, and as I approached the house saw a kingfisher perched upon the upper verandah. As I came nearer it dived into the fountain among the gold fish, but did not succeed in getting one. In all probability the kingfisher had within a few minutes been in one of my fish ponds among the minnow spawn, some of which had been previously transferred to the fountain by the kingfisher and had hatched there. In central and northern Minnesota there are hundreds of small ponds or lakes, many of which have neither inlet nor outlet. They are all stocked with fishes indigenous to the region. I have herewith described the simple provision of nature by which they have been stocked. MILTON P. PEIRCE.

COLUMBUS, OHIO.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of Thos. J. Conroy, 65 Fulton street, N. Y. See advertisement opposite first page of reading matter.—Adm.

ON THE NORTH SHORE.—V.

A THREE WEEKS' TROUTING TRIP ON THE NORTH RIVER OF LAKE SUPERIOR.

BAD weather seemed to be the rule now, for on awakening the next morn we were greeted with a high southwest wind, a sky with sombre clouds, and a sea that was curling with froth. The weather here is not always a poem, nor always conducive to comfort in the mid-summer days. It may be a pure delight in the morning, and in the evening *au contraire*. It's the bitter with the sweet, and woe to him who thinks the days are ever golden, and the winds ever soft from the blue heaven. Such an one is of the genus tenderfoot and would do well to avoid the dangers and disagreeabilities of a North Shore trip in a small sailboat.

The first felt decidedly comfortable that morning, and we hugged it with unmistakable assiduity, while patiently awaiting breakfast. In due course of time the smoking platters were on the table, and in a twinkling encompassed by two hungry anglers.

The bill of particulars on this occasion, as the disciple of Blackstone states it, embraced broiled trout, ham and eggs, fried onions, fried potatoes, hot cakes with maple syrup, raspberries, tea and crackers. This, with the keen appetites the open air life had given us, was relished with an appreciation that an epicure would envy, or an alderman sigh for.

Ned related how he found a field mouse that morning in one of his pantaloons pockets, and therefore began to feel exceedingly anxious about his magnificent fine point Mackinac blankets, which he secured a few years ago at Red Rock on the Nepigon, and which he valued above price. He was fearfully afraid they would commence a raid on these blankets and render them unfit for service. A grand hunt was organized for the mischievous pests in the tent and around the camp, but not a mouse was bagged. They were so infinitely small that, like the fabled fairy, they could hide in a cowslip's bell. That night they endeavored to build a nest in my hair, but finding such a bald area in the center of the cranium they abandoned it in disgust. That was the last of the descendant of what the groaning mountain produced.

No fishing could be accomplished that day. Ned, to put in the idle hours, brought out his canvas junk bag, and, selecting the necessary tools and materials, began to build an attic to his horny-headed pet. He staked his reputation on that fly, and thought with the present addition it would be perfectly irresistible. It was finally completed, and here is what it now looked like with its annex.

He had put two more horns to it in consequence of having seen a bug at Grindstone Point with four horns, and if perchance he should see another with a still greater number of horns, on they would go. Ned is a child of genius, but in this respect is a perfect giant, for "no pent-up Utica contracts his powers" on horns. He proudly exhibited it to Joe, who, to use his own language, declared, "It's a hell-fired booby fly."

"It will bring 'em," says Ned.

"Yes, if it hits 'em."

Ned's invitation for favorable criticism from Joe did not pan out as he expected, so he tackled me as to my opinion.

"Put it under a glass and have it exhibited at a dime museum," I advised the great fly architect.

Ned now had enough of the critics, and gathering his tools and materials, again consigned them to the depths of that wonderful bag, and then filling his pipe smoked away with a serene contentment that was beautiful to behold. He was doubtless musing o'er the success he anticipated with his improved fly in coaxing the agile trout from their dark haunts, 'neath shelving and creviced rocks, and the confusion that would ensue in consequence thereof to his libellers.

The boatmen, who had been traversing the rocky shore adjacent to the camp, returned with a large hatchway cover from some wrecked vessel, which they improvised for a table. A second trip succeeded in the finding of a discarded fish-box, which the waves had beaten into snowy whiteness. It was utilized as a cupboard. We are really fast emerging from rough camp life into something like style, and if the lake would only send us on its curling waves a roll of carpet or a crate of bric-a-brac we would soon be the aristocrats of the sunless woods. Some laundrying was done during the day, and a peep into a looking-glass was had that we might survey the good work the pure air and bright sunshine had accomplished. We looked as bronzed as a moon, but had cheeks "whose bloom was a mockery to the tomb," and eyes so sparkling as to suggest starvation to an M.D. Our certificates of good health were complete, and no quarantine regulations, we were confident, would ever apply to us when we again entered a civilized port.

I found a July number of the *Century Magazine* in my satchel which I had hurriedly obtained at the news stand as I was departing, and it proved to be the only reading matter we had taken into camp. It was perused, I assure you, with manifest interest from its opening article, "The Manchester Cathedral," to the "Poetic Eric-a-brac," the closing. Not a line was omitted, and even the advertisements were given a thorough overhauling. It was finally turned over to the half-breeds, who appeared to take infinite delight in its illustrations.

A couple of trout having broken Ned's landing net the last day we were out, he concluded to knit a new one. He made little headway at it, as the stitches to make were not sufficiently familiar to him. Joe, moreover, took it in hand and completed it in a short time. Ned could not properly drop the stitches as the net narrowed. He was out of practice, he said, but the lesson Joe taught him will not, he avers, be soon forgotten. He commenced a second one at which he admirably succeeded, but his twine running out, he was unable to complete it, and therefore laid it aside for a future day.

I noticed in our walk in the afternoon that the forest here was composed of maples, black and white birch, mountain ash with its red berries, balsam, fir and cedar. Wild strawberries, raspberries and blueberries were scattered here and there, and the inevitable larkspur rose bushes were everywhere. I looked for that pretty little pink flower called the *Claytonia virginica*, which is indigenous to this climate, but I did not succeed in finding it. It is doubtless further to the northwest. I found it the last time I was on the Nepigon, but not near the lake shore. On our return from the forest ramble a red squirrel was occasionally seen scurrying up a tree, and the white-throated sparrow and lovely gold crest would at rare interval rise on wing. A loon, with his plaintive cry, would greet us from the bay, while the ever-present white-plumed gull, the scavenger of the lake, would skim over the surface with his shrill cry. This is evidently not a region for birds and the sight of one is always pleasing, be it brightly plumaged or otherwise.

The stormy weather was constant the entire day, and when night closed the winds were madly howling and the waves pounding the rocky beach with a terrific violence. I was satisfied there would be another day of enforced idleness upon our hands and, with that impression I sought my pillow, leaving fierce Boreas in command.

The morning opened with a sky dull and leaden and with the same provoking wind, and the same sad refrain of turbulent waters. It being Sunday, Joe after breakfast asked for leave of absence to attend church at the Catholic Mission at Goulais Bay, some four miles distant. It was readily granted, and Peter was installed as *chef de cuisine*, grand master of the bed chamber and head engineer of the wood pile, all of which duties he performed with commanding ability.

Monday the wind had abated sufficiently to allow angling, but, owing to the storm of the two previous days, the trout were not on the rise, and as a consequence we caught only two, but I succeeded in breaking, through sheer awkwardness, another tip. It was, however, put in serviceable condition on reaching camp. We now took an account of our stock of provisions, which under our keen appetites was rapidly melting away. The result showed there was sufficient remaining for ten days, and so we were content with the situation of the stock exhibit. We concluded, weather permitting, to break camp in the morning and go further up the lake, where we were sure of more successful forage on the trout tribe.

Everything was exceedingly favorable for the trip when we awoke in the morning. The warring winds had given place to gentle zephyrs from the south, the sky was unclouded, and all nature was smiling as if she too rejoiced in the agreeable change. Camp was broken immediately after breakfast, and we were then off and sailing before the delightful breeze with ardent hopes and cheerful hearts:

"O happy ship,
To rise and dip,
With the blue crystal at your lip!
O happy crew,
My heart with you
Sails, and sails, and sings anew."

During the stormy days Ned never warbled an air, but now that the soft blue skies and bright sunshine prevailed, he was constantly filling the air with delicious melody. Even the half-breeds were infused with the spirit of song, and endeavored to catch the pleasing airs that fell from the lutelike lips of Ned. Their singing, though correct as to time, had nothing of an artistic nature about it, their notes being mournful and spiritless and given with little modulation. Their own songs were all French—"the wanton *chansons* of the *ancien régime*" which the ancestors of these men had no doubt heard sung by gay young officers in remembrance of beloved Paris."

During the open air concert Ned had his flies dancing on the water, when all of a sudden one of the freckled patriarchs of the deep, being of an investigating character, sprang with wolf-like savagery at that idolized beauty with the additional horns, and captured it and also the entire leader. Ned, at this direful accident, set up a wail of anguish that might have been heard at distant Gros Cap. He cared not, he said, for leader or line: but the loss of that particular fly, which had cost him so much faithful study, time and skill to construct, could not then be replaced, as no more materials were at hand to build another. It was such a taking lure, as he thought, that he would never again venture on a similar outing without an endless number of them. Says I:

"Ned, did you ever see anything like it either in the heavens or on the earth?"

"Certainly."

"Where?"

"In merrie old England."

"What's the matter with Young America?"

"Not old enough to produce a bug of that magnitude or of such rare color."

"She can produce a larger and more brilliant bug."

"What one?"

"The hum-bug."

"Take the horns."

"Oh, your escaped trout has them."

"Well, then, take this horn."

And out of his copious pocket came a bright flask containing a crimson fluid, ever a delight to the angler. It sweetly gurgled down the turnpike throat.

Had Ned been on the *qui vive* when the rise was made he would have doubtless saved that speckled monster, for he was an exceedingly skillful hand with the rod. Song and trouting at one and the same time are not always a complete success; separately they do infinitely better.

It was a pleasant sail along the rugged and wooded line of shore, as new scenes remarkably interesting and imposing were in constant view. The bright sunshine was playing on the dancing ripples, and wood and rock were bathed in its golden glow, while the balmy atmosphere toned all that was inharmonious into the repose of beauty. We went into camp near Grindstone Point, and in the afternoon made a raid on the trout that resulted in the capture of three handsome ones averaging 3lbs. While returning to camp I swung another golden beauty to the lure, but he concluded after a brief struggle to remain in his rocky lair. As we were turning a point that gave us a view of our camp, a cub bear a few rods in our rear was seen to enter the water and quench his thirst. Peter immediately started to swing the boat around to give chase, but Joe thought we had better go to camp

for weapons before making the assault, as the little one's mamma might seriously object to parting with her black babe. I thought it prudent, and so returned, and when on arriving in camp remained there, as we all came to the conclusion we had lost no bear or no bear's cub, and were not partial to bear meat. The only weapon in camp was one revolver, and that was not always to be relied upon, as it failed at times to respond to the manipulations of the index finger.

That evening on returning I asked Ned to let me have his revolver to place under my pillow, so as to be prepared for any emergency that might arise. He resolutely declined, saying he might possibly be the first victim accidentally sacrificed by the pistol. That night, after I had closed my eyes in slumber deep, I wandered into dreamland, where I had sanguinary conflicts with bears, in which I slaughtered them without end and without mercy. About the peep of dawn Ned, who had been suffering from an aggravated corn, awoke and concluded he would give it a soaking as a remedy of alleviation. Just as he was crawling from under the mosquito bar I awoke in somewhat of a dazed condition, and on seeing him on all fours I was positive it was one of the bears of my dream and at once I slid down to the lower end of the bed, so I could get a fair blow at what I supposed was bruin, and then exerting all my strength I gave poor Ned such a vicious kick with the admonition "get out" that he went sprawling some distance, bawling at the same time, "It's me, it's me; don't kick me!" In an instant the ridiculous situation flashed upon me, and then I burst out in such hearty peals of laughter as to awake the whole camp. As soon as I recovered from my cackling I made all the apologies I could to my suffering friend. "Oh, yes," replied Ned, "kick a man out of camp and then apologize to him is like hanging a man first and trying him afterward. You are forgiven, but don't repeat." It was fortunate indeed that Ned did not let me have his revolver that evening, for if he had I should have, in my confused condition, riddled him with his own revolver and never had peace afterward. "All's well that ends well" can well be applied in this particular case. In connection with this early morning skirmish it leads me to state that quite frequently there is no misfortune but is relieved by some compensating feature. The reward here was the sudden disappearance of pain from Ned's corn. It had been ruthlessly kicked out, a case evidently of heroic treatment. Ned was down on dreams ever after, and suggested as a preventive to further accidents that I be bound in my little bed. I was bound not to have it that way, and so he looked to the careful concealment of all weapons ere he retired.

ALEX. STARBUCK.

CINCINNATI, Ohio.

ANGLING NOTES.

FEW anglers, unless owners of private waters, are aware of the many enemies trout have to contend with. Man, unless a poacher, is the least destructive of all. In fact if he is a good fisherman and a true angler, he does very little injury to the fish, he only keeps the big ones and fishes for a comparatively short season, whereas the mink or the kingfisher are at it all the time, month in and month out. The muskrat undermines his dams, the watersnake, mink, kingfisher, heron, bittern and others feed on the fish night and day, to say nothing of eels, suckers, pickerel, pike and a host of other enemies of the trout. How often we have admired the stately blue heron, when fishing along the stream we have started him from secluded shady corner and watched him sail away with his long legs hanging down; and how often we have caught his victim with a great gash in back, caused by the blow of his sharp bill. And who has not seen Mr. Watersnake wiggling off with his head out of water holding a struggling trout. Anglers should always make it a point to kill this fellow, and it is very easily done by casting ahead of him, and as he passes over the leader a sharp strike will hook him, when he can be drawn ashore and dispatched with a stick.

The game and fish at the South Side Sportsmen's Club on Long Island have suffered to such an extent that the club has found it necessary to engage a man to reduce the number of these creatures, and we give below the result of the last six months' work: One fox, 16 racoons, 32 opossums, 14 minks, 3 cats, 3 weasels, 120 muskrats, 2 woodchucks, 8 squirrels, 1 owl, 26 bluejays, 6 hawks, 7 kingfishers, 2 cranes, 16 crows and 1 rattlesnake.

The Quebec & Lake St. John Railway have issued their time table for the coming season. They have also sent to their patrons with the time table two very interesting books, one entitled "Historical and Sporting Notes," including a description of Lake St. John and the trout lakes about Quebec, by LeMoine, and the other "The Doom of Mamelons, with a Description of Lake St. John and Saguenay Region," by W. H. H. Murray. The time table is particularly arranged to meet the requirements of the anglers visiting that section, to whom they issue permits for fishing the numerous waters they control, including pools in the winninish or landlocked salmon district.

RANDOM CASTS.

WE ought to congratulate ourselves that so many ladies are becoming anglers; the coarse fellows will the sooner disappear, for they cannot thrive where gentleness is at home.

In landing channel bass it is dangerous to put your fingers in the gills to lift them in the boat. The back of the mouth is provided with minute teeth, which easily break off, causing a swelling of the hand which, with considerable pain and a stiffness of the joints, lasts for days.

Learn to fish with either hand. I was once poisoned by the teeth of a fish entering the second and third fingers of my right hand, and for six days had to do all my fishing with the left.

Angling may possibly not be the Mecca of all mankind, but it has the power and does instill in most men a better respect for the golden rule, and without which of what good are all our protestations of endeavoring to lead a better life.

RIG REEL,

THE SUNSET CLUB.

THE president called the meeting to order at the usual hour, and stated that, owing to the open winter, the discussion about new methods of fishing under the ice would be indefinitely postponed. "But we will consider to-night," he continued, "the review of the report of the new invention for catching fish, an omission in 'Looking Backward.' Of course you are aware that we are indebted to the passenger department of our leading railroads for the discovery and success of the original contrivance. It is an established fact, or rather a foregone conclusion, that railroad men are generally truthful, though occasionally one may be found who has a trifling impediment in his veracity. There is no class of men who take a greater interest in introducing to the public's notice open byways, secret retreats, quiet lakes, romantic solitudes where the game fishes of our American waters abound, than the general passenger agents. They are each and all of the Truthful James order, and they transmit the clandestine power of producing positive effects to their traveling passenger agents, who are men selected from Sunday-school rolls, and who distribute this condensed magnetism of interest through innocent ticket agents to the unbeguiled public. T. P. agents are reliable anglers, patient, persevering, and need no fishing medicine to give them luck.

"The device used by a party of these young men is really scientific. It remained for them alone to discover the use and application of electricity to the immediate wants of a hungry man. It is a known fact that nearly all species of fish are readily attracted at something bright. We believe an exception is made of the eel, which is said to turn tail when a ray of light is thrown on him. Passenger agents have a lay off, a week of rest, of retirement, and during the latter part of the past season several of them combined their telegraphic knowledge together, with what they picked up on the road, and succeeded in getting the electric light into service. They made a strong non-conducting receptacle that would resist tons of pressure to the square inch, and bottled up in it, the Lord only knows how, a prodigious number of thousands of 'ohms' or something like it of lightning, of both varieties, heat and light. There was cussedness enough in the magazine, which if let loose all at once would have blown the Central Traffic Association into smithereens, and wiped from the face of the earth all traces of the gentlemen's agreement. When everything was in readiness, D. H. messages were sent to all traveling passenger agents within the territory to meet the gentlemen at Baw Beeze Lake, a landlocked lake of Michigan, to test this wonderful invention. They came from every direction, and as soon as they arrived were stationed in boats around the power. Among them were Captain Shearman with smiling McC. Smith; W. S. Brown with his umbrella; the tall and graceful Snavelly; 'A Man' with T. J. Clarke, who tried to convince him that sunshine and moonlight received their light from the Rock Island Road. There was McWhinney, dressed in his new suit of clothes; A. G. Robinson with diamonds; Fred Lord and C. H. Holdridge, each toying with maple leaves; Jake Holderman and F. H. Tristram listening to W. R. Israel's lecture on Egyptian productions; the handsome A. E. Lippincott and several representatives of Southern sunny States. Seldom was such a ray of talent and enthusiasm gathered on the shore of any lake.

"It is in the clear waters of Baw Beeze Lake that the distinguished black bass finds the savage muskalonge. When all were ready the accoutrements and attachments were placed in position, the 'inducement' let down into the water and the current turned on. No one breathed; the first victim was a muskalonge, 25lbs, with scales off. He cautiously approached the invention, rolled his eyes, poked his nose within the circle, where he remained perfectly dumbfounded and was readily snared by the man at the bow. The intelligent monarch of the inland lake did not realize his sad end until too late; he had purchased his ticket. Then followed black bass, and of such great sizes that the oldest inhabitants along the lake shore stood gaping at each other. There were black bass with the proud distinction of having at some time broken the rod and line of such successful anglers as Byron Archer, whose fame extends throughout the State. But besides bass there came the smaller fry; all shared the same fate. But to active, nervous T. P. A's the sport became monotonous; it was really too much of a good thing; they had more fish than they knew what to do with. The men in charge were not through with the experiments—a greater surprise awaited their guests. They let down a second insulated wire and turned on the heat current. There was nothing ever equal to this; even D. P. Wheeler acknowledged his surprise and declared there was nothing along his line equal to it. Every fish that came in contact with the wire was cooked. The moment the nose touched, the body flew about and attached to the wire as if it was part of it. Five black bass were cooked instantly, being done to a turn before they were through kicking, and when scooped out, and the little motions of evisceration, peeling, yanking out the backbones and an application of salt and pepper and anchovy sauce were gone over, there was indeed a feast fit for the veriest gourmand that walks. The smacking of lips echoed along the lake and died out in the distance like a parting train. John Bastable and Fred Boyd, both good judges of delicate food, pronounced them extraordinarily fine. When the day's fishing was done the passenger agents convened under a shaded elm tree and formed themselves into a convention; speeches were made, when it was noticed that one by one they sought convenient hiding places. They looked pale and careworn—the fish cooked by electricity made them sick, and there was not a bottle of fishing medicine in the county. When the sun went down on Baw Beeze Lake, and the rippling waves died softly in the autumn haze, side by side on the sandy beach, with no other covering but nature's own moonlight, there lay the representatives under the influence of incandescent cooked fish. How long they slumbered the official report saith not."

After the initiation of several members and the conclusion of the regular order of business, the president said, with some feeling: "Brethren, I am happy to introduce a gentleman who has done more for the interest of the angler than any man in the West. He is known among the railroad magnates as 'The noblest Roman of them all,' and among the fishermen as the Fish Commissioner of Wisconsin. From his youthful days, at Middlesex, Vermont, to the present, he has ever kept in view

the interest of the angler and the lover of outdoor recreation. I have the honor of introducing Mr. A. V. H. Carpenter, G. P. and T. A. of the C. M. & St. P. R. R."

Mr. Carpenter said: "You ask me to say something relative to a history of my life and sufferings in the great cause of fishing and hunting. If you are fresh in your recollection about the incidents in the life of 'Peter Simple,' you will remember the visit of the 'middles,' of which number Peter was one, to the zoological gardens, and the account given by the keeper of the same of the traits and attractions of the several specimens on exhibition. The hippopotamus was described as being an amphibious animal, and so called because he could not live on land and died in the water. Again, you are, of course, up in all the details of the remarkable history of the Pickwick Club, and the characteristics of the several members of the corresponding society thereof, among whom was the celebrated Mr. Winkle, the sportsman of the club, who achieved the wonderful feat of wounding one of his comrades in shooting at a covey of birds while said comrade was standing nearly behind him. Another incident from Pickwick is probably as fresh as your memory, viz: the visit of Mr. Tony Weller, the celebrated stage driver, to Doctors Commons, after the death of his wife, for the purpose of procuring the probate of her will, at which time he took along several of the full-dressed, heavy-sterned stage drivers as sort of umpires 'to see fair.'"

"These anecdotes of the doings and sayings of great men in other lines furnish a well-fitting key to the door of my experience in hunting and fishing. I have in the last few years been vividly reminded of the impressions people have in regard to my experiences and attainments as a hunter and fisherman, by frequent inquiries similar to those you make. It is no doubt natural enough that people should expect one who has had the honor of being a member of the Commission of Fisheries of such a State as Wisconsin, which is the natural paradise of all the varieties of fresh-water fish acceptable to the palates of good straight-haired Americans, should have had some experience in capturing the members of the various finny tribes; but in this, you will see by my 'leaders,' they are sadly mistaken. I think the Governor who appointed me had in mind that at least I would not do more damage in the way of destroying the fish than the Board could do good in securing their introduction to the waters of the State. I think I am the only member of the Board who is not an expert fisherman."

"Away down in 'old Varmount' in the days of my boyhood, which was a long time ago, I used to capture the beautiful little brook trout which swarmed in the mountain streams of the Green Mountain State. They were all sizes, from the length of a lady's little finger to the forefinger of a good-sized double-fisted man. We, i. e., the boys of the neighborhood, were wont to assemble on the Saturdays of the season, with bread, salt pork and pickles and cooking utensils, find a good rendezvous on the banks of the stream to be fished, then separate, make our catch and return, dress them and cook them, the cooking being done by placing a strip of salt pork inside the trout, then placing it on a fork of witch hazel and cooking in the blaze of a nice wood fire. If a good cornfield were near and the corn at the right stage we occasionally made a raid on the field and got a good roast of corn ears; and if the farmer and his big sons were at home and out gunning for poachers we sometimes got our own ears 'roasted' as a part of the entertainment. We had more fun to the square inch than ever did any coterie of fish liars who ever undertook to paralyze one another with their yarns."

"As to the matter of hunting, I once killed a black bear with an old United States Springfield musket, flintlock, with the regulation cartridge or ball and three buckshot for a charge. I killed him as a matter of necessity, for it was either he or I that had got to die, or else all the indications were at fault. He came after me as though he meant to have me, but I got there first, and if Mr. Bear had had time to think about it after the charge struck him, I have no doubt he would have been sorry he came. That too was down in 'Varmount.' Since I commenced railway life on Jan. 1, 1849, game and fish have been safe from destruction at my hands, my attention having been turned mainly to finding out and providing convenient methods of getting to the best places for sport either with the rod or gun, and especially here in Wisconsin where nearly all the best points are reached by the great Chicago, Milwaukee & St. Paul R. R. and its various branches and connections."

"Now, this is said to be a world of compensation, and when I feel like kicking myself for not having performed any miraculous feat comes the reflection that I am as well off as the old farmer who attended revival meeting, and being interrogated by the conductor as to what the Lord had done for his soul, replied, 'Nothing to brag on,' and thus I am saved any bragging."

"I will not bore you with any statistics from our Board's report of the condition of the fisheries in Wisconsin, because those are items which can be had by reference to the published reports of the Board, and if you desire to peruse one of them, I will write to the president of the Board to send you one. They form interesting reading to the disciples of Izaak, surnamed Walton, but are rather too voluminous to form part of a skirmish speech."

"To sum up, the most remarkable thing concerning myself is, that there is nothing remarkable about me that I have ever been able to discover." J. E. GUNCKEL.

TOLEDO, Ohio.

CARP FISHING IN NORTH CAROLINA.—Windsor, N. C., Feb. 10.—*Editor Forest and Stream:* For some weeks past we have been having very good fishing of an entirely new kind. I say new kind, because it is a new fish with us, and also to anglers generally. I believe that carp will readily take a hook baited with an angle worm, and they do take the bait right along. I knew one party last week to take over a hundred carp (I think they are mirror carp) in a day, and many other parties took from seventy-five down; the largest weighed about 3½ lbs. and the smallest about 12oz., the average being about 1lb. These fish were taken from creeks emptying into the Roanoke River, this being the first time in two or three years that the river has been low enough to fish. They are supposed to be escaped fish from private ponds, which were all broken in the summer of 1888 and 1889 by the great number of heavy rain storms. No carp were ever known in these waters before.—CASHIE.

CANADIAN SALMON RIVER LEASES.

THE following circular has been sent out to those who purchased leases of Canadian salmon streams at the sale of Jan. 10:

"I beg leave to inform you that I have received instructions from the Hon. Chas. H. Tupper, Minister of Marine and Fisheries of Canada, to forward to every purchaser or lessee of fishing rights and privileges in those rivers and lakes in the Province of Quebec advertised for sale on the 9th and 10th of January last (1890) by the Hon. George Duhamel, Commissioner of Crown Lands for the Province of Quebec, in the Quebec *Official Gazette*, on or about the 13th day of November last (1889), and also the purchasers or lessees of similar rights and privileges purchased or leased since the said public sale by private agreement, a certified copy, under my signature and seal of office, of the protest which the said Hon. Charles H. Tupper as Minister of Marine and Fisheries for Canada caused to be served upon the said Commissioner of Crown Lands on the 8th day of January, 1890.

"As I have been given to understand that you have in your name or as the attorney for other parties, purchased or leased certain fishing rights and privileges in the rivers and lakes herein referred to, I have the honor of inclosing to your address for your information and for that of your principals, a duly certified copy of the above-mentioned protest."

"Before closing this letter I shall take the liberty of calling your attention to the fact that by this protest the Minister of Marine and Fisheries, for the reasons therein mentioned and detailed, claims that all such sales of fishing rights and privileges are illegal and contrary to law, and will not convey any title to the purchaser thereof; you are therefore requested to take notice of the said protest and to govern yourself accordingly."

This document is signed by J. A. Charlebois, notary public, Quebec, Canada. The protest is a paper of considerable length, and recites that Notary Charlebois had appeared before Commissioner Duhamel and through Assistant Commissioner Taché had protested in behalf of the Dominion Government against any sale of the rivers and lakes which were advertised by Duhamel for sale on these grounds: That the rivers mentioned, so far as they were ungranted at the date of the passing of the British North American act, became by the express provision of that act the property of Canada, and the Province of Quebec has no rights or interest in such rivers which it can sell or transfer; that the sale or transfer of fishery rights in the sea coast and inland fisheries appertains to the Government of Canada alone, and the government of a province cannot interfere with that power; that more particularly the intended lease of the River Patapédia is in any event an interference with the power of the Government of Canada, under the authorities of the Fisheries act, which reserved and set apart that river for the propagation of fish; that all such sales of fishing privileges advertised as aforesaid are illegal and contrary to law, and will not convey any title to the purchaser."

AQUARIA NOTES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

BRACKISH WATER FOR INJURED FISH.

A VERY interesting experiment has recently been made in confining fishes infected with fungus (as a result of injuries received in transportation) in brackish water for a time. It is well known by all who handle live fish that they are very easily injured. The scales may be torn off, the fins torn and abraded, the lips generally bruised and torn from knocking against the sides of the can or box, and the whole mucous coating and skin more or less scratched and bruised. Many of these injuries do not show for some days, and it is possible that where fish are speedily restored to natural conditions at the end of their journey they may find in the mud or in some other source a healing balm which will effect a cure. In the aquarium, however, they are soon attacked by fungus (*Saprolegnia*), and in their generally depressed condition refusing food though undoubtedly starving, they soon succumb. The usual method of treatment in such cases is to dip them frequently in salt water. While many other solutions, such as carbolic acid, washing soda and others are frequently used, it is quite probable that the salt water is quite as efficient as any. The labor involved, however, in treating a number of fish in this manner is very great, to say nothing of the splashing and slopping occasioned. It is also a question as to whether the injuries inflicted upon the fish in the frequent handling of them—especially in the common knot-woven net—are not as great as the benefits received. However that may be, the experiment mentioned above seems to open up a very simple and efficacious treatment of fishes so injured.

The water in the aquarium used was brought to a density of 1.006. The fish experimented upon were large-mouthed black bass, white bass, red-eye or rock bass, crappie, yellow perch, white perch, eel, sunfish, carp, goldfish and catfish. The under lips of the black bass were badly torn and completely covered with fungus. There is no question in the minds of any who saw them and understood their condition that they would have died in the fresh-water aquaria. They are now, after more than a month's sojourn in the brackish water, fully restored, with new skin grown over what were ragged festering sores. While in the brackish water they commenced to chase and feed upon the small minnows given them, and will now, from all appearances, be kept without difficulty.

The crappie are a very timid and rather delicate fish, easily injured in transportation. They are soon attacked by fungus. In this case they were speedily restored and are now living comfortably and feeding on smaller fish. They will swallow a fish larger than can be taken by a yellow perch of the same length. All the other species mentioned were easily freed from fungus. The goldfish and carp were infested by a minute parasite of which recent mention has been made. They were speedily restored. Many of the catfish, sunfish, white perch and the trout are also infested with a parasite heretofore mentioned in these columns—the *Chromotophagus parasiticus*—and it remains to be seen whether or not they can be exterminated in the same way.

The trout, embracing four kinds—speckled, rainbow, lake and hybrids of speckled and lake, (also a grayling)—were first placed in water of a density of 1.010, and this was gradually increased to 1.021, in which they are now

iving, but not without some discomfort. These are trout bred artificially from parents bred similarly, so that they have never heretofore been in salt water. The lake trout, of course, never in any case gets to salt water. The experiment in the case of the trout also probably offers an opportunity of observing the changes of coloration which take place in the Salmonidae which go to the sea. Mention has been made of the fact that in an aquarium containing gar-pike and mud fish (*Amia*), the gars were infested with the parasite (*Argulus*), while the mud fish were free from them. Still more remarkable is the fact that in an aquarium containing two species of the same genus (*Fundulus*), the members of one species (*heteroclitus*) are completely covered with the infusorian parasite *Chromatophagus*, while the others (*diaphanus*) are not infested. These two species school together.

WM. P. SEAL.

"NATURAL FOOD FOR FISHES."—U. S. Fish Commission, Washington, D. C.—In "Providing Natural Food for Fish Fry," in issue of Jan. 30, I am made to say that "the gnat and mosquito larvae are of no use only," etc. It should read, "are of use, only," etc. It should have been stated also, referring to the killing of newly-hatched fish by mosquito larvae, that the young of goldfish were meant. Trout fry would, of course, be too large for them.—WM. P. SEAL.

KENTUCKY FISH NOTES.

ALTHOUGH it is perhaps a trifle early for angling, some good bass fishing is afforded within a radius of twenty-five miles from Louisville. The finny tribe bite encouragingly, and an excellent season is predicted. In eastern Kentucky especially is the fishing good. A delegation from the Somerset Fishing Club made a trip to the south fork of the Cumberland River and caught a large number of salmon, weighing from 8 to 14 lbs. each. They were white salmon, however, which bite somewhat earlier than other fish. The members of this club report fishing the best they have known in ten years on the South Fork at Port Burnside and above for quite a distance.

Pineville is convenient to this spot. Capt. G. G. Berry and Mr. Graham Brown were there a few days since and cast their lines in Clear Creek, a few miles from town. The fish bit quite readily, and the largest bass captured weighed 10 lbs. 8 3/4 oz. Jellico, Tenn., a short distance across the State line, is said to be the best bass-fishing point adjacent to eastern Kentucky.

Tyrone, on the Kentucky River, is the nearest point to Louisville where the best sport for anglers is promised. It is reached by the Louisville Southern, and for ten miles along the river on either side of the station the banks are filled with spots where fish are quite plentiful from early in the season until almost the last.

Among the headwaters of this river, at Irvine, the sport will be excellent with a week or more open and pleasant weather. A friend of mine who lives not far from Irvine, tells me that yellow bass are caught in great quantities there.

Nearly all the mountain streams of Kentucky contain bass, wall-eyed pike and pike "proper." Two kinds of bass are usually found, black and rock bass. The same fish are found in the Kentucky River, and also the "croppie," sometimes known as the "new-light" or "tin-mouth." In the Cumberland River the white salmon are only found below the Cumberland Falls.

LOUISVILLE, Feb. 21.

A LEGAL ANGLER'S FEE.

THE Hon. Jerry L. Suddarth, Prosecuting Attorney of the Third Judicial District of Indiana, who lives at Leavenworth, Crawford county, secured last week what he considers the most fortunate legal fee of his life. Since his boyhood Mr. Suddarth has been a devotee of piscatorial pastime, and when legal duties do not interfere, he can be found with hook and line as busily engaged as though he were reading Blackstone.

It is his custom each spring to invite a party of his friends from Louisville to take part with him in a big bout which he arranges. Naturally he knows where the best fishing waters are. For eight or ten years Mr. Suddarth has had a yearning eye on a certain big pool in Blue River, the great fishing stream of southern Indiana. The stream is a small one, but contains hundreds of fish.

The pool sought after by the man of law is one that is always still and abounds in vast numbers of fish. The attorney had tried again and again to get legal possession of that fishing resort, but the estate was so tied up with legal complications that he was unable to get hold of it. Only a short time ago it was his fortune that the heirs of the property secured him to make a settlement of it. The attorney made only one stipulation—that his services should be rewarded by a deed to the coveted fish pond. This was cheerfully agreed to by the heirs, and the tract was transferred to him last week.

Mr. Suddarth has already set men to work erecting an old-fashioned log house on its banks. He will supply it with all the necessary conveniences. He proposes to spend many days with his friends there, and was in Louisville a day or two since arranging with them for a trip at an early date.

C. A. D.

LOUISVILLE, Ky.

A BLACK BASS ESTIMATE.—Fayetteville, N. C., Feb. 17.—Editor Forest and Stream: My attention has been called to the fact, which is admitted, that in a letter of mine in your issue of the 6th inst. I inadvertently give the credit of a sentiment to Genio C. Scott which properly belongs to Dr. J. A. Henshall, in estimate of the black bass. The quotation, which was made from memory, and which is here rectified from "The Book of the Black Bass," should read, "Inch for inch and pound for pound he (the B. B.) is the gamest fish that swims." Believing that to be the concurrent testimony of all of old Isaac's disciples, the credit should be given for its expression to him to whom it is due.—W. J. GREEN.

INSPIRATION IS NEEDED FOR FISH STORIES.—St. Louis.—Fish stories can only be told handsomely when one is in the humor, superinduced by active operations in high old piscatorial art. Possibly the inspiration may overtake me soon after the season opens in June. I must first drop a line to my old friends in the water, and should they respond in a manner somewhat exciting, I may then drop line to you.—J. R.

WARE ROD AND GUN CLUB.—Ware, Mass., Jan. 28.—The newly formed Rod and Gun Club has leased about 300 acres of land situated along the banks of Beaver Brook in Ware, and has rebuilt an old dam at an expense of \$700, which will, when filled, give us a lake about two miles long, delightfully situated among the hills and woods. The lake is a grand feeding ground for fish, and pickerel, bass, perch, etc., thrive wonderfully. At least, so we are told by old fishermen, who remember the original lake and the fishing at that time. It is proposed to stock the lake this season with a number of desirable varieties of fish, but just what we have not decided. Carp, bass, muscalonge and others are proposed. Can you give us any information as to desirable variety? We have a first-class set of men interested in the club, and intend to build a club house, with boat house, stable, etc., during the coming season. Officers, F. M. Sibley, Pres.; H. C. Davis, Vice-Pres.; S. W. Coe, Sec'y; H. O. Robinson, Treas.; E. W. Lawton, L. A. Fisherick, Wardens; G. H. Perkins, Steward. E. H. Guild, E. E. Orrell and H. O. Caryl, Directors.—E. H. GUILD. [We would introduce black bass without hesitation. Carp will do no harm, and we know one very successful bass culturist who uses them regularly as food for his bass. Shiners can be planted with the black bass and should be introduced freely. As for the muscalonge we doubt its availability for your waters. The wall-eyed pike will get along in company with black bass and endures confinement in lakes; it is one of the finest game fishes in our streams. In planting such active species, however, you must provide a good supply of minnows, or shiners, for their maintenance.]

OUR FLORIDA NUMBER.—The New York FOREST AND STREAM for Jan. 9 is in large part devoted to describing the sporting attractions of Florida, and they are great indeed for the lover of both rod and gun. More than a score of excellent illustrations of the sporting fish of Florida are given, the celebrated tarpon or "silver king" of course holding first place, although last on the list. A copy of this grand number can be had post free by sending sixpence-halfpenny to Messrs. Davies & Co., 1 Finch Lane, Cornhill, London. We are certain all our readers who buy a copy will thank us for the hint. Under Dr. Bean the fishing department of FOREST AND STREAM has increased in interest, and our fears that the appointment of this eminent ichthyologist to the control of this department might lead to more ichthyology and less angling in it have proved groundless.—The Fishing Gazette, London, Feb. 1, 1890.

THE SPOTTED HIND IN WASHINGTON.—Among a lot of red snappers, red groupers, channel bass and other showy southern fishes exhibited a few days ago in a Washington market were two examples of the handsome spotted hind (*Epinephelus drummond-hayi*)—a fish rarely seen in northern cities. We first made the acquaintance of this species in 1876, when Mr. Blackford sent a specimen to the Centennial Exposition, which found its way later to the National Museum. The sides of this beautiful fish are profusely sprinkled with whitish spots on a purple ground. Our knowledge of its habits is derived chiefly from the writings of the late Silas Stearns, who stated that individuals weighing 50 lbs. are occasional, though this is fully four times the average. It is a bottom fish in depths of 17 to 22 fathoms, and its color varies with its surroundings. The spotted hind is most abundant about the reefs in South Florida. In Bermuda, according to Dr. Goode, it is called the "John Paw."

WALL-EYED PIKE IN KENTUCKY.—Somerset, Ky., Feb. 10.—Five members of the Somerset Hunting and Fishing Club with their boatmen, Jeff and Bell Roberts, caught 404 lbs. of salmon Jan. 29 to Feb. 1 at their club house on the south fork of the Cumberland River, eighteen miles south of here. All were taken with hook and line, using club minnows for bait. The largest fish caught weighed 13 1/2 lbs., the smallest 2 1/2 lbs. The fish were divided up among club members and friends in this town. The sport would have continued, but the river rose too high. Next month the large pike (jack they are called here) will commence biting. The largest fish and the greatest number were caught between the hours of 4 P. M. and 8 P. M.—J. M. R. [We assume that the salmon above referred to are the same as the wall-eyed pike of the Great Lakes and other northern regions, and will be glad to have a pencil sketch for identification. Does the true pike (*Lucius lucius*) inhabit your fishing grounds?]

Fishculture.

WORK OF THE U. S. FISH COMMISSION.

WE are indebted to the Commissioner for the following exhibit of the annual appropriations made for the propagation and distribution of food fishes, the number of stations operated, the product distributed and the miles traveled, from the fiscal year 1886 to the fiscal year 1889, inclusive:

Year.	Appropriation.	Stations.	Mileage.	Fish and eggs distributed.
1886	\$187,000	13	83,218	173,666,083
1887	175,000	13	87,386	210,625,413
1888	175,000	15	89,631	228,986,117
1889	161,180	19	116,012	333,462,689

In comparing the appropriations, work done, etc., of the year 1886 with the year 1889, we find: In appropriations a decrease of \$25,820, or 13.8-10 per cent. In stations an increase of 6, or 46 per cent. In fish an increase of 159,706,606, or 92 per cent. In mileage an increase of 32,794, or 40 per cent. Stations in 1890, 21, an increase of 8, or 61 5-10 per cent.

Should the deficiency of \$20,000 asked for the current fiscal year be given, the increase over 1886 will be only \$3,000, or 1 6-10 per cent. The tables showing the amount of work done so far this year cannot at present be brought together, but indications go to show that at the end of 1890 the increase of work over 1889 will be very large in one branch of the work alone, that of the distribution of fishes indigenous to the Mississippi Valley, being 30 5-10 per cent., or 100,591 fish in 1889 to 131,311 in 1890.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Glean," "Dick Swivel," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

The Kennel.

FIXTURES.

DOG SHOWS.

March 4 to 7.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.

March 11 to 14.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 5.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

FIELD TRIAL AT INDIANAPOLIS.

INDIANAPOLIS, Ind., Feb. 6.—Editor Forest and Stream: A great deal of interest is being taken in dog matters in this city, and while our dog show a few weeks ago was quite a success, our local sportsmen go more on a good field dog than one with a beautiful form. A series of field trials has been the result. The dogs are judged according to field trial rules as much as possible, except retrieving, no firearms being allowed on the grounds. Birds are very plentiful, and the farmer makes no objections to the crowd tramping over his place, but frequently joins them to see the fun.

The trial of which I send you a report was quite a success in every particular, and the winners may well feel proud, as there is no doubt that the best dogs in the city were present.

Wednesday, Feb. 4, quite a crowd of spectators, thirteen dogs and their owners, boarded the 6:45 train for London, a station sixteen miles east of this city. Arriving at our destination the dogs were drawn and a start made north of town.

HOOSIER HARRY AND RODMAN.

Hoosier Harry, a liver and white pointer owned by H. A. Comstock, and Rodman, same color and breed, were the first brace down. Both dogs started off at a rattling gait, which they maintained throughout the heat. In fact your correspondent was so infatuated with their merry style while in motion and glorious attitudes on points that he has no criticisms to make. They were the finest brace that ran; each would honor the other's point, were steady to wing and fur, and under very good control. After running 2h. Hoosier Harry was declared the winner.

OLD MAN AND NIGGER.

Old Man, an old liver colored pointer, so old that he was gray around the muzzle and his teeth all gone, and the Gordon setter Nigger were cast off in woods to work on scattered birds. The Gordon excelled in speed and style, but the Old Man showed he was going to get there; 30 minutes' race convinced the judges that the Old Man was the best dog.

DOC AND BEN.

Doc, Irish setter, and the English setter Ben commenced their race in a business-like manner, both going fast; after drawing stubble blank the dogs were ordered in a cornfield where the red dog nailed a bevy; Ben not near to back; birds followed to woods Doc pointed a single; then Ben pointed. Ben while going very fast flushed 5 or 6 birds down wind and dropped to wing. This was an excusable flush and the dog should not have been penalized. Doc scored a point backed by Ben. Dogs ordered up and Doc awarded the heat. Down 40 minutes.

GRAPHIC III. AND SPOT.

Liver and white colored pointers. Put down in stubble field, both started off at a very good pace. Graphic in adjoining ragweed field ran into a bevy. Following the birds Spot secured three points and was given the heat.

NELLY C. AND FANNY.

Black and white English setter bitch Nelly C. and the red Irish setter bitch Fanny created quite a sensation when called, as both are noted in this locality for their great field qualities, besides carrying off the honors in their respective classes at the late dog show. Both dogs showed good speed, style, pace and range. After running 1 hour and 20 minutes the dogs were ordered up and Fanny declared the winner.

PLUTO AND TUCK.

English setters, started at a very rapid gait, Pluto showing that he had had a little more experience on game, and after being among the birds 20 minutes the judges gave him the heat.

HOOSIER HARRY AND FRANK.

Liver and white pointer Frank being the bye dog he was put down against Hoosier Harry, the winner in the first brace. Both dogs got a point on separate bevs, and after some work on singles the dogs were ordered up and the heat given to Harry.

Thus the first series was ended. The balance of the heats run resulted in Hoosier Harry winning first, Rodman second, and Old Man and Spot divided third. All the prize winners are pointers.

Mr. Hamp Kerr, S. Smith and Dr. Moore acted as judges and gave perfect satisfaction, doing their work in an impartial manner. The weather was fine, ground in good condition for walking and everybody was glad that they had gone, and some of the boys found out that they did not own the best dog in the country. S. H. S.

A PLEA FOR THE FOXHOUND.

Editor Forest and Stream:

The very slim recognition given the foxhound by bench shows and reporters for various sportsmen's papers is exceedingly irritating to the lovers of this most perfect of all hunting dogs. In making this complaint I am voicing the earnest sentiment of the Brunswick Fur Club and of at least a thousand fox hunters in New England alone. A magnificent pack of sixteen foxhounds were shown at the recent New York show, the most perfect specimens of their own or any other kind in the show, yet all the notice given them in the report in your issue of Feb. 20 is comprised in six lines. The hunting and therefore useful dog is surely of far more importance than the utterly useless St. Bernards, mastiffs and toy fox-terriers, and yet columns are devoted to these where lines are given the foxhound.

All we ask is that hereafter as much consideration be given the foxhound on the bench and in reports as is given the pointer or setter. I am quite certain that fox hunters of New England who own foxhounds are equal in number to the bird hunters who own bird dogs. We naturally look to the FOREST AND STREAM for good descriptions of our favorites at the bench shows and hope we shall not be disappointed in the report of the coming Boston show.

A. C. HEFFENGER, Vice-Pres. Brunswick Fur Club. PORTSMOUTH, N. H.

DOGS OF THE DAY.

THE last issue of FOREST AND STREAM contains the official report of the A. K. C. meeting and another referring to the accounts. As my name is used pretty freely in both reports I deem it necessary to give some explanation of my motives and a better idea of what did occur. During the New York show Mr. Peshall told me of information he had from some one else that Mr. Belmont had put \$1,000 into the A. K. C. treasury and this was covered up by jumping the commencement of the fiscal year from Jan. 1 to Jan. 11, and commencing with the \$1,228.28 carried forward to new cash book. I asked Mr. Wilmerding, of the auditing committee, if he could say anything as to the peculiar date, and he said no; that Mr. Vredenburg had placed all his books at the committee's disposal, his 1888 as well as the 1889 books, and that he saw nothing that suggested anything of the kind. On arriving at the A. K. C. office for the annual meeting I looked up the *Gazette* file and found the statement of account as presented at the last annual meeting and which is reproduced by Mr. Peshall. The accounts were not what should have been presented at an annual meeting, being simply a quarterly statement from Dec. 5 to Feb. 16, in place of from Jan. 1, 1888, to Jan. 1, 1889. Whether Mr. Peshall's statement was correct or otherwise it was only proper that the truth should be known, and for that reason I asked the question I did. To this Mr. Vredenburg replied, and in the course of his remarks said that it had been stated that the club had received \$1,000 from Mr. Belmont. This Mr. Vredenburg explicitly denied in so many words. This denial was all I was after, and my subsequent questions were not, as they appeared in print, a piece of cross-examination, but an effort to enable Mr. Vredenburg to correct his brought forward balance with some previous statement which terminated with a similar balance. I did not seem to be able to make my meaning clear, and not wishing to take up the time of the meeting after obtaining the distinct denial of Mr. Vredenburg that any outside money had been passed to the club's credit, I quietly said to him, "I won't take up any more time of the meeting, but will drop in and explain to you what I want when there is more time." The chairman never attempted to check my questions, and I voluntarily withdrew from the discussion, being fully satisfied with Mr. Vredenburg's assertion.

I did not have time to call on Mr. Vredenburg as I purposed before leaving New York, and subsequently wrote him asking how the balance of \$333.45 was increased to \$1,228.28. The answer came back the following day that the \$333.45 was simply the A. K. C. account, and on Jan. 11, when the new cash book was opened, the balance of the Stud Book account was added to the \$333.45. I am just as anxious as Mr. Peshall to expose any wrong doing, but I must beg of him to excuse me from being a partner of his in the matter. The fact is, Mr. Peshall is to blame for the method of rendering the account at the meeting of February, 1889, as much as anybody is. He was present at that meeting, was a member of the Stud Book Committee, and knew all the ins and outs of the A. K. C. business for the year 1888, and yet allowed the quarterly financial report to pass muster for an annual one. Even if he was not present at the actual time of adopting the report, he knew of it and also saw its publication in the *Gazette*, and could have shown its fallacy if any existed long ere this. With regard to the financial statement of the A. K. C. for 1889, it has not been made out as I would have it done—this I have discussed before—but it is only a question of division of accounts and in no way affects the balance in the bank, which is as represented in the treasurer's report. As long as the A. K. C. has a hard cash balance in the bank, no one will object to Mr. Peshall's drawing up statements of his own to show that there is no balance there and that the club is \$3,000 or \$3,000 worse off than nothing.

There is, however, this to be said about attacks of this kind. There was a letter read at a late meeting from a club desirous of becoming a member, but asking first for information as to the correctness of charge which had been made against the A. K. C. previous to making formal application for membership.

New York show week was a busy time for one who had many of the club meetings to attend. It is not so much the time occupied by the meeting, but what is lost while efforts are being made to get the members together. I dropped in at several, but only took part in the Spaniel Club and associate members' meeting, both of which were very satisfactory. The Spaniel Club is now assured of its two challenge cups, one for cocker and the other for field spaniels, and that with a membership of not over twenty-five. The Boston club has followed the example of New York, and donated to the cup fund the Spaniel Club's subscription to that show; Rochester is expected to follow suit; Buffalo could not do so, having already announced the cash in special prizes, but Mr. Bush contributed \$10 to the fund and guaranteed an additional \$10. It is a little club, but contains some hustlers. Mr. Wilmerding took a well-merited step upward, and is now president, with Mr. Whitehead, of Trenton, as secretary. Mr. West will continue to hold the funds.

A Dayton, O., correspondent sends us this note of what we presume should be styled inclosed coursing: "Farmers from the big woods brought in a large and savage old becoon, and a fight between the coon and a hound dog has been arranged to come off at Lang's road house, \$25 a side. Betting is for and against the dog being able to fetch the coon out of a barrel."

The Collie Club secretary-treasurer has been voted a salary of \$250 a year. As there are but seventy members who pay \$5 a year each, it will just leave \$100 for the members. From this must be deducted \$10 annual dues to A. K. C.; stationery, stamps, etc., cost \$18 41 for the eighteen months ending Jan. 1, thus for twelve months would be say \$80, cost of engraving on prize cups \$12 50, making a total of \$102.50 to come out of the expected balance of \$100 which will only be forthcoming if all the seventy members pay up. Fortunately the club had a balance in January of \$772.34, out of which, however, the members are promised \$500 in cash special and stake money to be refunded (\$306.50). This will leave \$272.34 of the old balance to be carried forward to next year's account. I was not present at the Collie Club meeting and had no opportunity therefore of showing the folly of paying such a sum for secretarial duties. It practically amounts to seventy men paying \$5 each for the distribution of the stake money received by subscribers to the produce, futurity and annual sweepstakes.

The Collie Club accounts were made up to Jan. 1. I suggested that the constitution be so amended at the Philadelphia meeting last year, but was voted down, and as no meeting of the club at which the constitution could be changed was held between then and Jan. 1, it looks a little strange to read in the report just issued: "In consequence of the change of time for holding the annual meeting from fall to spring, it was considered best to make our fiscal year correspond with the calendar year." I quite agree with the necessity for the change, otherwise I would not have offered the resolution referred to, but as the club decided almost unanimously that July 1 should be the termination of the fiscal year, the executive committee took a good deal upon its shoulders in making the change. It is by this change that

we have two years' dues credited in one annual report, that for the year ending July 1, 1889, and again for the year ending July 1, 1890. If the next annual report is made out to the correct date there will be no receipts from dues at all.

Rochester premium lists are very scarce in Philadelphia. I have only seen one so far and that was not sent to me. Will the Rochester secretary kindly oblige the club's many supporters among the Quakers?

Buffalo on the contrary has been most profuse in distributing the premium lists for the show of April 15 to 18, and a mighty good list it is, one upon which the club is certainly to be congratulated. Here and there one can detect evidence that Secretary Smith, though new to dog show men, can make improvements upon models which have gone before. Buffalo has made no bid for puppies, giving but one class for both sexes and omitting the class altogether from the majority of breeds. The one exception is in the case of spaniels, which has two classes, the club classification No. 1 having been adopted in necessitating this exception. It is just about as near a model for a \$1,400 premium list as I have seen, and it would be very hard to make any improvement on it. Mr. Tallman is to superintend, and as previously announced the judges are Mr. Davidson for pointers, setters, foxhounds and beagles, and Mr. Mason for the remainder of the classes.

While at New York show Mr. Willey told me that it was not his intention to exhibit spaniels at Rochester or Baltimore, not from any desire to pass these shows by, but he could not spare the necessary time, and must therefore restrict himself to Buffalo and Boston. As a great many new exhibitors may hold back on account of expecting to meet the strong New Hampshire kennel at Rochester and Baltimore, Mr. Willey's intentions might well be made public.

Mr. Bush, president of the Buffalo Kennel Club, made two good purchases at New York; Bessie W., by Obo IL, and Novel, by Black Pete out of Mr. Hemingway's old bitch Miss Nancy.

Mr. L. W. Sheffield, the English pug breeder, who judged at Birmingham in 1889, and is also to adjudicate at the forthcoming toy dogs show, wrote letters to pug exhibitors with a view to obtain special prizes and get good entries. An attempt is being made to assail Mr. Sheffield for "black-mail." Fortunately for that gentleman his letters were published in connection with the charge. While his course may not be what would be followed by many judges, there is not a single sentence in the letters to which any reasonable person can object.

Several letters have been received within the past week respecting the associate members' right to vote at the postponed election. One of these is as follows: "In the February number of the *Gazette* there is published a list of these associate members, who up to Jan. 20 had paid dues for 1890 and were therefore eligible to vote for officers and delegates. Since that date a large number, no doubt, have paid up their dues. Are they therefore eligible to vote, now that the time of voting has been extended to April 10? This is a matter on which I greatly need enlightenment." The answer is, that only those who had paid their dues on Jan. 20 have the right to vote at the postponed election. We are simply by the postponement—rendered necessary by President Perry's very proper refusal to recognize the slips sent out as conforming to the constitution—correcting the error made on Jan. 21. Mr. Vredenburg said at the associate members' meeting, that there were about seventy additional members since Jan. 20, and there will soon be a hundred. As soon as the hundred is complete all the members will be entitled to vote for one more delegate, and so on in the case of any complete additional hundreds.

I would like to say in connection with the postponed election that a very strong disposition was manifested on the part of Western members to have the West represented. In referring to the matter of voting I said a month ago that the objection to the election of delegates outside of easy distance from New York was not a very good plan, for what the associate members wanted was actual representation at the meetings and not mere complimentary elections. Among those mentioned as proper to represent the West was Mr. L. F. Whitman, of Chicago, and I spoke to him on the subject of his willingness and ability to attend the meetings regularly. His reply was in every respect satisfactory. Mr. Whitman took a very active part in the deliberations at the associate members' meetings. To be candid, I was a little afraid of Mr. Whitman at first. He has a straight-out way of talking, and it looked like a fight and trouble, but I soon found out that it was his manner, that he said all he had to say and meant all he said, without any scheming. We were all, I think, most favorably impressed with Mr. Whitman, and he was asked by a few of us whether he would stand for secretary and delegate. This he agreed to do. With your permission therefore, Mr. Editor, I will put in nomination the following ticket: President, Dr. J. Frank Perry, of Boston; Vice-President, Dr. J. H. Meyers, of New York; Secretary, Mr. L. F. Whitman, of Chicago. All of these gentlemen have shown themselves to be outspoken and thoroughly independent and I am sure will prove worthy of the support of the members.

The reason I take the liberty of suggesting a ticket is this: We are not acquainted with each other as yet, and the vote is therefore likely to be very straggling and fail to determine very much as to how opinions run. There is also this difficulty. It is necessary to vote for them as officers, and while some might vote, say for Mr. Whitman as secretary, others might do so as vice-president, and although he might receive a sufficient number of votes all told to elect him to either office, yet the split as to the offered position would lose him both of them. If we were voting on this plan, which I think would be an improvement, that the highest number of votes received by any one person made him president, the second highest took the vice-presidency and the third highest the secretaryship, there would be no necessity for any such thing as a ticket or a suggestion on my part. The difficulty now is to prevent throwing votes away.

The accident to Mr. H. W. Lacy at the close of the New York show week was a very unfortunate circumstance, and his many friends will be glad to hear of his speedy recovery. It was gravely stated in a contemporary that Mr. Lacy's accident prevented him getting a "beat" in having his report of the show published a week ahead of the FOREST AND STREAM's report. A stretch of imagination, seeing that his paper had gone to press three days before his accident.

A team of eight great Danes, sent over by Mr. Ulric S. Doos, the German breeder, will be at the Chicago show. What a pity they were not sent over for New York as well. J. W.

ROBINS ISLAND CLUB.—The annual meeting of the Robins Island Club was held at Brooklyn, Feb. 18. The Board of Directors were unanimously reelected for the ensuing year. Below is the list: Dr. S. Fleet Spier, Messrs. Alden J. Swan, Walter L. Wellington, H. D. Polhemus, Chauncey Marshall, Henry J. Cullen, Jr., and Wm. Stanley.

THE SELECTION OF A HOUSE DOG.

[By a Lady Contributor.]

Editor Forest and Stream:

If there were only two so-called "yaller dogs" in this country they would be worth \$500 each, because they would be valued for their rarity and not for their worth. The demand for everything new is greater than the supply, and when the supply increases the demand falls off. It is even so with dogs; certain kinds are fashionable or unfashionable, as is furniture, dress, or anything that is bought and sold. Mr. Ellwanger, in his delightful book "The Garden's Story," says, "To think it has taken all these years to render a daffodil 'fashionable'! As if a live flower were a ribbon, subject to the caprice of a milliner! Yet what may we not expect when lovely woman stoops to blond her tresses, and vandal florists figuratively plunge a flower into the dye pot?" Now it seems just as absurd that dogs should be "fashionable" or "unpopular"—and that one should hear "fox-terriers are the rage now," "pugs have gone out"—"puggie dear" is now neither worse nor better than he was ten years ago. Foxie! day will pass, and he will give place to the Roman dog, the Chihuahua dog, or something else. It is owing to no true merit of his own that a certain breed of dog is popular, it is the indefinable something, and like the professional beauty, he is in favor everywhere, until there is a verification of the old adage "give a dog a bad name and you hang him." A great deal of this is brought about by dealers and breeders, who, when they find that any one kind are becoming too numerous to bring enough money to suit them, will import and boom some new sort. To do which they make the most of, or invent some story, or trait to his disadvantage; which, if true, had been well concealed in the beginning of his career. The most plausible and easiest believed is "that he is treacherous," meaning that he will bite his master or some person he is supposed to have an affection for. That was put on the Newfoundland when certain parties wished to bring up the St. Bernard. Now it is beginning to be said of the mastiff, who was "all the go" a year since. Now I wonder if the dog never thinks his master is treacherous? I knew an intellectual woman, who had a fine sensitive dog; there were times when caresses and all the pet names in the vocabulary were showered upon him; at others when she was busy writing or reading, he, "thinking himself long enough neglected," would place his head on her knee, or his nose under her hand for a caress; she, vexed with the interruption, would knock him with the book, saying "go away." Now was not that treachery?

Last spring while in London I read an inquiry in an English sporting paper, why Newfoundland dogs were so little known in America? I could have answered it, although I disbelieve in their treachery, but they are rather too large to come under the head of house dogs. Mastiffs are often made indoor dogs in the country; they have the advantage of short hair, but are too big—great cumbersome things, becoming very fat, stupid and piggy-looking, and having such a mass of animal flesh in a room, especially in summer time, makes an unpleasant atmosphere. I recall a delicate little boudoir of a room in a certain country home, with a pretty woman in it—everything in accord save a huge mastiff stretched out and snoring audibly. In Paris it is considered that there are three classes of dogs—the Caniche, the *chien* (dog), and the *altes-vous en* (go away). The latter is a cur, or the waif of a good family adopted by some poor person. I have a word to say in favor of the mongrel. He learns to perform tricks more easily than any other sort save the Caniche or French poodle. Udder, a thoroughbred cur of my acquaintance, can do creditably twelve tricks, and I know others as smart as she is.

Mr. Caniche is a veritable dude among dogs with his shaving, and his curls—ribbons on his neck, perhaps a brace let on one leg, ridiculous—but he did not make himself look so. An unshaved poodle is a fright, and before he is established on this side, dog barbers will have to be set up as in Paris.

So clever is he, learning so much, understanding almost everything that is said to him, he makes a fine house dog in a city home. The Russian poodle is larger, longer curls, rather more intelligent, black, and much more rare. There is a spaniel from Chesapeake Bay, brown, with tight, though smaller curls, that I wish were known as a pet. His value as a bird dog is established; he could be made almost as smart as a poodle, but his home must be where there is water near enough to give him frequent swims so as to retain his health and looks. The cocker spaniel and all the spaniel tribe make satisfactory house pet; their long soft ears, pretty paws, and engaging ways all recommend them as such, provided there is means to give the larger sorts (larger than the Blenheims and King Charles) a good swim, for spaniels, like ducks, must go into the water. No dog "makes up" so prettily as a small spaniel; ribbons become him, there is an air of Van Dyke pictures and Queen Henrietta Maria associated with him when seen with his mistress in a city drawing-room, or driving beside her on bright-colored cushions.

If one looks at the selection of a dog in an æsthetic point of view—and why not—he should be chosen to accord with or to make a harmony with his owner, such as a tall and graceful man or woman accompanied by a greyhound, they would have their surroundings to correspond with themselves. Put that greyhound beside a fat and stumpy person, any one would note the discord. A greyhound has the advantage of short hair; he is below the average of intelligence, not a good watcher, the smaller ones delicate and very chilly. Again, see a young man in a white flannel suit, with brown shoes, etc., with a brindle and white terrier—there is a picture all made. The fox-terrier is fashionable, and for a city house dog very good. In England his value is increased as the number of his dark spots diminish. They are the most mischievous of puppies, so if a young one is bought, expensive as they are, in the course of a short time he will destroy to the value of his price. I have had such an experience; whipping, nothing would do until at last he killed a favorite canary through the bars of the cage, then he was exiled. When grown he becomes a satisfactory little dog. The bull-terrier puppy of fine breed is more easily trained than most other sorts; he learns obedience and good manners easily (if you are firm), is bright, amusing, he need not be made cross, and if kept where there are no other dogs to pick a quarrel with when grown, will be gentle and affectionate to his human friends, and an excellent watch. All white is considered the color. I have seen entirely brindle ones that I thought handsome. Darwin says that all quite white animals are deaf. I have noted it in almost all white cats and dogs.

Of the larger sorts the setter is often a house dog, even in cities, but it is cruel to keep one of his size, and who requires so much exercise, imprisoned in streets and made to breathe the close atmosphere of a city house. Doing so subjects him to many diseases and much hardship. As a bird dog he is valued because his long hair keeps him from being scratched in bushes and thorns. That long hair also gets full of burs and hayseed, fuller yet of fleas; there are various sorts and all prices, but in getting one for a pet, one that has not "a good nose" is desirable because as not needed for shooting with he is less likely to go after game of himself. All bird dogs are desirable to keep where there are children, because they are not snappish, besides their mouths and teeth are formed to carry game without mangling, thus do not make as sharp a bite as those possessed with sharp teeth and a pointed snout. I have seen a bird dog suffer a great deal from a child's teasing, still retain his good humor. A pointer is my favorite among dogs for a lady's companion in a country house—intelligence, a gentle disposition, not boisterous ways, they will watch

over and play with a child, in a word may be made an ideal dog; they do not take to strangers, which is a good trait, and make the best of watchers; their ears and their nose being so quick to hear and smell they detect the approach of a person before any one else will. I have seen one start up and bark when the wind blew the scent of some one toward him, who was concealed from sight by bushes in the night, and whose footsteps were inaudible on the grass. Those with the most white are desired by sportsmen, being easily seen at a distance and bring a much higher price than dark ones, but dark-colored ones are much handsomer.

The collie is a beautiful animal, very graceful, beautifully shaded if brown—very valuable in many ways—and very good fun for a boy to romp with. It is hard to say it of any so attractive, that he is not desirable. It is their nature to drive animals, so they cannot be broken of chasing horses and carriages, which is such a dangerous practice as to keep the owner in constant dread that there will be an accident, or to bring him into trouble with his neighbor; they also are snappish, not for badness but in play, usually biting at the feet or pulling the dress for a frolic, or in their gladness to see you. The collie's place is at the barn where he will drive the cows to and from the pasture every day, or stay around watching the men at their work, with one eye on the safety of the stable, but not on the piazza while the pony phaeton and the village cart are bringing young ladies to call on his mistress.

The spitz is of the past—but one can remember how extremely popular he once was; then came the hue and cry (principally raised by certain New York papers), "Down with the spitz," "rabies," "another victim," and all that sort of talk. I never believed so much bad of him, if he had been shorn of his long hair in summer and kept cool he would have remained as sane as any other dog; certainly he had a peculiar disposition and one it was not worth while to encourage with so many idiosyncrasies.

In those days I had a friend who brought a spitz, or rather a Pomeranian, dog from the other side. The first time I saw him he barked most furiously, keeping it up (enough to frighten most people) until his mistress came into the parlor, greeting me very cordially. Then he sat on the floor opposite to me, gazing steadily at me for some while, after which he jumped on the sofa, put his paw on my shoulder and wanted to lick my cheek. Ever after we were the best of friends. After awhile the mistress died. I did not then visit the house for many months, on which occasion the dog greeted me with enthusiasm, seating himself quietly by my side. I remained to dinner; upon that he left his place by his master to sit by me. During his mistress's life he had barely tolerated his master, but after her death he was devoted to him until he married again, when the spitz became so cross to the new wife he had to be sent away. I relate this to show the peculiar disposition of the spitz—jealous, attaching himself to one person and disliking others.

Every one who knows Rome recalls the pretty little Roman dog. The Chihuahua dog from Mexico is equally bright and nice. There are very few of them in New York. Would there were more; for, besides being very desirable as a small one, their being natives of a warm climate makes both them and the Roman well suited to keep in health during the summer heat of America. Pugs and toy dogs are not included in this article. Can they even be called dogs? They are not cats, certainly; but a fine cat is more to be desired than one of these wheezy things, with his tongue burned so that he will loll it out of his mouth and his tail screwed up like a pig's, or one of those toy terriers dwarfed in size and intellect by some process. These are an outrage upon natural history, not to be classed with the rest of canines. We associate them with a blonde-haired mistress dividing her attention between one of them, a yellow-covered novel and a box of candy.

ENGLISH NOTES.

Editor Forest and Stream:

A recent sensation in the doggy circles of this country has been caused by the calumnious statements made by the "English Commissioner" in an American paper concerning the English St. Bernard Club. This is what appeared in the columns of your contemporary: "I am sorry to hear that the affairs of the St. Bernard Club are not as prosperous as they might be. Many members are behind with their subscriptions, several members of the committee never attend its meeting, and altogether things look so queer that there will be no St. Bernard show next year." It is nothing less than the act of a scoundrel to write such untruths as are contained in the above quoted emanations of the brain of this wretched penny-a-liner, the "English Commissioner." The statements were made without the slightest foundation either in substance or in fact, and could only have been written for the sole purpose of making "copy." Naturally this lying statement has put the whole of the members of the St. Bernard Club up in arms, and Marsden, the secretary of the club, has written to the press, absolutely denying every one of the statements made. The feeling here is most bitter against this "English Commissioner" for having written such miserable untruths concerning a club which numbers among its members some of the wealthiest and most influential members of the doggy world in England, and strong remonstrances are to be made to the paper which gives employment to this audacious calumniator.

His name is Huseroff—and his lying statements respecting the St. Bernard Club are just in keeping with his equally untrue representations that he is the editor of the English Kennel Gazette. He has simply scattered broadcast the information that he held that post—but there is an old saying and a true one, that if you allow a thief enough rope he'll hang himself—and Huseroff has at last come to the end of his tether. For Aspinall, the Secretary of the Kennel Club, has found it necessary to write to the Stock-Keeper and proclaim he and not this fellow Huseroff is editor of the Gazette. I am in a position to state that Huseroff is merely an under clerk in the Kennel Gazette office, and that beyond being allowed to add a few shillings per month to his income by occasionally contributing some matter, which as a rule has previously appeared in other papers, he is in no way connected with the Gazette. I may mention that Huseroff is a man practically unknown in the doggy world here, he never owned a dog and knows nothing about them. He got employment in the office of a doggy newspaper here and I suppose through his employment there, the American editor took him in hand as the "commissioner" in ignorance of what he really is. No one of any note takes notice of him in this country.

A LIVELY LORD.

NEW YORK DOG SHOW REPORT.—New York, Feb. 24.—Editor Forest and Stream: Permit me, through your widely read columns, to inform my many friends and enemies that no part of the report of the New York dog show, which appeared in your last issue, was written or influenced by me.—CHAS. H. MASON.

POINTER BITCH FOUND.—Mr. A. W. Howe, Springfield, Mass., has in his possession a stray white and liver pointer bitch. She appears to be in whelp. The owner can obtain her by addressing Mr. Howe.

NEW HAVEN DOG SHOW.—There is strong probability that the New Haven Kennel Club will hold a dog show some time next winter in connection with poultry and pet stock.

SPAYING.

Editor Forest and Stream:

Let me thank you for your article on "Spaying" in this week's issue. I can indorse every word of it. You might have added that the deaths immediately resulting from the operation are numerous.

Some time ago I took two young St. Bernard bitches to be spayed, first requesting that the operation be explained to me in detail. It was, and I promptly drove home with my puppies. This was my first lesson, and what I have since learned has made me thankful that I declined to have anything to do with it. No bitch of mine shall ever be spayed, and further, I will not sell a bitch puppy to any one who intends to have her spayed.

Apologies of this let me say that I believe the Connecticut Legislature is unwittingly putting a premium on cruelty by making the license fee \$6.15 for bitches and \$1.15 for dogs and spayed bitches. I have heard dog owners say, "I have a bitch puppy, but I shall have her spayed rather than pay \$6.15 on her every year." As you say, "The practice is unnatural and cruel, and the operation should not be performed."

H. S. PITKIN.

HARTFORD, Conn., Feb. 14.

Editor Forest and Stream:

I notice in the last number of FOREST AND STREAM an article on "Spaying," and I would like to give a little testimony on that subject contrary to the opinion expressed therein.

I have had in my possession a spayed setter bitch belonging to a friend for the past seventeen months. According to the representations of the man who reared and broke her she is in her sixth year, and her appearance, teeth, etc., bear out the representation. During the two seasons in which I have shot over her she has shown herself a dog of unusual staying power, and the fastest working of any dog of good field qualities that I have had experience with. She is of average intelligence, a very enthusiastic worker, and the only fault that I have observed in her is a deficiency of scenting power, though in that respect she is fully up to the average of dogs as I have observed them. This bitch is in good health, as she has been all the time that I have had her, and aside from a tendency to increase in flesh when idle, and which I have found to be easily controlled, is a very pleasant animal to have about the premises. She has never to my knowledge been in season, and seems to have an aversion for dogs.

F. B. GATLORD.

DETROIT, Mich., Feb. 15.

HECTOR AS A SIRE.

ARLINGTON, N. J., Feb. 15.—Editor Forest and Stream: As certain parties have circulated a report at the New York show that my St. Bernard champion Hector has not sired any pups during the past year, and that he is no longer able to do so, allow me to hand you herewith an extract of my stud register. Hector was not put at public stud until he was three years old, and he has never been abused since. He is as vigorous to-day as he ever has been, the sayings of the jealousy-minded people to the contrary notwithstanding. By giving room to the above in your valuable paper you will confer a favor.

K. E. HOFF.

A REPORTER DOG.

IN April or May, 1883, an acquaintance of mine presented me with a four-months-old puppy (no pedigree). I had ample leisure time, and when the season opened the youngster was thoroughly yard-broken. Stationed in a quail-hunter's Eldorado, it was an easy matter to give my dog a good field education that same fall and winter. It was toward the end of the succeeding season of 1884-5 when I first noticed that my dog would report. The middle of the day is even in fall and winter very hot in southern Texas, and I would generally select a shady spot to rest for several hours. Calling my dog up I would give him his water and lunch, bathe his flanks and order him to lie down. As soon as rested he would rise and try to induce me to do the same; upon being reprimanded he would sit staring at me for several minutes; and if I did not show any intention to recommence our hunt, he would deliberately walk off, and sometimes be absent an hour; whenever he returned he would be very restless, whine, break away a short distance, return, leap up and ask to be caressed; and upon being followed would go straight up to the birds he had found and come to a point.

When traveling by wagon he would wind game a great distance off, and upon being allowed to leave the conveyance would draw on the game and come to a point. If the conveyance did not stop, and nobody dismounted to shoot over him, he would freeze to the point until the wagon would get out of sight. Then he would carefully withdraw, and after catching up, in a manner not to be misunderstood, beg to be followed. In those instance he would work for the gun as faithfully as for myself; under other circumstances, however, men who hunted with me continually could not induce him to go with them, nor if forced to go along to work for them. The dog is alive, and his present owner writes that he is still unsurpassed on quail and a most reliable retriever.

IDAHO.

IRISH SETTERS AT NEW YORK.

BLACKSBURG, S. C., Feb. 15.—Editor Forest and Stream: The New York dog show of 1890 is over (the second one I have failed to attend), and a marked catalogue kindly mailed me by a friend is just at hand. The list of Irish setter winners is to me very interesting reading and draws forth a few comments on their breeding.

In 1881 I bred champion Elcho to champion Noreen, and from that litter came champions Elcho, Jr., Glencho, Bruce and Noreen II. It is safe to say that no other Irish bitch in America, and I doubt if any setter bitch of any breed, or pointer, ever before or since produced such a litter. One of them winner of more first, special and champion prizes than any other setter or pointer ever bred in America; another the size of more winners than any other setter or pointer ever bred in this country, and the third a field trial winner.

The winner of 1st open dog class and vhc. reserve in open bitch class at the New York show this week were sired by

the first dog named, the winners of 1st and 2d in challenge bitch class, 1st, 4th and vhc. in open bitch class were sired by the second dog mentioned, and the winners of 1st and vhc. reserve in challenge dog class and vhc. in open dog class by the third. That is a record to be proud of.

Of the six entries in the challenge dog class three of them are field trial winners and four were sired by field trial winners. No other challenge class mentioned in the catalogue contained such a list of field trial winners; in fact the field trial winning Irish setter dogs outnumber the field trial winners in all the other challenge classes of setters and pointers combined.

Of the four entries in the challenge bitch class one is a field trial winner, and no other challenge bitch class in the show contained one. Who says Irish setters are not good for work and beauty combined?

Of the ten entries in the challenge class for Irish setters one was sired by my old Elcho, seven by his son, one by a grandson, and the tenth was out of one of his daughters, and all of them except one contain the Elcho-Palmerston cross, which was first made by the writer.

Again I say all this is a record to be proud of, and every admirer of the Irish setter in America should join at once the Irish Setter Club, support field trials, breed winners, so that in the future, as at the New York show, the Irish challenge classes shall outnumber all the other challenge classes combined in field trial winners.

MONT CLARE.

BUFFALO DOG SHOW.

THE premium list of the first annual dog show of the Buffalo Kennel Club is ready for distribution. There are 107 classes provided for, with prizes of \$10 in the challenge and \$10 and \$5 in the open, and \$8 and \$4 in the puppy classes. The St. Bernard Club offers silver medals for the best dog and bitch in both rough and smooth-coated owned by members of the club. The Spaniel Club classification No. 1 is adopted, and the club offers \$25 in specials. Mr. C. H. Mason offers a copy of "Our Prize Dogs" for the pointer and English setter with the best set of legs and feet, and a copy of "Typical Dogs" for the sporting spaniel—other than Irish water—and mastiff, same conditions. The show will be held in the Caledonian Curling Club Rink, on Elliott street. Spratts Patent will bench and feed, and Mr. Wm. Tallman will be the superintendent. The judges are: Mr. John Davidson, pointers, setters, foxhounds and beagles; Mr. C. H. Mason the remaining classes. Entries close March 25. The address of the secretary is Mr. A. W. Smith, 263 Main street, Buffalo, N. Y.

CHICAGO DOG SHOW ENTRIES.

Editor Forest and Stream:

The entries for the Mascoutah Kennel Club's show, to be held in Chicago, March 4 to 7, number 649, divided as follows: Mastiffs 36, St. Bernards (rough) 43, smooth 16, bloodhounds 2, Newfoundland 1, Great Danes 55, deerhounds 7, greyhounds 22, pointers 51, English setters 51, Irish setters 30, Gordon setters 16, foxhounds 52, Chesapeake Bays 4, Irish water spaniels 10, Clumbers 5, field 7, cocker 21, collies 32, poodles 4, bulldogs 13, bull-terriers 20, dachshunde 2, beagles 13, toy terriers (smooth) 38, wire-haired 11, Irish terriers 6, Scotch 3, Dandie Dinmonts 4, Skye 3, black and tan 7, Yorkshire 13, toy 1, pugs 16, King Charles spaniels 4, Bleuheims 4, Italian greyhounds 3, schipperke 2, Clydesdale terriers 3, Siberian wolfhounds 7, miscellaneous 5.

Geo. H. Hill, Superintendent.

DEATH OF CLAREMONT NOREEN.—Des Moines, Ia., Feb. 13.—Editor Forest and Stream: I am sorry to write you of the loss of Claremont Noreen (Claremont Patsy—Nino). I regarded her as the most promising bitch puppy that I ever bred, and I have bred some good ones. I think a large board fell on her, for she became paralyzed before I noticed anything the matter with her general health. I had saved this bitch, together with a dog pup Rancho, which I now have, to send to some of the prominent bench shows in order that the sporting fraternity might have an opportunity to judge of Patsy's merits. I shall still show Rancho, if in condition, at Chicago and Boston, and possibly some other shows, although not seven months old, and am satisfied that he will be favorably noticed.—F. H. PERRY.

ROCHESTER DOG SHOW.—The dog show of the Rochester Kennel Club, to be held at Rochester March 11 to 14, promises to be a great success. In addition to the regular prizes there will be valuable specials offered. The St. Bernard Club offer silver medals, one for the best of each sex in both rough and smooth-coated owned by members of the club. The Mastiff Club offers \$25 for the best mastiff owned by a member of the club, provided there are three competitors. The Pointer Club offers \$10 each for the best dog and bitch owned by a member of the club. The Kennel Club has made an arrangement with all express companies coming into Rochester to carry all dogs exhibited, one way free.

ST. BERNARD CLUB MEDALS.—New York, Feb. 21.—Editor Forest and Stream: Please notice that the medals, offered by the St. Bernard Club for the Rochester show, are for American bred dogs. The notice sent out by the Rochester Club announcing the said specials, does not mention this. Kindly insert this in this week's issue and oblige.—K. E. Hoff, Pres. St. Bernard Club of America.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Notes must be sent on the Prepared Blanks. Don. By C. D. Crawford, Middletown, N. Y., for black, tan and ticked beagle dog, whelped Jan. 2, 1890, by Speculation (Kingwood—imported Fanny) out of Velda W. (Cameron's Rachel—Pussie). Virgie and Lady Aylesford. By Eugene K. Kennel, Cincinnati, O., for fawn pug bitches, whelped Sept. 3, 1889, by Rochester out of Tantrums.

Onota Shot, Onota Peg and Onota Rose. By Onota Kennels, Pittsfield, Mass., for red Irish setters, one dog and two bitches, whelped Oct. 29, by champion Chief (Berkeley—Duck) out of Bizreena (Nimrod—Bizarah).

Pollie Perkins and Sallie Hamilton. By Woodland Kennels, Woodstock, Ont., for red and black cocker spaniel bitches, whelped May 9, 1889, by Black Duke (champion Obo II.—Woodland Queen) out of Lady Stanley (Robin—Fretyle).

Black Count and Black Duchess II. By Woodland Kennels, Woodstock, Ont., for black cocker spaniel dog and bitch, whelped May 8, 1889, by champion Obo II. (Farrows's Obo—Chloe II.) out of Woodland Queen (Kelly's Tiggy—Woodstock Queen). Martha Washington. By Geo. Douglas, Woodstock, Ont., for black cocker spaniel bitch, whelped May 9, 1889, by Black Duke (champion Obo II.—Woodland Queen) out of Lady Stanley (Robin—Fretyle).

BRED.

Notes must be sent on the Prepared Blanks. Frolic—Balkis. C. B. Van Hoesen's (Brooklyn, N. Y.) greyhound bitch Frolic to H. W. Huntington's champion Balkis (Clyto—Primrose), Feb. 6.

Cassandra—Balkis. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch champion Cassandra to his champion Balkis, Feb. 18.

Royal Cuts—Duke of Vernon. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Royal Cuts Duke of Vernon—Gala Duke to his Duke of Vernon (Glendale—Spotless), Feb. 22.

Bonnie—Douglass II. J. E. McDonald's (Ligonier, Ind.) pug bitch Bonnie to Eberhart Pug Kennels' Douglass II, (Douglass I., June), Feb. 16.

Cora of Wetheral—Roger. F. Windholz's (New York) English setter bitch Cora of Wetheral (Sir Alister—Mena) to L. Gardner's Roger (Count Noble—Queen Meg), Feb. 24.

Rose Royal—Doc. McBeth Kennels' (North Lawrence, O.) English setter bitch Rose Royal (Mike—Alice Royal) to Geo. McKenzie's Doc (Druid—Ruby), Dec. 18.

Sedan—O'Donovan Rossa. M. Flynn, Jr.'s (Bristol, R. I.) Irish setter bitch Sedan (Choster D. Herald—Nancy) to his O'Donovan Rossa (Starsfield—Nino), Feb. 20.

Lady Stanley—Frank. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Lady Stanley (Robin—Fretley) to their Faust (Black Duke—Lady Nell), Feb. 12.

Jealousy—Faust. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Jealousy (Obo, Jr.—Woodland Queen) to their Faust (Black Duke—Lady Nell), Dec. 29.

Nellie—W. Patterson's. (Woodstock, Ont.) field spaniel bitch Nellie (Jack—Flora) to Woodland Kennels'—(champion Rob, Jr.—Dolly), Dec. 26.

WHELPS.

Notes must be sent on the Prepared Blanks.

Salva. H. D. Kendall's (Lowell, Mass.) mastiff bitch Salva (Champion of the North—Bess), Feb. 11, six (three dogs), by E. B. Sears's Seed—Maurice (Good England—Druid).

Rosa Croxteth. Geo. F. Corman's (Cochituate, Mass.) pointer bitch Rosa Croxteth (Royal Croxteth—Maggie V.), Feb. 7, ten (five dogs), by C. A. Parker's Wm. Tell (Currier's Prince—Currier's Belle II).

Rose Royal. McBeth Kennels' (North Lawrence, O.) English setter bitch Rose Royal (Mike—Alice Royal), Feb. 16, seven (five dogs), by Geo. F. Corman's (Cochituate, Mass.) pointer bitch Rosa Croxteth (Royal Croxteth—Maggie V.), Feb. 7, ten (five dogs), by C. A. Parker's Wm. Tell (Currier's Prince—Currier's Belle II).

Nino. E. H. Perry's (Des Moines, Ia.) Irish setter bitch Nino (Elcho—Noreen), Jan. 20, eight (four dogs), by his Claremont Patsy (Frisco—Nellie IX).

SALES.

Notes must be sent on the Prepared Blanks.

Claypatra. Black and white greyhound bitch, whelped May 25, 1889, by Memnon out of Fannie M., by H. W. Huntington, Brooklyn, N. Y., to Robert Little, New York.

Kismet. Black and white greyhound bitch, whelped May 25, 1889, by Memnon out of Fannie M., by H. W. Huntington, Brooklyn, N. Y., to N. Q. Pope, same place.

Highland Joe. Black greyhound dog, whelped Aug. 28, 1889, by Balkis out of Cassandra, by H. W. Huntington, Brooklyn, N. Y., to Woodhaven Kennels, Woodhaven, L. I.

Erl King and My Queen. Black and white greyhound dog and black bitch, whelped Jan. 4, 1889, by Memnon out of Harmony, by H. W. Huntington, Brooklyn, N. Y., to Woodhaven Kennels, Woodhaven, L. I.

Highland Stuart, Highland Warrior and Highland Prince. Black and white greyhound dogs, whelped Aug. 28, 1889, by Balkis out of Cassandra, by H. W. Huntington, Brooklyn, N. Y., to N. Q. Pope, same place.

Bronco, Jr. Black pointer dog, whelped July 20, 1885, by Harrop's Phil out of Harrop's Dinah, by McBeth Kennels, North Lawrence, O., to F. Wiederholt, St. Louis, Mo.

Brammie. Liver pointer dog, whelped February, 1889, by Bronco, Jr. out of Rie, by McBeth Kennels, North Lawrence, O., to F. Wiederholt, St. Louis, Mo.

Lady Aylesford. Silver fawn pug bitch, whelped Sept. 3, 1889, by Rochester out of Tantrums, by Eberhart Pug Kennels, Cincinnati, O., to P. R. Simmons, New York.

Virgie. Apricot fawn pug bitch, whelped Sept. 3, 1889, by Rochester out of Tantrums, by Eberhart Pug Kennels, Cincinnati, O., to E. D. Olmstead, New Decatur, Ala.

Kitty Glenview. Irish setter bitch, whelped May 17, 1889, by champion Tina out of Onota Belle, by M. Flynn, Jr., Bristol, R. I., to C. P. Doerr, Chicago, Ill.

Lulu IV. Red Irish setter bitch, whelped Feb. 28, 1883, by J. F. Shay's Dick out of Lulu II, by M. Flynn, Jr., Bristol, R. I., to W. F. Van Buskirk, Odell, Ill.

Chief—Biscenia whelp. Red Irish setter dog, whelped Oct. 29, 1889, by Onota Kennels, Pittsfield, Mass., to E. Dow, Lauesboro, Mass.

Duke. Red Irish setter dog, whelped Oct. 29, 1889, by Chief out of Biscenia, by Onota Kennels, Pittsfield, Mass., to E. J. Dunn, same place.

Toby—Bessie Ober whelps. Cocker spaniels, whelped Jan. 7, 1890, by McBeth Kennels, North Lawrence, O., a black dog to E. S. Howells and a liver dog each to J. R. Schlagel and F. Cleveland, all of Massillon, O.

Black Duke—Lady Nell whelps. Black cocker spaniels, whelped Aug. 5, 1889, by Woodland Kennels, Woodstock, Ont., a dog each to W. J. McKay, same place; John Packham, Niagara Falls, Ont.; Alex. Cromwell, London, Ont.; and Frank Onilleite, Montreal, Can., and a bitch each to Chas. Pharo, Bethlehem, Pa., and Levy Conger, Toronto, Ont.

Obo II—Woodland Queen whelp. Black, white star, cocker spaniel dog, whelped May 8, 1889, by Woodland Kennels, Woodstock, Ont., to G. C. Jones, Emporia, Kan.

Black Duke—Lady Stanley whelps. Black cocker spaniel bitches, whelped May 9, 1889, by Woodland Kennels, Woodstock, Ont., one each to G. C. Jones, Emporia, Kan., and Fred Domney, Hamilton, Ont.

Buffalo Andy. Black and tan terrier dog, whelped May 20, 1889, by Buffalo General out of Gipsy Queen, by A. W. Smith, Buffalo, N. Y., to John G. Burns, same place.

DEATHS.

Breeze. Black and white English setter dog, whelped Sept. 3, 1882, by Druid (Prince—Dora) out of Poetess (Carlowitz—Dell), owned by Jas. L. Smith, Hackettstown, N. J., Feb. 14.

Richmond. May, black and tan fox-terrier bitch, whelped August, 1883 (Raby Tyrant—Richmond Olive), owned by W. E. Applegate, New Albany, Ind.; in parturition.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

R. O'S., St. John, N. B.—My spaniel pup, about 3½ months old, has lice. Would you in your Kennel Management give me recipe? Ans. Wash with carbolic soap and comb carefully with comb dipped in petroleum oil or kerosene.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. **Kennel Record and Account Book.** Price \$3. **Training vs. Breaking.** By S. T. Hammond. Price \$1. **First Lessons in Dog Training, with Points of all Breeds.** Price 50 cents.

Rifle and Trap Shooting.

RANGE AND GALLERY.

QUEENS, L. I., Feb. 20.—Two trials more will finish the rifle contest that has been going on between the Queens County Wheelmen and the Queens Athletic Club's grounds. The match is for a gold medal and the local championship. The scores made at today's shoot were: P. J. Berger 31, W. L. Wood 31, C. H. Rose 30, J. J. Kelsey 29, M. P. O'Connor 29, A. Collison 29, L. D. Dougherty, Jr. 29, R. A. Kissam 29, N. N. Kellogg 28, W. W. Davis 27, T. W. Murphy 27, W. J. Hendrickson 27, P. Spatz 26, J. E. Coombs 26, W. A. Fish 25, J. B. Collinson 25, J. Hamilton 24, F. Hamilton 23, C. Schmidt 23, W. R. Taylor 22, O. Denton 21, W. B. Coomes 15.

WORCESTER, Mass., Feb. 22.—A few of the members of the Worcester Rifle Association went out to Broad Meadow Range to-day. The recently fallen snow and the bright sunlight were very dazzling, and a troublesome wind added to the discomfort of the shooters. The distance was 200 yds., and in the rest match with a possible 100, a 3in. carton was used. The work of each man follows:

	Creedmoor.	Standard.	Rest.
L. Thomas....	44 40-90	79 83-164	90
J. Leighton....	46 49-95	79 83-162	
Chas. Allen....	45 46-91	78 81-159	90
M. G. Fuller....	46 48-92	76 76-152	92
S. Clark....	44 45-89	74 75-149	91
Moses Carter....	46 46-82	73 73-146	
R. Chase....	43 43-80	68 69-137	

BOSTON, Feb. 11.—Massachusetts Rifle Association celebrated Washington's birthday at their range by the firing of many guns and burning of much powder. A very large crowd of riflemen were on hand early. The weather conditions were very unfavorable, there being a strong wind from 9 to 11 o'clock, besides Jack Frost was on hand to cause the shooters to shiver and shake. This caused the scores to run rather low. Following are to-day's scores, 200 yds., standard American target:

H L Lee.....	73	G Black.....	64
H L Lee.....	77	H Severance.....	73
H L Lee.....	71	S C Sydney.....	72
J Francis.....	104	Record Rest Match.	
J N Eames.....	95	H L Lee.....	92
P Thomas.....	93	A H Ballard.....	90
		R A Long.....	87
		Pistol Match—30 yds.	
J B Fellows.....	87	H L Lee.....	85

NEWARK.—The Newark Shooting Society turned out strong at the general meeting on the evening of the 21st. The reports of the secretary and treasurer showed the society to be in a sound condition both financially and numerically. The shooting committee reported a proposed alteration of the park, by which perfect safety would be insured, and were ordered to proceed with the work. The following officers were elected for the ensuing year: President, Henry W. Egner (re-elected); Vice-President, Frank C. Watts; Secretary, Chas. H. Townsend (re-elected); Treasurer, Julius Stapf (re-elected); First Shooting Master, August Begerow (re-elected); Second Shooting Master, John Coppersmith (re-elected); Auditing Committee, F. Weiss, Ford J. Herpers, Wm. Schmauder, Jr.; Board of Directors, Franz Haeftel, Albert Seitz, Peter Bell, John H. Hugel, Alex. Volheue and the first five officers; Collector, C. H. Townsend. The coming season promises to be a lively one, judging from the expressions of the members. The society has now 164 names on the roll.

THE TRAP.

As this journal is the only one having a representative with the East and West team tourists, our readers will be given the best brightest, fullest, most accurate and most satisfactory reports of the progress of the enterprise.

AMERICAN SHOOTING ASSOCIATION DATES

April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May 28, 29, 30.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

EL PASO ROUTE, Texas, Feb. 12.—The duck shooters of the party reached the car yesterday evening just before the sunset train pulled out for El Paso. They had had a most delightful time, and they spread out on the ground beside the track 77 ducks and 68 quail, the result of five guns, shooting about half a day, and not a very good day either. This hunt was offered through the courtesy of Gen. D. S. Stanley, commanding San Antonio post and Director of the Mitchell Lake Association. The preserve of Mitchell Lake is pronounced by our men to be the grandest thing of the kind they ever saw, and they cannot say enough of the treatment they had there. Our car furnished Mr. Dimick, W. E. Perry, Heikes, Whitney and Quimby, and these were entertained by Judge Shields and Messrs. O. E. Guessaz, Chas. Hummell, Jr., August Thiele, A. L. Conaway, D. P. Barr, Simon Vieth and A. B. Critzar. As a sample of the treatment they gave our people, I might cite Mr. Perry's story. Mr. Perry had never killed a duck in his life, and he dropped the first one he shot at, and thereupon got wild, and soon shot away all his 50 shells. Mr. Hummell gave him all the shells he had, and after Mr. Perry had got away with these, he gave him his 16-gauge gun and his shells, and turned him loose on the quail, on which he made a good record. The San Antonio men were simply out to give our men a good time, and they did it as only Texas sportsmen know how. Only two canvasbacks were bagged and a few redheads, but mallards and pintails were abundant. The boys say they never saw so many wildfowl, but they were hard to work. Decoys, floats and sink-boxes are not used on the lake. As for the quails, they are simply legion, and no Northern sportsman who has not visited Texas knows anything about quail shooting. The boys were so happy that they were to leave San Antonio and the royal fellows who make up its sports fraternity.

It was very cold last night. We ran into a northerly this morning as we passed through the first mountains of the run, and much of the morning was passed in a regular *poudre* blizzard. It was rather a checker-board blizzard, however, with nearly as much sunshine as snow and cloud. The pitiful adobes of the Greaser settlements looked cold and cheerless in the sudden cold, and the natives, bundled up in their shawls and shivers and looked blue as they huddled at the depot platforms where we made our infrequent stops. The run has been through low mountains nearly all the way, and the road is far more winding and picturesque than I had any idea this southern route could be. The country is not settled at all. Cattle seem abundant. At 1 o'clock we saw three antelope on a side of the track, and immediately upon the other side a glorious band of these beautiful creatures, which stopped at about 200 yds. distance, and made a wild and beautiful picture as they stood looking at the train. A little later we saw three coyotes not 50 yds. distant.

We had been told that this 24-hours' ride to El Paso would be dull and dreary, but no one on board the *folant* could have called it so. There was a perfect carnival of fun all day long and with music, song and general antics, the time has passed very, very quickly. At every stop of the train there has been a cry of "Train robbers!" whereat Fred Quimby has pretended to be frightened nearly to death, and all the others have looked brave. It would be the biggest joke on earth if this carload of expert trap-shots should be held up by one or two gentlemen of the road. One of the party, whose name is withheld for his family's sake, remarked to-day that this is a dining car, the robbers might want to tuck in for our bouillon. Quimby had no doubt.

We got "over the hill," apparently, about the middle of the afternoon, two hours behind, and the way we came spinning down around the curves was a caution to stage-drivers. We ate supper on the fly, had a breakdown and general *mucha batalla* in the smoking room, and a little after 8 o'clock ran into the seaport of this, I should mention what is now known on the car as the celebrated "Ruble pool." At Mr. Dimick's suggestion, at Austin, several of the boys formed a little pool, the one who guessed nearest to the "gate receipts" at San Antonio to take the funds. Mr. Dimick tipped the wink to the other boys and they all wrote "30.00" on their tickets. As Mr. Ruble wrote "25," it followed as matter of course that everybody else was nearer than he, and he lost his 25 cents, all of which he stigmatized as a low-down attempt to rob him of a quarter. And then the boys laughed. To-night all the crew are well and hearty. "Tex," the wildcat, is growing 4in. a day, and has developed a preternatural voice. The outfit cuts a wide swath in the edibles.

El Paso, Feb. 13.—This is the same old one-eyed Mexican town, sleepy and pleasant as it was five years ago when the writer last saw it, though somewhat improved in spots, architecturally speaking, by the addition of a few good modern buildings. There are still a few of the same gentlemen of Jewish descent who are reck-

lessly willing to sacrifice their entire stocks of goods at less than cost; there are still the same pole and sawhide fences, and there is still the same old wind, blowing from twelve directions at once. Not much of a shooting point this, except for rifle and revolver. The trap club, of a dozen members or so, has now no active organization, although some inanimates are shot by the faithful.

The car was received last night by the usual delegation of warm-hearted sportsmen, who were awaiting the arrival of the teams, and the town was taken in a little bit before bed time. This morning the boys scattered widely over this curious and singularly interesting town, and stared at the sights of this old Spanish civilization, so different from our own. Mr. Smith, of the gun firm of Andrews & Hill, whose place has been made headquarters, kindly took the majority of our party across the river into Paso del Norte this morning, and at lunch time they all came in loaded with Mexican curiosities, in which the beautiful native flitigee work in silver had a large showing, what with the horn chairs, the cactus plants and to-day's accession of oddities, the car is coming to look like a traveling bazaar.

At 2:30 P. M. the boys began a great exhibition. They made a vast exhibition of themselves, but an almighty poor exhibition of trap shooting. The wind was gusty and eccentric, the dust was vile and the birds were fat and drakes all over the atmosphere. About 100 of the faithful watched the fun and tried their best to screw their courage up to the point of tackling Mr. Dimick for that \$25 competition, but couldn't. The East won to-day again by two birds. Only the most skillful bad shooting on earth enabled either team to beat the other. The scores footed up as follows: yet, and 35 by Heikes was top score for a single man. Budd shot well his bill race in the singles, but shot El Paso wind too hard in the doubles, as Mr. Dimick tied Budd. Westland couldn't find 'em, Stice fell down, and everybody waltzed. W. S. Perry and Cahoon made an amusing struggle to shoot less than each other, and Perry's 9 doubles won the race for his team. Score, regular race, Mr. Dimick referee:

Eastern Team.		Western Team.	
H. McMurchy.....	11111111111111111111	10 11 01 00 11—34	
W. Wolstencroft.....	11111111111111111111	10 11 11 11 11—33	
W. E. Perry.....	11111111111111111111	11 01 11 11 11—33	
W. S. Perry.....	11111111111111111111	11 11 10 11 11—29	
H. B. Whitney.....	11111111111111111111	11 10 10 11 10—35	164

C. W. Budd.....		J. A. Ruble.....	
11111111111111111111	11 10 100 1 10—34	11111111111111111111	10 11 10 11 11—33
11111111111111111111	10 11 10 11 11—33	11111111111111111111	11 10 11 11 10—36
11111111111111111111	11 10 11 11 10—36	11111111111111111111	00 01 10 11 11—25
11111111111111111111	11 10 11 11 11—34	11111111111111111111	11 10 11 11 11—34

At this point the East is one race ahead. Forty thousand birds have been shot at in the series, and the East is seven birds ahead in total. Counting Dayton shoot, not included in series, the West is seven birds ahead. Pretty close work.

En Route, 6 P. M.—We are on the road for California, and are passing through the mountains along the Rio Grande. The wonderful purple hue of the sunset in this country is settling down on the mountain tops. I do not like to leave this country of "to-morrow." It is so quiet and sensible, and sees so clearly the needlessness of continual work.

Lathrop, Cal., Feb. 17.—Champion trap-shooters at Stockton to-day. Eastern team: McMurchy 38, Wolstencroft 33, W. E. Perry 34, W. S. Perry 28, Whitney 38; total 171. Western team: Budd 32, Ruble 35, Heikes 34, Cahoon 29, Stice 37; total 161. Budd's gun broke, and he shot with six different guns, which accounts for his low score.

San Francisco, Feb. 20.—Champion trap-shooters: Eastern team: McMurchy 38, Wolstencroft 35, W. E. Perry 36, W. S. Perry 24, Whitney 40 straight; total 171. Western team: Budd 32, Heikes 29, Cahoon 26, Stice 37; total 167. The teams were royally entertained by the California Athletic and Press Clubs.

The trophy offered by Messrs. Clabrough, Golcher & Co. of San Francisco, for a 50 bluecock match between the teams, Feb. 10, is a handsome specimen of art and of most ingenious and pleasing design. We are indebted to the donors for the accompanying illustration.

THE FORESTER TOURNAMENT.

DAVENPORT, Ia., Feb. 15.—The annual shooting tournament of the Forester Gun Club closed this afternoon. The attendance from the first day, Feb. 11, was good, the weather was fine except to-day, when it rained a little. The first day the wind was rather high, and made pigeon shooting very difficult. Never in the history of the club have there been such good birds. They were extra game and made a hard fight to escape when wounded. The following are the scores of the regular programme and the four extras:

Match No. 1, 7 live birds, 5 ground traps, Keystone system of rules, four prizes.			
Schick.....	6	Converse.....	6
Penrose.....	7	Doc West.....	5
Myers.....	3	Strawn.....	6
Grimm.....	2	Emerson.....	6
Duer.....	2	E Stone.....	6
Gilman.....	4	F O Davis.....	5
Penrose first, Fairall second, F. O. Davis and Doc West div. third, Grimm and Gilman div. fourth.			

No. 2, 10 single Keystones:			
West.....	5	Grimm.....	7
Duer.....	8	Bennewitz.....	7
Skinner.....	9	Strawn.....	9
Myers.....	7	Wolverton.....	7
Howard.....	8	Wooster.....	6
Gilman.....	8	Leopold.....	6

THE BIRMINGHAM SHOOT.

BIRMINGHAM, Ala., Feb. 14.—The shoot of the American Shooting Association closed to-day after a three-days' meeting. It was a success in scores, but hardly so in numbers. The local shooters, however, promise better things when next the big Association favors them with a tournament. The leading scores follow.

First Day.—No. 1, open class, 15 singles, entrance \$2.50:		
Mascot.....10	Ellerbe.....9	Frederick.....9

SAIL PLAN.

BODY PLAN.

Fig. 1.

MIDSHIP SECTION.

A YACHT FISHERMAN.

THE good work in behalf of safer and better boats and improved methods for our fishermen which has been carried on for some years by Capt. J. W. Collins, of the United States Fish Commission, is well known to the readers of the FOREST AND STREAM. The schooner Grampus, designed by Captain Collins, whose lines were published in our issues of Jan. 13-20, 1887, has proved a complete success, and the same result may confidently be predicted for the handsome little yacht fisherman, whose lines we here reproduce by permission of the Commissioner of Fisheries from the advance sheets of the Bulletin of the United States Fish Commission for 1888. In this volume Captain Collins describes a number of small auxiliary fishing craft for use along the coast where quick transport to market is an object; and in addition he offers the accompanying design, intended especially for the Pacific coast, where ice cannot be used, being too costly to be profitable.

Though intended for a fisherman, the design will compare most favorably with many small keel yachts, and with moderately light scantling, lead keel, or even iron if for cruising only, she would make a very fine craft, handsome in sheer and outline and a very easy sea boat. The following description is given by Captain Collins:

"In making the designs for this boat I have been influenced somewhat by consideration of the fact that she can carry very little ballast, owing to her buoyancy being decreased to the extent of the capacity of the well. Therefore she has ample beam to give her the requisite stability. Since it is also necessary to have as much capacity in the well as practicable, her depth is considerable. This feature will, however, improve her sea-going qualities.

"If a portion of the ballast can be put outside, in the form of a metal keel, it will add materially to the stability, and at the same time make the boat easier in a seaway, since then the weights will be more central than if put inside, where they can be placed only forward and aft of the well.

"The arrangement of the deck and interior must be adapted to the special needs of those who use the boat, and may vary considerably in different localities. I will suggest, however, that tolerably comfortable quarters for sleeping and cooking can be had forward of the well (Fig. 2), and in that part of the boat the deck might be nearly flush with the rail, as indicated, to give the maximum of head-room. Aft of the cuddy the deck might be lower, as shown in the plan, and in the hold, abaft the well and on each side of it, can be stowed nets, lines, etc., also fish that die in the well or otherwise.

"The cutter rig is the one best adapted to a boat of this kind when speed is a special requisite. Besides, a running bowsprit (which can be pulled in when the sea is rough) and a housing topmast add materially to the power and efficiency of a boat in heavy weather. The sail plan shows a large area of canvas, most noticeable, perhaps, in the club gafftopsail. But the prevalence of light winds on the Pacific coast during a portion of the year seems to call for considerable light canvas, and on a boat like this it can be easily managed and will do most effective work.

"The special feature of this boat is, however, the well. It is believed that the so-called 'box well' (Figs. 1 and 2), which is peculiar to the Key West 'smackees,' is the style best adapted to market fishing, and for this reason such an one has been shown on the plans. If greater capacity for living fish is required it can be obtained by making the well of the ordinary type with a deck, and building it with 'primings-out.' It is probable, though, that a box well will be found quite sufficient to accommodate the catch from day to day, and any surplus which cannot be marketed can be transferred to live-cars, as previously mentioned.

"The plans have been made for a boat of such size as is believed to be most suitable for the market fishery of the west coast. It is, however, entirely feasible to construct one smaller or larger from the plans, as will be understood by practical builders.

The following are the principal dimensions:

Length over all.....	34ft. 3in.
Length, load waterline.....	28ft. 2in.
Beam, extreme.....	10ft. 9in.
Beam, load waterline.....	9ft. 7½in.
Depth deck to keel, amidships.....	5ft. ½in.
Draft, extreme.....	1ft. 9in.
Least freeboard.....	8ft.
Length of well, extreme.....	3ft.
Length of well at deck.....	5ft.
Width of well, extreme.....	2ft.
Width of well at deck.....	2ft.
Mast, from fore side of stem at deck.....	9½in.
Mast, deck to hounds.....	22ft. 9in.
Masthead.....	4ft. 6in.
Topmast, fid to truck.....	22ft.
Boom.....	30ft. 6in.
Gaff.....	20ft.
Bowsprit, outside stem.....	14ft. 6in.
Bowsprit pole.....	23ft.
Topsail club.....	10ft. 6in.

CRUISING YACHTS AND YACHT CRUISING.

THE following is a synopsis of the lecture lately delivered by Com. Center before the Seawanhaka Corinthian Y. C. on Jan. 18. As Mr. Center spoke at some length using only some brief notes and used the blackboard considerably for further elucidation of the subject, it is impossible to reproduce the lecture in full; but the following will no doubt be of interest and value to the large number of readers who are fond of cruising:

Some years ago I had the honor of reading before this club a lecture similar in matter, but not identical. Our subject this evening is on cruising yachts and yacht cruising, and I am confronted at the outset by the difficulty of making my meaning clear without possibly offending some of my hearers; for in explanation I shall have to speak of existing vessels and not always in a complimentary manner; I will explain why.

I have two opinions of yachts, one as a sailor, the other as a yachtsman; these opinions are diametrically opposite, and I may therefore in one breath condemn a vessel that in the next I will praise in the highest degree. I may, as a sailor, consider a fast racing yacht as utterly unsuited to cruise in, and therefore a bad cruiser, while as a racing vessel I may put her in the very first rank. I will divide this portion of our subject, Cruising Yachts, into Form, Construction, Sails and Sail Plan, and Deck Fittings. Form.—From the work demanded of her, a cruising yacht should differ in form from a racing yacht. She should be more moderate in dimensions for the same length of waterline, and with larger displacement and fuller ends. The reasons for these differences are as follows: She needs more moderate dimensions to obtain ease in disturbed water and to obtain a smaller sail plan; she needs more displacement for sea work, gaining thereby weight and power, and a larger internal capacity, and with a smaller crew owing to the smaller sails.

For large vessels the centerboard boat has proven to be the better cruiser in many ways. Her draft enables her to enter harbors otherwise inaccessible; and in heavy weather at sea, when hoisted, the raising of the centerboard allows the boat to make better weather; i. e., she goes to leeward and makes what is technically called a smooth to windward. As examples of good cruising yachts I shall name the Intrepid, Norseman, Gitana, Iroquois, Yampa and Monticeto. Of all these vessels the Monticeto, in my opinion, comes nearer to the ideal cruising yacht for our seas. The Norseman, Gitana and Intrepid are fine vessels, and their only fault is possibly in their construction, as they have thin outside keels; this defect is but a small one as long as they are handled by their present competent owners and skippers. The Iroquois has proven herself a very good cruising yacht and a fast one, and comes fully up to the requirements of our seas. The Yampa has more beam than is necessary, but her designer, under instructions from her owner, gave her this increased beam to prevent extreme angles of heel. At sea she is fast, having gone from Sandy Hook to Hatteras in 26 hours. The Monticeto in form is perfect for cruising purposes. Her rig as a yawl is of doubtful utility.

To show the necessity of moderate draft in a cruising yacht I will take for examples the Medusa and Liris. Liris draws within 2in. of Medusa, yet is 15ft. shorter on the waterline, and of about one-half the displacement; yet, in spite of these differences in size, she would have to lie as far off shore as Medusa, and exposed to the same conditions of sea and wind. I leave to your imagination the additional discomfort which must be the result of her want of size.

Construction.—A great deal of money and brains have been expended in improvements in the construction of racing yachts. The best construction is as necessary for a cruiser as for a racer. The cruiser is subjected to more heavy strains, and in reality does harder work than the racing vessel sailing for the most of the

time in summer breezes over a summer sea. I know that racing yachtsmen will not agree with me in this, but I have tried both with the same vessel and know the results. The frame and plank- ing of the cruising yacht need not be heavier than those of the racer, as she does not require such a large proportion of ballast to displacement, having sufficient power without it, thus raising her weight and thereby increasing her ease in a seaway.

We should be most particular in regard to the workmanship and see that it is of the very best. It is not generally understood that perfect workmanship has much to do with the real strength of a vessel, and that if the various pieces of wood are not bolted together so that they "fay" properly, the result for the amount of material is not a strong job. In other words, if the pieces brought together do not touch all over, no amount of bolting or weight of material can possibly make it strong. The late George Steers, our eminent shipbuilder, knew the value of this thoroughly, and it is said of him that he instinctively knew whether the work was being properly done, and upon one occasion at dinner time went through the between decks of the frigate Niagara, which he was then constructing, and at a glance as he walked along marked a number of knees already in place, to be taken down because improperly fayed.

Sails and Sail Plan.—The sail plan of a cruising yacht should be small in comparison with that of a racer. Extreme speed is not sought for, and economy in running expenses is obtained thereby as only a small crew is needed; as, however, the winds along this coast are moderate in summer, experience teaches us the necessity of two rigs, one for winter and one for summer.

For either rig, no change should be made in the masts and topmasts, so as not materially to alter the disposition of weights; and we therefore shorten the booms, gaffs and bowsprits to obtain the small winter rig. The ordinary working light sails are all sufficient. For winter cruising the storm canvas should be complete, carefully made and of heavy duck. The single stick should carry trysail, storm foresail (or forestaysail) and storm jib; or, as they are called in England, spinnaker and storm jib. The schooner should carry trysails, storm foresails and storm jib. It is a custom in England to have trysails with a gaff; this seems to be unnecessary. Up to the size of 90ft. waterline, a single bowsprit and jib is usually best.

Schooners of 80ft. may have the summer jib furled on a stay, as much time is saved thereby when getting under way, but in the winter season the shifting of jibs on the stay is dangerous to the lives of the crew. For vessels of 100ft. waterline the bowsprit and flying jib boom become a necessity.

The Guinevere, an English vessel of this size, tried the single jib and found it too large to handle in anything of a breeze. For many years an impression prevailed among American yachtsmen that heavy anchors and chains were very detrimental to a vessel's speed. Most of our yachts, especially the racing ones, were lamentably deficient in ground tackle. As anchors and chains are now stowed, however (about the mast rather than in the bows), the weight is less important. In speaking to sailors it is not necessary to say that the tackle should be of the very best that can be purchased. The modern windlass with its clutch gear is such a decided improvement and such a perfect machine, that it is preferable, under all circumstances, to the capstan. As to the vexed question of wheel versus tiller, the use of the latter, a passing and harmless bit of Anglomaniya, in my opinion, is not open to much discussion. Binnacles are made in all shapes and sizes, and most of them are pretty and useless toys; they should be made larger than those in use, especially on smaller yachts. A yacht when at anchor should have her booms lowered, boats at boom ends and properly secured, and flags mast-headed in the proper manner. Her gear should be kept taut, her sails properly furled, and everything about the vessel looking ship shape and "Bristol fashion." It has much to do with her commercial value,

FISHING CUTTER—DESIGNED BY CAPT. J. W. COLLINS, U. S. FISH COMMISSION.

also with the owner's reputation as a yachtsman and a sailorman. Brass work, a sad necessity, must be kept clean and the decks white. Wood work will look all the better for an occasional coat of varnish, first reducing it with a little turpentine. When under way sails should be properly hoisted, as nothing looks so slovenly as sails hanging in bights. The necessity of this is patent to any one who looks over a number of yacht photos.

Yacht Cruising.—This portion of the subject is of such scope that to give an interesting and instructive talk in regard to it within the time at our disposal presents some difficulties. I think, however, that a few words on the following details will prove most interesting and instructive. They are the equipment below, the disposition of the room, ventilation, etc., internal economy, the crew and its discipline, and lastly a few words on cruising.

Internal Equipment.—This must be as complete as possible, for I am assuming that the cruising yachtsman regards his boat as his floating home, and wishes as far as possible to surround his friends and guests with all the comforts that the size of his boat and the length of his purse will permit. The comforts of the inner man take precedence, and we immediately find a *batterie de*

cuisine to be a stern necessity. The galley should be as complete as it possibly can be, as it facilitates the work of the steward to a great degree. An agate ware is made which is inexpensive, easily cleaned and stylish. The American is such an adept at stove making that one can hardly go astray. For large vessels the modern wrought iron range is in general use and is the best. For smaller boats, however, I recommend a good cast iron stove of the Baltimore pattern and as large as the galley will permit. It has the advantage of heating up quickly and of cooling off with the same rapidity, which is a matter of great importance to the comfort of the crew in a small vessel. In this connection I remember many years ago having an English stove sent me at great expense of the way from Cowes, which was very heavy, difficult to start going, and naturally extremely hot even after the fire was put out, in other words totally unfitted to our climate and requirements.

On small yachts naphtha stoves are coming into fashion, although it is the experience of the insurance companies that they are dangerous implements. Many yachtsmen like them very much, from the fact that they cool off so quickly after being used. Nothing so adds to the charms of the cabin as a proper display

of silver well kept. Good beds for all, both forward and aft, pay in the end, and should always be well aired and kept in the best order. A large supply of linen is useful, as it is not always possible to get laundry work done properly and cheaply when away from home. The ventilation of beds is an important matter, and one often neglected on board yachts; there is nothing untidy in the appearance of beds on deck, any more than the appearance of the weekly wash behind a swell country villa; on the contrary, it indicates cleanliness and order. I have found lining the lockers on the sides of wooden vessels with zinc to be of very great benefit. It prevents the dampness from getting through, and keeps linen and shoes from becoming mildewed for quite long periods. Deck lights, if used, should not be made to open, as they always will leak. Skylights should be made sufficiently large for ventilating purposes. The cabin stove in single-stickers gives a great deal of trouble, and in many instances shows itself to be entirely unmanageable. Carpets should be made amply large, as they shrink when wet. I would advise the white trousers and jumpers now in use as the only proper clothing for crews. It is inexpensive, easily replaced and of so small value that the men are not inclined to hide them. Our Swedish crews are decent and respectable men, but untidy, and very apt to secrete their clothing for use on shore after they have been discharged. Several linen suits can be purchased for the price of one flannel suit; and, by giving them at intervals to the men, more tidiness and cleanliness is secured.

Ventilation.—Proper ventilation can only be had by a careful cleaning of the bilges. This can be done properly in wooden vessels only when out of commission and the yacht is out of water. All ballast should be removed, planking scraped clean, and just before launching, when the vessel is as dry as possible, she should be painted with red lead and bright varnish or with asphalt paint. This prevents the dirty water accumulating in the bottom from soaking into the wood, causing the disagreeable smell found in many yachts.

Disposition of Room, etc.—One can here say "many men, many minds." The arrangement of room is a matter of taste, but it takes an expert to do so to the best advantage as a rule, in American yachts, crews are not given space enough, and the officers even are often neglected. For small cruisers the keel vessel is the best, as the absence of the centerboard trunk leaves the intervening space free from obstruction, thus giving more scope to any individual arrangement. In large centerboard vessels, where the beam is sufficient to admit of a passage on each side of the trunk, as in the Sea Fox, this objection is overcome, as it makes it possible to reach each stateroom separately. It is a mistake to use the cabin for sleeping purposes; it adds much to the comfort and privacy to have staterooms for every guest. Sufficient light and ventilation can be obtained only through large skylights, deck and side lights. At sea we are confronted with the difficulty of keeping them water tight, and I know of no plan as yet devised that will absolutely prevent this. Light and cheerful decorations add much to the apparent size and brightness of cabin and stateroom. Pictures, photographs, and, if possible, bric-a-brac and books go far to give a homelike and cozy look to the rooms. Too much hard wood gives a gloomy effect, and it should be used sparingly and only as high as the wainscoting in ordinary houses. The laws which govern good taste in other things, govern on board a yacht as well, and no decoration or furniture that is unsuited from its perishability or its richness, such as rich plush cushions and heavy hangings, etc., can be considered suitable, as they soil quickly and readily get a stuffy odor.

Internal Economy.—In no part of yachting experience or knowledge can one go so far astray as here. The figures given by different owners as to the cost of running a yacht vary so much, that a deduction becomes very difficult; in other words the honesty or capability of servants is an unknown and variable quantity. I am constrained therefore to confine myself strictly to personal experience.

There are two persons on a yacht of real importance; the sailing master in one department and the steward in the other. Good wages, permanent yearly position, and good conduct money, are the only means I know of to obtain honest and capable service.

Every one connected with yacht purveying is, seemingly, unscrupulous, and only too ready to aid one's servants in useless and extravagant expenditures. My way of keeping expenses within bounds is by making, at the end of each season, a daily average of the year; and if the steward goes beyond a sum, known from previous experience, I can only conclude that he is dishonest or incapable. Fifty cents per capita per diem in forecabin and one dollar per capita in cabin is a very liberal allowance, including the moderate entertaining of the average yachtsman; and any excess must be viewed with suspicion. Frequent examination of books and payment of all large bills personally when possible, help to keep expenses within bounds.

Crew and Discipline.—As above stated, the two principal persons in the crew are the skipper or sailing master and steward. Each of them should be held responsible for everything in his department, making him hire every one under him; and frequent inspections of quarters, galley, etc., will go far toward maintaining proper discipline and order on the vessel. The whole comfort of owner and guests depends upon the honesty and capacity of these two head men, and if the laborer is worthy of his hire, good wages are in these cases true economy.

Frequent inspection of the vessel by the owner is very useful, even if he be not an expert, and no punishment is equal to the forfeiture of good conduct money. At present, yacht owners are in the hands of many incompetent and dishonest servants, and thus far no remedy exists for this condition of affairs. The matter has been broached in the New York Y. C., and one of its members has given the matter much thought and attention, and has devised a plan which we will hope to see in working order in the near future. Experience shows that discipline is more easily kept on those yachts where the after end of the ship leads a decent and clean life. One can hardly expect the untutored man in the forecabin to play angels, while their superiors in the other end of the ship are playing the devil. We can accept as an axiom, "Respect yourself, and the crew will respect you."

Cruising can be indulged in to its fullest extent only by men of leisure, fond of nature and of the sea for its own self.

The business man whose time is limited to a day or two can successfully indulge in racing, as a race occupies but a day; and while he is back attending to the serious occupations of life, the skipper and crew can be hard at work getting the spars, sails, etc., in shape again for the next contest.

One of the pleasures of cruising, if not its greatest, consists in handling and navigating the vessel oneself; entering unknown harbors by the aid of the lead and compass, with the pleasurable excitement of a possible encounter with an unknown rock. The cruising owner is therefore not necessarily unoccupied, as the above duties, together with inspection and care of the vessel, give him considerable employment.

Cruising in company where the vessels really keep together *i. e.*, side by side, is delightful; and only those who have tried it can tell its pleasures. In foreign cruising the utmost care must be taken in provisioning the vessel, as short commons or scarcity of water far from port is a serious disaster.

A sea letter should always be obtained from the Treasury Department; this entitles the bearer to certain valuable privileges in foreign ports, and exempts the vessel from many petty annoyances, harbor dues, etc. Yachtsmen neglect the customary courtesies to our representatives when they visit foreign ports; they should be assisted, and if possible, the officials of the country also should not be neglected. It is not necessary to go into lavish entertainment, but an official visit is often highly appreciated, as it makes a change in the dull routine of their daily lives, especially in out of the way places.

At the request of the committee I have written this resumé endeavoring to reproduce from memory the most salient features and such portions that I deem much interesting and instructive to yachtsmen of my somewhat rambling talk, which I dare not dignify with the name of a lecture.

NEW YACHTS ON LAKE ONTARIO.

THE new classification on Lake Ontario promises to give plenty of racing and some important additions to the fleet this year. The new *Life* boat for the Lake will be owned by Mr. Allan Ames, of Oswego, former owner of the Burgess centerboard Merle, and one of the best sailors on the Lake. She will be in the new 40ft. corrected length class, the same as Merle, the latter being 38ft. 6in. long. Merle is now owned by Messrs. McMurphy and Mickle, of Toronto, being enrolled in the Royal Canadian Y. C., and the old and new boats will meet on water designed this August. It is needless to say that the new Ames yacht will be keel craft and by no means the extreme narrow cutter which has been used to scare yachtsmen away from the new classification. As White Wings has finally been sold, her owner, Mr. Jarvis, of Hamilton, will build a cutter from his own design for the 30ft. corrected length class. She will be keel boat, 27ft. 6in. L.W.L., 8ft. 6in. beam and 6ft. draft. Mr. Jarvis has designed this winter a second *Chaperone* for the owner of the first yacht of that name. Our readers will remember a little controversy with the Boston *Globe* last December over some statements concerning the new rule on Lake Ontario. The sequel is rather amusing; the yachtsman who was quoted by the *Globe* as being prevented from

A Book Warmly Welcomed.

PAWNEE HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

In these stories we find examples of self sacrifice, gratitude, honor, and curiously enough, an idea of the atonement for sin, an intermediate state, and communication between this and the invisible world. Mr. Grinnell's "Notes," as he modestly calls them, are really a history of the tribe, its origin, its relationships, its medicines and mystery, and its present condition and progress. The book is beautifully printed, bound, and illustrated with first-rate drawings.—*Hartford Courant*.

The folk-tales are full of magic transformations and mystery, and they are related with a strong feeling for dramatic effect and often with much poetic grace.—*Springfield Republican*.

The Indian will become extinct or will be civilized. In either case their stories and myths will pass into oblivion. It is well that those of the Pawnees have been rescued and are preserved in this book so that generations yet to come shall read Indian tales as Indians told them to Indians.—*Home Journal*.

Their stories abound with humor, pathos and sentiment. The plan of the book is comprehensive and vividly portrays the Pawnee race from its historic, social and intellectual standpoint. The author has performed a valuable service, and his work will be welcomed and prized as it deserves.—*Magazine of American History*.

It is an important contribution to folk-lore literature that is especially valuable because of the insight it affords into the origin, customs and character of the Pawnee people.—*Philadelphia Times*.

This volume is a novelty and a valuable acquisition to American literature. While volume upon volume has been written of the folk-lore and hero stories of other and distant nationalities, the Indian (except in some fanciful sketches and romantic poems) has been overlooked. And yet the American Indian is the wisest and shrewdest and most manly of all the unlettered people on the globe. This collection, not fanciful, but drawn directly from the Indian oracles, shows that with his heroism and cunning he has wisdom and soul. * * * The volume is charming upon every page.—*Chicago Inter-Ocean*.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

The Most Perfect SPLIT BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY WATERPROOF. This most desirable result is obtained by a new and ingenious device NEVER BEFORE USED IN THE CONSTRUCTION OF A ROD. The Ferrules also are PRACTICALLY DOUBLE, and fitted OVER the bamboo is a WATERPROOF cushion of ZYLONITE, while over that are set the ferrules, thus adding MATERIAL STRENGTH AT THE JOINTS. The mountings are of GERMAN SILVER and HAND-MADE IN EVERY PARTICULAR. In short this is the rod anglers have long wished for. Examine it at any of our stores and satisfy yourself.

PRICE:
IN WOOD FORM.....\$20.00
IN ZYLONITE CASE.....\$25.00

EVERY ROD WARRANTED.

ANSWERS TO CORRESPONDENTS.

THE SPORT EXHIBIT IN 1892.

CHICAGO seems to have made a successful fight in her struggle for the possession of the World's Fair of 1892. The whole country will wish the bustling city of the central West the best of fortune in the big undertaking placed in her charge. It will be of course as great a show as can be put together in the time at disposal, and to this end immediate and active hustling in every direction by everybody concerned is imperatively necessary. The sportsman's side of American life should have an exposition worthy of its importance. It may not be possible to run a trout stream through the exposition grounds, to have a tarpon pond handy by or a bison herd ready for our transatlantic visitors to look at or take a few shots into. It will be possible, however, to make a display of the extra fine wares now turned out from our American factories and placed at the disposal of the world's sportsmen.

In firearms and fishing tackle in every one of the various branches of artisanship which the sportsman puts at his service, our workmen need have no fear in challenging the shops of Europe to a competitive exhibit. All this will fill show cases with interesting matter, but something more is needed. There should be competitions where visitors may see our sportsmen in actual manipulation of these various devices. We may have a casting tournament on a large scale, and in all the varieties of this sport. The dog men will attend to their specialty in a fashion befitting the occasion, and in the use of firearms there should be a programme of events which in after years ought to make the Exposition date a memorable one.

In military shooting we do not stand at the head; our militiamen have not been able to vanquish the Volunteers of Great Britain on their own grounds. Although possibly strict compliance with precedence ought to send a team abroad before inviting visitors here, yet it will be possible by the promise of a return match to secure a representative team here in '92. There should be not only a gathering of teams from the several States, but a national team ready to meet all foreign teams. This in military shooting. In long-range small-bore work, an

American team ought to stand ready, and if the Western men have not the arms nor the skill, they can depend upon a good lift from the Eastern shooters. The German contingent in America ought to give one of the Old Country shooting fests with as much of the festival character as our American temper will support, but with an abundance of the shooting side to show the superb skill of our German-American marksmen.

Coming to trap-shooting, there should be at once an exhibit of appliances in every line, of arms and of men. Live birds there should be in abundance, with plenty of artificial targets to show how well we have supplied a substitute for the rapidly disappearing feathered target. The prize list ought to be commensurate with the occasion and the programme ought to be broad enough to include each and every sort of marksmanship worth encouragement. There is a grand chance to give field sports a big lift in connection with the Exposition, which the whole country will assist Chicago in making a monster one, but no time is to be lost. The announcements have to go a long way and time for preparation is needed. Make up the schedule of events at once, make them ample enough to give everybody a chance to exhibit his skill and put sportsmen of national experience in charge.

BIDS FOR THE SEAL ISLANDS.

AT noon on February 20 the bids for the lease of the seal islands for a period of twenty years were opened at the office of the Secretary of the Treasury. There were twelve bids, of which two failed to contain certified checks for \$100,000, as called for by the advertisement, and one has since been withdrawn, leaving nine to be considered.

The bidding is double in its nature, being on a basis of 60,000 skins per year for the lowest limit, and 100,000 skins for the highest limit. The following bids were made on the bases named: The American Fishing and Trading Company of San Francisco, \$11,044,000 and \$14,340,000. The North American Trading Company of West Virginia, \$8,900,000 and \$14,100,000. The Pacific Steam Whaling Company of San Francisco, \$9,580,000 and \$15,300,000. The Alaska Commercial Company, \$8,800,000 and \$14,000,000. The Atlantic and Pacific Trading Company, \$10,850,000 and \$17,350,000. The North American Commercial Company of Illinois, \$9,652,000 and \$15,340,000. The North American Commercial Company of New York and San Francisco, \$14,004,000 and \$22,604,000. Another bid by the same company, \$12,750,000 and \$20,450,000. Another bid by the same company, \$13,442,000 and \$21,642,000.

All these bids are largely in excess of any rental of these islands previously paid.

On Feb. 28 Secretary Windom directed a lease to be made with the North American Commercial Company of New York and San Francisco for the exclusive privilege of taking fur seals upon the islands of St. Paul and St. George, Alaska, for a period of twenty years from May 1. The directors of the company are Lloyd Tevis, Henry Cowell, Matthias Meyer, and Isaac Liebes, all of San Francisco, and Albert Miller of Oakland, Cal. D. O. Mills of New York is a stockholder of the company. Its capital stock is \$2,000,000.

The company offers to pay an annual rental of \$60,000 for the lease, and, in addition to the revenue tax of \$2 upon each sealskin, it will pay \$7.62½ for each fur sealskin that shall be taken and shipped by it. The company also proposes to pay 50 cents per gallon for each gallon of seal oil; to furnish, free of charge, to the native inhabitants of the islands of St. Paul and St. George, annually, such quantity of dried salmon as the Secretary of the Treasury may direct; to furnish, under the direction of the Secretary of the Treasury, the natives the salt and barrels necessary for preserving meat.

The increase of revenue over that previously received by the Government from the Alaska Commercial Company is not far from \$700,000, but in some other respects the lease is less satisfactory than the one which has just expired, the bid of the new lessees not having been as explicit as it ought to have been with regard to the care to be taken of the natives of the seal islands.

The increase in the amount bid for this lease gives a clear notion of the great profits reaped by the former lessees, who have had for twenty years a monopoly of this business. While the new lessees control the Pribyloff Islands it must be remembered that the Alaska Commercial Company still holds possession of all the Russian

seal islands. Besides this a large number of seals are annually caught in the open sea, and it is quite possible that these three elements may interfere with each other in such a way as to bring down the price of seal fur to such a point that the new lessees of the Alaska seal islands may have to do business at a loss. It is, however, much more probable that these two wealthy corporations will unite to keep the price up for the benefit of both.

SNAP SHOTS.

A REPORT of the fur crop gathered in Maine during the past winter ought to be read by those persons who so often write to us asking where they can go camping in the Adirondacks and Maine and pay their expenses by trapping. It is hardly necessary to say that such questions are usually asked by men who are entirely without knowledge of the trapper's craft. In Maine last season there were caught and killed 236 bears, worth perhaps \$12 each; 22,000 muskrats, worth 16 cents each; 6,500 skunks, 50 cents; 5,300 mink, \$1.15; 900 coons, 60 cents; 3,250 foxes, \$1.40; 730 sables, \$1; 71 fishers, \$7; 96 otters, \$8; 176 lynx, \$3; 5 silver foxes, \$50; 9 cross foxes, \$8; 950 house cats, 15 cents, and 75 wildcats, 70 cents. Maine is perhaps the most thickly populated of the Eastern States. Its area is approximately 33,000 square miles. It requires therefore only a pencil and a small piece of paper to determine the amount of fur to the square mile taken in the State, according to this report, which does not profess to be exact. The results of this figuring gives us one bear to 140 square miles, one muskrat to 1½ square miles, one skunk to 5 square miles, one sable to 45 square miles and so on to the end of the chapter. It takes 9 square miles to produce a dollar in muskrats, 10 square miles to produce a dollar in skunk skins, 45 square miles to produce a dollar in sable—all this provided you are lucky enough to catch them. This fur crop is gathered almost wholly by experienced trappers. Gentlemen who want to go to Maine and the Adirondacks and pay the expenses of your trip by trapping, take our advice and don't.

Shall woman join man in the sports of the field? If shooting as a sport is manly, is it womanly too? When a woman takes to shooting in these days, are we to share the sentiment of an old rhymster who wrote in 1802:

"Since to handle the reins,
Hunt and shoot you take pains,
And act, my dear girl, so uncommon;
I can't love you, I swear,
For your words, look and air,
Make me think you a man—not a woman?"

These questions are answered, and answered quite conclusively, we think, by the relation from a lady's pen printed in our columns to-day. They are not discussed speculatively nor theoretically, but practically by an account of how one woman has actually joined her husband in his outings, and has learned to shoot. And she is only one of a large number of women who use the gun in the field, and find in the sport decided satisfaction.

The results of the pattern and penetration tests of shotguns now being carried on under the auspices of the FOREST AND STREAM, and being published in these columns, will ultimately be printed in book form. Owners of guns, who cannot but feel an interest in these matters, will then have a permanent record of the action of most of the best known makes of guns with varying charges, and such a record will be of the greatest value to all who use the shotgun.

The bill to codify the New York game statutes is advancing at Albany; and there is some ground for hope that it may be passed. No more important measure in relation to game and fish protection has been before the Legislature for years. The passage of this bill, the appointment of a competent committee, and their simplification of the statutes, are all in the line of more efficient conservation of game and fish.

In consequence of the decision of the Court of Appeals in the netting case, both bills relating to nets in the St. Lawrence, one coming from the net fishermen and the other from the Anglers' Association, have been withdrawn. Those interested in protecting the St. Lawrence game fish are of opinion that with the present statute, as upheld by the Court of Appeals decision, they have all the law required.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

IV.—MEAT IN THE POT.

It had been a day quite without excitement and of only moderate work. After having been camped for three or four days at the Upper Lake, during which time there had been much clambering over mountains with very little satisfactory results, the general consensus of the camp was that it would be well to move down to the Inlet. This change of plan had been brought about by the weather. The day before had opened bright and fair and with a strong west wind, which had promised continued good weather. The barometer, however, was falling, and Yo, whose faith in what the Small Chief called his "medicine box" was unfailing, shook his head ominously when he looked at it before breakfast that day. The wind blew harder and harder, and presently the sky became overcast and it began to rain hard. All the morning long triangles of waves came flying up the lake high in the air, and when they reached the Point of Rocks, met with the strong west wind which threw them into confusion and turned them back. They would fly about in an uncertain way, anxiously calling to each other for a few minutes, and then getting together again, would swing off to the southeast or east and disappear over the crest of Divide Mountain. Down on the prairie by the lake shore, grass bushes and trees were dank and dripping with moisture, but 500 or 600ft. higher up on the hillside, among the timber, the ground was interruptedly patched with snow, and higher still, this white covering was continuous until the bare wallrock was reached, where no snow could lie.

About two o'clock the wind suddenly ceased blowing and it became calm. The high sea which was running on the lake fell, and the rain ceased. Looking out of the tent for weather indications, it was noticed that the distant hills about the Lower Lake were obscured by white clouds which crept gradually nearer and nearer.

"We are going to have a north wind boys and with it some snow. Now the geese can get over the range," said Jack.

Slowly the storm approached, until at length the trees about the lower end of the Upper Lake were hidden from view, and there could be seen rolling over the surface of the water a dense white cloud which blotted out peak after peak, and point after point, gradually swallowing up the landscape. As it grew nearer this cloud seemed to move more swiftly, and presently it was upon us.

It came on so fast at the last that, almost before the boys realized how near it was, the fierce blast struck us, and at the same moment a deluge of rain, sleet and snow covered and drenched everything which lay without the tent. Struck by gust after gust of wind, the canvas houses shuddered and flapped furiously, but a man had jumped to each pole of the tent to hold it steady, while another, half covered by a rubber coat, tightened the ropes at each corner, and then at the sides, so that in a few moments our dwelling was as firm as a rock. Meanwhile, however, a crash without announced that the lodge had fallen. The door which faced the wind had been left open, and the canvas having been carelessly pinned down to the ground, a gust had lifted up and overturned the structure. A dash through the driving snow rescued the blankets of the men who had been sleeping in the lodge, and all hands prepared to spend the night in the tent, which luckily was large enough to afford them sleeping room. Toward dark the whirling white clouds of drifting snow gave place to rain, and all through the night when any one of the men awoke he could hear its regular faint patter upon the canvas roof, varied now and then by a rattle of louder, harder blows as a gust of wind brought with it a load of larger drops, which beat fiercely against the tent.

The next day it was clear and warmer. A Chinook had begun to blow, and on the lower level the snow was disappearing. The outfit of the camp was gathered up, and a great fire built, about which were spread out to dry blankets, ropes, saddles and other property. By mid-day the animals had been gathered and tied up, and the loads were being put on the horses, and an hour or two before sundown camp was made at the old spot at the head of the Upper Lake.

Meat was needed in camp. The goat meat was not highly esteemed, and even Tail-feathers-coming-insight-over-the-hill did not care for it. He expressed the general sentiment when, in answer to a question as to how he liked it, he remarked, shaking his head doubtfully, "Well, it *can* be eaten." It is true that we had had plenty of trout and grouse; we had not been brought down to eating bacon; still we wanted some "real meat," some sheep or deer or moose. So two of the old men declared that they would go hunting on the morrow.

Long before daylight next morning the Chief and Yo were stirring, for they proposed to clamber up on Singleshot Mountain to see if they could not find the little band of mountain sheep, which were known to frequent the basin in which Mad Bear Creek rises.

It was just gray dawn when—the horses having been brought in and saddled and breakfast having been cooked—they mounted and rode off up the flat. The trail up to Singleshot is steep, but not otherwise difficult, and is quite direct and gives an easy way through the extensive thickets of close-standing quaking aspens. It is an old trail, too, but sometimes is not used for two or three years, and when it is traveled, it is perhaps only passed over by half a dozen horsemen in a season. The result of this is that in many places it is only faintly marked, and this is especially true where it crosses open, grassy spots. You may find it quite plain in the timber, for even where the track made by the horses' hoofs is covered by the leaves of several seasons, the broken ends of the aspen twigs, pulled off by passing hunters, give you the direction to be taken; but when the riders have passed out into the open, they scatter out, and, each one pursuing his own course, the trail is no longer a beaten path from which the grass and weeds have been worn by horses' hoof. Instead, there are half a dozen faint trails made by single animals, in which the only sign of passage is the bent down grass. Such a trail lasts but a little while, and can scarcely be followed after it is a few weeks old, especially if rain or snow has in the meantime fallen. Besides this, through these open, grassy spots

game has passed. Bear, elk, sheep and deer have made their trails, new and old, in all directions, and it is almost a waste of time to try to puzzle out the ancient footmarks of the Indian ponies that have traversed the meadows.

The two horsemen had not been on Singleshot that season, but when they had nearly reached the mouth of the inlet by the Upper Lake they turned up the hill and struck into the trail, which through the aspens was easily followed. The morning was cold and frosty, and the crisp leaves broke sharply under the feet of the horses, while the slender twigs of the saplings, which, pushed aside by the man in advance, now and then flew back and struck the face of the second, stung sharply and left a red mark on the browned cheek.

Clambering, higher and higher, now lost in an aspen grove, or crossing open grassy parks sometimes strewn with rotting trunks of giant spruce trees, or plunging into a dark grove of pines, the men kept on, until at length they came to the level bench, upon which, at the foot of the talus slope of the mountain, the last timber grows. Above this, rise the rough rocks over which no horse could make his way without constant risk of breaking a leg or tearing off a hoof. Here the men halted, unsaddled and picketed their horses so that they could rest and feed during the hour which their riders would spend on the heights above. Coats and all extra clothing were removed and laid on the saddles at the foot of one of the trees, for in this rough, steep mountain climbing each pound of extra weight counts, and the less one has to carry the easier will be his progress. The last act preparatory to moving on the heights before them was to sit down and smoke; the Chief rolling a cigarette, while Yo whittled some tobacco from his plug and filled his pipe.

When the last fragrance of the tobacco had been wafted along the mountain side and the ashes had grown cold, the men rose, and, taking up their rifles, faced the steep ascent. A climb up a clay bank 200ft. high brought them to the piled up rocks over which sheep trails led along the mountain side. Before they had gone 200yds. they saw the fresh tracks of three sheep which had been made that morning, but it was impossible to follow them over the rocks, and the only thing to be done was to determine the direction apparently taken by the tracks, and to hunt slowly and carefully in the hope that their eyes might be quicker and sharper than those of the game. The men pushed on until they were close beneath the wall rock, and then followed a trail which led up into the basin between Singleshot and Flat Top. As they approached the crest of each little ridge their steps became slower and more cautious, their heads turned this way and that, and their eyes rolled as they scanned each foot of the country, and finally, as the leader came to the crest of the ridge, he removed his hat, and inch by inch raised his head, while his eyes roamed over the area before him, his comrade some yards in his rear waiting motionless until the ground had all been looked over.

If you see two old hunters going out for game in company, you will observe that they never interfere with one another. New men, those who are just serving their apprenticeship, are usually anxious to be ahead. They want the credit of being the first to see the game. They want also, perhaps, the first shot. They do not consider that if two heads come in sight over a ridge, the chances that they will be observed are just twice as great as if only one appears. They seem to think, too, that Providence is looking out for them in some especial way, and that game will be deaf and blind to their blunders, though fully alive to those of others. Old hunters act very differently. It is understood by them that the man who is ahead is to do the hunting. The one behind, while keenly scanning the country to see anything that may present itself, and which may have escaped the eye of his companion, never interferes with him, but awaits his directions. He is ready at a sign to creep up beside his leader and shoot, or he is equally prepared to lie down where he is, and to wait there for an indefinite time, or he will make a long round to start the game by giving it his wind or showing himself to it, so as to drive it in some desired direction. For the time being the man who is in the lead is a commander, and if the two have hunted in company often enough to understand each other, they work together with most perfect system. Another thing that you will notice about two old hunters is that they never try to shoot together at game. One or the other takes the shot, and if it fails, then they do the best they can. They know very well that it is almost impossible for two men to shoot at the same time without each being a little thrown off his balance, and they conclude rightly that, the two being both fair shots, there is more likelihood that one ball from a deliberately aimed rifle will kill, than that two, each of which will be more or less hastily delivered, will reach the mark they are aimed at.

This morning the Chief was in the lead, and his keen eye swept the mountain side before and below him for an hour or more as the two walked slowly along under the frowning "reefs." Eyes and ears were both intent. At length the ringing sound of a rolling rock was heard below them, and at the noise both men stood still as statues and watched the rocks whence the noise had come. For five or ten minutes they stood thus, but no repetition of the sound was heard, nor was anything seen to move on the bare gray rocks. As they slowly went on, Yo saw the Chief, who was at this moment ten feet above him on the slide rock, throw up his rifle and fire a quick shot. An instant later the backs of two animals were seen above a ridge of rock two hundred yards below them. For a moment it was hard to tell what these were. Through some optical illusion, which we have more than once noticed in the mountains, they looked red, almost like antelope. Yo at once pitched his rifle to his shoulder and fired at the narrow line of hair which was visible, but he heard the ball strike a rock and then go singing off across the valley, and knew that he had aimed too low. The back disappeared at once, but the hunters knew that the game would try to run around them and to climb the mountains, and both men hurried forward to cut them off.

It is not an easy matter to run over the loose slide rock. Let any one who does not know what it is imagine a pile of squared paving blocks and building bricks a thousand or two feet high, tumbled down as steep as they can lie, and let him fancy how easy it would be to run along the side of this pile at a good rate of speed. The footing is uncertain and the rocks roll and slide and change their position as the weight of a man rests on them. Slipping, stumbling and half falling, the men ran ahead as best

they could, Yo, who was the lighter weight of the two, being somewhat in advance. Suddenly he saw appear over a ridge before him the head and shoulders of a ewe, and besides her the smaller figure of a lamb. There was no time to waste, as the animals, if they should turn, would be out of sight in a single bound, and balancing himself on the moving rocks Yo fired at the ewe's shoulder. The report of the rifle was followed by a dull sound that indicated that the ball had hit the sheep, and Yo called back, "I think I hit her, Chief. I heard the ball strike." "Good," was the response, "follow her up and see where she is going."

Moving on to the ridge on which the animal had stood when the shot was fired, Yo looked over it and saw lying down, on a rock 300yds. beyond, the ewe, evidently hard hit, while by her stood the lamb. From the mother's actions it was evident that she had received a mortal wound, and would soon die. The Chief crept down the mountain side to within range of the animals and fired at the lamb, but it did not fall at once. The two sheep then got up and turning back walked along the slide rock below the men, disappearing behind a great rock, which the hunters could cover from their position.

It was evident that the two animals needed only to be left alone, and so the hunters sat down and smoked. When this ceremony had been performed they again took up their rifles and began the descent of the hill. Presently they reached a point from which they could see the sheep. The lamb was lying dead, while the ewe still had her head up, but was evidently in the last agonies. In a moment she stretched out her legs, gave a few convulsive kicks and began to roll over and over down the hill, falling at least a quarter of a mile before she stopped against a great stone.

Now followed the unpleasing task of preparing the meat for transportation, and the packing it out to the horses, a labor which occupied the greater part of the day, and during which one of the heavily-laden men fell among the rocks, receiving a strain from which he has not yet recovered, and which threatens forever to put an end to his hunting. At length the meat had all been carried out over the rocks and to the top of the steep bank, below which stood the horses. Down this bank it was rolled, and then came the packing it on the horse which was to carry it to camp. Neither one of the horses would pack meat, yet one of them had to, and the men chose the Chief's mount as the one least likely to prove obstinate. Three times they tried to put the load on the horse and three times it threw itself backward. Finally they blinded and lashed the load on firmly, then removing the blind let it buck. It made desperate efforts to free itself, but the load stayed with it, and finally it made up its mind to carry it. Starting on foot down the steep hill, they made good progress, yet before they had got near the lake level it was dark. Then they got into a dense thicket of aspens, lost the trail, and for some time wandered about trying in vain to get into the open. It was slow, hard and discouraging work, but at last they got out of the timber and on to the level bottom, and about 8 o'clock they reached the camp, healthily tired and ravenously hungry.

Yo.

DUNGNESS—A WINTER HOME.—III.

MENTION has already been made of the records of the old-time Camden Hunting Club. One rainy morning I took up these hunting books and for hours amused myself with their interesting records. Running through all the writings the doctrine of State Rights was seen in the toasts offered at the club dinners. Floyd, the secretary, certainly was an artist, for throughout both volumes are interspersed beautiful colored pen sketches, one drawing showing a deer at full run across a clearing, another one leaping off of a bank into the river. Each account of a hunt is headed with some illustration, showing different phases of the hunts. The old books also tell of still-hunts, as related to the secretary by the members. One still-hunter alone killed three bears in a day, and the same man killed seven deer in twenty-four hours.

As we turn over the pages let us stop at the account of the meet held at Fairfield, July 4, 1887. The afternoon is set aside for the regatta, which will decide the long debated question as to whether Gen. Chas. Floyd's Thos. F. Bryan or Col. Dubignon's Goddess of Liberty is the fastest boat. The first was a ten-oared boat, the last with six oars. The Goddess had run with many swift boats, but had never been beaten; the Thos. Bryan was untied, therefore the Goddess was the favorite with a majority of the gentlemen present. The Thos. Bryan rowing ten oars and the Goddess six (her full complement), started with the tide, and the Goddess was easily beaten by about 30yds, out of 250. The second race was run with six oars upon each boat, and in this the Goddess had heavy backers, some of whom made considerable bets. The boats ran with the tide, and the Thos. Bryan again took the lead and came out ahead with much ease. On their return (against tide) the Bryan was again successful. "The Goddess of Liberty," says the report, "is a remarkably fast boat, and was considered the fastest in Georgia, as she had never been shown the stern of any competitor until the Thos. Bryan encountered her. The Thos. Bryan is the fastest boat I ever saw, and the circumstance of her having taken out four of her oars and then beating such a crack boat as the Goddess proves her great speed; withal she is a superb boat, and those who witnessed her speed would readily risk tens of thousands that she will beat any boat that floats."

The account of this race I have given almost verbatim.

The race finished, we may in imagination see the members walking up the shady avenues leading from the river to the piazza, overgrown with honeysuckle. There they sit, sheltered from the summer's sun, or strolling out on the lawn, lie at length upon the grass, and, while the attendants pass around cool drinks, talk over the race. Along toward 4 o'clock, when the cool air comes up from the river, the long table is set upon the lawn and decorated with roses and flower of the sunny South. The old oaks gracefully bend their limbs, and swaying backward and forward the moss seems to fan the guests; the magnolias glisten, and from bough to bough flirt mockingbird and oriole.

As the wine is passed freely around and the good old Madeira loosens the tongue, the president, C. R. Floyd, is called upon for the first toast, the sentiment of which I find recorded in these words:

The curse of posterity is the sure reward of an infamous reputation, but it is too light and slow in its reproach for the baseness of apostasy in politics. The punishment of a Judas should be immediate, corporal and severe.

Whom he meant I know not, but at the time perhaps there was on the minds of all something which thus found expression. Then these other toasts followed:

Vice-President B. Hopkins—Proscription as practiced by the present Administration—A prelude to despotism, a practice incompatible with the free character of our Government.

General John Floyd.—The Federal Constitution—The reserved rights of the States, safeguards of the Union, we will defend them at every peril.

Doctor Turner.—The heroes who have made this day the festival of liberty, the noble nullifiers of America.

James Holzendorf.—Georgia—A young giant, rich in all the materials that constitute greatness, but misguided at present by evil counselors.

P. M. Nightengale.—The Day—It gave birth to liberty. Let the recollections of the deeds of our fathers, which it recalls, teach us to protect the rights they bequeathed us.

John Dilworth [J. D.'s father].—The Presidency of the U. S.—Most of the aspirants to that exalted station have sufficient talent, but insufficient virtue.

Thos. E. Howden.—The want of sense, or want of valor, or want of office, has caused the desertion of our old friends, the "Union Troop Men," who have gone over to the standard of the enemy, the Clarkites.

Thos. E. Howden (a guest).—The patriots who will not only talk in defense of liberty, but will fight for it.

Henry Floyd.—The successor of Gen. Jackson—Nobody rather than Hugh L. White, and the devil rather than Martin Van Buren.

Geo. W. Thomas (a guest).—The Camden Hunting Club—Not only invincible in the chase of wild deer, but our forest, but would be in the chase of the enemies of our country.

Dr. C. P. Cohen.—The hero of Camp Defiance and Antioch—He still lives a noble champion of State Rights, that at sixty years old with the unimpaired courage of a soldier would be an efficient volunteer to defend his country from foreign or domestic usurpation.

R. L. Floyd (Sec'y).—France.—The birthplace of Lafayette, the land of chivalry and glory; may the paltry dispute existing between her and the United States be soon consigned to oblivion.

Edward Aldrich (a guest).—Martin Van Buren—He is too small both in body and soul for the Presidential chair. The nest of an eagle should be filled and only by an eagle.

So felt those Southern gentlemen in those days which now seem so distant in this swiftest of all centuries.

And so my morning passed in reading those interesting books telling of hunts long ago. G. F. BLANDY.

Natural History.

NOTES ON THE WOODCOCK.

PROGRESS, N. C., Feb. 28.—*Editor Forest and Stream:* In November I wrote you quite a lengthy article on the ways of the woodcock, and at that time was not sure as to their having a note in spring or the mating season. I have been down here with a party of friends for two weeks; we have found woodcock very plenty on our daily tramps, and as it is in the height of their mating season I have taken a good deal of interest to look over every place where I started one to see if it had bored or was nesting. We find them in old fields and in good feeding grounds, also in small thick brush on the edge of heavy timber and near an old field, about the place they usually nest in. I don't think we have started at any time through the day a male bird; I can tell them as they are all very large, and on a number of occasions I have seen them sitting on the ground in front of my dog. I think on every occasion they had seen the dog; and they were lying quite flat on the ground. I have not seen any place that looked like a bore hole, and in all I have ever seen here in spring or fall I never have seen where one bored.

I have taken considerable pains to watch them at sunset to learn, if possible, if they did have a song or note which I was not sure of before. I am now sure they do have a note; and to my surprise it is a very fine one. I hardly know which of our song birds to compare it with, but think it very much like the catbird's or brown thrasher's. If any one ever took notice of those birds' songs, about the time they end up their song they make a very fine warble or water note, something like a canary, but not quite as fine.

I have watched and listened to the woodcock for a number of evenings, and have been much pleased by their queer actions. They begin sharp at sunset and seem to keep it up until daylight. This I suppose accounts for us never starting the cock bird through the day, as it seems to be the cock bird that does the flying and singing by night. His spiral ascent is not as straight up as it has been represented. He will leave the ground and fly in a circle of ten or fifteen acres, making the circle smaller each turn, until he reaches a height of some 200ft., all the time making a very uneven twitter with both bill and wings. Then, when the descent begins, he begins his warbling, which, I must confess, is more than I ever believed of him, although I have watched the birds many times, and his song is very sweet. After reaching the ground, which is always on a smooth place clear of grass or brush, he sits still for a few seconds, then begins to cry *spate* or *skape*, I hardly know how to describe it. It is very much like the snipe, only much louder, and it is not strange to hear five or six at a time from the house through the evening and up to midnight, in fact until daylight. Every time he makes the cry *spate* or *skape*, just before it he makes a clucking sound, like a man hiccupping, or something like a cuckoo, only much lower. I watched one last evening, in company with Mr. A. B. Simonds, and it lighted within 10ft. of me once, so I had a good chance to note its actions and hear the sound produced before it made its cry. Later in the evening Mr. R. C. Cornell went out with me to listen to the cry it makes.

Any one wishing to study the woodcock in the spring or mating season can do so here better than any place I have ever seen. And it looks now as if they would breed here this season quite plentifully. I am very sorry to say that some of the so-called sportsmen from the North are here quail shooting, and are killing all the woodcock they can find. When Mr. Cornell protested against it to the High Point hotel keeper that gentleman made the reply that he would open the next lot that were brought in and see if they did have eggs in them. I am sorry to know that we have sportsmen who will kill woodcock in spring, and am sorry to know that such men as the above are allowed to run hotels and encourage the killing of them with eggs in them. T. M. ALDRICH.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.

NEW ARIZONA MAMMALS.—Article XX. of Volume II. of the Bulletin of the American Museum of Natural History contains descriptions of Supposed New Species and Sub-Species of Mammals from Arizona, by Edgar A. Mearns, Assistant Surgeon U.S.A. The author describes a new sub-species of *Sciurus ludsonius*, one of *Fiber zibethicus*, two of *Hesperomys leucopus*, one of *Sigmodon hispidus*. He also describes the following new species: *Arvicola mogollonensis*, *Dipodomys merriami*, *D. chapmani*, *Lepus alleni*, *L. melanotis* and *Cynomys arizonensis*. Dr. Mearns is an enthusiastic naturalist, and his long residence in the Western mountains has given him exceptional opportunities for pursuing his favorite studies.

EVENING GROSBEEK IN PENNSYLVANIA.—The evening grosbeak (*Coccythraustes vespertina*) has recently been taken in Pennsylvania. A few days ago, when visiting in Warren City, Warren county, I received an adult female of this species taken Jan. 22, in a small grove near Warren. Mr. H. L. Greenlund, a taxidermist of Warren, who presented the grosbeak to me, said it was shot by a hunter, who informed him that it was sitting in the top of a cherry tree, and that no other birds of this species were seen by him. From advices I have received from different persons in the northern tier of counties in our State during the past six weeks, I infer that the evening grosbeak has been seen in at least five or six different sections of northern Pennsylvania this winter.—B. H. WARREN, M.D. (West Chester, Pa., Feb. 9.).

BLANKS FOR ORNITHOLOGISTS.—The Division of Ornithology of the U. S. Department of Agriculture has sent out to ornithologists blanks to be filled up giving the names of those species of birds known to breed in any locality. All observers who are willing to fill up such blanks can obtain them on applying to the chief of the Division which issues them.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two St. Thomas cougars (*Coryus xantholepis*), one ground dove (*Chondestes passerina*) and one yellow-shouldered amazon (*Chrysotis ochropus*). Purchased—Two opossums (*Didelphys virginiana*), one mockingbird (*Mimus polyglottus*), one great-horned owl (*Bubo virginianus*), one American crow (*Corvus americanus*) and two alligators (*Alligator mississippiensis*). Born—One brush-tailed kangaroo (*Petrogale penicillata*) and one black bear (*Ursus americanus*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLGOM 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENE 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENE 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

FARMER AND SPORTSMAN.

REMEMBER having had a good many talks with old ranchers in the course of my tramps over the California hills and marshes. It is seldom that one cannot persuade a farmer into a better opinion of the man who carries a gun and obeys the game laws cheerfully, instead of trying to evade them. Sometimes, however, you meet a man who attributes all his agricultural mishaps to the close season. It is the quail, not the field mice, wood rats and ground squirrels, that destroy his grain; the wild pigeons, not the bluejays, spoil his apples and pears. The man who owns a small vineyard suffers more than horticulturists from small birds and animals, and it is very difficult to educate him into right distinctions. He often finds game birds in his vineyard, hunting insects, picking up grass and weed-seeds, and they are all one in his mind with the fruit-eaters.

The California quail eats a great deal of grain from neglected, unthreshed fields in the foothills. Ranchers often cut their wheat and barley and let the bundles lie unstacked for weeks. Flocks of birds come to the feast, of course, but the bulk of the loss is due to the rodents, the rats, mice and squirrels. Even stacked grain suffers heavily from them, while it is safe from the quail. The quail is shy about going into the open fields, and at all times an investigation of his crop shows that his chief food is wild seeds. But the worthless ground squirrel often carries half a peck of wheat to his hole, and he will make trips half a mile into the field. Prompt harvesting is the remedy.

The newspapers report "destruction of crops by game," almost every autumn. Investigation generally shows that everything wearing fur or feathers has been included in the term. The agricultural papers usually add to the clamor, and "darken counsel by words without wisdom," until it is no wonder that beneficial legislation is so often opposed by rural communities. I used to hear an old gardener say that he wanted a "pamphlet of about twenty pages written on weeds and useful plants for the public school children to study." In like manner, I may add, a brief pamphlet on birds and small animals, written from careful observation of their habits, ought to be published for the schools of every State.

A discussion has just arisen in California over the proposed introduction of Mongolian pheasants from Oregon. Senator Sprague, of Yolo, has arranged to have a hundred pairs brought down this spring, and distributed. The farming interests demur, and say it will be as bad a mistake as the unfortunate English sparrow investment. The Academy of Sciences, in San Francisco, join in the opposition. The *Rural Press*, a very sensible agricultural journal, leads the objectors, "in the interests of the grape growers." I know little about the pheasant in question except that it has multiplied marvelously in the southern Oregon foothills, and pheasant shooting is now a much advertised attraction to visitors to that district. But I know pretty well the situation respecting this, or any other proposed introduction of game—everything depends upon where the game is to be turned loose.

"Bob White" quail and wild turkeys are to be brought here from Texas this year. For both these birds, as with the pheasants, hundreds of localities can be found where

no objections will ever be raised, and where they will have undisturbed opportunities to increase. In the mining and grazing districts there are immense areas of rolling hills and high mountain ranges, partly timbered, partly open, which can never be utilized for purely horticultural purposes. We can safely introduce all the game birds of similar climatic range into such districts, without raising the troublesome question which too enthusiastic men sometimes create by overstocking small woodlands in thickly settled agricultural districts. In these wilder regions game does not injure the value of any vineyards, grain culture is not profitable, grass and clover, dairying, stock raising and mining being the industries followed. The home gardens can always be protected from invasions.

Fortunately California is so mountainous that only one out of the fifty-three counties lacks "wild country" where small game thrives, and new species can be introduced to the entire satisfaction of the whole community. In the rich, thickly settled orchard districts, it is of course difficult and often inadvisable to keep preserves. I always advise my sportsmen friends to buy cheap, rough, partly wooded land now, while it can be had at Government prices, rather than to overstock small valley farms.

Of course there will always be some birds left in even thickly settled valleys. Many a young farmer in California has discovered the trick. Here, on Alameda Creek, within thirty miles from San Francisco, in the open valley, where land is held in farms of from ten to a hundred acres, and is considered worth \$500 an acre, there are some men who can shoot a few dozen quail on their own land every autumn.

I talked with such a farmer the other day, because I saw a flock of about a hundred quail scudding through a willow copse by the creek.

"Don't any one else shoot your quail?"

"They hardly ever get off the forty-acre farm. This is the only place near that has any quail left. I kept the half-acre of willows and they run in the orchard, the pasture lot, the weeds on the bottom and the fence corners. At night they fly into the pecan trees on the avenue, near the house. If a dozen birds are left over the stock keeps up. I never miss their keep."

"Tame? Not very. They keep out of sight a good deal, and after one or two shots they develop more tricks on this farm than I ever saw on hillside hunting. That whole flock will scatter, creep apart a while and then fly in radiating lines, never in bunches. You pick them up, one at a time, and trot all over the place. I have had 200 on this little farm in a good year."

"Could anybody breed them? No, I think not. That willow bend suited them years ago. If my farm was exactly like all the other farms, I couldn't keep them at home. But if I had no natural attractions on the place I should try to plant a bit of rocky copse and give them a chance." CHARLES HOWARD SHINN.

ODDS AND ENDS FROM CAPE COD.

THE winter on Cape Cod has been wonderfully mild. To-day the thermometer marks 50°, the southerly wind is without a chill, and the blackbirds—which I have seen every few days all winter—are whistling in the bushes which skirt the marsh. The quail and partridges have wintered well, and the unusual season has kept the robins and doves here in unusual numbers. The brant are in great flocks, and the bars off Dennis are almost black with them. Where are Mr. Hapgood and the Chatham branting clubs? Our New England spring will not give them such pleasant days as these.

The ease with which brant can be tamed after capture is surprising. A few years ago I had several which I had wing-tipped and caught. In a day or two they lost all fear and ate corn from my hand. They were kept on the shore in a woven wire pen, which ran down into the water. After I had had them some months a gale carried away the cage, and though the birds were frequently seen I could not recapture them.

During the open season, which has just closed, there were not as many quail and partridges killed as usual. The best score I have heard of was made by Mr. Joseph Nickerson, of Hyannis, 78 quail and 22 partridges. He was in the field two or three days a week throughout the season. The same gentleman shot a cock pheasant which had strayed from Mr. Cory's preserves on Great Island. It is a beautiful bird, and has been handsomely mounted by Mr. Swift, of Falmouth. Black ducks and whistlers are scarce compared with previous winters. The weather has not been hard enough for them. Sheldrakes have been here since October.

I have a couple of beagle pups by that grand field and show dog Frank Forrest. I have been training them, and they are worthy of their sire. Though not yet nine months old, I have shot a number of hares and rabbits ahead of them. One hare was followed for three hours in a style worthy of old dogs. The pups hunted when they were six months old. The increase of white hares on the Cape is worthy of note. Last season, hunting with an experienced dog, I shot one and started two more. This year with my pups I have shot six and started a number of others. Friends of mine in Barnstable and Plymouth say they are increasing and spreading down the Cape.

While hunting the other day I saw a course run which would have delighted the votaries of coursing. I stood on the shore of a pond about a hundred yards from an air hole. A hare came cautiously upon the pond to drink. The ice gave way and for some minutes he struggled in the water. Finally he crawled out and sat up to look about him. He caught sight of me, and away he went over the ice, running as easily and swiftly as he would on the shore. Down the pond he sped, and was about to disappear in the bushes when a small black animal—a mink, I suppose—darted out from the shore. In an instant the hare turned and up the pond he came even swifter than before. No greyhound ever worked harder than that mink, and the hare knew his life depended on his speed. They fairly flew over the ice. Here was coursing worth seeing, and such as I never heard of before. For a quarter of a mile the race continued, and then the hare disappeared on the shore, closely followed by the mink. Did he catch him? BRADLEY.

CAPE COD, Feb. 1.

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

ANTELOPE IN KANSAS.

SIX years ago last Thanksgiving eve I camped at Sand Lake, fifteen miles southwest of Cimarron, at sunset, slept the sleep of the just; and on Thanksgiving day killed by fair stalking four antelope and packed them into camp by dark. Just as I got my last load in, Tracy came in with four more in our camp wagon. We started for home the next morning, and when I got there I found a brand new girl baby that had come as a Thanksgiving present. That was the best Thanksgiving day I had ever had and I have seen forty.

The next spring, the mad rush of men to take up claims in southwestern Kansas set in, and the small towns along the A. T. & S. F. R. R. were like mining camps so far as business was concerned. The settlers came, the antelope decamped for the south and southwest; and we, the original settlers, made money and were so busy that there was no time for hunting except an occasional day stolen from business, when about all we got was exercise and an appetite. But for the last year the claim holder has departed almost as rapidly as he came. Towns of twenty to a hundred houses are almost deserted. Sod houses that were scattered all over the prairie are unroofed and the walls have tumbled down. The claim holder has hitched up his thin horses and pulled out for Colorado, Missouri or Oklahoma, and where there were fifty or a hundred families in a township of six miles square, in most of them there are now only three or four. But though it is sad to see a country depopulated, we stagers derive some consolation from the fact that the antelope are coming in again from the south, not singly but in goodly numbers; and I can once more hear the bark of the coyote from my door in Cimarron, a town that boasted of its 1,500 inhabitants two short years ago. Why did the claim holders leave? Well, the average 160 acres in southwest Kansas will not support a family, and they froze out.

Last week I concluded that I would see if I could not find an antelope near Sand Lake, and I commenced preparations for a three days' camp hunt. My hunting buggy was oiled. Tent, camp-stove and blankets were put in. The .45-90 Winchester and cartridges, the field-glass, the picket ropes and horse feed, and my old catch dog Bob were all bundled in; and John and I sneaked out of town rather quietly, as I was not certain that I could find or kill anything; and I don't like to advertise a hunt beforehand. Across the Arkansas, over the flats and we were lost to sight in the sandhills. We drove regardless of roads through the most likely places for antelope for four or five hours, and just before evening sighted a bunch of twelve on a sidehill shining white in the sun about two miles off. We drove as near as we could out of sight, taking advantage of a low ridge, and then got out, and picketing the horses, made a stalk. I tried my best, but either I am not so good a hunter as I used to be or something happened, for when I peeped over the knoll expecting to see them within 200 yds., they were going straightaway on the full run a mile off, heading straight west. It was almost sundown and we went back to the buggy and drove to a deserted claim, where I knew there was a well. The well was no well-roped nor bucket, but I drew water with a pail and a picket rope for the horses, and made coffee strong to kill the musty taste of the water for ourselves. We soon had the tent up, the lantern lit and a good supper ready.

I lay awake a long time after we had lain down, for it is a year since I have been out like this, and there is something in the hearts of some men that makes them like solitude. We were twenty miles from nowhere; we cared for nobody and nobody cared for us; and the coyotes sat around and discoursed sweet music several times for a half-hour or so at a stretch, much to Bob's disgust, who wanted to go out and tackle them. About daybreak I was awakened by John, who was getting breakfast, and singing an original song. John is a poet and has suffered from land locators. He composed the doggerel to relieve his feelings, and occasionally warbles it. The song is set of the tune of "A Rambling Rake of Poverty, or the Son to a Gambolier." He calls it

THE SQUATTER'S LAMENT.

When I got off at Cimarron

An agent took my hand.

He said, "As a land locator

I am at your command.

The finest farms in Kansas!

Lie spread before your view,

Come with me in my buggy,

I will show them all to you."

He took me through the sand hills,

Conveyed me o'er the plain,

Until at last he showed me

That banner timber claim.

And then he traded with me,

And me located pat

Some forty miles from water,

On the dreary Wild Horse Flat.

He took away my money,

Likewise my watch and chain,

And all that he has left me

Is this doggone homestead claim.

It's two hundred feet to water,

It's two hundred miles to wood,

I've a cracker box to sit on,

And musty pork for food.

Now, boys, when you come out here,

Take this advice from me,

Just bring your shotgun with you,

And watch agents carefully;

Or else they'll grab your money,

And locate you down pat.

Beside me in my solitude

On the dreary Wild Horse Flat.

I often sit on my cracker box,

And warble at my song,

But I think the land locator

Has treated me quite wrong.

So think of me with sorrow

As I eat my sour dough bread.

To hold down a claim in Kansas

Is worse than being dead.

The monotonous grinding of the coffee mill and John's song at last restored me to full consciousness, and I got

up with a grunt and proceeded to feed the horses, after a very slight dip in the musty well water. We sat down to eat breakfast. I was sitting with my back to the door, John with his face to it. Suddenly he stopped eating and said, "Look!" I looked out, and on the brow of the hill, about a quarter of a mile east, were fourteen as fine antelope as I ever saw, headed by an enormous buck, so big he really looked vicious. They disappeared over the ridge, and it was the work of a moment to drop tin coffee cups and grab guns. John said, "We don't have to hunt 'em, they come to us." We started on a trot after them. Just before we got to the top of the ridge we dropped and crawled about 100 yds., peeped over, and there they were, the nearest not more than 100 yds. from us, feeding quietly. I could not get a good shot at the old buck as he was feeding straight away, at about 200 yds.; but there was a two-year-old which presented me a nice mark at about 125 yds. We both took good aim, John said "Ready?" I, "Yes," he, "Fire!" and the two guns made one report. I saw my buck wilt and then fired twice at the old buck as he ran over the next ridge, but did not touch him; twice more at the bunch; and one dropped out and the rest disappeared. I then ran for my buck and found I had forgotten my cartridge belt and knife, so I bled him with a small pocket knife.

John had bled his, a large doe, and we ran for camp, not stopping to disembowel the game, hitched up the horses, chucked Bob into the buggy, and started for my wounded one. We saw him, after we got about a mile from camp, traveling slowly in the direction we last saw the herd. He did not see us till we got within 300 yds. of him and then I let Bob jump out of the buggy; and of all the races I ever saw that was the best. There was a good deal of vim left in the antelope. The dog is eleven years old and badly bunged up by wolf and coyote fights, and it was nip and tuck for a race of two miles, the horses on a dead run and both of us yelling to encourage old Bob. Finally Bob got there and grabbed the antelope by the hindleg, threw him, and in a second had him by the back of the neck. By the time I was out of the buggy to help the dog he had it dead, and almost smiled as I came to him. The antelope had been shot through the paunch. John says he hit him, I think I did; but as I can't prove it we call it a draw and drive slowly to camp, picking up our other two as we go.

It was now about 10 o'clock and we had only begun breakfast when the antelope caused the stampede, so we cooked breakfast over again, and then debated whether to hunt more or go home. We had enough meat, the water was poor and Bob was too slow for a catch dog, so we went home with the antelopes' heads ostentatiously hanging out over the tailboard.

As we drove up Main street half a dozen stopped us, and almost all remarked: "I wish I had known you were going, I would have gone with you." The meat is all eaten up and I am going after some more to-morrow.

CIMARRON, KANSAS.

KENTUCKY QUAIL NETTING.

Editor Forest and Stream:

I noticed a piece in FOREST AND STREAM Jan. 30 headed "Kentucky Fish and Game Club." I am no member, but mean to be when I get the conditions and requirements of membership, and wish you would send them to me. I have a matter or two that should be laid before the law committee of that club. The netting of quail in some of the mountain counties of Kentucky is followed by a good number of the residents, and if continued it will surely lead to the extermination of that favorite bird.

I spent ten days in the month of December, 1889, in Laurel and Clay counties, hunting quail. As for Clay county, I am not prepared to say whether or not netting is followed, but there is an abundance of quail there. An average shot can bag from 20 to 40 or 60 per day, with good dogs. Laurel county is overrun with netters. During my stay in the county, while hunting I would naturally inquire for the best quail country, and would hear from all sides, "Well, there were several beves around here, but Jim—or John—caught them all the last rain."

The past warm and rainy season was favorable for netting, as a warm, rainy, drizzling day is preferred for the business. I went to one man's house in Laurel county, and he came in at noon with, I suspect, 150 quail. He caught them so fast with his nets that he hadn't time to count them. Result of one-half day's netting. I offered him ten cents apiece to turn some of them out and let me shoot at them, but he refused by saying, "I can ship them and beat that price all to pieces." Ask that man if he likes to hunt and he will tell you "No indeed, but it's such an easy way to make \$15 or \$25 on rainy days when the boys want a little fun." Yes, fun, not sport; but the love of the almighty dollar is what induced him to go out and the only pleasure he enjoyed was the anticipation of his returns when he shipped the result of his day's labor. When the quail are all gone that class will get into other paying business.

And you, dear lover of the field, stir up and go to work. The "golden era" of your happy life is fast passing away, and our game will soon be gone; yes, gone for ever, and what will be left for the sportsman? Shooting at flying clay is not field sport. What's to be done with our fine pointers and setters when we fall back on clay-pigeons altogether?

So far as I know those parties may have been violating the law. I saw not less than one hundred quail traps on the trip. The residents informed me that they often trap the whole bevy. The law is violated in various ways. For instance, you go to Laurel county and get the confidence of some good resident, and bring up the subject of shooting quail in the summer time, when you can hear Bob White whistling from the top rail of a fence, and if you will yarn to him some things you have done in that line, nine of every ten will tell you how many he shot last summer with his rifle or pistol. A nice time for slaughtering parents. In fact, the people out there don't seem to know there is a game law, and I doubt if, with the exception of a few about London, a man can be found that knows when the season opens or closes. The Kentucky Fish and Game Club is the "right thing in the right place," and when it gets under full sway the market hunter won't have such a hankering after a little fun on a rainy day.

There is another noble game bird that is already well-nigh exterminated, that was formerly abundant in parts of Kentucky. I do not know its scientific name, but it is known as pheasant in its range. A few years past I

was fishing on Laurel Fork of Rockcastle River, Jackson county, Kentucky, in May, I believe, and I saw a number of persons hunting them and was told they are killed all seasons of the year. They are hunted with any kind of dog, and when flushed by a dog take to the nearest tree, where all of them can be bagged, as they will not fly from the report of a gun. Such game is truly worth protecting.

None of the above is written through any malice toward any of the followers of these methods, but because I feel a deep interest in the protection of our game, and especially our small game, for as everybody knows there are parts of Kentucky that would be dead as regards game if it were not for the small remnant of quail that has been spared on account of the present fragile laws. The mountain counties of Kentucky can boast of their numbers of quail; and if anybody wants a pleasant outing and any amount of mountain air, water and quail, let him go to Laurel or Clay county and he will be surprised to find how clever and whole-souled the people are; and his board bills will not exceed 25 cents a day.

The Blue Grass region has well nigh quit making any pretensions as to game. We have plenty of cottontails, foxes and corn bread. Long ago, when the good old farmers drove their hogs on foot to South Carolina, a good portion of the Blue Grass region of Kentucky was a rich maple and oak forest; and in those good old "honest days" she stood at the head of the list on game. It was here that Daniel Boone struggled with the blood-thirsty red man to obtain his choicest hunting ground. By and by old Dan became the happy possessor of that beautiful country and his fellow creatures flocked to the "great hunting grounds of Kentucky."

But alas! The once cherished game and the stately forests are gone forever, and fine short-horned cattle and the fastest trotters in the world graze over the same rich soil that once supported large herds of deer and a good number of bear and other wild animals. The country is still dotted with old sugar camps, which are perhaps the only heritage of the once happy times that used to be prized by our great grandfathers, when they shouldered their old flint-lock muskets and enjoyed the sport and pleasant pastimes that you and I love.

"Unmolested roved the hunters,

Built the birch canoe for sailing,

Caught the fish in lake and river,

Shot the deer and trapped the beaver;

Unmolested worked the women,

Made their sugar from the maple,

Gathered wild rice in the meadows,

Dressed the skins of deer and beaver.

And the wedding guests assembled,

Clad in all their richest raiment,

Robes of fur and belts of wampum,

Splendid with their paint and plumage,

Beautiful with beads and tassels.

First they ate the sturgeon, Nahma,

And the pike, the Maskenozha,

Caught and cooked by old Nokomis;

Then on pemican they feasted,

Pemican and buffalo marrow,

Haunch of deer and mound of bison,

Yellow cakes of the Mandamin,

And the wild rice of the river."

RICHMOND, Ky., Feb. 8.

QUAIL SHOOTING IN NORTH CAROLINA

Editor Forest and Stream:

I read a letter in this week's issue on "Quail Shooting in North Carolina," in which the writer perverts facts in a great degree.

In the fall of 1888 I wrote you to post me where I could find a few weeks' good shooting on quail or any other game. You answered that Tarboro, North Carolina, was an excellent place with any quantity of little brown beauties to be had for the shooting. I went there, and found that that town contained a little army of sportsmen very fond of gunning, each and every one of them being the possessor of from one to three fine pointers or setters, well broken and nearly all retrievers. Several of them volunteered very kindly to pilot my friend George and myself to the best grounds in that immediate neighborhood; but our first afternoon was spent with only two coveys found and four birds and one rabbit killed—rather discouraging to start with.

The next day a gentleman from Boston led us to believe he could find half a dozen coveys within half a mile of town; but in this case we also met with a disappointment, as our dogs only pointed one broken bevy of six birds on the edge of a very thick wood of tall pines, from which we dropped two birds, that were handsomely retrieved by a pointer bitch (within a week of casting her puppies), and after about six hours tramping through stubbles, grass, briars and low brush, we gave it up in disgust.

The same evening we took a train on the Tarboro & Hamilton R. R. for Hamilton, distant twenty-one miles, which we reached in seven hours—a high old road I must say. On the next morning two gentlemen of the village, Dr. Clarke and Druggist Robinson, both splendid shots, took their two red Irish setters and a Gordon to a place about a mile off, where we enjoyed some splendid sport, as the birds were quite numerous, with extraordinarily large coveys, from which we bagged over fifty head in less than three hours.

I read in a Western paper last August that a party about one and one-half miles from Lincolnton, N. C., owned a plantation of 700 acres actually alive with quail, rabbits, gray foxes, possum and coon (plenty of black coons), some wild turkeys and an occasional deer; but as a Pennsylvania gentleman, who was pulled by the same string, expressed it, the only deer was Mrs. Alice herself. However, when we reached there the 700 acres dwindled to 400 and there could not be found there three beves on the whole domain, so we were compelled to hunt elsewhere. About three miles in an easterly direction lay a farm belonging to Mr. W. H. Coleman. We called upon him and he gave us *carte blanche* on every acre he possessed. While we were having a good time on Mr. Coleman's ground he (Coleman) and Mr. P. D. Hinon, of Lincolnton, who came down with us, met with Coleman's next neighbor, Louis Sherral, and obtained leave for us to hunt his grounds. On the following day we went there. We had not been more than half an hour on Sherral's grounds when he approached and ordered us

off in a violent manner. I expostulated, at the same time reminding him that he gave permission on the previous day, but it was no go; so I told him I would walk over his grounds and perhaps something else if he annoyed me any further and that I would go the nearest way I knew off his grounds.

On the following Monday I went down to Mr. Coleman's again and had a lively time for a couple of hours, but the weather became quite disagreeable, hail and rain falling at intervals. We were compelled to return about noon, and in passing through town to our boarding-house I was hailed by a constable who had a warrant for my arrest for trespassing on Sherral's grounds. These grounds had been posted some ten years ago, but not a single notice could be seen anywhere, nor was it fenced in accordance with the statutes of North Carolina.

A new judge had been recently appointed and as yet had not tried a case. When I appeared before him, he was highly incensed against the complainant who he said was under the impression that if imposed, a fine would fall to him; but a lawyer soon disabused him of this hallucination and he proposed that I should pay whatever costs had been so far incurred; and not desiring to waste my time in useless litigation, I paid \$3.95 costs and went on my way rejoicing that in all that community there was not a single man who did not condemn Sherral for his contemptible action to me.

"W. H. K." states that I was a resident of New Jersey, but that is another of his canards which is scarcely worth correcting. The shooting in the middle of last November was not half so good as your correspondent leads us to believe at a more recent date. If there had been less traps and snares set on Sherral's place it would have been the best I met with on my Southern trip. During my two weeks down there, two-thirds of the time was spent indoors, owing to the unprecedented weather; hail, rain and snow. Something new to the oldest inhabitants of that locality. P. K.

BROOKLYN, N. Y., March 1.

[P. K. appears to be the person referred to by W. H. K. as "one Shelly, a native of the North."]

WOLVES IN THE ADIRONDACKS.

Editor Forest and Stream:

For the past six years I have during my outings visited the West Canada Lakes in the Adirondacks. They lie among the peaks of the Blue Ridge, a line of mountains seen south of the Raquette; are over twenty miles from the nearest settlement, and are about equi-distant from the Raquette, Fulton Chain lakes and Piseco Lake region. They are very seldom visited, and certainly from the best evidence obtainable there is a pack of wolves which have made their home in the vicinity for several years.

Louie Seymour, a French Canadian guide, has made his home winter and summer for the past six years on the shores of the "Big West." He has frequently met the pack, and has numerous stories to tell of their destruction of deer and other game; but what he seems to care most about is the impossibility of his keeping a dog but a little while, as the wolves kill them off. At first he thought his dogs got lost by following deer into other territory, and then were taken in by guides finding them, but now he has the best reason to believe that the five dogs lost each year, 1888 and 1889, were killed by wolves.

Mr. Robinson's Antoine reminds me so much of Louie that in reading his interesting and life-like stories of Vermont fishing I see French Louie always before me; and if I only had Mr. R.'s wonderful gift of writing the broken Canadian *patois*, I could entertain your readers with some interesting stories of adventures of Louie's long winter's trapping in the lonesome wilds, which helped to entertain us before the camp-fire every spring.

Three years ago this winter, Louie returning alone on snowshoes from his long line of traps—extending from Trout Lake outlet around by Moose River Indian Clearing to Silver Run, thence back by the Cobble's Stream to East Lake—reached the lake just at dusk, and rounding the point on a run so as to reach his shanty by dark, came suddenly on a large buck just run down by the wolves. They had cut his throat and drank his blood when Louie's yelling scared them away. He was only armed with a club and bowie knife, and having no meat at his shanty he succeeded in keeping them off till he cut out a hind-quarter, then he made for his shanty, got his gun and lantern and went back to kill the wolves. Though he was gone but an hour, when he got back to the deer nothing but well picked bones were left. Now, many will say Louie and his dog would have eaten as many deer during the winter as the wolves, but that is nonsense. I have no doubt Louie has venison most of the time during the winter, but one deer would last him two weeks and a pack of wolves will average one or more per day. And I think our legislative committee to codify the game laws should put a sufficient bounty on wolves to exterminate them inside of one year.

Now for my proof that wolves kill the dogs. A year ago last fall (better not name the exact date as probably it was after time for hounding) a guides' party was made up at Lake Pleasant to hunt at Big West, to lay in their winter supply of meat. Among them was Benage Paige, an old guide known to every one that ever was at Lake Pleasant. He had old Music, his famous deerhound, with him. Between Big West and South Lake is South Mountain. Landing at the old "Chi Phi Camp," Benage, in the swale back of camp, started Music on a fresh track. Snow was fresh and some three inches deep. The track swung right up the mountain through the open hardwood timber, which lay for nearly half a mile like a park, giving full view of the dog, which worked so fast, giving voice every few jumps, that Benage stood in admiration watching him. As he disappeared in a cleft of the mountain Benage started for his boat to await a chance of deer taking a turn to the lake, but stopped at hearing Music change his bay to a howl of pain. The day was as still as some fall days we can remember when sounds can be heard miles away. Benage heard snarling and sharp barks, and then saw old Music with two wolves at his flanks come into view. Benage instantly yelled at the top of his voice and fired his gun, which scared the wolves away. The old dog came reeling down the mountain, dyeing the snow with his blood every jump. His strength gave out before he reached his master, who was hastening to him. Benage found him bitten through the back of his neck, but the cruel wound that was death to him was just back of the fore shoulder, where a chunk of

meat as large as one's hand was torn out, laying the lungs bare. He lived but an hour. The party lost three dogs on the trip, and since that hunt no guide about those lakes has any doubt of the cause of the death of Louie's dogs. M. S. NORTHRUP.

JOHNSTOWN, N. Y. Feb. 8.

THE WEATHER AND THE GAME.

Editor Forest and Stream:

The winter has been phenomenal for its mildness, and highly favorable to the game. Owing to the very wet summer of '89 grouse were scarce in the fall in this locality, but owing to their extreme wildness very few were killed; and at the close of the shooting season the covers contained at least the usual number of birds for that date. Very few of their natural enemies have been about, and there must certainly be a goodly number of nesting birds this spring. I spent two days last November shooting in Windom township, Wyoming county, where I found grouse quite plentiful. I visited the locality recently and ascertained that they nearly all pulled through; and if good broods are reared the coming summer there must be grand shooting there another fall. While there, Feb. 13, I took from a mill flume four yellow perch, two of them much distended with eggs that were nearly ripe. Feb. 5 a flock of wild geese, about twenty, alighted on the ice near the center of Elk Lake—a beautiful little sheet of water three miles north of this place—and commenced dressing their feathers, and seemed contentedly awaiting the breaking up of the ice. But "the man with the gun" soon appeared, and they left, taking a northeast course. Bluebirds made their appearance here Feb. 18. Last spring none were seen until March 13.

ACBURN, Pa., Feb. 27.

BON AMI.

Editor Forest and Stream:

What a beautiful day. The air is musical with the songs of the happy warblers, while on the meadows is heard the curious peep of the baby bullfrog, which we never hear before the middle of April or May. A few English snipe have been bagged and there is a big flight of spring brant. While driving to-day I flushed a male woodcock on the road in front of Mr. E. R. Wilbur's place. He was very gentle and strutted around with his tail feathers spread out, very much after the fashion of a peacock. After feasting my eyes on him (as we very seldom see this noble game bird here), I flushed him, but he seemed possessed to stay in the road, where he would be sure to meet death at the hand of some pot-hunter—unless he had the protection of a New York policeman. After turning my horse around and flushing him three times off the road, I finally had the satisfaction of seeing him seek safety in the swamp on the premises of Mr. E. R. Wilbur. ALFRED A. FRASER.

THE CEDARS, OAKLAND, L. I., Feb. 20.

Editor Forest and Stream:

The game in this section of Connecticut (southern part) has had apparently the most favorable winter that it has had for years. The ground has been bare all winter with the exception of two light falls of snow, neither enough for tracking rabbits. There was no bird shooting after Jan. 1. Neither partridges nor quail were badly thinned out, as a short trip in the woods about here will show. The last day that I was in the field with setter was Christmas, when I bagged four partridges, disabled my gun and reached home at noon.

I have been out a number of times since with my foxhound, and have seen birds on every trip. They were mostly partridges, one or two in a place. The quail do not show in as large numbers as some winters, for it has been so open that they stay in the swamps, not being driven out by hunger; but they are here in plenty and in large flocks for this time of year. Rabbits are so plenty as hardly to be called game, although hunted some with dogs and ferrets (illegal).

Pickering fishing through the ice is excellent about here when we have ice, but we have had none as yet. Our weather has been one cold day, one warm day and a week of rain and mud. C. A. L.

WINSTED, Conn.

Editor Forest and Stream:

We have had a very open winter here. Lake Ontario has been clear of ice all winter. Big Sandy Bay has not been entirely frozen up as yet. Whistlers and sheldrakes have been here all winter. Saw the first appearance of migratory birds last week, one robin and a few black ducks. Shot three of the ducks. GEO. M. WOOD.

WOODVILLE, N. Y. Feb. 23.

Editor Forest and Stream:

My occupations have been so confining the last fall that my personal knowledge of the number of birds is slight. I was able to get into the field but twice, and then, although my dogs were in fine trim, made only moderate bags; but the winter has been so mild and the number of birds bagged so small, that I am sure we will have good sport next fall if the hatching season proves favorable.

I learn from farmers that many coveys were untouched, and now contain from ten to fifteen birds in fine condition.

More deer are reported in the mountains than have been seen for years, and I trust that when the season opens I may be able to report a pleasant hunt. The same remarks as to the birds (quail) will apply equally to pheasants (ruffed grouse). A few of these were bagged within two miles of this town. T. M. S.

LEXINGTON, Va., Feb. 22.

Editor Forest and Stream:

There was a good-sized flight of English snipe on our meadows Dec. 26 and 27. There were snipe here Feb. 4 and 5, and on Friday, the 28th, I again put up two while exercising my dogs. An unusually large number of mallards have spent the winter hereabouts. Feb. 15 I found a woodcock, Feb. 17 saw the first bluebirds, and on the 21st saw a bunch of seven robins. Woodcock were reported to me as being here on Feb. 3, but I found none till the 15th. SPRING BROOK.

MONMOUTH, N. J.

AN INCIDENT OF OLD TIMES.

It was before the Union Pacific Railroad was constructed that a party of about sixty men, including myself, from the States, bound for Montana, camped that our teams might recuperate, they having traveled many a long mile and day on short rations. The immigration—pilgrimage, in Western mining vernacular—to Montana that year by the Oregon trail was large.

A few of us when near Ft. Laramie set about forming a company from the pilgrims who dared venture by a cut-off route west of the Big Horn Mountains by way of an old trail made by bridges. The result of the effort was this party camped on the Rosebud. The Indians were very troublesome. The bones of many a poor pilgrim, who had parted from his home and kindred to seek a fortune, and who had a passion for hunting, were left to bleach in the mountains.

Bump and myself were the only hunters in the party, or at least who had a passion for hunting strong enough to risk their scalps to try it. We wanted meat, we needed a hunt, and in the morning a party of twelve men well mounted and armed set cut into the foothills in quest of game.

On a broad open tableland we espied an antelope lying in the grass. Bump or myself would get it. Ten pair of eyes would watch the one who tried his skill. We disputed as to which one of us should make the exhibition. We cast lots. The lot fell to Bump, and he, by a snail like crawling, came within range, and as the animal sprang up, killed it.

We were not satisfied with the hunt, and against the protestations of the rest of the party went alone further into the foothills and mountains, keeping one eye out for Indians and the other for game.

We could see by the general lay of the country ahead of us, that just over a sharp ridge there must be good ground for antelope or deer. Picketing our ponies at the foot of the ridge, and festooning our hats with tufts of long grass, we crawled to the top of the ridge, and carefully peering over, saw a large gang of antelope feeding, out of rifle range. While studying how we could stalk them, we espied an antelope lying just within long range. It was warm sunshine, a day for insects to make the best of their short life. Pushing the muzzle of my gun carefully over the crest of the ridge and taking a careful aim, I was in the act of pulling the trigger when a large fly alighted on the barrel of the gun so as to obscure the front sight. I dare not make much demonstration, but gently rolling the gun so as to dislodge the fly, I again took aim, and when just ready to pull trigger the fly returned to his old position. This it repeated a half score of times or more. How did you feel? say you. Had the patience of Job, or of course? Well, I am not accustomed to use anything but plain, mild language, but I looked around for Indians, and saw Bump just behind me, flat on the ground, shaking like a man with the ague, with one hand over his mouth, to keep from exploding into uproarious laughter. He said I had been muttering biblical names and words, but they were not arranged in orthodox order. I finally obtained a successful shot.

We went into camp that evening with two antelope on our saddles, and found a great anxiety on account of our prolonged absence. Some time I may narrate how I killed the second of those two antelope. H. L.

SUNDAY SHOOTING.

Editor Forest and Stream:

In your issue of Feb. 20, "T. M.," speaking of the Massachusetts law prohibiting Sunday shooting, says: "There are plenty of young men like myself who have to work all the week, and Lord's Day is the only day when we can have a little recreation: we cannot enjoy field sports like our richer brothers if this takes effect. And I think plenty of ruffianism will grow out of it."

With sincere sympathy, but with considerable diffidence, I beg leave to suggest a remedy. First, then, the proposition that dog and gun, costing say \$100 (taking out the close season), will only afford thirty-five or forty days (Sundays), and this, barring sickness, weather, accidents, etc., will hardly be questioned.

Now instead, an outfit consisting of "Ridgway's Birds," Miss Merriam's "Birds Through an Opera Glass" and a good field glass, at a total cost of say \$35, and used in the study of birds in their several aspects of home life, migrations, economic value, etc., will furnish as great an incentive to zeal and hard work, both in field and closet, as will dog and gun; and the game secured will be as superior as the intellectual is higher than the material.

If unobjectionable recreation be the sole object, then this plan has the further advantage of extending the open season so as to embrace the entire year; and while the woods and fields offer the best results, still it is not too much to expect fair returns to reward morning and evening observations in the heart of a great city.

Again, the rich can lease large tracts for hunting and fishing, and thus exclude "T. M." and the rest of us; but under my plan the old pastures, the byways and hedges are our most choice preserves and always alike open to all.

Lastly, my plan, instead of in any way tending to ruffianism, tends directly and unerringly to produce a healthy soul and mind in a healthy body. I might cite Izaak Walton, Rev. Gilbert White, Henry D. Thoreau, John Burroughs and others in support of these views, but will content myself with quoting a single remark of Sam Lovel to Uncle Lisha: "I gets lots o' things a-huntin' 't I can't show ye nor tell ye 'bout, an' a feller that don't don't get the best o' huntin' 'cordin' to my idee."

M. E. H.

JEFFERSON, Iowa.

OHIO.—Dayton, Feb. 27.—Sportsmen here are generally signing an appeal to the Governor and to the new State Board of Fish and Game Commissioners for appointment of Mr. Charles H. Kelso, of Kent, to be Chief Warden. For a number of years the Commission has directed its efforts to stocking the creeks, rivers and lake with fish, and now the shooters want a show.—BUCKEYE.

FLORENCE, Colo., Feb. 27.—Ducks are plenty on the Arkansas River now. Other game scarce. A few deer and bears have been killed in the mountains near here this winter. The winter has been very mild, but it is quite cold at present.—T. R.

WOMAN IN THE FIELD.

WHY do not more women accompany their husbands or brothers on shooting expeditions? Is it because they don't know how to do it, or because they are not encouraged in the idea by their respective lords, or because they don't know how delightful it is? I am quite sure that there are many women who now sit at home and in the secret depths of their hearts cherish a little hard bitter feeling of being neglected when their husbands go off on shooting trips. Now, to these women I would like to become a sort of feminine guide-post, pointing out to them an easy and pleasant path. I know that a woman can go with her husband on his shooting trips, and not only not be a hindrance to him, but greatly increase his pleasure.

If the wife, instead of regarding her husband's shooting solely as a man's sport in which she can have no share, will make up her mind to go out with him once or twice she will soon see how delightful it is and how easily done; and days that have formerly been passed by her in solitude will be looked forward to with equal eagerness by both.

I don't believe that there is any woman, no matter how much of a "town mouse" she may be, who would not enjoy standing by her husband's side on a sunny slope, where the quail are scattered, and see him make a good shot; and though at first she may become discouraged at her own want of success and think that in the matter of shooting "all is vanity," yet I venture to predict that from the moment the first bird falls to her gun she will entirely understand her husband's hitherto uncomprehended enthusiasm. I have been through it all myself, and "what woman has done woman can do."

First then, as to costume. I have found that the most convenient costume consists of a canvas coat and vest, made in every particular like a man's, full canvas skirt, reaching just below the knees, corduroy knickerbockers, canvas and leather leggings, and stout low-heeled laced shoes. Also a flannel shirt, a corduroy "fore and aft" cap, and if I may venture so far, wear your oldest corsets and loosen them to their fullest extent. Equipped in this way, Diana need dread neither cold nor rain. Of course, in very severe weather a cardigan may be added, though you will be surprised to find how few wraps are needed, and for snipe and rail shooting, the leggings and shoes are replaced by light extra long rubber boots. My gun is a double-barreled 20-bore, and weighs about 5lbs. Don't invest in a cartridge belt. I did, and wore it proudly at first, but I soon discarded it, and now carry my cartridges in my coat pockets in the true sportsman fashion. The last requisite is a pair of heavy gloves, the finger tips cut off so as to allow free play to the fingers.

And now that we are all ready to start, I wish to say just a few words to the man of the party. Be very considerate of your companion at first. She will soon become comparatively independent, but at first she will have many discouragements to meet, and will need all your consideration and help. Don't be so eager to make a "good bag" that you forget everything else. Stand ready to help her over fences, for a high rail fence or a tottering stone wall is no slight obstacle to a woman unaccustomed to country tramping, and also hampered by a gun of which she is probably a trifle afraid. In going through the heavy brush let her follow you closely, and don't let the twigs and branches snap back in her face. While you splash boldly through swamps and bogs, show her how to skirt all along the edge. Try to forget at first that you are on a shooting trip, imagine that you are just out for a walk together, and show her the courtesy that you would naturally show any woman under such circumstances.

Let your wife stand where she can see you make one or two shots, and then give her a chance to shoot too. What difference does it make if you do lose a few birds, if by doing so you can give great pleasure to some one else and besides can make yourself sure of always having a sympathetic and enthusiastic companion. And, my dear sir, the first time she sees the dogs point and asks what is the matter with them, don't laugh.

I began my shooting under unusually favorable circumstances, for the Doctor, besides being a most enthusiastic sportsman, has unlimited patience, and encouraged and urged me on when, after days and days of unsuccessful effort to hit a sitting bird, I was disposed to give up in despair. One thing that I cannot too strongly impress on beginners is, do not be discouraged. Shooting, the sport of all others which requires a quick eye, a steady hand, calm nerves and good judgment, cannot be learned in a day. You must expect failure after failure at first, and then suddenly some day the knack will come to you, and every outing after that will improve you. When I first began, I used to go with the Doctor just for the walk, and with no thought of myself shooting. I had practiced a little with a small rifle, and felt that I was moderately expert at that, but it seemed so far beyond my powers ever to come anywhere near a flying bird that it never entered my head to try. Day after day we tramped about together and at last the shooting fever began to burn within me. I had fired the Doctor's gun several times at sitting birds, and as he carefully aimed and held it and my part of the performance consisted in pulling the trigger, the shots generally told, and filled me with the desire to "do it all myself." When I became the proud possessor of my own gun, the first precept that the Doctor tried to instill into me and one that I think should be branded on the barrels of all beginners' guns, was, "Be careful where your gun points." This cannot be insisted on too strongly at first. After a time it becomes second nature to be careful with your gun and you carry it safely by instinct, but at first be watchful every moment. Never for an instant allow your gun, loaded or unloaded, to point toward any member of the party, and on getting over a fence always look first to see that it is at half-cock. Practice on sitting birds at first until you can get your sights and bring your gun to your shoulder quickly. Then when you begin to try wing birds, do not, as you will want to, hold your barrels down and bring them up on your bird, but hold them up and bring them down. Take as quick an aim as possible, always holding a little ahead of the bird if he is going across you, and right on him if he is going from you, and keep your gun moving with the bird while you are taking aim. Don't jerk or pull the trigger, but push it down with a firm steady pressure, and if you miss with the first barrel, at least have a try with the second. I don't suppose I shall ever forget the first bird I shot on the wing, and, by the way, I blush to say it was a

robin. I had been shooting at birds on the wing for some time, and had almost despaired of ever attaining the distinction of killing one. It was a windy October day, and the Dr. and I were walking down a sunny slope toward a clump of cedars. Gyp was with us, and exhilarated by the crisp air, was rushing about here and there, every now and then dashing to the cedars, which maneuver always brought out a flock of robins. We had been watching the birds and commenting on their numbers, and the Dr. had gone ahead a few steps, when, just as he turned to speak to me, a robin flew out of the cedars at my side and made for those at the foot of the slope. Without a second's pause I raised my gun to my shoulder, aimed and fired. There was an instant of silence, then a shout from the Dr., "Hurrah! Good girl! You got him." I could scarcely believe my eyes, but when we reached the bottom of the slope there the bird lay, dead. Of course I did not hit anything more that day, nor for many days after, but when the next rail season came I began to feel that I had really made some progress. But of that, more anon. N. B.

PATTERN AND PENETRATION.

WHITNEY SAFETY GUN, 12-GAUGE.

WHEN the FOREST AND STREAM sent out its general invitation to all makers of guns, to send in sample arms for test, one of the earliest responses came from the Whitney Safety Firearm Company, of Florence, Mass. They were anxious to have a weapon at the screen, but they were in the midst of a change of location of shop and could not then send in a gun without great inconvenience. It was not until Christmas time that expert T. T. Cartwright, who is so well known as a rifle shot in this and other countries, came down as the agent of the company to fire a sample arm. It was one of the make of arm of which the company has established a wide reputation as makers of a particularly safe arm. A glance at the cuts will show the arm in section. It is the invention of W. H. Whitney, who had the necessity of an arm of this sort impressed upon him, when he saw a cousin killed by his side while lifting a gun from the bottom of a boat. A model was whittled out of wood and further improvements brought about what the company now claim to be the only absolutely safe hammerless gun on the market.

The parts are few in number, being about half the number there is in some guns. They are strong and easy to make. The gun will be made in three or four grades, and will be well made, well balanced, good shooting, and with interchangeable parts. Besides its simplicity and its safety, the price will be within the reach of all. The mainsprings of the gun are always passive, except when the tension lever, A, is pressed against the pistol grip. The shooter has to hold the lever up while he shoots. The instant he lets go of the lever the mainsprings are passive. The hammers are always at full cock except at the moment of firing. In case the shooter gets a misfire, all he has to do is open his hand and close it, when the gun is again ready for trial. The opening or closing of the barrels has nothing to do with the cocking of the hammers. The whole of the lock work is on the trigger plate, and all the sportsman has to do is to take out three screws, when the action and trigger plate can be taken from the stock. The whole gun can be taken apart by any man who can use a screw driver. The parts of the gun are all made from best forged steel. The boring of the gun will receive special attention, and guns will be bored to use the same size wad as the above, viz., a 12-wad for 12-gauge.

The gun tried was No. 1, factory number, being the first gun made by the company, and one that Mr. Cartwright had used all summer at the trap. It was not made specially for the test, but was made for a well-known shot in Minnesota, and it was by his orders that the arm had the right barrel with a very moderate choke, while the left was given a full choke.

When Mr. Cartwright opened his cartridge box he had two sets of charges ready. One had 3½drs. of No. 2 King's quick shot powder behind a charge of 1½oz. Tatham's No. 8 chilled shot. The other charge had 3drs. of powder with 1½oz. of shot. Why two charges so near alike were brought was not explained. In order to secure a wider range of test a package of wood powder charges was secured from the stock in charge of the superintendent of the range. It was in stock nobody knew how long, and there was no way of telling the time of its loading. It was in fact just such a nondescript charge, so far as pedigree went, as that sent to the range at the time the L. C. Smith gun was sent down for trial. The box was one from the old Chamberlin Cartridge Co. stock and had probably been at Claremont since the range was opened, a year ago. Readers will understand then that the black powder charges were direct from the company offering the gun for test, but that the wood powder charges were not. The lighter black powder charges were tested only through three shots from each barrel at each range and an analysis of the cartridges showed as follows:

Loading.	Powder.	Shot.
U. S. Climax shell; (1..... 95 grs.		489 grs.
card over shot; two-2..... 94 grs.		485 grs.
B. E. and card over (3..... 92 grs.		503 grs.
powder.		
	Average 94 grs.	492 grs.

Right Barrel.					Left Barrel.				
Aimed Circle.	Selected Circle.	Between Centers.	Penetration.	Sheets.	Aimed Circle.	Selected Circle.	Between Centers.	Penetration.	Sheets.
133	171	4½	11	138	144	5	8		
219	271	4	13	259	264	4½	10		
112	123	7	11	214	209	4	8		
165	188	5	12	204	206	4½	9		
AT 60 YDS.									
29	29	3½	76	109	5	6			
24	29	4	76	104	6	2			
72	83	2	79	109	4½	3			
42	47	3	77	107	5	4			

In this connection it is worth noting how figures of charge vary. The wood powder label claimed a load of 1½oz. of Tatham's No. 8, and Mr. Cartwright said he had loaded with 1½oz. Tatham No. 8 shot, but the analysis shows 508 pellets per charge in the former and 453 in the latter case, with a difference in weight of over 50grs., yet several critics have noted what they thought was an error in these tests, because our analysis of charge

did not agree with shot company catalogues. We only give the charge as the gun holder says he loaded, and the analysis as we find the cartridges picked at random from the lot used in the test. The variation shows what shot measures amount to as they are manipulated by loader here and there over the country.

The day chosen for the trial was sharp and cold with good wind blowing, but it was not an unfair one for gun or shooter, and just how the arm acted may be read in the detailed report on the heavier charge of black powder and the wood powder cartridges.

CLAREMONT, N. J., Dec. 27, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Whitney Safety Hammerless. Cost, \$47. No. of gun 1. Weight, 7.15-lbs. Length of barrels, 30in. Gauge, 12. Right barrel, modified choke. Left barrel, full choke. Weather—Clear. Direction of wind, 3 o'clock. Force of wind, 16 miles per hour. Thermometer, dry, 38°. Do wet, 33°. Humidity, 57°. Barometer, 29.9in. Charge, as given by holder of gun:

ON THE FACE OF THE MOON.

LOUISVILLE, Ky.—Mr. John B. Riley, an old and famous Kentucky hunter, was in town yesterday and tells me of the following 'possum hunt, which he engaged in.

"We were out looking for 'possum late one autumn night. The dogs had been trying in vain for nearly an hour to follow a trail. They at last located a 'possum in a limited space, but they could not unanimously determine upon the tree wherein the sly old 'possum was ensconced. One specially sagacious 'possum hunter, who had spent half his nights in the woods, at last declared that he could tree the 'possum himself.

"After about twenty minutes patient searching he called the rest of the party to his side, and directed our attention by the pointing of his finger through the dead lumber and dry leaves of the treetops till our gaze almost rested on the face of the man in the moon himself, when all exclaimed in amazement. There was the 'possum with the hairs of the backbone bristled up on the face of the moon. He was perched in the top of one of the tallest trees in the forest, but he could be plainly seen in that peculiar position with the animal between you and the moon, although the night was otherwise dark in the forest."

C. A. D.

NEW YORK LEGISLATURE.—Albany, March 1.—The Senate has passed Mr. Stevens's Assembly bill prohibiting the shipment of game killed in the counties included in the forest preserve. The Senate Committee on Game Laws has reported favorably Mr. Coggeshall's bill for the revision and codification of the laws protecting fish and game. The Governor has signed Assemblyman Curtis's bill amending the act establishing the State Forestry Commission relative to lands in the forest preserve. In the Assembly Mr. Crawford offered a resolution, which went over at the time, but it will undoubtedly be passed. It provides that the Attorney-General be requested to furnish the Assembly with his opinion on what constitutes the "waters of this State, as mentioned in the various laws for protecting game and fish, as distinguished from waters belonging to individual associations, and especially as to the status of waters covering lands upon which taxes are paid, and whether waters can legally be taken for the public use without compensation to the owners.

HUNTING IN THE NATIONAL PARK.—Hyde Park—Hudson, Feb. 27.—Editor Forest and Stream: I want to call your attention to a difference between your report of Senator Vest's new Park bill, Section 5, in your issue of Jan. 30, and the same section of S. 491, passed Feb. 21. In your issue Section 5 "prohibits hunting, killing, wounding or capturing wild animals or birds, except dangerous animals; prohibits the taking of fish, etc." Section 5 of the bill, as passed in the Senate, reads: "That all hunting, or the killing, wounding or capturing, at any time, of any wild animal or bird, except dangerous animals, when it is necessary to prevent them from destroying human life or inflicting an injury, is prohibited within the limit of said Park, etc." From your report of that section of the bill one would infer that the hunting of dangerous animals was permissible under the provisions of the bill; whereas such is not the case, as will be seen from the italicized words above.—ARCHIBALD ROGERS.

QUAIL FOR BRITISH COLUMBIA.—Vancouver, B. C., Feb. 12.—Editor Forest and Stream: A committee meeting of the Mainland Game Protective Association was held at the Leland Hotel, Vancouver, British Columbia, last evening. In addition to the 300 pheasants ordered from China and Japan, it was decided to import 100 quail. These will be turned down as soon as they arrive, and if they do at all well we should soon have some quail shooting. The Association already has over 40 members, and it was decided to canvass the neighboring city of New Westminster to increase the membership as much as possible. All the farmers in the district are giving the Association

a hearty support and the Legislature will be appealed to, to protect pheasants and quail on the mainland of British Columbia for at least two years. We had quite a cold snap here after Christmas, which drove the ducks south. They have now returned and the shooting is again excellent.—C. E. T.

WATERPROOFING CLOTHING AND TENTS.

THE following directions will be welcomed by many who are desirous of a good recipe for waterproofing textile fabrics. Our correspondent is evidently fully conversant with the subject, and his instructions are so clear and explicit as to be easily followed:

Editor Forest and Stream:

Many inquiries have been made in your journal respecting the best method of waterproofing cloth. I send the following recipe, copied to the best of my recollection, from a scientific paper in 1872. It may be useful to those who dread being poisoned by the alum and lead solution, although with proper management there is really no danger of this.

"Gelatine and soap of each one pound, dissolved together in thirty quarts of boiling water. Add by degrees one and a half pounds of alum and continue boiling for a quarter of an hour. When the fluid is at 122° Fahrenheit, put in the cloth, let it soak well, then hang up without wringing, till dry. Afterward wash in cold water and mangle. The sulphuric acid of the alum combines with the soda of the soap and sets free the fatty acids, which form with the gelatine a substance insoluble in cold water."

For my own clothes I have always used the alum and sugar-of-lead solution, in the proportions of 1lb. of the former to 1/2lb. of latter, added to 10gals. of rain water. The alum being in double the proportion usually recommended insures the precipitation of all the lead in the form of sulphate, which sinks to the bottom if allowed to stand for a few hours. The clear liquor should be poured into a clean vessel before the clothes are put in it. This method prevents the deposition of the sulphate of lead among the fibers of the cloth.

I used to soak my clothes first for 24 hours in a solution of 1/4oz. of yellow soap boiled in 1gal. of water; hang them up to drain, and when half dry put them for 12 hours in the alum solution. The fatty acids of the soap are stated to form minute crystals with the alumina, which adhere to the fibers of the cloth and help to repel rain. Clothes treated in this way are of course not so absolutely waterproof as India rubber, but have the great advantage of not confining the perspiration. They will keep out heavy rain for 8 hours or more, if perfectly loose all over, but any part that fits tightly lets in a little wet. After being taken off they should be spread before a fire to dry. If thrown into a heap, or even if hung all right upon a peg, they will be found damp the next day, especially inside the sleeves.

Clothes waterproofed by one of the above-mentioned methods will, I believe, soon be in general use instead of macintosh, among sportsmen and campers out. The best kind I have ever owned for real rough work were invented a few years ago by a tailor named Burberry at Basingstoke, in this country. The inside is of thin tweed and the outside of a fine cloth woven from flax and very strong, both being made waterproof. They are light and warm, and the flax cloth is almost untearable by thorns when pushed through the thickest bushes; at the same time it is free from the unpleasant stiffness of canvas or leather clothes.

J. J. MEYRICK.

COMBAMARTIN, North Devon, England, Feb. 19.

Sea and River Fishing.

WHAT IS THIS?

ACT FIRST AND LAST.

Scene 1.—Your boatman takes you to the grounds. You bait up and cast out (if you know how, otherwise your man does it for you), then sooner or later lay your rod down and wait. You keep on waiting, sometimes for days, yes, weeks.

Scene 2.—At last something has passed over and found your bait; it is moving off with it; you don't strike, that seems too much like angling, and you are not angling now, but wait until the something has swallowed the hook to its tail almost. In great excitement you now pick up your rod and hold on like grim death (your pole will stand all the strain that can be put upon it), grinding on your reel when your strength permits. Mr. Boatman now heaves up his mud hook and steers the boat as you are towed along.

Scene 3.—Presently, from sheer exhaustion (and that, remember, without the slightest chance of being able to rid itself of the hook), the something rolls itself on its side alongside the boat and is gaffed.

Scene 4.—It is talked and found wanting.

Scene 5.—You now teach yourself deaf, dumb and blind trying to explain to your friends (who already know all about it) how skillfully you handled it and how many times it nearly got away, and because you know no better, think you have accomplished a great feat. You have no skill, you used no skill, but still you kill.

And this is called tarpon fishing.

Except for being able to say that you have killed your tarpon on rod and reel, weighing —lbs., surely you cannot call it sport from an angler's point of view. Fancy comparing it with angling for salmon, trout or bass, where skill tells above all else.

BIG REEL.

VIRGINIA.—Lexington, Feb. 22.—In consequence of the muddy condition of the streams last summer few bass were killed. During some of the warm days this winter a few were taken from deep pools, and more are reported to be in the streams than we have ever had.—T. M. S.

JAMAICA BAY.—A determined effort is making to abolish seining in Jamaica Bay, a Long Island resort much in favor with New York salt-water fishermen.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of Thos. J. Conroy, 65 Fulton street, N. Y. See advertisement opposite first page of reading matter.—Ad.

ON THE NORTH SHORE.—VI.

A THREE WEEKS' TROUTING TRIP ON THE NORTH SHORE OF LAKE SUPERIOR.

IT would be impossible to record for want of space all the little incidents that happened in camp, as they came with the swiftness of fairies thronging a moonlight glade. There is one in particular that is fresh in memory and which is too humorous to ignore. I will relate it. We had in our outfit laid in several delicacies in canned goods for our own especial use, and which fact we tried to impress upon our boatmen, but they would not take it that way. Every time we opened one of these special cans and used therefrom we gave it into their keeping to reserve for us, but it disappeared as absolutely as if it had been swallowed by an earthquake. An inquiry as to the cause resulted in the statement that they had eaten it, fearing it might spoil. This went on for some time, until an almost entire can of very choice pears had suddenly disappeared. Ned and I both got red hot over this last disappearance, and lit into the sweet toothed half-breeds with a vengeance. Joe fired up a little and said he never went with gentlemen who did not share equally everything they had.

"Haven't we given you apples?" said Ned.

"And onions?" said I.

"And apricots?" said Ned.

"And ham?" said I.

"And eggs?" said Ned.

"And crackers?" said I.

"And bread?" said Ned.

"And potatoes?" said I.

"And toast?" said Ned.

"And feasted your friends?" said I.

"And sent you to church?" said Ned.

"And you want half our champagne?" said I.

"And half our whisky?" said Ned.

"And haven't you grown fat?" said I.

"And lazy?" said Ned.

"Do you take us for tenderfeet?" said I.

"Or for bleeding lambs?" said Ned.

And so on for quality we continued until poor Joe and quiet Peter felt completely overwhelmed, and slunk into their tent deeply abashed. Joe threw himself on his blanket and tried to sleep his confusion and indignation away, while Peter took out his knife and securing a stick whittled with bowed head and pouted like a child of tender years. Joe stuck to his quilt for fully two hours, while Peter, tired of whittling, came out of the tent, knife and stick in hand, and promenaded down the sandy beach. It was evidently a bad case of sulks. We concluded, as a relief to their overburdened spirits, to further pursue our piscatorial pleasures, and so called them to get the boat ready. They very leisurely came forth and as leisurely proceeded to get everything ready, and about all this time had been spoken by the pouting twain. They were dead to everything but their inward emotions, which were a perfect misery to them. Soon arriving where the *fontinalis* lie in cover we began casting, but not before we had gone at least half a mile did we receive a single rise, and that one was missed, much to my discomfort and the entire satisfaction of the churlish boatmen, who were doubtless praying that some disaster might overtake us as a revenge for the veto we had placed upon their rapacious raid on our choice delicacies. Ned had now, since he had lost his monstrosity of a bug, a fly, or whatever it was, taken high rank again as an artist of the angle. He was whipping the waters with unexampled skill and a patience only belonging to those who are genuine disciples of the guild. Every throw that went out from the gentle manipulations of his wrist sent his fly circling through the air with a grace and surety that delivered them on the gentle ripples with a lightness akin to the falling of fleecy down. I could not but admire his perfect skill, and would frequently cease casting to watch his feathery lures as he sent them on their mission, like a thing of life, in search of a golden fin. In one of these admiring moments, and just as his fly had gently kissed the water, I saw a rainbow-arch of light sweep down on his glittering fly, and with the sudden splash that followed there came the music of the whirling reel that to the heart of the angler is ever dear. I sat and watched the white-haired sportsman enjoy his heaven of happiness as he fought the ferocity of that maddened trout. He met him at every dangerous dash with a deftness and patience that practice alone can give, and finally conquered the monarch of the fresh waters after a ten minutes' struggle, in which he displayed the very perfection of angling tactics.

"Bravo! Bravo!! Bravo!!! Well done, Ned, you are entitled to the honor—laurels. A more skillful battle with the enameled beauty I never before witnessed," I exclaimed after he had successfully landed him.

"Oh, I had my fighting jacket on then. But ain't he a Jim dandy?"

"He is lovely indeed; a poem of beauty in silver and gold."

"Let's have his avoidupois."

"Here's the scales, hang his quivering jaw to that."

"Just four and three-quarter pounds."

"Good enough!"

And now I turned to the waters and endeavored to imitate the victorious Ned. The bottom of the lake disclosed magnificent cover for the fish. Huge boulders, shelving rocks and deep crevices, admirable lairs for the coveted trout, were on every side. I was confident of soon hanging a beauty, and on my third cast my anticipations were fully realized, for a savage splash came and met with the usual response, and a crimson darling was in consequence frantically running around with the lure firmly secured in his toughened jaw. He was not so large as Ned's, but he gave me a very enjoyable play. He weighed three pounds, and was fit to take rank in spotted loveliness and symmetry with Ned's monarch. Ned at this time, wishing to indulge in the luxury of the weed, handed his rod to Joe, that he might try his skill in coaxing the fish to the feathery and tinsel counterfeit. He was very fond of fishing, and went at it with an earnest will, sending his flies with a flutter in all directions and with masterly grace. This act of Ned's proved a panacea for the sulks, as the emotional boatman soon gave full play to his tongue in his native dialect. Peter also recovered from the silent disease, and good fellowship once more seemed firmly established in our quartette. Joe caught one three-pounder, and I followed suit with another a shade smaller, and then we started on the

home stretch, now and then making a cast as we went along the serrated shore. Ere we reached camp we realized in full force the glowing beauties of a northern sunset. The water had quieted till there was only a gentle ripple, and the dipping sun clothed the murmuring surface with a bright crimson which deepened as the evening advanced, glowing with more intense fire and holding a broad band of what seemed solid color, which mirrored itself on the far away clouds in the bright red of the furnace and the pale red of the shell, grandly and gorgeously as ever clouds were painted under any sky. Such colors were never seen on a painter's canvas, and were never counterfeited in silk or satin by the most skillful weavers of the eastern looms.

After we had taken our vesperian meal, we noticed that the boatmen cleared everything from the table but the can of California pears, which we had ordered opened for that meal. This delicacy was that which had caused the little revolution in our camp, and the rebellious boatmen still had bitter recollections of it. They had concluded to let us take care of the remainder of the forbidden fruit, and therefore left it to our protection. I insisted on calling them back and have them remove and care for the unfinished can, and if they refused to break camp at once and start for the "Soo," I was quite provoked at such contemptible trifling, and felt like fighting it out. Ned said "No," and advised putting the can in a crotch of a tree immediately in front of our tent. He thought it would defeat their provoking intentions if we gave the matter no attention. I was willing to try it, but determined that a repetition would open a strong revolt on my part at least.

Shortly after we retired Ned gave me the unpleasant information that something was crawling on one of his legs.

"It may be one of those little green snakes, Ned."

"No, it ain't large enough for one."

"Probably a horny bug," and then I smiled at the idea of once more reminding him of his last monstrosity.

"Ha ha! good, but the what-is-it is still crawling."

"Smash him with that Cinderella hoof of yours."

And then there was an upward movement of his blanket, and a sound immediately afterward akin to a lover's smothered kiss.

"Did you bring him?"

"I hit him, but he is kicking and clawing furiously."

"Give him one more."

Again the blanket moved and the smothered sound again heard.

"How is it now?"

"All quiet on the Potomac. He is ready for burial."

"Good night."

"Good night."

An early breakfast was had and start made for Grindstone Point for an hour or two's tender dalliance with the trout beautiful. The courtship of the finny tribe that morning was eminently successful, as we enticed eight of these lovely Naiads of the glittering dots to the banquet of the flies deceitful, and rejoiced exceedingly thereon. It was a morn of glorious sport, and to recite all the exciting events that occurred would take more time than we are inclined to give, as we have drawn this trouting trip to a length that, I fear, is already wearying to the gentle reader. As a matter of record, I will simply state that in weight the trout ran from 2½ to 4½ lbs. Of course they were all of that dappled beauty upon which the devotee of the rod ever gazes with wild delight. These trout were carefully placed on strings and then anchored in the lake, as we were desirous of keeping them alive in order to take with us on our return.

We fished an hour in the afternoon, but the indications of a storm, we thought, caused the trout to be indifferent to the fly. The romance of the forest and lake is beginning to fade and the charm of home circle and civilization is fast growing upon us. A crow as black as any crow could be, and that is inky black, was seen parading on our return to camp on the sandy beach that extended for a few rods from our quarters. He doubtless had an eye for something edible that the tossing waves might bring him, and was not amiss to the toothsome things we had in store. A rabbit had the evening previous made a visit to the boatmen's tent, he also being bent on the same mission as the parading crow. He ambled away quite rapidly when the boys caught sight of him. This set them to making the spring-loop trap, in which poor bunnie would be swung to an untimely death if ever he entered within that dangerous circle of the loop. No rabbit, however, fell a victim to the trap.
